US Environmental Rental Corporation

Rentals · Sales · Service

MiniRAE 2000 Calibration

- To turn on the unit, press & hold the **Mode** button and allow the unit to run 5-10 minutes in a clean air environment.
- After the warm-up, press & hold the **Mode & N/-** buttons simultaneously until the unit displays "Calibrate/ select gas?"
- Press **Y/+** "Fresh air cal?" is displayed
- Press **N/-** "Span cal?" is displayed
- Press **N/-** " Select Cal Memory?" is displayed
- Press **N/-**" Change Span Value?" is displayed
- Press **Y/+,** the unit will display span value. If no Change is needed. Press and hold the **MODE** button & "modify cal memory?" is displayed press **N/-**
- If you wish to change the span value, press the **MODE** button to move the cursor, and **Y/+ or N/-** to increase/decrease the displayed value to coincide with your span gas.
- Once the value is entered press & hold the **MODE** button until **SAVE?** is displayed press **Y/+** , "Modify cal memory?" is displayed press **N/-**
- **"Change Correction Factor?"** is displayed. If your desired correction factor is not 1.00(default setting) press **Y/+.** Use the same steps as Change span value to change the correction factor. If no change is required, Press **N/-** to continue.
- **"Fresh Air Cal?"** is displayed (Ensure that you are in a clean ambient air environment.) Press **Y/+**
- **"Zero in progress"** will be displayed, followed by countdown. The zero reading will now be displayed. The unit will move to **"Span Gas Cal?"**
- Fill a 3L Tedlar bag with Span gas.
- From **"Span Gas Cal?"** Press the **Y/+ button** "Apply Gas Now" is displayed. Apply Gas to the unit. The unit will countdown and then display **"Update Data"** the unit is Updating the calibration data in the instrument. The unit will now display **"Cal'd Reading =... (Span value).** Followed by **"Calibration Done".** Remove the Teldar Bag from the unit.
- Press **MODE** Twice to return to the run mode
- Unit is now calibrated and ready to use

Note: After the span calibration is completed and the unit is running, it is recommended to perform a functional "bump test" to verify the accuracy of the calibration. To perform this test, simply reconnect the span gas to the unit and verify the displayed reading coincide with the actual concentrations of span gas used for calibration. (Manufactures spec is +/- 5% of the value)

ALTERNATIVE FINAL COVER DESIGN REPORT
FLORIN PERKINS LANDFILL
SACRAMENTO COUNTY, CALIFORNIA

1.0 INTRODUCTION

This report presents an evaluation of the performance of an alternative final cover system that is being proposed for closure of the Florin Perkins Landfill (FPL) located in Sacramento County, California. The analyses presented herein are submitted as a basis for agency approval of the proposed alternative final cover design. The analyses have been completed using local climatological data, soil data specific to existing on-site borrow materials and proposed import borrow soils that may be available for final cover construction, and vegetative conditions typical of the natural environment adjacent to the landfill.

1.1 REGULATORY REQUIREMENTS

Since there is no prescriptive minimum design criteria for an unclassified (inert) landfill such as the FPL, the alternative final cover presented herein has been designed to meet the minimum regulatory requirement for closure of a Class III facility as they are defined in California Code of Regulations (CCR) Title 27. As stated in CCR Title 27, § 21140:

> "*The final cover shall function with minimum maintenance and provide waste containment to protect public health and safety by controlling at a minimum, vectors, fire, odor, litter and landfill gas migration.*"

CCR Title 27, § 21090 (a) states:

> *"The Regional Water Quality Control Board (RWQCB) can allow any alternative final cover design that it finds will continue to isolate the waste in the Unit from precipitation and irrigation waters at least as well as would a final cover built in accordance with applicable prescriptive standards under ¶ (a)(1-3)."*

In addition, under the CCR Title 27 §20080 (c) (1), in order to approve an alternative design, the State Water Resources Control Board (SWRCB) requires the discharger to demonstrate that the prescriptive standard is not feasible because it:

> *"is unreasonable and unnecessarily burdensome and will cost substantially more than alternatives which meet the criteria in § 20080 (b)."*

1.2 PURPOSE

The purpose of this study was to evaluate the feasibility of constructing an alternative final cover at the FPL in accordance with CCR Title 27. As such, this report presents an evaluation of whether the performance of the proposed alternative final cover is consistent with the performance goals addressed by the prescriptive (Class III landfill) standards by yielding equivalent or superior protection against water quality impairment. Also included herein is data that confirms that the prescriptive final cover constructed over the FPL would be unreasonable and unnecessarily burdensome and would cost substantially more than the alternative proposed.

1.3 SCOPE OF WORK

Work completed during this study included:

1. Collection of bulk soil samples from a variety of on site borrow sources and from locally available import soils that were used for closure of the Jackson Road Landfill across the street from the FPL site (Figure 1). On and near site soil sampling was conducted by Dunn Environmental, Inc.;
2. Completion of laboratory testing in general accordance with ASTM standards;
3. Evaluation of laboratory test results and selection of soil characteristics to be used in characterizing final cover soil system performance;
4. Review of local climatological data in the area of the FPL;
5. Selection of a computer program to simulate unsaturated flow through the proposed alternative final cover system;
6. Computer modeling of the proposed non-prescriptive cover system using the available laboratory soil test results, historic local climatic data and the selected computer codes, and;
7. Preparation of this report.

2.0 FIELD INVESTIGATION

In April, 2012, Dunn Environmental, Inc. (DE) in coordination with GeoLogic Associates, Inc. (GLA) collected samples from various on-site borrow sources within the FPL site in order to evaluate their potential for future use in an alternative final cover to be constructed over the site. Additionally, foreseeing that additional cover soils may be necessary to complete closure of the FPL, bulk soil samples from the JRL final cover

were also collected since they represent typical local soils that might be available for import to the FPL in the future. A total of fifteen (15) bulk soil samples were collected from the various locations (Figure 1). Table 1 summarizes the test results obtained from samples collected during the field investigation and Appendix A includes the detailed geotechnical laboratory test results.

3.0 LABORATORY TESTING

In accordance with ASTM and other acceptable standards, soil samples from the various sources were tested for classification (ASTM D-2487), moisture content (ASTM D-2216), gradation (ASTM D-422), atterberg limits (ASTM D-4318), maximum relative density and optimum moisture content (ASTM D-1557), and saturated hydraulic conductivity (ASTM D-5084). Samples for hydraulic conductivity testing were remolded to 90% of the relative maximum density as determined by ASTM D 1557 at 1% above optimum moisture content and these samples were subjected to a low confining pressure (approximately 6-8 psi) during testing to simulate a lightly loaded final cover soil application. The soil water characteristics of the proposed final cover soils have been estimated on the basis of soil grain size distribution, bulk density, and hydraulic conductivity.

Based on the results of the geotechnical soil testing of on-site final cover soils will generally consist of sandy and silty clays (CL) and silty and clayey sands (SC and SM). Some soil samples also yielded a considerable quantity of gravel-sized and larger particles with more than 15% retained on the #4 sieve.

Recent closure activities at the Jackson Road Landfill utilized import soils similar to the on-site soils and were generally classified as a silty and clayey sands (SM and SC) (Kleinfelder, 2011) (Table 2). Soil testing conducted during the construction of the cover system at the JRL, typically consisted of classification (ASTM D-2487), moisture content (ASTM D-2216), #200 wash gradations (ASTM D-1140), atterberg limits (ASTM D-4318), and maximum relative density and optimum moisture content (ASTM D-1557).

4.0 COVER MODELING

4.1 GENERAL

After review of several infiltration models, the program LEACHM (Leaching Estimation and Chemistry Model) was selected for the final cover analyses summarized herein. LEACHM is a one-dimensional finite difference computer model developed at Cornell University. The model simulates water and solute transport in unsaturated or partially saturated soils to a depth of about two meters. Estimates of plant growth and absorption of water by plant roots are included in the model as are climatic factors such as precipitation and evaporation. LEACHM is able to predict net flux through a hypothetical soil cover by allowing the user to stipulate laboratory determined matric potential/soil moisture content

relationships, bulk density/porosity relationships, and saturated hydraulic conductivity values. These values are transformed in a curve fitting routine to produce the air entry value and exponent ("a" and "b" coefficients) used in Campbell's retentivity equation. Unsaturated hydraulic conductivity is then estimated for a given soil moisture content using Campbell's conductivity relationship. After calculation of the unsaturated hydraulic conductivity, LEACHM simulates unsaturated flow through the modeled profile using Richards' equation.

A comparison of several unsaturated flow models commonly used in final cover applications concluded that the LEACHM model is conservative in calculating infiltration performance when compared to other models (i.e., UNSAT-H, Hydrus-2D, HELP, and Vadose/W) (Ogorzalek, et. al, 2008 and Bonhnhoff, et. al., 2009). GLA has monitored alternative final cover performance under post-closure conditions at over 11 landfill sites in California, and the field performance of these post closure systems supports the use of the LEACHM software.

4.2 MODEL INPUT

The following sections describe the critical assumptions, variables, and input requirements incorporated into the LEACHM computer analyses. Variables specified in the model include the iteratively calculated transient soil water status factors, plant growth, plant maturity, plant harvest variables, soil matric potential and saturated hydraulic conductivity. Sample input/output files for the LEACHM program are provided in Appendix B.

4.2.1 COVER CONFIGURATION

The first step in using the LEACHM model involves definition of the soil profile. This is accomplished by defining the total thickness of the profile and a nodal or profile segment thickness. Modeling of the proposed alternative final cover system at the FPL was completed assuming a total final cover thickness of 3.0 feet. As a result, a total profile thickness of 914-mm (3.0 feet) was stipulated, as was a nodal frequency of 152.5-mm (6 inches). This yielded a total of 6 profile segments or nodes, and the analysis assessed water flux at each of these nodes ten times a day throughout the modeling period.

For comparative purposes, modeling of the performance of a theoretical soil barrier layer prescriptive final cover (the prescriptive standard for a Class III unlined waste cell) was also completed. For this analysis the final cover was assumed to consist of a four-foot cover section incorporating (from bottom to top) a two-foot thick foundation layer composed of import soils a one-foot thick fine-grained soil barrier layer assumed to consist of low permeability clay similar to that placed at the nearby Forward Landfill and a one-foot thick vegetative layer also consisting of import soils. The Forward Landfill clay layer characteristics were used to represent the barrier layer of the prescriptive cover since these

materials exhibited hydraulic conductivity of less than 1x10-6 cm/sec (the minimum prescriptive standard included in CCR Title 27). A total profile thickness of 1219-mm (4.0 feet) was stipulated, as was a nodal frequency of 152.5-mm (6-inches).

4.2.2 BOTTOM BOUNDARY CONDITIONS

One of the most critical parameters included in this analysis is definition of the bottom boundary condition of the final cover section. In estimating the nature of flow through the bottom boundary of the final cover at the FPL, the following boundary conditions were considered.

Based on large-scale demonstration project data, it is clear that the most realistic characterization of the bottom boundary condition for an MSW landfill is represented by the constant potential condition (GLA, 1999, GLA 2001, Lass et. al., 2000, Lass et. al., 2001). In this case, it is assumed that there is a source of moisture available within the landfill (e.g. 100% humidity landfill environment) that would represent a continuous source of moisture (and therefore constant potential) within the waste and at the base of the cover section. This bottom boundary condition allows for characterization of two directional moisture movement and allows for the extraction of moisture through the final cover if drying conditions predominate (i.e., downward migration is calculated when the final cover moisture content is high and allows for extraction of water from the landfill [i.e., drying of the waste] when the moisture in the final cover is low). In estimating the nature of flow through the bottom boundary of theoretical final cover sections at the FPL, the constant potential boundary condition was utilized.

A more conservative condition is represented by defining the lower boundary as a "lysimeter". In this scenario, moisture migrates in only one direction (vertically downward) though it passes into the waste prism only after the base of the section becomes saturated and local soil suction is essentially zero (a condition expected at this interface given the humid environment created by the waste). Again, it should be noted that moisture will not be extracted upward from the waste if surface drying induces a suction gradient in the overlying cover.

Finally, a free draining condition was used to calculate the "worst case" performance characteristics of the modeled final cover. Worst case conditions are presumed under this scenario since moisture is drawn downward through the base of the profile under a suction head applied by the underlying soil/waste, but moisture is not "pulled back" from the section if shallow drying conditions develop.

4.2.3 SOIL COVER CHARACTERISTICS

For each node or interval in the defined profile, LEACHM requires input of specific soil properties, including: remolded dry bulk density; initial matric potential and soil moisture content; Campbell's "a" and "b" coefficients

(Campbell, 1974), and saturated hydraulic conductivity. Porosity is then calculated as a function of the stipulated specific gravity of the soils and their remolded dry bulk density.

Prior to initiation of modeling of the proposed alternative final cover design, the soils were tested for classification (ASTM D-2487), moisture content (ASTM D-2216), gradation (ASTM D-422), atterberg limits (ASTM D-4318), maximum relative density and optimum moisture content (ASTM D-1557), hydraulic conductivity (ASTM D-5084)(Table 1). Campbell's "a" and "b" coefficients were conservatively calculated using the LEACHM RETFIT program and were based on grain size distribution, bulk density, and hydraulic conductivity. Table 3 lists the soil characteristics of the soil samples considered for the alternative final cover system for the FPL, as well as, the soil characteristics of a typical prescriptive final cover if it were to be constructed at the site.
Since infiltration of moisture through a soil profile is mainly driven by the unsaturated hydraulic conductivity of the soils, the results highlighted in this report represent the minimum infiltration performance anticipated from the lowest quality import soils anticipated to be available for use in final closure of the FPL site.

4.2.4 CLIMATIC CONDITIONS

Precipitation - Another critical element in modeling cover performance using LEACHM involves identification of total daily precipitation, as well as the time and rate of water application. For each rain event, LEACHM calculates the maximum time period allowed for infiltration as the specified quantity of water to be applied divided by the application rate. Water, which has not entered the soil profile at the end of the application period, is assigned to an excess runoff term and included in the mass balance calculations. The matric potential of the soil and the unsaturated hydraulic conductivity of the soil thus limit infiltration into the profile at the time of water application. In other words, infiltration is limited by the ability of the soil to take water during the time of application.

Since positive drainage will always be maintained on the landfill surface, no ponding of rain or irrigation waters was included in the analyses.

The analyses of final cover performance for the FPL presented herein were performed utilizing precipitation data recorded from the closest available weather station (California Irrigation Management Information System (CIMIS) Sacramento FAA Executive Airport Station) located approximately 6 miles southwest from the FPL site. Though the average annual rainfall at this station over the last 60 years is 17.89 inches, the rainfall for the years 1978-1987 (the wettest 10-year period in the available record) were used for modeling purposes. During this 10-year monitoring period (1978-1987) the average precipitation recorded was 20.60 inches per year. The magnitude and duration of the rainfall events were estimated in a fashion believed to conservatively represent typical

rainfall events at the site. This included defining the time of day for water application to be 0.4 days (9:36 am) and a water application rate of 60 mm/day.

Evapotranspiration - LEACHM requires mean weekly pan evaporation data from which daily potential evapotranspiration (DPET) is calculated as one-seventh of the weekly total pan evaporation. Daily potential transpiration is calculated by multiplying the DPET by a crop cover fraction. Daily potential evaporation is then calculated as the difference between DPET and potential transpiration. For modeling purposes, LEACHM assumes that evapotranspiration starts at 0.3 days (7:12 a.m.) and ends 12 hours later at 0.8 day (7:12 p.m.). During this period, potential evapotranspiration is varied sinusoidally with actual evapotranspiration calculated as a function of the potential evapotranspiration, the profile's soil water status, and specified plant properties. Given a stipulated crop cover fraction of 1.0, LEACHM will calculate that all of the evapotranspiration that occurs is associated with transpiration. However, if a value of 0.0 is entered; all soil moisture losses will be calculated to result solely from evaporation.

Evapotranspiration data is not a readily available weather monitoring parameter, since measurement of this parameter requires special instrumentation to monitor: air temperature, daily mean temperature, wind speed, relative humidity, and solar radiation in order to calculate evapotranspiration. The California Irrigation Management Information System (CIMIS) is a program within the Office of Water Use Efficiency (OWUE), California Department of Water Resources (DWR) that monitors these parameters at select locations throughout the state for agricultural purposes. Pan evaporation data was obtained from the the Fair Oaks Station located 9.5 miles northeast from the project site. Historical evapotranspiration data for the Fair Oaks Station is only available for the period between 1995 and 2012 and during this period evapotranspiration has averaged 49.8 inches/year. For modeling purposes, the monitoring period between 1999-2008 when evapotranspiration averared 51.16 inches was incorporated into the model.

4.2.5 VEGETATION CONDITIONS

Rather than applying a coefficient to approximate the transpiration effects of plants, LEACHM uses the equation of Nimah and Hanks (1973) to simulate the uptake of water by plant roots. Variables included in the equation and requiring user specification include: crop cover fraction, root water potential (the root potential below which plants are unable to extract water from the soil); root resistance (the depth dependent resistance to upward flow of water within the roots); and the root distribution (expressed as a nodal percentage of all roots).

The vegetation evaluated herein included an annual shallow rooting grass with scant native shrub species, conservatively estimated to provide a minimum of 70% coverage over the land. This coverage was selected based on review of the development of vegetation around the vicinity of the landfill, and is considered a minimum for native vegetation in this area.

The vegetation values listed below were also specified for the long-term cover analyses.

VARIABLE	SPECIFIED VALUE
Wilting point	-1500 KPa
Root Flow Resistance	1.00
Root Condition	Mature

4.3 VARIABLE SENSITIVITY ANALYSIS

The following discussion addresses the sensitivity of model results to changes in the critical variables discussed above, and also includes a discussion of several other, less sensitive input variables. A summary of the sensitivity analysis completed for this study is included in Table 4. The base condition for the sensitivity used the soil characteristics of sample JRL-7 (sens1a in Table 4) since that sample yielded a saturated hydraulic conductivity near the geometric mean of the samples tested (Table 1).

4.3.1 COVER THICKNESS

Performance of the final cover appears to be sensitive to cover thickness with net flux generally increasing as the cover is thickened. Based on the modeling completed, and in light of the concern for greenhouse gas emissions for covers that are too thin, it is concluded that the optimal final cover design for the FPL is 3-feet. This final cover thickness was used in subsequent sensitivity analyses.

4.3.2 SOIL WATER CHARACTERISTICS

As shown in Table 4, significant changes in net infiltration are calculated in response to changes in the assumed saturated hydraulic conductivity and soil suction characteristics of the final cover. In analyzing the sensitivity of other variables and for long-term modeling of the performance of the alternative final cover system, the hydraulic conductivity of a soil sample (JRL-7) which exhibited a saturated hydraulic conductivity slightly higher than but near the geomean of samples tested (9.64×10^{-6} vs 1.04×10^{-5} cm/sec) and yielded an infiltration performance in the middle of the analyses was used.

4.3.3 WATER APPLICATION RATE

Calculated net flux through several modeled profiles varied only slightly when using application rates between 45 and 75 mm/day. As a result, the middle value of 60 mm/day was selected to represent the semi-arid climate typical of the FPL site.

4.3.4 VEGETATION CONDITIONS

The sensitivity of model results to vegetation coefficients including transpiration, root potentials, root distribution, root lengths and root flow resistance are discussed below and are also summarized in Table 4.

Maximum Actual Transpiration/Evaporation - Sensitivity analyses for this parameter included stipulation of maximum actual transpiration/evaporation values slightly greater or less than 1.0, and these analyses resulted in minor changes to the calculated net flux through the modeled soil profile. This result suggests that with site soils in this environment, the analyses are not very sensitive to the value of this parameter. Since selection of values greater than 1.0 may not be conservative (in that it allows transpiration to compensate for an evaporative deficit), a value of 1.0 was selected for the long-term analyses completed as part of this study.

Minimum and Maximum Root Potentials - Calculated net flux through several modeled profiles varied only slightly when using maximum root potential values between -30 KPa and -10 KPa but varied more significantly when completing sensitivity analysis using minimum root potential values between -1000 and -3000 KPa and. Since it is anticipated that revegetation of the closure area will include native plant communities and since these communities typically exhibit relatively low root potentials, a minimum root potential of -2000 KPa and maximum root potential of -15 KPa, were conservatively selected to simulate the water extraction capabilities of the anticipated native grasses with minor shrubs.

Crop Cover Fraction - Selection of crop cover fraction coefficients ranging from 50 to 75 percent result in only minor changes in the calculated infiltration performance of the cover.. Since native undisturbed areas at the FPL currently support a varying vegetative cover, a minimum 70 percent crop cover fraction, was selected for subsequent long-term analyses.

Root Distribution - The rooting depth and the concentration of roots at depth ("root distribution") was completed for this study by simulating relatively shallow rooting grasses with few deeper rooting shrubs. As modeled, in the base case, roots were limited to the three-foot cover thickness (914 mm), with 80 percent of the roots conservatively assigned to the upper one foot (305 mm) interval. As shown in Table 4, if deeper rooting plants and vegetation develop on the site, they will be able to extract more moisture from the waste prism and final cover system.

Root Length - As shown in Table 4, variations in the cumulative root length (within a 2-meter square area) do not significantly alter the performance of the cover system. Based on the sensitivity analyses completed, root length was not considered a sensitive parameter and a 100 meter root length was conservatively selected for subsequent long-term analysis.

4.4 MODELING RESULTS

In order to provide a basis for comparing the proposed alternative final cover to a prescriptive final cover that might be placed over the FPL, modeling included analysis of both the alternative and a prescriptive soil cover system using the same environmental conditions.

4.4.1 PRESCRIPTIVE FINAL COVER

Soil Barrier Layer - Modeling of a prescriptive soil barrier layer final cover over the FPL was conducted using LEACHM in order to allow for performance comparison. As summarized above, the soil based prescriptive cover was modeled as a four foot thick final cover incorporating a two-foot thick foundation layer composed from proposed import soils (Table 1), a one-foot thick clay barrier layer and a one-foot thick vegetative soil layer, again composed from the proposed import soils.

Modeling the performance of the low hydraulic conductivity barrier layer of a prescriptive final cover system constructed in a semi-arid climate is particularly difficult because environmental stresses (desiccation and settlement cracking) are likely to degrade the hydraulic properties of the low hydraulic conductivity barrier layer over the long term. In fact, field investigations indicate that the hydraulic properties of a prescriptive cover system in a semi-arid climate can degrade by two to three orders of magnitude with regard to saturated hydraulic conductivity within a period of a few years (Albright, et. al., 2007; Benson et.al., 2007; Benson and Wang, 1996; Melchior, 1997; Vierbicher and Assoc., 1996; & GLA, 2003).

For the assessment of a degraded prescriptive final cover system, moisture flux modeling was performed based on material characteristics that are degraded in a fashion similar to the degradation affects described by the Alternative Cover Assessment Program (ACAP). That is, modeling for the degraded prescriptive cover system assumed the use of soils similar to the soils used in modelling of the prescriptive final cover analysis included in the Forward Landfill alternative final cover design for the Stage 1A partial final closure (GLA, 2005).

Since CCR Title 27 regulations require shallow rooting vegetation that will not penetrate the barrier layer (min. $1x10^{-6}$cm/sec), both the degraded and the non-degraded prescriptive cover modeling used only grasses with a root distribution which was limited to the upper one foot of the final cover section.

Soil Moisture Content - Figure 2 depicts the modeled moisture content of a degraded prescriptive final cover system in percent by weight for eight distinct depth intervals over the 10-year modeling period. As shown, soil moisture in the shallow layers (up to 9-inches) is very responsive to individual rainfall events. Though reflecting a generally higher moisture content overall, the moisture content within the barrier layer (15 and 21 inches) is also responsive to seasonal conditions. Within deeper soils (27 to 45 inches) the soil moisture tends to

remain relatively high with little response to individual rain events but a broad, longer-term response to seasonal conditions. Seasonally, all of the soil layers are shown to dry during the spring, summer and fall, with rewetting of the profile expected to occur during the winter rains.

While environmental conditions will clearly degrade a prescriptive soil barrier final cover system over time, the theoretical performance of a non-degraded system was also modeled. As shown on Figure 3, under pristine conditions, the prescriptive final cover soils respond to individual and seasonal rainfall conditions in a way similar to, though slightly more muted than those modeled for the degraded condition.

Infiltration - Figure 4 depicts the calculated infiltration through the layers of the modeled degraded soil barrier prescriptive final cover profile. As summarized in Table 5, the most realistic (i.e., constant potential) bottom boundary condition, yields a net negative flux potential of about -0.15 inches/year. Though not shown graphically, the performance of the same cover system under Free Draining and Lysimeter bottom boundary conditions was calculated to be +0.06 and 0.0 inches/ year respectively).

The theoretical performance of a non-degraded system was also calculated. As shown on Figure 5 and summarized in Table 5, under this condition, a soil barrier layer final cover using import soils is calculated to yield a net drying of about -0.04 inches per year under constant potential conditions. Though not shown graphically, the performance of the same cover system under Free Draining and Lysimeter bottom boundary conditions was calculated to be +0.06 and 0.0 inches/year respectively.

4.4.2 ALTERNATIVE FINAL COVER

As summarized above, the FPL alternative final cover was modeled as a three-foot thick (914-mm) soil cover hosting native vegetation. The results of the alternative final cover modeling performed for this study are presented in Figures 6 through 11.

Soil Moisture Content - Figures 6, 7 and 8 depict the modeled soil moisture content of three different prospective final cover soils for the 3-foot thick alternative final cover for the FPL in percent by weight for several distinct depth intervals over the 10-year monitoring period using the most representative (constant potential) bottom boundary condition. As indicated in these figures, the full soil profile is expected to wet dramatically during the winter and dry during the spring, summer and fall; a condition similar to observed conditions in most monitored landfill covers. The modeled moisture trends results in a soil moisture content pattern wherein shallow soil moisture contents respond to single seasonal rain events, while the deeper soils generally respond in a more muted way to overall seasonal conditions.

As is indicated, similar soil moisture responses are anticipated in association with the variety of soils available at the site though soils with slightlyl higher hydraulic conductivity are modeled to yield slightly higher minimum annual moisture contents (Figure 8 vs Figures 6 and 7).

Infiltration - Figures 9, 10 and 11 depict the net flux through the layers of modeled alternative final covers incorporating a variety of soil sources. Figure 9 indicates a minimum potential performance of -7.83 inches/year for the proposed 3-foot thick alternative final cover composed of average import soils. Figures 10 and 11 illustrate the net flux calculated for other import and on-site source soils are likely to yield yield a net negative flux potential of between about -18.31 and -27.48 inches/year (Table 5).

Though not shown graphically, the performance of a final cover composed of average import soils under Free Draining and Lysimeter bottom boundary conditions was calculated to be +0.02 and 0.0 inches/ year respectively.

5.0 DISCUSSION

5.1 SOIL MOISTURE CONTENT

The soil moisture trends observed in Figures 6, 7, and 8 are typical of monitored alternative final cover systems in California in that higher moisture content is identified at depth during the dry season. This condition indicates that, as expected, there is a source of moisture available from below the final cover.

5.2 INFILTRATION

As shown in Figures 4, 5, 9, 10 and 11, substantial extraction of water from the landfill (negative flux) is expected to occur through both alternative and prescriptive soil barrier prescriptive final cover systems constructed at the FPL. As summarized on Table 5, this drying potential represents as much as -7.83 to -29.02 inches/year for the 3-foot thick alternative cover design proposed herein. In contrast, a degraded prescriptive soil barrier final cover is expected to yield a net negative potential of only about -0.15 inches/year. While it is unrealistic to expect that a prescriptive soil barrier final cover will not be subject to severe desiccation and related loss of performance under the climatic conditions of the FPL, even if the barrier layer could be maintained, it would yield a net drying potential of only about -0.04 inches per year.

Though not believed to be representative of actual conditions at the FPL, modeling completed using the Free Draining and Lysimeter bottom boundary conditions also indicate that the alternative final cover will perform in a fashion equal or superior to the prescriptive design (Table 5).

5.2 MAINTENANCE

Alternative final covers are designed to incorporate deeper rooting plant communities, and as a result, over time the 3-foot thick alternative cover is expected to resist surface erosion better than a 4-foot thick soil barrier layer prescriptive cover system. In addition, since the alternative final cover does not include a discrete low permeability barrier layer, repair of the system, if required, can be accomplished without substantial excavation. Finally, since it is unreasonable to expect that a prescriptive final cover will retain its performance characteristics over time, and since this damage can occur quickly and pervasively throughout the cover footprint (in response to seasonal dessication), it is likely that regular reconstruction of the system would be required to actually maintain pristine performance over the long term. In contrast, as an alternative final cover ages, system performance is expected to improve in response to development of more robust plant communities and soil/plant equilibrium.

5.3 COST

It has been estimated that the cost of constructing the earthworks portion of a prescriptive soil based final cover system at the FPL would be approximately 33% more than the cost of an alternative final cover. In addition, the post-closure maintenance costs of a prescriptive final cover are expected to be substantially (perhaps by orders of magnitude) more than post-closure maintenance cost of the alternative final cover proposed herein.

5.4 LANDFILL GAS EMISSIONS

Title 27 CCR indicates that another purpose for final covers is to control surface emissions of landfill gas. In fact, the placement of additional, cover soils as a part of final closure is expected to yield superior surface emissions performance relative to the existing interim cover. While controlling surface emissions, an appropriately designed alternative final cover system at this site will also minimize infiltration of moisture through the cover, further reducing any potential groundwater impacts that might contribute to landfill gas issues at the site. Since the landfill has not exhibited excessive surface emissions under interim closure conditions, landfill gas emissions are not expected be problematic after completion of the final cover.

6.0 RECOMMENDATIONS

As discussed earlier, the results of infiltration modeling indicate that a 3-foot thick alternative final cover composed from on-site and reasonably available imported soils will yield superior performance relative to a 4-foot thick soil based prescriptive soil cover. As a result of the modeling completed and reported herein, it is recommended that the FPL be closed using a 3-foot thick alternative final cover composed of select soils derived from the FPL site and from proposed import soil sources that meet the soil characteristics included in the analyses incorporated herein.

In order to generate adequate performance characteristics, the proposed final cover materials will have to be conditioned and monitored during import and placement in order to yield a uniform final cover soil. Final cover soils should, at a minimum possess a gradation that meets or exceeds 33% (by weight passing the No. 200 sieve), a minimum of 12% finer than 5-microns, and yield a saturated hydraulic conductivity of less than 1.0 $x10^{-5}$ cm/sec. for any individual test result.

Import borrow soils should be tested for gradation and Atterberg Limits at a minimum of 1 test per 1000 cubic yards of import. Import borrow soils should be tested for hydraulic conductivity at a minimum of 1 test per 5,000 cubic yards of import. The permeability samples should be remolded to 90% of the relative maximum density at 1% above optimum moisture content and tested at low confining pressure (6-8 pounds per square inch) to mimic final cover conditions.

Final cover soils Iincluding both on-site and imported soils should also be tested during construction at the following minimum frequency:

COMPACTED FINAL COVER FILL TESTING
TYPE AND FREQUENCY

Test Description	TEST DESIGNATION	MINIMUM TEST FREQUENCY	PASSING CRITERIA
Moisture-Density Relationship	ASTM D1557	The greater of: one per 5,000 cubic yards	No testing criteria. (Results used to evaluate relative compaction).
In-Place Moisture/Density (Nuclear or Drive Ring)	ASTM D6938, ASTM D2937	Four (4) field density tests shall be performed for each 1,000 cubic yards of material placed	Minimum of 90% for compaction and +/- 1% of optimum moisture content.
In-Place Density and Moisture Content (Sand-Cone)	ASTM D1556	10% of required density tests	Minimum of 90% for compaction and +/- 1% of optimum moisture content.
Laboratory Permeability	ASTM D5084 or approved method	One per 5,000 cubic yards placed	Maximum of $1.0x10^{-5}$ cm/sec
Atterberg Limits	ASTM D4318	One per 1,000 cubic yards placed	None Required.
Full Grain Size Distribution	ASTM D422	One per 1,000 cubic yards placed	Minimum of 33% passing #200 and minimum of 12% passing 5-micron
Standard Classification	ASTM D2487	One per 1,000 cubic yards placed	See Alternative Final Cover Design Report, GLA 2012.
Visual Inspection	ASTM D2488	Daily Observations	No oversize rocks (3-inch minus) and deleterious materials.

Upon completion of cover construction, it is also recommended that erosion monuments be placed throughout the cover section at locations of exaggerated erosion so that the residual cover thickness can be verified at all times. It is recommended that erosion inspection (and monitoring of erosion monuments) be completed at least annually until erosion equilibrium has been reached.

In previous meetings with the regulatory agencies (RWQCB), there was a concensus that the FPL site would be able to construct the final cover over the three waste management units (WMU's) over a six year period (i.e., a six-year closure schedule). The assumptions

were based on a final cover thickness of 2-feet, and more importantly based on the rate of suitable import borrow soils received at the FPL site to complete the closure. The closure recommendation, as designed and recommended herein is for a three foot thick cover system and a 6-year period would likely be insufficient to import suitable borrow soils. The additional 1-foot of final cover recommended as part of this closure design for the FPL would likely require an additional 3-4 years of soil importation.

Based on our final cover design and monitoring experience with alternative final cover systems in California, GLA believes that an initial 2-foot thick compacted and vegetated cover system will provide reasonable infiltration performance during the installation year period and that allowing an additional 4 to 6 yeas for importation and construction of the ultimate thickness will not create an unreasonable risk to groundwater. As part of this phased closure of the FPL site, FPL should implement an appropriate CQA program during construction of the initial 2-feet of the cover system with the additional 1-foot thick cover layer constructed and approved once the additional soils are available. FPL should clear and grub the 2-foot thick soil cover layer before commencing construction of the final 1-foot thick soil layer.

The ultimate performance of the proposed 3-foot thick cover section will be very sensitive to the establishment and maintenance of an effective plant community over the closure area. As a result, soil cover repairs and vegetation reseeding, should be conducted as necessary.

7.0 CONCLUSION

Based on the data presented herein, it is concluded that a 3-foot thick monolithic alternative final cover section constructed as described above will satisfy the regulatory requirements for an alternative final cover as defined in CCR Title 27. More specifically, the modeling completed and reported herein indicate that an alternative final cover system constructed using on-site borrow source soils or likely import soils would be consistent with the performance goal addressed by the prescriptive standard since it would afford superior protection against water quality impairment. In addition, the expected degradation of a prescriptive final cover and the resulting substantially higher cost of post-closure maintenance make a prescriptive final cover system at the FPL unreasonable and unnecessarily burdensome.

8.0 CLOSURE

This report is based on the project as described and the geotechnical data obtained in this study. Our firm should be notified of any pertinent change in the project plans or if conditions are found that differ from those described in this report, since this may require a revaluation. This report has not been prepared for use by parties or projects other than those named or described above. It may not contain sufficient information for other parties or other purposes.

This report has been prepared in accordance with generally accepted geotechnical practices and makes no other warranties, either express or implied, as to the professional advise or data included in it.

APPENDIX D

EMERGENCY RESPONSE PLAN

FLORIN PERKINS LANDFILL

EMERGENCY RESPONSE PLAN

August, 2016

1.0 INTRODUCTION

This Emergency Response Plan has been prepared for the Florin-Perkins Landfill (FPL). FPL is located east of Florin Perkins Rd, south of Jackson Highway (State Route 16) and north of Fruitridge Road. The property address is 3901 or 4201 Florin Perkins Road. The Multiple Family Trusts own FPL and lease the site to Zanker Road Resource Management, Ltd. (Zanker). Zanker operates a transfer station and a recycling facility on the site; and are responsible for emergencies related to their operations. Due to their presence on-site, Zanker personnel would logically be the first parties to detect and respond to an emergency situation. Parties responding to emergencies not related to Zanker's operation are likely to consist of the following personnel:

- The Owners
- Consultant personnel performing routine post closure monitoring and maintenance activities under contract by the Owners
- Contractors hired by the Owners.

In this document, "Owners/Agents" refers to these parties identified above.

This Emergency Response Plan explicitly does not supersede, or alter other emergency response plans (or similar documents) prepared, implemented, and maintained by either Zanker, or Consultants/Contractors employed by the Owners

FPL is an inactive unclassified (inert waste) landfill awaiting closure. As an inactive unclassified landfill, FPL presents significantly less potential for emergency situations than an active landfill. Owners/Agents responsible for Florin-Perkins Landfill post closure maintenance will have the capability of responding to typical non-hazardous emergencies and conducting preliminary hazard assessments. If a hazardous waste response is required the proper authorities will be notified.

Since FPL is inactive, there is no landfill equipment on-site to use in responding to emergencies. Therefor, the Owners will hire contractors to assist in responding to emergencies.

This plan provides the general guidelines to be followed to help prevent, resolve or mitigate unusual but foreseeable situations that could potentially impact public health and safety, or the environment. Since this plan cannot anticipate the details of any

specific emergency, individuals responding to an emergency are expected to combine training and experience with the general procedures and guidance presented here to assess a specific situation and respond appropriately.

In addition, the plan includes contact information for organizations and individuals to be notified in case of natural disasters or other emergencies.

Note that this plan does not foresee all eventualities of the facility, and sound common sense should be used at all times.

2.0 EMERGENCY RESPONSE AND REMEDIAL ACTION PLAN

2.1 PURPOSE

This Plan is prepared for general landfill postclosure maintenance.

As required by Section 21130 of Title 27, this Emergency Response Plan addresses the following potential events:

- Vandalism
- Fires
- Explosions
- Earthquakes
- Floods
- Collapse or Failure of Artificial or Natural Dikes, Levees, or Dams
- Surface Drainage Problems
- Other Waste Releases

This section discusses general emergency procedures. Specific procedures for the events listed above are presented in separate sections. In addition details on Electrical Power Line Safety is discussed.

2.2 HAZARD ASSESSMENT

If there is reason to suspect that an emergency situation involves hazardous substances, appropriately trained personnel (Owner/Agent - consultants/contractors) will assess the situation and establish appropriate response procedures. In many instances, the appropriate response is likely to involve restricting, or prohibiting, access to the site of the emergency and contacting specially trained professionals to handle the situation. In addition, Owners/Agents will contact appropriate public safety and regulatory agencies to advise them of the situation. Section 11, below presents contacts for emergency situations.

2.3 GENERAL EMERGENCY PROCEDURES

Emergency situations that may threaten public health or the environment may occur at the closed landfill. Depending on the nature of the emergency, either Zanker personnel, or City/County emergency responders will manage and direct any response to an emergency situation. Standard Owner/Agent policies and procedures will determine the appropriate personnel for this role. Training for Owner/Agent staff assigned to perform landfill post closure maintenance will include periodic review of emergency plans and procedures. Actions to respond to an emergency situation will likely include one, or more, of the following:

- Assess the condition and its potential impact upon public health and safety and the environment.
- Implement procedures necessary to protect public health and safety, such as restricting, or prohibiting, access to the site of the emergency.
- Implement procedures necessary to protect the environment. For example, constructing temporary containment berms to prevent off-site transport of wastes, or leachate may be necessary if drainage problems or exceptionally heavy storms create a "wash out" situation.
- Notify appropriate agencies and persons, such as public safety agencies, regulatory agencies, utilities, and neighbors, as soon as possible. In particular notify regulatory agencies within required time frames.
- Use fire or safety alarms as necessary.
- Brief staff of overhead power line and tower awareness to avoid contact. Maintain warning and setback notice from power lines.
- Respond to the emergency by providing first aid, if necessary, and other appropriate actions.
- Appoint appropriately trained persons to remediate any problems.
- Take corrective action to restore normal conditions/operations.
- Document the emergency and train personnel to prevent reoccurrence

3.0 VANDALISM

The presence of Zanker personnel at the transfer station and recycling facility will likely deter vandalism significantly. If vandalism occurs, depending on the location, either Consultant personnel will detect it during routine inspections and maintenance, or Zanker personnel will detect it during their operations. Depending on the nature of the damage, Zanker/Consultant personnel will address any problems following the general procedures presented in Section 2.3.

4.0 FIRES

Fires are a threat because of the obvious danger they pose to human health and property. Fires on a closed landfill generally result from one of three main causes: range fires, sparks from maintenance activities/equipment, and spontaneous combustion. If a fire occurs, the gates to the property should be closed to all but emergency vehicles.

4.1 EXTINGUISHING SURFACE FIRES

Fire extinguishers are available, if needed at the transfer station and recycling facility. Appropriately trained Consultant, or Contractor, personnel can extinguish small fires with fire extinguishers, shovels and other hand tools, and, possibly, transfer station, and/or recycling facility, equipment.

In case of a major fire, all personnel will leave the area of the fire and notify the City of Sacramento Fire Department. The nearest City of Sacramento Fire Station is Fire Station 60, located at 3301 Juliard Drive. Estimated travel time from Fire Station 60 to FPL is less than 5 minutes. Other emergency response services are expected to be within a half-hour time frame.

4.2 SUBSURFACE FIRES

Organic materials undergo natural decomposition under two natural settings: in the absence of air, called "anaerobic" conditions (e.g., buried underground in a landfill), or in an air-rich setting, called "aerobic" conditions (e.g., in a compost pile). Both aerobic and anaerobic conditions are natural, and neither results in any concern unless something unusual occurs. The biological and chemical reactions that occur in both aerobic and anaerobic decomposition generate heat. Since air is present under aerobic conditions, combustion, or fire can occur. The organic materials buried in a landfill are typically under anaerobic conditions, without sufficient oxygen present to support combustion. Introducing air into this anaerobic setting can result in spontaneous combustion or an underground fire. In a landfill, either inadequate cover, or excessive landfill gas withdrawal, can allow air into the buried wastes, which can cause an underground fire. Within this context, one should note the following conditions at FPL:

- In-place wastes have an extremely low organic content, and contain a large quantity of soil. Therefore, there is very little fuel to support a fire.
- Active landfill gas withdrawal is not proposed. Therefore, drawing air into the buried wastes by excessive landfill gas withdrawal in not possible.

Therefore, underground fires at FPL are not likely. If one does occur, placing additional cover or should extinguish the underground fire. In addition, a guidance document on

surface and subsurface landfill fires (causes, detection, response, etc.,) is available at the CalRecycle web site.

5.0 EXPLOSIONS

In general, explosions are rare at closed landfills. At a closed landfill an explosion would most likely result from accumulation of an explosive mixture of landfill gas and air in an enclosed space. Landfill gas control and regular landfill gas monitoring will reduce the chance of accumulating an explosive combination of landfill gas and air in an enclosed space at the closed landfill. If an explosion occurs, Owners/Agents, or emergency response personnel will respond to the situation consistent with the general emergency procedures presented in Section 2.3. In addition, personnel will implement the following procedures:

- Conduct initial observations from a safe distance and exercise extreme care before approaching the scene of the explosion.
- Contact appropriate public safety agencies immediately.
- If another explosion appears likely or possible (or if the cause of the explosion is not apparent) avoid approaching the area. That is, personnel without specific training in this sort of situation should not endanger themselves and should allow adequately trained professionals to handle the situation.
- Be aware that hazardous conditions (e.g., heated clouds of invisible gases, toxic fumes, etc.) that may not be visible, or readily apparent, may exist.
- If the explosion results in conditions that may allow the release of leachate, or wastes off-site, take steps necessary to contain wastes on-site, if such work can be performed at a safe distance from the location of the explosion.

In general, the above procedures respond to the fact that landfill gas is virtually the only fuel for an explosion that one would expect at a closed landfill. If an explosion occurs, and an explosive combination of landfill gas and air collecting in an enclosed space is not an obvious cause for the explosion, personnel should regard the situation as extremely unusual, and potentially dangerous. (e.g., Explosives may have been received and buried at the landfill without the operator's knowledge, despite good load-checking procedures.)

Explosion of a transformer is another potential source of explosions at the closed landfill. If this occurs, County personnel should notify PG&E and follow the general emergency procedures in Section 2.3.

Explosions related to operations at the transfer station and recycling facility are also possible. If such an explosion occurs, Owners/Agents will respond as described above.

In addition, personnel responding to an explosion should be aware that a fire may be associated with the explosion (as either a cause, or a result) and respond, if necessary, as described in Section 4, above.

6.0 EARTHQUAKES

The closed Florin-Perkins Landfill is not in an area where earthquakes are common, or likely to cause significant damage. In addition, experience from such events as the Northridge Earthquake in Southern California and the Loma Prieta Earthquake in Northern California indicates that most earthquakes are not likely to result in landfill-related imminent threats to public safety and health, or the environment. Either Owners or Agents will respond to earthquakes by following the general emergency procedures in Section 2.3. In addition, FPL may retain the services of experts in seismic events to evaluate potential damage or design repairs.

7.0 FLOODS

The "American River/Sacramento River Flood Depth Zones" map available on the Sacramento Area Flood Control Agency web site indicates that FPL is subject to flooding to a depth of zero to five feet. If flooding does occur, either Owners/Agents, or Consultant/Contractor personnel will respond as described by the general emergency procedures in Section 2.3. Responding personnel will exercise particular care to prevent off-site transportation of wastes by flood waters.

8.0 COLLAPSE OR FAILURE OF ARTIFICIAL OR NATURAL DIKES, LEVEES, OR DAMS

There are no artificial, or natural, dikes, or levees, or dams at FPL. Therefore, this emergency is not a concern.

9.0 SURFACE DRAINAGE PROBLEMS

Either Owners/Agents, or Consultant/Contractor personnel will respond to surface drainage problems as described in the general emergency procedures in Section 2.3. As noted in Section 2.3, constructing temporary containment berms to prevent off-site transport of wastes, or leachate may be necessary if drainage problems or exceptionally heavy storms create a "wash out" situation. Non-emergency work to correct surface drainage problems should be performed during dry weather (either dry periods during winter, or, preferably, during summer). Even emergency situations are likely to require temporary repairs, during rain events, with more substantial repairs performed during dry weather. Emergency work performed during storm events should have the following objectives:

- Protecting public health and safety
- Protecting the environment
- Protecting capital improvements, and equipment.

10. OTHER WASTE RELEASES

Responding to releases of landfill gas either through final cover, or at the landfill perimeter is considered part of regular postclosure maintenance, and this emergency response plan does not address that topic. Any other waste releases due to causes other than the events addressed above are likely to be unique situations. Either Zanker personnel or Consultant personnel will respond by following the general emergency procedures in Section 2.3.

11.0 EMERGENCY SERVICES AND CONTACTS

11.1 ROUTE TO HOSPITAL

The directions below describe the route to the nearest hospital:

- Take Florin-Perkins Road north to Jackson Road.
- Left on Jackson Road.
- Bear left onto Folsom Boulevard.
- Bear right onto Elvas Avenue.
- Take ramp.
- Turn right onto 57th Street.
- Turn left onto H street.
- Turn right onto 51st Street
- Turn right onto F Street
- The hospital on F street is on the left.

The Hospital name, address, and phone number are:

Sutter Memorial Hospital

5151 F Street, Sacramento, Ca. 95819

916-454-3333

11.2 EMERGENCY EQUIPMENT AND AVOIDANCE OF HIGH VOLTAGE POWER

First aid supplies and other emergency equipment are available at the transfer station. Warning signs and notices near high voltage power should be maintained as referenced on the landfill construction drawings.

11.3 EMERGENCY CONTACT INFORMATION

12.0 SUMMARY

The emergency conditions discussed in this plan are very general. It is impossible to cover every possible emergency situation and, therefore, the appropriate personnel should constantly be on the lookout for possible emergency conditions. Prevention and detection of potential hazards will save lives and protect property. The original and a copy of this plan will be kept in the Owners' possession; and the Owner will provide copies as requested.

APPENDIX E

COST ESTIMATES

Florin-Perkins Landfill
Revised Closure Cost Estimate
2014 Post-WDR Update

Post-Closure Cost Estimate
2014 Post-WDR Update

NOTE:	As requested by RWQCB personnel, NV5 has prepared this updated post-closure cost estimate to present a post-WDR (Order No. R5-2013-0042), February, 2014 estimate

SITE SECURITY

Assumptions and Input	
1	Average annual effort is 2 laborers with a pickup for 1 day, plus materials
2	Use CALTRANS Labor Surcharge and Equpiment Rental Rates 4/1/13 - 3/31/14 (Att. A)
3	Use Prevailing Wage Rates from Department of Industrial Relations web site (Att. B)
4	Use CALTRANS Standard Spec 9-1.04 (Att. C)

Labor

Number of persons	Group	Loaded Cost	Surcharge (%)	Cost w/Surcharge	Hours per person	Labor Cost	Markup (%)	Total Labor Cost
2	Laborer-Gp. 3	$ 45.92	12	$ 51.43	8	$ 822.89	35	**$ 1,110.90**

Equipment

Description	Code	Rate	Hours	Equipment Cost	Markup (%)	Total Equipment Cost
Cars, Light Trucks	00-06	$ 21.43	8	$ 171.44	15	**$ 197.16**

Materials	
Estimate based on Home Depot costs for chain link fencing materials	**$ 500.00**

Average Annual Site Security Cost	**$ 1,808.05**

Florin-Perkins Landfill
Post-Closure Cost Estimate
2014 Post-WDR Update

FINAL COVER MAINTENANCE

NOTE: Over time ET final cover will require very little maintenance per GLA Report

Assumptions and Input	
1	Average annual effort is 1 laborer, 1 operator, a rubber-tired tractor, and a pickup for 3 days
2	Use CALTRANS Labor Surcharge and Equpiment Rental Rates 4/1/13 - 3/31/14 (Att. A)
3	Use Prevailing Wage Rates from Department of Industrial Relations web site (Att. B)
4	Use CALTRANS Standard Spec 9-1.04 (Att. C)

Labor

Number of persons	Group	Loaded Cost	Surcharge (%)	Cost w/Surcharge	Hours per person	Labor Cost	Markup (%)	Subtotal for Group
1	Laborer-Gp. 3	$ 45.92	12	$ 51.43	24	$ 1,234.33	35	**$ 1,666.34**
1	Operating engineer (Heavy and Highway Work) - Gp. 6	$ 59.20	12	$ 66.30	24	$ 1,591.30	35	**$ 2,148.25**
						Total Labor Cost		**$ 3,814.59**

Equipment

Description	Code	Rate	Hours	Equipment Cost	Markup (%)	Subtotal Equipment Cost
Cars, Light Trucks	00-06	$ 21.43	24	$ 514.32	15	**$ 591.47**
Tractor, Rubber Tire, Industrial, Farm & Skid Steer, over 50 HP	C	$ 38.85	24	$ 932.40	15	**$ 1,072.26**
				Total Equipment Cost		**$ 1,663.73**

Average Annual Final Cover Maintenance Cost	**$ 5,478.32**

Florin-Perkins Landfill
Post-Closure Cost Estimate
2014 Post-WDR Update

VEGETATIVE COVER MAINTENANCE

NOTE: Over time ET final cover will require very little maintenance per GLA Report

Assumptions and Input	
1	Average annual effort is 2 laborers with a pickup for 1 day, plus materials
2	Use CALTRANS Labor Surcharge and Equpiment Rental Rates 4/1/13 - 3/31/14 (Att. A)
3	Use Prevailing Wage Rates from Department of Industrial Relations web site (Att. B)
4	Use CALTRANS Standard Spec 9-1.04 (Att. C)

Labor

Number of persons	Group	Loaded Cost	Surcharge (%)	Cost w/Surcharge	Hours per person	Labor Cost	Markup (%)	Total Labor Cost
2	Laborer-Gp. 3	$ 45.92	12	$ 51.43	8	$ 822.89	35	**$ 1,110.90**

Equipment

Description	Code	Rate	Hours	Equipment Cost	Markup (%)	Total Equipment Cost
Cars, Light Trucks	00-06	$ 21.43	8	$ 171.44	15	**$ 197.16**

Materials

Estimate based on Peaceful Valley Farm Supply (Grass Valley) CA native grass seed mix costs	**$ 100.00**

Average Annual Vegetative Cover Maintenance Cost	**$ 1,408.05**

Florin-Perkins Landfill
Post-Closure Cost Estimate
2014 Post-WDR Update

Monitoring, Operation, and Maintenance of Environmental Monitoring and Control Systems

Assumptions and Input	
1	Use actual Dunn Environmental costs for ground-water and LFG monitoring
2	Assume need to replace LFG system once in 30 years
3	Assume wells are $3,000/Each per internal DE Team cost discussions
4	Use prevailing wage cost info from M. Penn for LFG laterals & headers (conservative)
5	Gas monitoring cost reduced to reflect reduced laboratory cost as suggested by LEA

Annual Gas Control and Monitoring	**$ 23,000.00**
Annual Groundwater, Vadose and Leachate Monitoring (includes corrective action monitoring)	**$ 32,000.00**

Landfill Gas System Replacement Costs

Item	Units	Quantity	Unit Cost	Item Cost
Wells	Each	46	$ 3,000.00	$ 138,000.00
4" Manifold	LF	10100	$ 27.00	$ 272,700.00
Wind Turbines	Included in Well Cost			0
	Total Gas System Replacement Cost			$ 410,700.00
	Annualized Cost Over 30 Years			**$ 13,690.00**

Average Annual Cost for Monitoring, Operation, and Maintenance of Environmental Monitoring and Control Systems	**$ 68,690.00**

Drainage and Erosion Control Systems Maintenance.

Assumptions and Input	
1	Average annual cost equals cost to replace one 120' downdrain (24" CMP) every 5 years (based on experience) NOTE: This does not imply that the actual work will consist of replacing 1 overside drain every 5 years, just that the cost of replacing 1 overside drain every 5 years is a representative average annual cost.
2	Average annual effort is 1 operator and 2 laborers with rubber tire tractor with backhoe & laoder bucket and pickup and for 2 days, plus materials
3	Use CALTRANS Labor Surcharge and Equpiment Rental Rates 4/1/13 - 3/31/14 (Att. A)
4	Use Prevailing Wage Rates from Department of Industrial Relations web site (Att. B)
5	Use CALTRANS Standard Spec 9-1.04 (Att. C)

Labor

Number of persons	Group	Loaded Cost	Surcharge (%)	Cost w/Surcharge	Hours per person	Labor Cost	Markup (%)	Total Labor Cost
1	Operating engineer (Heavy and Highway Work) - Gp. 6	$ 59.20	12	$ 66.30	16	$ 1,060.86	35	$ 1,432.17
2	Laborer-Gp. 3	$ 45.92	12	$ 51.43	16	$ 1,645.77	35	$ 2,221.79
						Total Labor Cost		**$ 3,653.96**

Equipment

Description	Code	Rate	Hours	Equipment Cost	Markup (%)	Total Equipment Cost

Florin-Perkins Landfill
Post-Closure Cost Estimate
2014 Post-WDR Update

Tractor, Rubber Tire, Industrial, Farm & Skid Steer, over 50 HP	C	$ 38.85	16	$ 621.60	15	$ 714.84
Cars, Light Trucks	00-06	$ 21.43	16	$ 342.88	15	$ 394.31
					Total Equipment Cost	**$ 1,109.15**

Materials (16 Ga. CMP)						
Item	Units	Quantity	Unit Cost	Item Cost	Markup (%)	Total Materials Cost
Pipe - 20' lengths	LF	120	$ 15.24	$ 1,828.80	15	$ 2,103.12
Couplings w/Gaskets	Each	8	$ 30.00	$ 240.00	15	$ 276.00
Flare Inlet	Each	1	$ 125.00	$ 125.00	15	$ 143.75

					Total Materials Cost	**$ 5,052.87**

Total Cost	**$ 9,815.98**

Average Annual Drainage and Erosion Control Systems Maintenance Cost (Total Cost, Above, Divided by 5)	**$ 1,963.20**

TOTAL AVERAGE ANNUAL POSTCLOSURE COST	**$ 79,347.62**

TOTAL POSTCLOSURE COST OVER 30 YEARS	**$ 2,380,428.73**

FLORIN PERKINS LANDFILL

UPDATED FINAL CLOSURE AND POST-CLOSURE MAINTENANCE PLAN

May, 2018

Closure and Post-Closure Cost Estimates

Attachment A

CALTRANS Labor Surcharge and Equipment Rental Rates Effective April 1, 2013 Through March 3, 2014

State of California
Business, Transportation, and Housing Agency

Department of Transportation
Division of Construction

Labor Surcharge and Equipment Rental Rates

(Cost of Equipment Ownership)

Effective April 1, 2013 through March 31, 2014

USER'S GUIDE
FOR LABOR SURCHARGE AND EQUIPMENT RENTAL RATES
April 1, 2013 - March 31, 2014

Equipment Rental Rates are available on the Internet at:

http://www.dot.ca.gov/hq/construc/equipmnt.html

Miscellaneous Equipment Rental Rates are available on the Internet at:

http://www.dot.ca.gov/hq/construc/misceqrr/index.htm

The miscellaneous listing is updated daily.

Changes

Books are no longer available in hard copy and should be downloaded from the internet and printed.
Changes to the equipment rates in the April 1, 2013 book are the result of: 1) fuel costs increased; 2) interest rates decreased; 3) Producers' Price Index increased; 4) increase in sales tax; and 5) no change in freight (F.O.B.) rates.

Labor Surcharge

The labor surcharge compensates the contractor for statutory payroll items stipulated by various governmental agencies. The six items included are worker's compensation, social security, Medicare, Federal unemployment insurance, State unemployment insurance, and State training taxes. The general rate is an average of the job classifications common to Caltrans projects. Changes to the labor surcharge in the April 1, 2013 book were the result of a decrease in worker's compensation rates. The rates were derived from using the pure premium rate approved by the Insurance Commissioner effective January 1, 2013 and increasing it by the historical statewide average expense. In the calculation of the labor surcharge for overtime work, the worker's compensation is not included on the premium portion of overtime, as provided by worker's compensation regulations.

The surcharge percentage to be applied to the actual wages paid as provided in Section 9-1.04B [9-1.03A(1b)] of the *Standard Specifications* will **be 12 percent for regular time (RT)** and **11 percent for overtime (OT)**.

Exceptions to the general rate are listed below. These classifications were chosen because of high worker's compensation insurance costs. Forward questions, regarding worker's compensation rating and proper labor surcharge usage, to the rental rate personnel in the Division of Construction.

EXCEPTIONS

Type of Work Performed	Labor Surcharge Percent	
	RT	**OT**
Concrete Construction - Bridge	**14**	**13**
Drilling	**14**	**13**
Fence & Guardrail Construction	**14**	**13**
Erection of structural metal for metal bridges, excluding sign bridge	**18**	**16**
Landscape Gardener	**12**	**11**
Mobil Crane & Hoist Service	**16**	**15**
Painting Steel Structures or Bridges	**18**	**16**
Pile Driving, not including drilled, cast-in-place concrete piles	**14**	**13**
Sign Erection or Repair	**19**	**17**
Wrecking & Demolition	**14**	**13**

An appropriate labor surcharge will be established by the Division of Construction for work that is determined by the resident engineer to be covered by Longshoreman and Harbor Worker's Act.

ELECTRIC GENERATORS & LIGHT PLANTS [ELGEN]

DELAY FACTOR = 0.10 **OVERTIME FACTOR = 0.91**

Rates are for gas or diesel power and alternating or direct current.

GENERATOR [GEN]

Rated in accordance with Mfr's output in kilowatts.

OVER	TO	Code	Rate
0	1	**000-001**	$0.89
1	3	**001-003**	$2.09
3	7.5	**003-008**	$4.29
7.5	15	**008-015**	$9.58
15	25	**015-025**	$15.07
25	50	**025-050**	$15.10
50	100	**050-100**	$27.44
100	200	**100-200**	$55.81
200	300	**200-300**	$95.68
300	400	**300-400**	$130.03
400	500	**400-500**	$162.69

LIGHTS [LITE]

Includes trailer, pole and generator.

Model	Code	Rate
2 Light Set	**2 LIGHT**	$4.13
4 Light Set	**4 LIGHT**	$8.16

ELECTRIC POWERED HAND TOOLS [ELTOL]

DELAY FACTOR = 0.61 **OVERTIME FACTOR = 0.42**

Includes electric powered, hand held tools not listed elsewhere in this book. Expendable bits, blades, discs, wheels, etc. shall be paid by separate invoice. Rated in accordance with Mfr's suggested retail price.

TOOLS [TOOL]

OVER	TO	Code	Rate
450	600	**045-060**	$0.27
600	800	**060-080**	$0.35
800	1000	**080-100**	$0.45

FORK LIFT TRUCKS [FKLFT]

DELAY FACTOR = 0.19 **OVERTIME FACTOR = 0.83**

Includes attachments and accessories. Listed in accordance with the Mfr's maximum rated capacity in kilograms(pounds).

FORK LIFT TRUCKS [FLT]

OVER	TO	Code	Rate
454 (1000)	1814 (4000)	**010-040**	$29.56
1814 (4000)	2722 (6000)	**040-060**	$39.39
2722 (6000)	3629 (8000)	**060-080**	$44.36
3629 (8000)	5443 (12000)	**080-120**	$61.90
5443 (12000)	7258 (16000)	**120-160**	$64.44
7258 (1600)	9072 (20000)	**160-200**	$75.35
9072 (20000)	11340 (25000)	**200-250**	$74.03
11340 (25000)	13608 (30000)	**250-300**	$82.00
13608 (30000)	18144 (40000)	**300-400**	$103.44
18144 (40000)	22680 (50000)	**400-500**	$122.50
22680 (50000)	34020 (75000)	**500-750**	$166.02

GRADERS [GRADR]

DELAY FACTOR = 0.10 **OVERTIME FACTOR = 0.91**

Includes ripper and scarifier attachments and all accessories. Electronic blade control and specialty cutting tools shall be paid separately.

BLADE-MOR [BMOR]

Model	Code	Rate
727	**2173**	$27.98

TRUCK, TRUCK TRAILERS, EXCL. DUMP TRUCKS & EQPT TRAIL [TRUCK]

DELAY FACTOR = 0.13 **OVERTIME FACTOR = 0.88**

Includes all attachments and accessories related to hauling, with and without trailers as needed. Includes water trucks, freight trucks and passenger vehicles, including 4wd option. Listed by Mfr's Gross Vehicle Weight in Kilograms(pounds). For tractor-trailer units, the gross vehicle weight of the cargo carrying unit or units will control. In the case of water trucks, the tank capacity expressed in kilograms (pounds) of water plus 20%, will determine the gross vehicle weight. For attachment allowance, see attachment class.

GENERAL PREVAILING WAGE DETERMINATION MADE BY THE DIRECTOR OF INDUSTRIAL RELATIONS
PURSUANT TO CALIFORNIA LABOR CODE PART 7, CHAPTER 1, ARTICLE 2, SECTIONS 1770, 1773 AND 1773.1

FOR COMMERCIAL BUILDING, HIGHWAY, HEAVY CONSTRUCTION AND DREDGING PROJECTS

CRAFT: #LABORER AND RELATED CLASSIFICATIONS

DETERMINATION: NC-23-102-1-2013-2
ISSUE DATE: AUGUST 22, 2013
EXPIRATION DATE OF DETERMINATION: JUNE 29, 2014** The rate to be paid for work performed after this date has been determined. If work will extend past this date, the new rate must be paid and should be incorporated in contracts entered into now. Contact the Office of the Director – Research Unit for specific rates at (415) 703-4774.

LOCALITY: ALL LOCALITIES WITHIN ALAMEDA, ALPINE, AMADOR, BUTTE, CALAVERAS, COLUSA, CONTRA COSTA, DEL NORTE, EL DORADO, FRESNO, GLENN, HUMBOLDT, KINGS, LAKE, LASSEN, MADERA, MARIPOSA, MARIN, MENDOCINO, MERCED, MODOC, MONTEREY, NAPA, NEVADA, PLACER, PLUMAS, SACRAMENTO, SAN BENITO, SAN FRANCISCO, SAN JOAQUIN, SAN MATEO, SANTA CLARA, SANTA CRUZ, SHASTA, SIERRA, SISKIYOU, SOLANO, SONOMA, STANISLAUS, SUTTER, TEHAMA, TRINITY, TULARE, TUOLUMNE, YOLO, AND YUBA COUNTIES.

PLEASE GO TO PAGE 50 FOR CLASSIFICATIONS WITHIN EACH GROUP

# INDICATES AN APPRENTICEABLE CRAFT. THE CURRENT APPRENTICE WAGE RATES ARE AVAILABLE ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWAPPWAGE/PWAPPWAGESTART.ASP. TO OBTAIN ANY APPRENTICE WAGE RATES AS OF JULY 1, 2008 AND PRIOR TO SEPTEMBER 27, 2012, PLEASE CONTACT THE DIVISION OF APPRENTICESHIP STANDARDS OR REFER TO THE DIVISION OF APPRENTICESHIP STANDARDS' WEBSITE AT HTTP://WWW.DIR.CA.GOV/DAS/DAS.HTML.

a GROUP 1(D) - MAINTENANCE OR REPAIR TRACKMEN AND ROAD BEDS AND ALL EMPLOYEES PERFORMING WORK COVERED BY THIS CLASSIFICATION SHALL RECEIVE $0.25 PER PER HOUR ABOVE THEIR REGULAR RATE FOR ALL WORK PERFORMED ON UNDERGROUND STRUCTURES NOT SPECIFICALLY COVERED HEREIN. THIS SHALL NOT APPLY TO WORK BELOW GROUND LEVEL IN OPEN CUT. THIS SHALL APPLY TO CUT AND COVER WORK OF SUBWAY CONSTRUCTION AFTER TEMPORARY COVER HAS BEEN PLACED.
GROUP 1(H) - ALL LABORERS WORKING OFF OR WITH OR FROM BOS'N CHAIRS, SWINGING SCAFFOLDS, BELTS RECEIVE $0.25 PER HOUR ABOVE THEIR APPLICABLE WAGE RATE. THIS SHALL NOT APPLY TO LABORERS ENTITLED TO RECEIVE THE WAGE RATE SET FORTH IN GROUP 1(A).

b SATURDAYS IN THE SAME WORK WEEK MAY BE WORKED AT STRAIGHT-TIME IF JOB IS SHUT DOWN DURING THE NORMAL WORK WEEK DUE TO INCLEMENT WEATHER, MAJOR MECHANICAL BREAKDOWN OR LACK OF MATERIALS BEYOND THE CONTROL OF THE EMPLOYER.

c **AREA 1** - ALAMEDA, CONTRA COSTA, MARIN, SAN FRANCISCO, SAN MATEO, AND SANTA CLARA COUNTIES.
AREA 2 - ALPINE, AMADOR, BUTTE, CALAVERAS, COLUSA, DEL NORTE, EL DORADO, FRESNO, GLENN, HUMBOLDT, KINGS, LAKE, LASSEN, MADERA, MARIPOSA, MENDOCINO, MERCED, MODOC, MONTEREY, NAPA, NEVADA, PLACER, PLUMAS, SACRAMENTO, SAN BENITO, SAN JOAQUIN, SANTA CRUZ, SHASTA, SIERRA, SISKIYOU, SOLANO, SONOMA, STANISLAUS, SUTTER, TEHAMA, TRINITY, TULARE, TUOLUMNE, YOLO AND YUBA COUNTIES.

d SERVICE LANDSCAPE LABORER ON NEW CONSTRUCTION MAY WORK ANY FIVE (5) DAYS WITHIN A WEEK.

e GROUP 1(B) RECEIVES AN ADDITIONAL AMOUNT EACH DAY. SEE PAGE 50 FOR DETAILS.

f WHEN THREE SHIFTS ARE EMPLOYED FOR FIVE (5) OR MORE CONSECUTIVE DAYS, SEVEN AND ONE-HALF (7 ½) CONSECUTIVE HOURS (EXCLUSIVE OF MEAL PERIOD), SHALL CONSTITUTE A DAY OF WORK, FOR WHICH EIGHT (8) TIMES THE STRAIGHT TIME HOURLY RATE SHALL BE PAID AT THE NON-SHIFT WAGE RATE FOR THE SECOND SHIFT. THE THIRD SHIFT SHALL BE SEVEN (7) HOURS OF WORK FOR EIGHT (8) HOURS PAY AT THE NON-SHIFT WAGE RATE.

g ZONE PAY AT THREE DOLLARS ($3.00) PER HOUR, FACTORED AT THE APPLICABLE OVERTIME MULTIPLE, WILL BE ADDED TO THE BASE RATE FOR WORK PERFORMED OUTSIDE THE FREE ZONE DESCRIBED BY THE BOUNDARIES ALONG TOWNSHIP AND RANGE LINES. PLEASE SEE TRAVEL AND SUBSISTENCE PROVISION FOR MAP DESCRIPTION AND EXCEPTIONS.

RECOGNIZED HOLIDAYS: HOLIDAYS UPON WHICH THE GENERAL PREVAILING HOURLY WAGE RATE FOR HOLIDAY WORK SHALL BE PAID, SHALL BE ALL HOLIDAYS IN THE COLLECTIVE BARGAINING AGREEMENT, APPLICABLE TO THE PARTICULAR CRAFT, CLASSIFICATION, OR TYPE OF WORKER EMPLOYED ON THE PROJECT, WHICH IS ON FILE WITH THE DIRECTOR OF INDUSTRIAL RELATIONS. IF THE PREVAILING RATE IS NOT BASED ON A COLLECTIVELY BARGAINED RATE, THE HOLIDAYS UPON WHICH THE PREVAILING RATE SHALL BE PAID SHALL BE AS PROVIDED IN SECTION 6700 OF THE GOVERNMENT CODE. YOU MAY OBTAIN THE HOLIDAY PROVISIONS FOR THE CURRENT DETERMINATIONS ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWD. HOLIDAY PROVISIONS FOR CURRENT OR SUPERSEDED DETERMINATIONS MAY BE OBTAINED BY CONTACTING THE OFFICE OF THE DIRECTOR – RESEARCH UNIT AT (415) 703-4774.

TRAVEL AND/OR SUBSISTENCE PAYMENT: IN ACCORDANCE WITH LABOR CODE SECTIONS 1773.1 AND 1773.9, CONTRACTORS SHALL MAKE TRAVEL AND/OR SUBSISTENCE PAYMENTS TO EACH WORKER TO EXECUTE THE WORK. YOU MAY OBTAIN THE TRAVEL AND/OR SUBSISTENCE PROVISIONS FOR THE CURRENT DETERMINATIONS ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWD. TRAVEL AND/OR SUBSISTENCE REQUIREMENTS FOR CURRENT OR SUPERSEDED DETERMINATIONS MAY BE OBTAINED BY CONTACTING THE OFFICE OF THE DIRECTOR – RESEARCH UNIT AT (415) 703-4774.

DETERMINATION: NC-23-102-1-2013-2 and NC-23-102-1-2013-2A

CONSTRUCTION SPECIALIST
ASPHALT IRONERS AND RAKERS
CHAINSAW
CONCRETE DIAMOND CHAINSAW
LASER BEAM IN CONNECTION WITH LABORER'S WORK
MASONRY AND PLASTER TENDER
CAST IN PLACE MANHOLE FORM SETTERS
PRESSURE PIPELAYERS
DAVIS TRENCHER – 300 OR SIMILAR TYPE (AND ALL SMALL TRENCHERS)
STATE LICENSED BLASTERS AS DESIGNATED
DIAMOND DRILLERS
DIAMOND CORE DRILLER
MULTIPLE UNIT DRILLS
HYDRAULIC DRILLS
CERTIFIED WELDER

GROUP 1 (FOR CONTRA COSTA COUNTY ONLY, USE GROUP 1 (G) FOR SOME OF THE FOLLOWING CLASSIFICATIONS)
ASPHALT SPREADER BOXES (ALL TYPES)
BARKO, WACKER AND SIMILAR TYPE TAMPERS
BUGGYMOBILE
CAULKERS, BANDERS, PIPEWRAPPERS, CONDUIT LAYERS, PLASTIC PIPE LAYERS
CERTIFIED ASBESTOS AND MOLD REMOVAL WORKER
CERTIFIED HAZARDOUS WASTE WORKER (INCLUDING LEAD ABATEMENT)
COMPACTORS OF ALL TYPES
CONCRETE AND MAGNESITE MIXER AND ½ YARD
CONCRETE PAN WORK
CONCRETE SANDERS, CONCRETE SAW
CRIBBERS AND/OR SHORING
CUT GRANITE CURB SETTER
DRI PAK-IT MACHINE
FALLER, LOGLOADER AND BUCKER
FORM RAISERS, SLIP FORMS
GREEN CUTTERS
HEADERBOARD MEN, HUBSETTERS, ALIGNERS BY ANY METHOD
HIGH PRESSURE BLOW PIPE (1-1/2" OR OVER, 100 LBS. PRESSURE/OVER)
HYDRO SEEDER AND SIMILAR TYPE
JACKHAMMER OPERATORS
JACKING OF PIPE OVER 12 INCHES
JACKSON AND SIMILAR TYPE COMPACTORS
KETTLEMEN, POTMEN, AND MEN APPLYING ASPHALT, LAY-KOLD, CREOSOTE, LIME, CAUSTIC AND SIMILAR TYPE MATERIALS (APPLYING MEANS APPLYING DIPPING, OR HANDLING OF SUCH MATERIALS)
LAGGING, SHEETING, WHALING, BRACING, TRENCH-JACKING, LAGGING HAMMER
MAGNESITE, EPOXY RESIN, FIBER GLASS AND MASTIC WORKERS (WET/DRY)
NO JOINT PIPE AND STRIPPING OF SAME, INCLUDING REPAIR OF VOIDS
PAVEMENT BREAKERS AND SPADERS, INCLUDING TOOL GRINDER
PERMA CURBS
PRECAST-MANHOLE SETTERS
PIPELAYERS (INCLUDING GRADE CHECKING IN CONNECTION WITH PIPELAYING)
PRESSURE PIPE TESTER
POST HOLE DIGGERS-AIR, GAS, AND ELECTRIC POWER BROOM SWEEPERS
POWER TAMPERS OF ALL TYPES, EXCEPT AS SHOWN IN GROUP 2
RAM SET GUN AND STUD GUN
RIPRAP-STONEPAVER AND ROCK-SLINGER, INCLUDING PLACING OF SACKED CONCRETE AND/OR SAND (WET OR DRY) AND GABIONS AND SIMILAR TYPE
ROTARY SCARIFIER OR MULTIPLE HEAD CONCRETE CHIPPING SCARIFIER
ROTO AND DITCH WITCH
ROTOTILLER
SAND BLASTERS, POTMEN, GUNMEN, AND NOZZLEMEN
SIGNALING AND RIGGING
SKILLED WRECKER (REMOVING AND SALVAGING OF SASH, WINDOWS, DOORS, PLUMBING AND ELECTRIC FIXTURES)
TANK CLEANERS
TREE CLIMBERS
TRENCHLESS TECHNOLOGY LABORER- PIPE INSTALLATION, BURSTING, RELINING, OR SIMILAR
TRENCHLESS LABORER'S WORK, CAMERA CONTROLLER
TURBO BLASTER
VIBRA-SCREED-BULL FLOAT IN CONNECTION WITH LABORER'S WORK
VIBRATORS

GROUP 1 (A)
ALL WORK OF LOADING, PLACING AND BLASTING OF ALL POWDER & EXPLOSIVES OF WHATEVER TYPE, REGARDLESS OF METHOD USED FOR LOADING AND PLACING
JOY DRILL MODEL TWM-2A
GARDENER-DENVER MODEL DH 143 AND SIMILAR TYPE DRILLS
TRACK DRILLERS
JACK LEG DRILLERS
WAGON DRILLERS
MECHANICAL DRILLERS-ALL TYPES REGARDLESS OF TYPE OR METHOD OF POWER
MECHANICAL PIPE LAYER-ALL TYPES REGARDLESS OF TYPE OR METHOD OF POWER
BLASTERS AND POWDERMAN
HIGH SCALERS (INCLUDING DRILLING OF SAME)
TREE TOPPER
BIT GRINDER

GROUP 1 (B) -- SEE GROUP 1 RATES
SEWER CLEANERS (ANY WORKMEN WHO HANDLE OR COME IN CONTACT WITH RAW SEWAGE IN SMALL DIAMETER SEWERS) SHALL RECEIVE $4.00 PER DAY ABOVE GROUP 1 WAGE RATES. THOSE WHO WORK INSIDE RECENTLY ACTIVE, LARGE DIAMETER SEWERS, AND ALL RECENTLY ACTIVE SEWER MANHOLES SHALL RECEIVE $5.00 PER DAY ABOVE GROUP 1 WAGE RATES.

GROUP 1 (C)
BURNING AND WELDING IN CONNECTION WITH LABORER'S WORK
SYNTHETIC THERMOPLASTICS AND SIMILAR TYPE WELDING

GROUP 1 (D)
SEE FOOTNOTE A ON PAGE 49

GROUP 1 (E)
WORK ON AND/OR IN BELL HOLE FOOTINGS AND SHAFTS THEREOF, AND WORK ON AND IN DEEP FOOTINGS (DEEP FOOTINGS IS A HOLE 15 FEET OR MORE IN DEPTH)
SHAFT IS AN EXCAVATION OVER FIFTEEN (15) FEET DEEP OF ANY TYPE

GROUP 1 (F-1)
ALIGNER OF WIRE WINDING MACHINE IN CONNECTION WITH GUNITING OR SHOT CRETE

GROUP 1 (F-2)
ALIGNER HELPER OF WIRE WINDING MACHINE IN CONNECTION WITH GUNITING OR SHOT CRETE

GROUP 1 (G) APPLIES ONLY TO WORK IN CONTRA COSTA COUNTY
PIPELAYERS (INCLUDING GRADE CHECKING IN CONNECTION WITH PIPELAYING), CAULKERS, BANDERS, PIPEWRAPPERS, CONDUIT LAYERS, PLASTIC PIPE LAYER, PRESSURE PIPE TESTER, NO JOINT PIPE AND STRIPPING OF SAME, INCLUDING REPAIR OF VOIDS, PRECAST MANHOLE SETTERS, CAST IN PLACE MANHOLE FORM SETTERS IN CONTRA COSTA COUNTY ONLY

GROUP 1(H)
SEE FOOTNOTE A ON PAGE 49

GROUP 2
ASPHALT SHOVELERS
CEMENT DUMPERS AND HANDLING DRY CEMENT OR GYPSUM
CHOKE-SETTER AND RIGGER (CLEARING WORK)
CONCRETE BUCKET DUMPER AND CHUTEMAN
CONCRETE CHIPPING AND GRINDING
CONCRETE LABORERS (WET OR DRY)
DRILLERS HELPER, CHUCK TENDER, NIPPER (ONE CHUCKTENDER ON SINGLE MACHINE OPERATION WITH MINIMUM OF ONE CHUCKTENDER FOR EACH TWO MACHINES ON MULTIPLE MACHINE OPERATION. JACKHAMMERS IN NO WAY INVOLVED IN THIS ITEM.)
GUINEA CHASER (STAKEMAN), GROUT CREW
HIGH PRESSURE NOZZLEMAN, ADDUCTORS
HYDRAULIC MONITOR (OVER 100 LBS. PRESSURE)
LOADING AND UNLOADING, CARRYING AND HANDLING OF ALL RODS AND MATERIALS FOR USE IN REINFORCING CONCRETE CONSTRUCTION
PITTSBURGH CHIPPER, AND SIMILAR TYPE BRUSH SHREDDERS
SEMI-SKILLED WRECKER (SALVAGING OF OTHER BUILDING MATERIALS) – SEE ALSO SKILLED WRECKER (GROUP 1)
SLOPER
SINGLEFOOT, HAND HELD, PNEUMATIC TAMPER
ALL PNEUMATIC, AIR, GAS AND ELECTRIC TOOLS NOT LISTED IN GROUPS 1 THROUGH 1 (F)
JACKING OF PIPE-UNDER 12 INCHES

GROUP 3
CONSTRUCTION LABORERS INCLUDING BRIDGE LABORERS, GENERAL LABORERS AND CLEANUP LABORERS
DEMOLITION WORKER
DUMPMAN, LOAD SPOTTER
FLAGPERSON/PEDESTRIAN MONITOR
FIRE WATCHER
FENCE ERECTORS, INCLUDING TEMPORARY FENCING
GUARDRAIL ERECTORS
GARDENER, HORTICULTURAL AND LANDSCAPE LABORERS (SEE GROUP 4, FOR LANDSCAPE MAINTENANCE ON NEW CONSTRUCTION DURING PLANT ESTABLISHMENT PERIOD)
JETTING
LIMBERS, BRUSH LOADERS, AND PILERS
PAVEMENT MARKERS (BUTTON SETTERS)
PAVERS/INTERLOCKING PAVERS (ALL TYPES) AND INTERLOCKING PAVER MACHINES
MAINTENANCE, REPAIR TRACKMEN AND ROAD BEDS
STREETCAR AND RAILROAD CONSTRUCTION TRACK LABORERS
TEMPORARY AIR AND WATER LINES, VICTAULIC OR SIMILAR
TOOL ROOM ATTENDANT (JOBSITE ONLY)

GROUP 3 (A) -- SEE GROUP 3 RATES
COMPOSITE CREW PERSON (OPERATION OF VEHICLES, WHEN IN CONJUNCTION WITH LABORER'S DUTIES)

GROUP 4
ALL FINAL CLEANUP OF DEBRIS, GROUNDS AND BUILDINGS NEAR THE COMPLETION OF THE PROJECT INCLUDING BUT NOT LIMITED TO STREET CLEANERS (NOT APPLICABLE TO ENGINEERING OR HEAVY HIGHWAY PROJECTS)
CLEANING AND WASHING WINDOWS (NEW CONSTRUCTION ONLY), SERVICE LANDSCAPE LABORERS (SUCH AS GARDENER, HORTICULTURE, MOWING, TRIMMING, REPLANTING, WATERING DURING PLANT ESTABLISHMENT PERIOD) ON NEW CONSTRUCTION
BRICK CLEANERS (JOB SITE ONLY)
MATERIAL CLEANERS (JOB SITE ONLY)

NOTE: AN ADDITIONAL DETERMINATION FOR LANDSCAPE MAINTENANCE WORK AFTER THE PLANT ESTABLISHMENT PERIOD OR WARRANTY PERIOD IS PUBLISHED ON PAGE 57 OF THESE GENERAL DETERMINATIONS.

GROUP 6
STRUCTURAL NOZZLEMAN

GROUP 6 (A)
NOZZLEMAN (INCLUDING GUNMAN, POTMAN)
RODMAN
GROUNDMAN

GROUP 6 (B) -- SEE GROUP 4 RATES
GUNITE TRAINEE (ONE GUNITE LABORER SHALL BE ALLOWED FOR EACH THREE (3) JOURNEYMAN (GROUP 6, 6A, 6C, OR GENERAL LABORER) ON A CREW. IN THE ABSENCE OF THE JOURNEYMAN, THE GUNITE TRAINEE RECEIVES THE JOURNEYMAN SCALE.).
NOTE: THIS RATIO APPLIES ONLY TO WORK ON THE SAME JOB SITE.

GROUP 6 (C)
REBOUNDMAN

GROUP 7
LANDSCAPE LABORER TRAINEE (RATIO FOR TRAINEES IS ONE IN THREE. AT LEAST ONE SECOND PERIOD TRAINEE AND AT LEAST ONE THIRD PERIOD TRAINEE MUST BE EMPLOYED BEFORE EMPLOYING ANOTHER FIRST PERIOD TRAINEE).
NOTE: THIS RATIO APPLIES ONLY TO WORK ON THE SAME JOB SITE.

GENERAL PREVAILING WAGE DETERMINATION MADE BY THE DIRECTOR OF INDUSTRIAL RELATIONS
PURSUANT TO CALIFORNIA LABOR CODE PART 7, CHAPTER 1, ARTICLE 2, SECTIONS 1770, 1773 AND 1773.1
FOR COMMERCIAL BUILDING, HIGHWAY, HEAVY CONSTRUCTION AND DREDGING PROJECTS

CRAFT: #LABORER AND RELATED CLASSIFICATIONS (Special Single and Second Shift)

DETERMINATION: NC-23-102-1-2013-2A
ISSUE DATE: AUGUST 22, 2013
EXPIRATION DATE OF DETERMINATION: JUNE 29, 2014** The rate to be paid for work performed after this date has been determined. If work will extend past this date, the new rate must be paid and should be incorporated in contracts entered into now. Contact the Office of the Director-Research Unit for specific rates at (415) 703-4774.
LOCALITY: ALL LOCALITIES WITHIN ALAMEDA, ALPINE, AMADOR, BUTTE, CALAVERAS, COLUSA, CONTRA COSTA, DEL NORTE, EL DORADO, FRESNO, GLENN, HUMBOLDT, KINGS, LAKE, LASSEN, MADERA, MARIPOSA, MARIN, MENDOCINO, MERCED, MODOC, MONTEREY, NAPA, NEVADA, PLACER, PLUMAS, SACRAMENTO, SAN BENITO, SAN FRANCISCO, SAN JOAQUIN, SAN MATEO, SANTA CLARA, SANTA CRUZ, SHASTA, SIERRA, SISKIYOU, SOLANO, SONOMA, STANISLAUS, SUTTER, TEHAMA, TRINITY, TULARE, TUOLUMNE, YOLO, AND YUBA COUNTIES.

PLEASE GO TO PAGE 50 FOR CLASSIFICATIONS WITHIN EACH GROUP

# INDICATES AN APPRENTICEABLE CRAFT. THE CURRENT APPRENTICE WAGE RATES ARE AVAILABLE ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWAPPWAGE/PWAPPWAGESTART.ASP. TO OBTAIN ANY APPRENTICE WAGE RATES AS OF JULY 1, 2008 AND PRIOR TO SEPTEMBER 27, 2012, PLEASE CONTACT THE DIVISION OF APPRENTICESHIP STANDARDS OR REFER TO THE DIVISION OF APPRENTICESHIP STANDARDS' WEBSITE AT HTTP://WWW.DIR.CA.GOV/DAS/DAS.HTML.

a GROUP 1(D) - MAINTENANCE OR REPAIR TRACKMEN AND ROAD BEDS AND ALL EMPLOYEES PERFORMING WORK COVERED BY THIS CLASSIFICATION SHALL RECEIVE $0.25 PER PER HOUR ABOVE THEIR REGULAR RATE FOR ALL WORK PERFORMED ON UNDERGROUND STRUCTURES NOT SPECIFICALLY COVERED HEREIN. THIS SHALL NOT APPLY TO WORK BELOW GROUND LEVEL IN OPEN CUT. THIS SHALL APPLY TO CUT AND COVER WORK OF SUBWAY CONSTRUCTION AFTER TEMPORARY COVER HAS BEEN PLACED.
GROUP 1(H) - ALL LABORERS WORKING OFF OR WITH OR FROM BOS'N CHAIRS, SWINGING SCAFFOLDS, BELTS RECEIVE $0.25 PER HOUR ABOVE THEIR APPLICABLE WAGE RATE. THIS SHALL NOT APPLY TO LABORERS ENTITLED TO RECEIVE THE WAGE RATE SET FORTH IN GROUP 1(A).

b SATURDAYS IN THE SAME WORK WEEK MAY BE WORKED AT STRAIGHT-TIME IF JOB IS SHUT DOWN DURING THE NORMAL WORK WEEK DUE TO INCLEMENT WEATHER, MAJOR MECHANICAL BREAKDOWN OR LACK OF MATERIALS BEYOND THE CONTROL OF THE EMPLOYER.

c **AREA 1** - ALAMEDA, CONTRA COSTA, MARIN, SAN FRANCISCO, SAN MATEO, AND SANTA CLARA COUNTIES.
AREA 2 - ALPINE, AMADOR, BUTTE, CALAVERAS, COLUSA, DEL NORTE, EL DORADO, FRESNO, GLENN, HUMBOLDT, KINGS, LAKE, LASSEN, MADERA, MARIPOSA, MENDOCINO, MERCED, MODOC, MONTEREY, NAPA, NEVADA, PLACER, PLUMAS, SACRAMENTO, SAN BENITO, SAN JOAQUIN, SANTA CRUZ, SHASTA, SIERRA, SISKIYOU, SOLANO, SONOMA, STANISLAUS, SUTTER, TEHAMA, TRINITY, TULARE, TUOLUMNE, YOLO AND YUBA COUNTIES.

d SERVICE LANDSCAPE LABORER ON NEW CONSTRUCTION MAY WORK ANY FIVE (5) DAYS WITHIN A WEEK.

e GROUP 1(B) RECEIVES AN ADDITIONAL AMOUNT EACH DAY. SEE PAGE 50 FOR DETAILS.

f ZONE PAY AT THREE DOLLARS ($3.00) PER HOUR, FACTORED AT THE APPLICABLE OVERTIME MULTIPLE, WILL BE ADDED TO THE BASE RATE FOR WORK PERFORMED OUTSIDE THE FREE ZONE DESCRIBED BY THE BOUNDARIES ALONG TOWNSHIP AND RANGE LINES. PLEASE SEE TRAVEL AND SUBSISTENCE PROVISIONS FOR MAP DESCRIPTION AND EXCEPTIONS.

RECOGNIZED HOLIDAYS: HOLIDAYS UPON WHICH THE GENERAL PREVAILING HOURLY WAGE RATE FOR HOLIDAY WORK SHALL BE PAID, SHALL BE ALL HOLIDAYS IN THE COLLECTIVE BARGAINING AGREEMENT, APPLICABLE TO THE PARTICULAR CRAFT, CLASSIFICATION, OR TYPE OF WORKER EMPLOYED ON THE PROJECT, WHICH IS ON FILE WITH THE DIRECTOR OF INDUSTRIAL RELATIONS. IF THE PREVAILING RATE IS NOT BASED ON A COLLECTIVELY BARGAINED RATE, THE HOLIDAYS UPON WHICH THE PREVAILING RATE SHALL BE PAID SHALL BE AS PROVIDED IN SECTION 6700 OF THE GOVERNMENT CODE. YOU MAY OBTAIN THE HOLIDAY PROVISIONS FOR THE CURRENT DETERMINATIONS ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWD. HOLIDAY PROVISIONS FOR CURRENT OR SUPERSEDED DETERMINATIONS MAY BE OBTAINED BY CONTACTING THE OFFICE OF THE DIRECTOR – RESEARCH UNIT AT (415) 703-4774.

TRAVEL AND/OR SUBSISTENCE PAYMENT: IN ACCORDANCE WITH LABOR CODE SECTIONS 1773.1 AND 1773.9, CONTRACTORS SHALL MAKE TRAVEL AND/OR SUBSISTENCE PAYMENTS TO EACH WORKER TO EXECUTE THE WORK. YOU MAY OBTAIN THE TRAVEL AND/OR SUBSISTENCE PROVISIONS FOR THE CURRENT DETERMINATIONS ON THE INTERNET AT HTTP://WWW.DIR.CA.GOV/OPRL/PWD. TRAVEL AND/OR SUBSISTENCE REQUIREMENTS FOR CURRENT OR SUPERSEDED DETERMINATIONS MAY BE OBTAINED BY CONTACTING THE OFFICE OF THE DIRECTOR – RESEARCH UNIT AT (415) 703-4774.

GENERAL PREVAILING WAGE DETERMINATION MADE BY THE DIRECTOR OF INDUSTRIAL RELATIONS PURSUANT TO CALIFORNIA LABOR CODE PART 7, CHAPTER 1, ARTICLE 2, SECTIONS 1770, 1773 AND 1773.1

FOR COMMERCIAL BUILDING, HIGHWAY, HEAVY CONSTRUCTION AND DREDGING PROJECTS

CRAFT: TEAMSTER (APPLIES ONLY TO WORK ON THE CONSTRUCTION SITE)

DETERMINATION: NC-23-261-1-2013-1
ISSUE DATE: August 22, 2013
EXPIRATION DATE OF DETERMINATION: June 29, 2014** The rate to be paid for work performed after this date has been determined. If work will extend past this date, the new rate must be paid and should be incorporated in contracts entered into now. Contact the Office of the Director – Research Unit for specific rates at (415) 703-4774.

LOCALITY: All Localities within Alameda, Alpine, Amador, Butte, Calaveras, Colusa, Contra Costa, Del Norte, El Dorado, Fresno, Glenn, Humboldt, Kings, Lake, Lassen, Madera, Marin, Mariposa, Mendocino, Merced, Modoc, Monterey, Napa, Nevada, Placer, Plumas, Sacramento, San Benito, San Francisco, San Joaquin, San Mateo, Santa Clara, Santa Cruz, Shasta, Sierra, Siskiyou, Solano, Sonoma, Stanislaus, Sutter, Tehama, Trinity, Tulare, Tuolumne, Yolo, and Yuba Counties.

[e] Step II – 2nd 1000 Hours											
[f] Step III – 3rd 1000 Hours											

[a] Supplemental Dues and Contract Administration.
[b] Saturday in the same work week may be worked at straight-time hourly rate if a job is shut down during the normal work week due to inclement weather or major mechanical breakdown, or lack of materials beyond the control of the Employer.
[c] An individual employer may employ one (1) trainee for every four (4) journey level Teamsters actively employed. Individual employers with less than four (4) journey level Teamsters may utilize one (1) trainee; thereafter, one (1) for every four (4) journey level Teamsters.
[d] Sixty-five percent (65%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[e] Seventy-five percent (75%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[f] Eighty-five percent (85%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[g] For classifications within each group, see page 56.

RECOGNIZED HOLIDAYS: Holidays upon which the general prevailing hourly wage rate for Holiday work shall be paid, shall be all holidays in the collective bargaining agreement, applicable to the particular craft, classification, or type of worker employed on the project, which is on file with the Director of Industrial Relations. If the prevailing rate is not based on a collectively bargained rate, the holidays upon which the prevailing rate shall be paid shall be as provided in Section 6700 of the Government Code. You may obtain the holiday provisions for the current determinations on the Internet at http://www.dir.ca.gov/OPRL/PWD. Holiday provisions for current or superseded determinations may be obtained by contacting the Office of the Director – Research Unit at (415) 703-4774.

TRAVEL AND/OR SUBSISTENCE PAYMENT: In accordance with Labor Code Sections 1773.1 and 1773.9, contractors shall make travel and/or subsistence payments to each worker to execute the work. You may obtain the travel and/or subsistence provisions for the current determinations on the Internet at http://www.dir.ca.gov/OPRL/PWD. Travel and/or subsistence requirements for current or superseded determinations may be obtained by contacting the Office of the Director – Research Unit at (415) 703-4774.

DETERMINATION: NC-23-261-1-2013-1 and NC-23-261-1-2013-1A

CLASSIFICATIONS:

GROUP 1
Dump Trucks under 6 yards
Single Unit Flat Rack (2 axle unit)
Nipper Truck (When Flat Rack Truck is used appropriate Flat Rack shall apply)
Concrete pump truck (When Flat Rack Truck is used appropriate Flat Rack shall apply)
Concrete pump machine
Snow Buggy
Steam Cleaning
Bus or Manhaul Driver
Escort or Pilot Car Driver
Pickup Truck
Teamster Oiler/Greaser/and or Serviceman
Hook Tenders
Team Drivers
Warehouseman
Tool Room Attendant (Refineries)
Fork Lift and Lift Jitneys
Warehouse Clerk/Parts Man
Fuel and/or Grease Truck Driver or Fuelman
Truck Repair Helper
Fuel Island Attendant, or Combination Pit and/or Grease Rack and Fuel Island Attendant

GROUP 2
Dump Trucks 6 yards Under 8 yards
Transit Mixers through 10 yards
Water Trucks Under 7000 gals.
Jetting Trucks Under 7000 gals.
Single Unit flat rack (3 axle unit)
Highbed Heavy Duty Transport
Scissor Truck
Rubber Tired Muck Car (not self-loaded)
Rubber Tired Truck Jumbo
Winch Truck and "A" Frame Drivers
Combination Winch Truck With Hoist
Road Oil Truck or Bootman
Buggymobile
Ross, Hyster and similar Straddle Carrier
Small Rubber Tired Tractor
Truck Dispatcher

GROUP 3
Dump Trucks 8 yards and including 24 yards
Transit Mixers Over 10 yards
Water Trucks 7000 gals and over
Jetting Trucks 7000 gals and over
Vacuum Trucks under 7500 gals
Trucks Towing Tilt Bed or Flat Bed Pull Trailers
Heavy Duty Transport Tiller Man
Tire Repairman

GROUP 3 (continued)
Truck Mounted Self Propelled Street Sweeper with or without Self-Contained Refuse Bin and or Vacuum Unit
Boom Truck - Hydro-Lift or Swedish Type Extension or Retracting Crane
P.B. or Similar Type Self Loading Truck
Combination Bootman and Road Oiler
Dry Distribution Truck (A Bootman when employed on such equipment, shall receive the rate specified for the classification of Road Oil Trucks or Bootman)
Ammonia Nitrate Distributor, Driver and Mixer
Snow Go and/or Plow

GROUP 4
Dump Trucks over 25 yards and under 65 yards
Vacuum Trucks over 7500 gals
Truck Repairman
Water Pulls - DW 10s, 20s, 21s and other similar equipment when pulling Aqua/pak or Water Tank Trailers
Helicopter Pilots
Lowbed Heavy Duty Transport (up to and including 7 axles)
DW 10s, 20s, 21s and other similar Cat type, Terra Cobra, LeTourneau Pulls, Tournorocker, Euclid and similar type Equipment when pulling fuel and/or grease tank trailers or other miscellaneous trailers

GROUP 5
Dump Truck 65 yards and over
Holland Hauler
Lowbed Heavy Duty Transport (over 7 axles)

GROUP 6 (Use dump truck yardage rate)
Articulated Dump Truck
Bulk Cement Spreader (w/ or w/o Auger)
Dumpcrete Truck
Skid Truck (Debris Box)
Dry Pre-Batch Concrete Mix Trucks
Dumpster or Similar Type
Slurry Truck

GROUP 7 (Use appropriate Rate for the Power Unit or the Equipment Utilized)
Heater Planer
Asphalt Burner
Scarifier Burner
Fire Guard
Industrial Lift Truck (mechanical tailgate)
Utility and Clean-up Truck
Composite Crewman

GROUP 8
Trainee

Group 6		USE DUMP TRUCK YARDAGE RATE									
Group 7		USE APPROPRIATE RATE FOR THE POWER UNIT OR THE EQUIPMENT UTILIZED									
Group 8 (Trainee)[c]											
[d] Step I – 1st 1000 Hours											
[e] Step II – 2nd 1000 Hours											
[f] Step III – 3rd 1000 Hours											

[a] Supplemental Dues and Contract Administration.
[b] Saturday in the same work week may be worked at straight-time hourly rate if a job is shut down during the normal work week due to inclement weather or major mechanical breakdown, or lack of materials beyond the control of the Employer.
[c] An individual employer may employ one (1) trainee for every four (4) journey level Teamsters actively employed. Individual employers with less than four (4) journey level Teamsters may utilize one (1) trainee; thereafter, one (1) for every four (4) journey level Teamsters.
[d] Sixty-five percent (65%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[e] Seventy-five percent (75%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[f] Eighty-five percent (85%) of the Journey level wage for the type of equipment operated, plus full fringes without Vacation/Holiday.
[g] For classifications within each group, see page 56.

RECOGNIZED HOLIDAYS: Holidays upon which the general prevailing hourly wage rate for Holiday work shall be paid, shall be all holidays in the collective bargaining agreement, applicable to the particular craft, classification, or type of worker employed on the project, which is on file with the Director of Industrial Relations. If the prevailing rate is not based on a collectively bargained rate, the holidays upon which the prevailing rate shall be paid shall be as provided in Section 6700 of the Government Code. You may obtain the holiday provisions for the current determinations on the Internet at http://www.dir.ca.gov/OPRL/PWD. Holiday provisions for current or superseded determinations may be obtained by contacting the Office of the Director – Research Unit at (415) 703-4774.

TRAVEL AND/OR SUBSISTENCE PAYMENT: In accordance with Labor Code Sections 1773.1 and 1773.9, contractors shall make travel and/or subsistence payments to each worker to execute the work. You may obtain the travel and/or subsistence provisions for the current determinations on the Internet at http://www.dir.ca.gov/OPRL/PWD. Travel and/or subsistence requirements for current or superseded determinations may be obtained by contacting the Office of the Director – Research Unit at (415) 703-4774.

1. Risk, loss, damage repair, or cost of whatever character arising from or relating to the work and performance of the work
2. PLACs and taxes

The Department does not pay for your loss, damage, repair, or extra costs of whatever character arising from or relating to the work that is a direct or indirect result of your choice of construction methods, materials, equipment, or manpower, unless specifically mandated by the Contract.

Payment is:

1. Full compensation for all work involved in each bid item specified by the description and measurement unit shown on the Bid Item List
2. For the price bid for each bid item shown on the Bid Item List or as changed by change order with a specified price adjustment

Full compensation for work specified in divisions I, II, and X is included in the payment for the bid items unless:

1. Bid item for the work is shown on the Bid Item List
2. Work is specified as change order work

Work paid for under one bid item is not paid for under any other bid item.

Payment for a bid item includes payment for work in sections referenced by the section set forth by that bid item.

If an alternative is described in the Contract, the Department pays based on the bid items for the details and specifications not described as an alternative unless the bid item is described as an alternative, in which case, the Department pays based on the details and specifications for that alternative.

The Department pays for change order work based on one or a combination of the following:

1. Bid item prices
2. Force account
3. Agreed price
4. Specialist billing

If the Engineer chooses to pay for change order work based on an agreed price, but you and the Engineer cannot agree on the price, the Department pays by force account.

If a portion of extra work is covered by bid items, the Department pays for this work as changed quantities in those items. The Department pays for the remaining portion of the extra work by force account or agreed price.

The Department pays 10 percent annual interest for unpaid and undisputed:

1. Progress payments
2. After-acceptance payment except for claims

For these payments, interest starts to accrue 30 days after the 1st working day following the 20th day of the month payment is due. For a change order bill not submitted within 7 days after performing the work, interest starts to accrue 60 days after the 1st working day following the 20th day of the month payment is due.

The Department pays 6 percent annual interest for unpaid and undisputed claims. Interest starts to accrue 61 days after the Department accepts a claim statement.

The Department pays 6 percent annual interest for awards in arbitration (Civ Code § 3289).

If the amount of a deduction or withhold exceeds final payment, the Department invoices you for the difference, to be paid upon receipt.

Pay your subcontractors within 10 days of receipt of each progress payment under Pub Cont Code §§ 10262 and 10262.5.

9-1.04 FORCE ACCOUNT

9-1.04A General

For work paid by force account, the Engineer compares the Department's records to your daily force account work report. When you and the Engineer agree on the contents of the daily force account work reports, the Engineer accepts the report and the Department pays for the work. If the records differ, the Department pays for the work based only on the information shown on the Department's records.

If a subcontractor performs work at force account, accept an additional 10 percent markup to the total cost of that work paid at force account, including markups specified in section 9-1.04, as reimbursement for additional administrative costs.

The markups specified in labor, materials, and equipment include compensation for all delay costs, overhead costs, and profit.

If an item's unit price is adjusted for work-character changes, the Department excludes your cost of determining the adjustment.

Payment for owner-operated labor and equipment is made at the market-priced invoice submitted.

9-1.04B Labor

Labor payment is full compensation for the cost of labor used in the direct performance of the work plus a 35 percent markup. Force account labor payment consists of:

1. Employer payment to the worker for:
   1.1. Basic hourly wage
   1.2. Health and welfare
   1.3. Pension
   1.4. Vacation
   1.5. Training
   1.6. Other State and federal recognized fringe benefit payments
2. Labor surcharge percentage in *Labor Surcharge and Equipment Rental Rates* current during the work paid at force account for:
   2.1. Workers' compensation insurance
   2.2. Social security
   2.3. Medicare
   2.4. Federal unemployment insurance
   2.5. State unemployment insurance
   2.6. State training taxes
3. Subsistence and travel allowances paid to the workers
4. Employer payment to supervisors, if authorized

The 35 percent markup consists of payment for all overhead costs related to labor but not designated as costs of labor used in the direct performance of the work including:

1. Home office overhead
2. Field office overhead
3. Bond costs
4. Profit
5. Labor liability insurance
6. Other fixed or administrative costs that are not costs of labor used in the direct performance of the work

9-1.04C Materials

Material payment is full compensation for materials you furnish and use in the work. The Engineer determines the cost based on the material purchase price, including delivery charges, except:

1. A 15 percent markup is added
2. Supplier discounts are subtracted whether you took them or not

3. If the Engineer believes the material purchase prices are excessive, the Department pays the lowest current wholesale price for a similar material quantity
4. If you procured the materials from a source you wholly or partially own, the determined cost is based on the lower of the:
   4.1. Price paid by the purchaser for similar materials from that source on Contract items
   4.2. Current wholesale price for those materials
5. If you do not submit a material cost record within 30 days of billing, the determined cost is based on the lowest wholesale price:
   5.1. During that period
   5.2. In the quantities used

9-1.04D Equipment Rental

9-1.04D(1) General

Equipment rental payment is full compensation for:

1. Rental equipment costs, including moving rental equipment to and from the change order work site using its own power.
2. Transport equipment costs for rental equipment that cannot be transported economically using its own power. No payment is made during transport for the transported equipment.
3. 15 percent markup.

If you want to return the equipment to a location other than its original location, the payment to move the equipment must not exceed the cost of returning the equipment to its original location. If you use the equipment for work other than work paid by force account, the transportation cost is included in the other work.

Before moving or loading the equipment, obtain authorization for the equipment rental's original location.

The Engineer determines rental costs:

1. Using rates in *Labor Surcharge and Equipment Rental Rates*:
   1.1. By classifying equipment using manufacturer's ratings and manufacturer-approved changes.
   1.2. Current during the work paid by force account.
   1.3. Regardless of equipment ownership; but the Department uses the rental document rates or minimum rental cost terms if:
      1.3.1. Rented from equipment business you do not own.
      1.3.2. The Labor Surcharge and Equipment Rental Rates hourly rate is $10.00 per hour or less.
2. Using rates established by the Engineer for equipment not listed in *Labor Surcharge and Equipment Rental Rates*. You may submit cost information that helps the Engineer establish the rental rate; but the Department uses the rental document rates or minimum rental cost terms if:
   2.1. Rented from equipment business you do not own.
   2.2. The Engineer establishes a rate of $10.00 per hour or less.
3. Using rates for transport equipment not exceeding the hourly rates charged by established haulers.

Equipment rental rates include the cost of:

1. Fuel
2. Oil
3. Lubrication
4. Supplies
5. Small tools that are not consumed by use
6. Necessary attachments
7. Repairs and maintenance
8. Depreciation
9. Storage
10. Insurance
11. Incidentals

The Department pays for small tools consumed by use. The Engineer determines payment for small tools consumed by use based on Contractor-submitted invoices.

The Engineer may authorize rates in excess of those in the *Labor Surcharge and Equipment Rental Rates* if:

1. You submit a request to use rented equipment

2. Equipment is not available from your normal sources or from one of your subcontractors
3. Rented equipment is from an independent rental company
4. Proposed equipment rental rate is reasonable
5. The Engineer authorizes the equipment source and the rental rate before you use the equipment

The Department pays for fuel consumed during the operation of rented equipment not included in the invoiced rental rates.

9-1.04D(2) Equipment On the Job Site

For equipment on the job site at the time required to perform work paid by force account, the time paid is the time:

1. To move the equipment to the location of work paid by force account plus an equal amount of time to move the equipment to another location on the job site when the work paid by force account is completed
2. To load and unload equipment
3. Equipment is operated to perform work paid by force account and:
   3.1. Hourly rates are paid in 1/2-hour increments
   3.2. Daily rates are paid in 1/2-day increments

9-1.04D(3) Equipment Not On the Job Site Required for Original-Contract Work

For equipment not on the job site at the time required to perform work paid by force account and required for original-Contract work, the time paid is the time the equipment is operated to perform work paid by force account and the time to move the equipment to a location on the job site when the work paid by force account is completed.

The minimum total time paid is:

1. 1 day if daily rates are paid
2. 8 hours if hourly rates are paid

If daily rates are recorded, equipment:

1. Idled is paid as 1/2 day
2. Operated 4 hours or less is paid as 1/2 day
3. Operated 4 hours or more is paid as 1 day

If the minimum total time exceeds 8 hours and if hourly rates are listed, the Department rounds up hours operated to the nearest 1/2-hour increment and pays based on the hours shown the following table. The table does not apply when equipment is not operated due to breakdowns, in which case rental hours are the hours the equipment was operated.

Equipment Rental Hours

Hours operated	Hours paid
0.0	4.00
0.5	4.25
1.0	4.50
1.5	4.75
2.0	5.00
2.5	5.25
3.0	5.50
3.5	5.75
4.0	6.00
4.5	6.25
5.0	6.50
5.5	6.75
6.0	7.00
6.5	7.25
7.0	7.5

7.5	7.75
≥8.0	hours used

9-1.04D(4) Equipment Not On the Job Site Not Required for Original-Contract Work

For equipment not on the job site at the time required to perform work paid by force account and not required for original-Contract work, the time paid is the time:

1. To move the equipment to the location of work paid by force account plus an equal amount of time to return the equipment to its source when the work paid by force account is completed
2. To load and unload equipment
3. Equipment is operated to perform work paid by force account

9-1.04D(5) Non-Owner-Operated Dump Truck Rental

Submit the rental rate for non-owner-operated dump truck rental. The Engineer determines the payment rate. Payment for non-owner-operated dump truck rental is for the cost of renting a dump truck, including its driver. For the purpose of markup payment only, the non-owner-operated dump truck is rental equipment and the owner is a subcontractor.

9-1.05 EXTRA WORK PERFORMED BY SPECIALISTS

If the Engineer determines that you or your subcontractors are not capable of performing specialty extra work, a specialist may be used. Itemize the labor, material, and equipment rental costs unless it is not the special service industry's established practice to provide itemization, in which case, the Engineer accepts current market-priced invoices for the work.

The Engineer may accept an invoice as a specialist billing for work performed at an off–job site manufacturing plant or machine shop.

The Engineer determines the cost based on the specialist invoice price minus any available or offered discounts plus a 10 percent markup.

9-1.06 CHANGED QUANTITY PAYMENT ADJUSTMENTS

9-1.06A General

The unit prices specified in section 9-1.06 are adjusted under section 9-1.04.

9-1.06B Increases of More Than 25 Percent

If the total bid item quantity exceeds 125 percent of the quantity shown on the Bid Item List and if no approved *Change Order* addresses payment for the quantity exceeding 125 percent, the Engineer may adjust the unit price for the excess quantity under section 9-1.04 or the following:

1. The adjustment is the difference between the unit price and the unit cost of the total item pay quantity.
2. In determining the unit cost, the Engineer excludes the item's fixed costs. You have recovered the fixed costs in the payment for 125 percent shown on the Bid Item List.
3. After excluding fixed costs, the Engineer determines the item unit cost under section 9-1.04.

If the payment for the number of units of a bid item in excess of 125 percent of the Bid Item List is less than $5,000 at the unit price, the Engineer may not adjust the unit price unless you request it.

9-1.06C Decreases of More Than 25 Percent

If the total item pay quantity is less than 75 percent of the quantity shown on the Bid Item List and if no approved *Change Order* addresses payment for the quantity less than 75 percent, you may request a unit price adjustment. The Engineer may adjust the unit price for the decreased quantity under section 9-1.04 or the following:

1. The adjustment is the difference between the unit price and the unit cost of the total pay quantity.
2. In determining the unit cost, the Engineer includes the item's fixed costs.
3. After including fixed costs, the Engineer determines the item unit cost under section 9-1.04.

The Department does not pay more than 75 percent of the item total in the Bid Item List.

STATEMENT OF CERTIFICATION

Geo-Logic Associates prepared this 2024 Second Semiannual Groundwater and Landfill Gas Monitoring Report under the direction of the undersigned. I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Prepared by:

_____

Gregory George
Senior Geologist
PG No. 8114, CEG No. 2496

Signed January 23, 2025

EXECUTIVE SUMMARY

The following Water Quality Monitoring Report was prepared by Geo-Logic Associates on behalf of Ms. Nancy Cleavinger, the representative of Multiple Family Trusts, to summarize 2024 landfill gas (LFG) monitoring results and second 2024 semiannual groundwater monitoring results for the Florin Perkins Landfill (FPL) in Sacramento County, California. The FPL consists of three separate fill areas identified as the East Fill Area (EFA), North Fill Area (NFA), and South Fill Area (SFA). This report was prepared in accordance with the Waste Discharge Requirements (WDRs) and associated Monitoring and Reporting Program (MRP) included in the Central Valley Regional Water Quality Control Board (RWQCB) Order No. R5-2013-0042.

Groundwater monitoring results for the second half of 2024 are generally consistent with recent monitoring data for the landfill. As has been the case historically, quantifiable concentrations of trichlorofluoromethane (TCFM), commonly associated with landfill gas, were detected in samples from six groundwater monitoring locations. No statistically significant increasing trends are noted for these TCFM results during the last five years.

Multiple inorganic constituent concentrations were measured above calculated interwell statistical concentration limits, largely at SFA wells MW-C, MW-D, and MW-F. No statistically significant increasing trends are noted for these inorganic exceedances during the last five years. These three wells are designated as corrective action wells in the MRP, therefore, no further action is required.

Methane concentrations were measured below regulatory values in all landfill perimeter probes, landfill in-waste vapor probes, and in-waste gas vents with one exception during the second half of 2024. Methane at detection probe VP-8R measured above the 1 percent by volume regulatory limit during the fourth quarter 2024 and samples will be collected for further laboratory volatile organic compound speciation through third quarter 2025 in accordance with the WDRs.

1.0 INTRODUCTION

The following Water Quality Monitoring Report was prepared by Geo-Logic Associates (GLA) on behalf of Ms. Nancy Cleavinger, the representative of Multiple Family Trusts (the Trust), to summarize water quality and landfill gas (LFG) monitoring data collected between July and the end of December 2024 at the Florin Perkins Landfill (FPL) in Sacramento County, California. This report also includes a summary of annual monitoring activities conducted in accordance with the Waste Discharge Requirements (WDRs) and associated Monitoring and Reporting Program (MRP) included in the Central Valley Regional Water Quality Control Board (RWQCB) Order No. R5-2013-0042. The sampling and analytical procedures that were employed are described in the Sampling and Analysis Plan (SAP) and Water Quality Protection Standard (WQPS) Report prepared by Dunn Environmental (2013).[1]

1.1 LOCATION AND DESCRIPTION

The FPL is located east of Florin Perkins Road, south of Jackson Highway (State Route 16), and north of Fruitridge Road (Figure 1). The landfill consists of a 106-acre permitted landfill area within a greater 210-acre site that was used for gravel mining prior to landfilling. The landfill began accepting wastes in 1993 shortly after the neighboring Jackson Road Landfill (also owned by trusts represented by Nancy Cleavinger) reached capacity and ceased accepting wastes. Florin Perkins Landfill, Inc. operated the landfill from start-up in 1993 to 2005. In February 2005, the property owners evicted Florin Perkins Landfill, Inc. from the site for noncompliance with Regional Board Orders and breaches of the operating agreement. Since then the landfill has been inactive and portions of the site have been closed.

Landfill-related facilities at the site include the landfill; a former materials stockpile area; gas and groundwater monitoring wells, precipitation and drainage controls, access roads; former buildings areas; and an onsite supply well. Other onsite facilities include a 10-acre transfer station/materials recovery facility operated by Zanker Road Resource Management (Zanker); buffer land; a utility tower easement; quarry pit areas; and site perimeter ditches and berms. Approximately 56 acres of the 106-acre area was authorized for disposal under previous WDRs and wastes were discharged to three unlined fill areas referred to as the NFA, SFA and EFA. Additionally, the area referred to as the Central Processing Area (CPA) was used for material stockpiling and storage (Figure 2).

[1] Dunn Environmental, Updated Sample Collection and Analysis Plan, Water Quality Protection Standard Report and Contingency Plan, December 2013.

1.2 MONITORING PROGRAMS AND ANALYTICAL REQUIREMENTS

The environmental management and monitoring systems at the FPL include the following components:

- **Perimeter LFG Probes**. There are 15 perimeter gas monitoring wells at the site, including: six along the outside perimeter of the SFA (GPs-1, 2 , 3, 8, 13, and 15); one along the western perimeter borrow area of the site (GP-9); four along the northern perimeter of the NFA (GPs-4, 10, 11, and 12); three along the eastern perimeter of the EFA (GPs-5, 6, and 14); and one along the southeast site perimeter (GP-7). Eight of the gas wells (GPs-1, 2, 3, 7, 8, 11, 13, and 15) are triple-nested completions (e.g., shallow, middle, and deep), gas wells GP-5 and GP-14 are double-nested completions (e.g., shallow and deep), and the other five gas wells (GPs-4, 6, 9, 10, and 12) are single-casing completions.

- **In-Waste LFG Vapor Probes**. In 2011, the Trust implemented an Evaluation Monitoring Program (EMP) in response to CVRWQCB requirements. During the EMP, eight temporary vapor probes were installed in waste based on LFG monitoring results collected from Cone Penetration Test (CPT) soundings. The vapor probes were intended to be temporary installations and were constructed of Teflon tubing connected to 6-inch long stainless steel-mesh well screens encased with small gravel. However, these probes are still being monitored by the Trust.

- **LFG Extraction System**. The LFG extraction system consists of eight vertical in-waste gas vents in the SFA (GV-1, GV-2, GV-3, GV-4, GV-5, GV-11B, GV-15B, and GV-16B); seven vertical in-waste gas vents in the EFA (GV-1B, GV-2B, GB-4B, GV-5B, GV-6, GV-7, and GV-8); and three vertical in-waste gas vents in the NFA (GV-9, GV-10, and GV-11).

- **LFG Treatment System**. The LFG treatment system completed in January 2016 consists of a skid-mounted positive-displacement centrifugal blower rated at 1,250 standard cubic feet per minute (scfm) that provides vacuum to extract LFG and convey it to three skid-mounted granular activated carbon (GAC) vessels connected in series. Each GAC vessel contains 500 pounds of granular carbon and can accommodate a flow of 500 scfm. When breakthrough is detected, GAC vessel one is disconnected from the series resulting in GAC vessel two becoming the lead vessel and GAC vessel three the lag. The blower system also contains a 60-gallon liquid-vapor separator (knockout tank).

- **Groundwater Monitoring System**. The FPL groundwater monitoring system consists of 12 onsite wells: MW-A through MW-F; MW-G(S) and MW-G(D); MW-H(S) and MW-H(D); MW-I, and FPL MW-2. MW-G(S) and MW-G(D), and MW-H(S) and MW-H(D) are well pairs screened in upper and lower intervals of the uppermost aquifer, respectively. Maximum groundwater elevations of these paired wells correspond to about -12 feet below mean sea level (MSL). The groundwater monitoring system also includes three wells positioned north/northwest of the site at the JRL, and three wells (Aspen) on neighboring property to the east and owned by Teichert Land Company.

The WDRs note that historical groundwater monitoring data for the FPL indicate a release was identified in 2002 based on a confirmed detection of the VOC TCFM (Freon 11) in Point of Compliance (POC) well MW-F on the southern perimeter of the SFA. VOCs and/or elevated general minerals have since been detected in other SFA compliance wells, and immediately downgradient of the NFA.

The annual sampling and analysis matrix for the landfill is shown in Table 1, and Tables 2 through 5 summarize the analytical requirements for the surface water, unsaturated (vadose) zone, and groundwater samples collected at the site. Figure 3 shows the locations of the monitoring points identified in Table 1. As indicated in Table 1 and the MRP, both a Detection Monitoring Program (DMP) and a Corrective Action Program (CAP) are implemented at the site. Constituents of Concern (COC) monitoring is required every 2½ years per Table V of the MRP and was last conducted during the first 2023 semiannual monitoring event. Offsite Aspen well monitoring is performed by others who also provide the associated data to the Trust. The next COC round will be conducted during the first 2025 semiannual monitoring event (Table 1). Table 6 summarizes well completion information for site monitoring points; LFG probe completion details are summarized in Table 8.

1.3 SAMPLING, ANALYSIS, DATA REVIEW, AND REPORT PREPARATION

The second 2024 semiannual monitoring event conducted at the FPL was managed by GLA with support from Field Solutions, Inc. (FSI) and Pace Analytical Laboratory, under subcontract to GLA. The monitoring and analysis program was performed in accordance with WDR and SAP requirements.

1.4 SCOPE OF REPORT

In accordance with the MRP requirements, this semiannual monitoring report includes:

- Information regarding field monitoring and sampling procedures and results[2];
- A map showing the locations of observation stations, monitoring points, and background monitoring points;
- The estimated quarterly groundwater flow rate and direction in the uppermost aquifer, in any zones of perched water, and in any additional zone of saturation that is monitored based upon water level elevations taken prior to the collection of the water quality data submitted in the report;
- Tabulated monitoring data for all monitoring points and constituents for groundwater, unsaturated zone, leachate, and surface water;
- An evaluation of the concentration of each monitoring parameter compared to the current concentration limits, trend analyses, and the results of any required verification testing for constituents exceeding a concentration limit;
- An evaluation of the effectiveness of run-off/run-on control facilities;
- A summary of Standard Observations for the reporting period;
- As described in more detail below, copies of sampling and analytical data for offsite Teichert Aspen property wells MW-1, MW-2, and MW-3 were provided by HDR, Inc. (HDR) and are included in Appendix A; and
- Field monitoring records for FPL wells are also included in Appendix A, laboratory analytical results are included in Appendix B, statistical analyses are included in Appendix C, Appendix D includes the Standard Observations, and time-series charts and hydrographs are included in Appendix E for the reporting period.

[2]This information includes: (i) the time of water level measurement; (ii) the type of pump or other device used for purging; (iii) the method of purging used to stabilize water in the well bore before the sample is taken including pumping rate; the equipment and methods used to monitor field pH, temperature, and conductivity during purging; results of pH, temperature, conductivity, and turbidity testing; and the method of disposing of the purge water; and (iv) the type of pump or other device used for sampling.

2.0 FIELD, LABORATORY, AND STATISTICAL PROCEDURES

2.1 FIELD MONITORING AND SAMPLING

FSI performed field monitoring under subcontract to GLA in accordance with WDR requirements during the third and fourth quarters of 2024. The FSI field data sheets are included in Appendix A and the field monitoring results are summarized in Table 7 through Table 10. Results are discussed as follows:

2.1.1 Third Quarter 2024

- Third quarter monitoring was performed on September 11. Those activities included gauging groundwater levels in site monitoring wells. Field activities also included monitoring for landfill gas-related constituents in three occupied structures, in all GP-series perimeter probes, all GV-series gas vents, and in-waste VP-series vapor probes.

2.1.2 Fourth Quarter 2024

- Fourth quarter monitoring was conducted on December 4 and December 18 and included gauging groundwater levels in site monitoring wells, monitoring LFG concentrations in three occupied space structures, in all GP-series perimeter probes, all GV-series gas vents, and in-waste VP-series vapor probes.
- Groundwater samples were obtained from site monitoring wells for analyses of routine monitoring parameters.
- Another consultant (HDR) measured groundwater levels and sampled the offsite Aspen monitoring wells that are located on the Teichert property on December 19, 2024. The HDR field sheets and associated laboratory data are included herein (Appendix A).

2.2 LABORATORY ANALYTICAL PROCEDURES

Groundwater and vadose zone samples were delivered under chain-of-custody control to Pace Analytical Laboratory for analysis of the monitoring parameters identified in Table 2 and Table 3. The laboratory quality control (QC) data were evaluated to assess the acceptability of the analytical data and its applicability in interpreting changes in water quality. Laboratory QC results are included with the analytical reports in Appendix B. Method Detection Limits (MDL) and Practical Quantitation Limits (PQL; also known as reporting limits or RLs) were used to quantify and report the analytical results. Review of the QC data indicates:

- The chain-of-custody documentation and the analytical laboratory receipt logs indicate the samples were properly preserved, sealed, and chilled in accordance with EPA guidelines;
- All analyses were performed within the specified holding times;
- Comparison of the blind duplicate (MW-R) sample results to primary sample results from Well MW-H(D) shows no significant differences in the reported values;
- No VOCs were detected in any of the field blank, trip blank, or method blanks that were analyzed; and
- Review of the laboratory reports indicates laboratory QC surrogates, spikes, and matrix spike duplicates were measured within acceptance limits or were qualified by the laboratory based on comparisons with the sample concentrations.

Based on this information, the laboratory data from the second 2024 semiannual monitoring period is deemed suitable for analysis.

2.3 STATISTICAL ANALYSIS PROCEDURES

Non-statistical analyses and upper tolerance limit (UTL) statistical analyses are used to evaluate the groundwater monitoring data collected at the FPL. In general, non-statistical methods are used to evaluate non-naturally occurring constituents that are present in less than 10 percent of the background data or that are not otherwise amenable to statistical methods. This procedure specifies verification testing if data from any monitoring point meets either of the two triggering conditions: (i) the data contains two or more qualifying VOCs that equal or exceed their respective MDL; or (ii) the data contain one qualifying VOC that equals or exceeds its PQL.

Acceptable statistical analysis procedures for landfill monitoring are specified in CCR Title 27 §20415(e)(8)(A-D).[3] Monitoring data from the FPL is statistically analyzed in accordance with 27 CCR §20415(e)(8)(C) that identifies the following procedure:

[3] Section 20415(e)(8)(E) allows the use of alternative procedures and the WDRs note that an alternative statistical analysis procedure may be proposed and incorporated in the monitoring program if the alternative is reviewed and approved by the Regional Water Quality Control Board Executive Officer.

> ***Tolerance Interval***—*a tolerance or prediction interval procedure in which an interval for each COC or Monitoring Parameter is established from the distribution of the background data, and the value for each COC or Monitoring Parameter at each monitoring point is compared to the upper tolerance or prediction limit;*

The interwell (upgradient-downgradient) tolerance limit procedure used at the site was previously updated using Sanitas™ software (version 9.637) in the Second 2023 Semiannual Monitoring Report. As specified in the WDRs, the FPL consists of three fill areas (i.e., the EFA, SFA, and NFA) and each area has specified background and point of compliance monitoring locations. The SAP and WQPS Report specifies that the concentration limits be updated every two years. The most recent update used historical data from 2002 through June 2023. These limits were used for comparison of analytical results as summarized in Table 12. The next update will be performed prior to the second 2025 semiannual sampling event using data collected through the end of the first 2025 semiannual monitoring round.

3.0 DATA EVALUATION

3.1 GROUNDWATER ELEVATIONS AND FLOW

Depths to groundwater and groundwater elevations measured to date are summarized in Table 7 and third and fourth quarter 2024 elevations are plotted in Figure 3 and Figure 4. The groundwater elevations that were measured in the second half of 2024 declined in all wells up to -1.35 feet since January, are generally consistent with previous monitoring data, and suggest groundwater flow direction to the southeast (NFA and SFA) at gradients that range from about 0.001 feet/foot (ft/ft) to 0.006 ft/ft. These data also suggest that hydraulic mounding occurs along the western edge of the EFA as evidenced by groundwater flow to the northwest and the center of the facility.

3.2 GROUNDWATER QUALITY AND COMPARISON WITH CONCENTRATION LIMITS

Fourth quarter 2024 routine groundwater monitoring results are summarized in Table 11 and are compared to non-statistical and statistical concentration limits in Table 12. For constituent results that exceeded a respective UTL, concentration trends were evaluated using the Mann-Kendall estimator (Sanitas™) and historical data from the last five years of monitoring. The results of monitoring for the second half of 2024 are generally consistent with recent monitoring data for the landfill and indicate the following:

- **MW-B** (SFA Background Well). No VOCs were detected above their respective MDLs in this well. Background monitoring wells are used to establish inorganic constituent concentration limits for interwell statistical comparisons (i.e., upgradient-downgradient). Inorganic results for this well are compared to calculated concentration limits for reference purposes only.

- **MW-C** (SFA Detection and Corrective Action Well). Bicarbonate, calcium, chloride, magnesium, potassium, and TDS concentration limits were exceeded at this well. However, exceeded concentrations are relatively stable and not increasing in a statistically significant manner over the last five years. Furthermore, recent results are below the historical intrawell maximum value. TCFM was detected at a concentration above the PQL in this well, but TCFM has been measured in this well before and historical trend analysis indicates concentrations are significantly decreasing over the last five years.

- **MW-D** (NFA Detection and Corrective Action Well and EFA Background Well). No concentration limits were exceeded at this well. TCFM was detected at a concentration above the PQL in this well, but TCFM has been measured in this well historically and trend analysis indicates concentrations have not been increasing during the last five years.

- **MW-E** (SFA Background Well). No concentration limits were exceeded at this well. No VOCs were detected during the second half of 2024.

- **MW-F** (SFA Detection and Corrective Action Well). The TDS concentration limit was exceeded for this well. As shown in Appendix C however, concentration of this constituent appears relatively stable and not increasing in a statistically significant manner over time. TCFM was detected at a concentration above the PQL but no other VOCs were detected above respective MDLs and TCFM concentrations are shown to be relatively stable and not increasing in a statistically significant manner over time.

- **MW-G(D)** (SFA Corrective Action Well). The sulfate and TDS concentration limits were exceeded in this well. Sulfate and TDS concentrations are relatively stable and not increasing in a statistically significant manner over the last five years. Furthermore, recent results for these constituents are below the historical intrawell maximum values. TCFM was detected at a concentration above the PQL but no other VOCs were detected above respective MDLs and TCFM concentrations are shown to be relatively stable and not increasing in a statistically significant manner over time.

- **MW-G(S)** (SFA Corrective Action Well). The chloride concentration limit was exceeded in this well. However, concentrations appear relatively stable and are not increasing in a statistically significant manner over time. TCFM was detected above the PQL but has not increased statistically during the past five years.

- **MW-H(D)** (SFA Detection Monitoring Well). No inorganic UTL was exceeded and no VOCs were detected in this well during the second half of 2024.

- **MW-H(S)** (SFA Corrective Action Well). The chloride concentration limit was exceeded in this well. However, concentrations appear relatively stable and are not increasing in a statistically significant manner over time. The TCFM concentrations were measured above the PQL but no other VOCs were detected and TCFM concentrations are not changing in a statistically significant manner over time.

- **FPL MW-2** (EFA monitoring well). No UTL concentration limits was exceeded and no VOCs were detected at this well. Well FPL MW-2 was installed in September 2018, is not included in the WDRs, and to date has not been designated as a Corrective Action or Detection Monitoring well.

Of note, TCFM is commonly associated with LFG and the low concentrations discussed above show static or declining trends during the past year. These results are generally consistent with recent monitoring data for the landfill, and based on this information, there is no evidence of a new release from the site. Results for samples obtained by others from (offsite) Aspen wells are included in Appendix A and summarized in Table 11. In addition, time-series graphs of historical data from all wells are included in Appendix E.

3.3 UNSATURATED ZONE MONITORING

Unsaturated zone and LFG monitoring was performed at FPL onsite structures, LFG perimeter probes, in-waste vapor probes, and passive LFG vents. Field monitoring data associated with this work are included in Appendix A and the results of monitoring are summarized in Table 8, Table 9, and Table 13. As indicated in these tables:

- **Perimeter Probes (Table 8).** No methane concentrations greater than 1 percent (%V; by volume) were measured in any GP-series perimeter probe, weigh station, break room, or second office building sample during the second half of 2024 (all were non-detect).

- **In-Waste Vapor Probes (Table 9).** The in-waste vapor probe survey reported methane concentration above 1%V in detection probe VP-8R during the December 2024 monitoring event. VOC testing and results are included in Appendix B and summarized in Table 13[4]. Methane concentrations at all other "additional corrective action" probes were measured below 20 %V for all stations during the site monitoring events.

- **In-Waste Gas Vents (Table 9).** No methane concentrations greater than 20 %V were measured in any in-waste gas vent during the second half of 2024. Therefore, no samples were collected for VOC (TO-15) testing.

[4] VOCs will be tested quarterly by EPA Method TO-15 for detection monitoring probes and may be discontinued after one year if detected methane concentrations remain below 1 percent by volume during that period. FSI omitted VOC sampling in December 2024. Subsequently, VOCs will be sampled two times at VP-8R during the first quarter 2025.

Additional information is provided under separate cover for the fourth quarter 2024, FPL LFG monitoring (Geo-Logic, 2024).

4.0 STANDARD OBSERVATIONS AND COMPLIANCE SUMMARY

4.1 STANDARD OBSERVATIONS

The standard observations required by the WDR and MRP are completed on a monthly basis by a representative of the Trust. The information included in the Standard Observations does not identify significant areas of flowing water, erosion, or wash-out during the second semiannual 2024 monitoring period. Also, no leachate seeps or ponded water were identified during the second half of 2024. These observations are included in Appendix D.

4.2 RUN-ON AND RUN-OFF FACILITIES

Site data and information indicate the FPL is internally drained and there are no surface water channels that convey stormwater onto the site. No flowing water was observed at the site between July and the end of December 2024. Information included in the Standard Observations reports (Appendix D) does not identify significant areas of erosion, ponding, or wash outs.

4.3 FINDINGS

The results of monitoring for 2024 are generally consistent with past groundwater monitoring data for the FPL and provide no evidence of a new release from the site. A previously detected VOC (TCFM) was reported in samples from some groundwater monitoring wells but historical data suggest these concentrations are static or declining during the past five years.

The methane concentration at detection probe VP-8R was above the action limit during the December monitoring event. Owing to the exceedance, samples collected for VOC speciation in accordance with the WDR will continue through the third quarter 2025. The sampling coincided with extremely wet conditions (i.e., atmospheric river) which can flush the vadose zone and affect LFG results.

5.0 LIMITATIONS

GLA'S services on this project were performed in accordance with current and generally accepted environmental consulting principles and practices. Environmental conditions may exist at the site that could not be observed and our evaluation was partially based on information supplied by others. Therefore, our professional analyses are based in part on interpretation of data from discrete sampling locations that may not represent actual conditions between sampling points. Additional data from future work or changing conditions may lead to modifications to the professional opinions and recommendations included in this report.

SW-5		Detection	WDR Table IV				o										o						

NOTES:

1. Semiannual sampling required for all vents in which methane concentration exceeds 20 percent by volume during either quarterly field monitoring event.
2. VOC sampling required in all probes in which detected methane concentration exceeds 1 percent by volume. VOC sampling may discontinued after one year of quarterly monitoring if detected methane concentration remains below 1 percent by volume during that period.
3. VP-5R and VP-6 are identified as detection monitoring locations in the WDRs. However, the quarterly monitoring results indicate they should be a corrective action well based on the Additional Corrective Action Monitoring Program requirements under Section A.6.b. of Order R5-2013-0042.
4. GP-14 is a new LFG probe installed in September 2018 as required by the CVRWQCB. This well is not identified as a sampling point in the WDRs but is assumed to be a Detection Monitoring Point and is sampled in accordance with WDR Table II.A requirements.
5. GP-15 is a new temporary LFG probe installed in October 2019 as part of the April NOV mitigation. This well is not identified as a sampling point in the WDRs but is assumed to be a Detection Monitoring Point and is sampled in accordance with WDR Table II.A requirements.
6. FPL MW-2 is a new groundwater monitoring well installed in September 2018 as required by the CVRWQCB. This well is not identified as a sampling point in the WDRs but is assumed to be a Detection Monitoring Point and is sampled in accordance with WDR Table I.A requirements.

Air Flow Rate	ft^3/min	See Note 2	Quarterly	Semiannually
Vent Pressure	lb/in^2	See Notes 2,3	Quarterly	Semiannually
Temperature	oF	See Note 2	Quarterly	Semiannually
Carbon Dioxide	%	See Note 2	Quarterly	Semiannually
Hydrogen Sulfide	ppmv	See Note 2	Quarterly	Semiannually
Methane	%	See Note 2	Quarterly	Semiannually
Monitoring Parameter				
VOCs	ug/cm^3	EPA TO-15	See Note 4	Semiannually

NOTES:

1. VOC sampling required in all probes in which detected methane concentration exceeds 1 percent by volume. VOC sampling may discontinued after one year of quarterly monitoring if detected methane concentration remains below 1 percent by volume during that period.
2. Per the WDRs, field monitoring shall be conducted using appropriate measuring device for each parameters.
3. Per the WDRs, vent pressure shall be measured with the wind turbine gate valve open and closed.
4. Semiannual sampling required for all vents in which methane concentration exceeds 20 percent by volume during either quarterly field monitoring event.

Table 4
SUMMARY OF LEACHATE SEEP MONITORING REQUIREMENTS
Florin Perkins Landfill
Sacramento County, California

PARAMETER	UNITS	SPECIFIED EPA METHODS	SAMPLING FREQUENCY	REPORTING FREQUENCY
Field Parameters				
Total Flow[2]	gallons	NS	Each Occurrence	Within 7 Days
Flow Rate[2]	gallons/day	NS	Each Occurrence	Within 7 Days
Electrical Conductivity	umhos/cm	NS	Each Occurrence	Within 7 Days
pH	units	NS	Each Occurrence	Within 7 Days
Monitoring Parameters				
Bicarbonate	mg/L	NS	Each Occurrence	Within 7 Days
Calcium	mg/L	NS	Each Occurrence	Within 7 Days
Carbonate	mg/L	NS	Each Occurrence	Within 7 Days
Chloride	mg/L	NS	Each Occurrence	Within 7 Days
Magnesium	mg/L	NS	Each Occurrence	Within 7 Days
Nitrate-Nitrogen	mg/L	NS	Each Occurrence	Within 7 Days
Potassium	mg/L	NS	Each Occurrence	Within 7 Days
Sodium	mg/L	NS	Each Occurrence	Within 7 Days
Sulfate	mg/L	NS	Each Occurrence	Within 7 Days
Total Dissolved Solids	mg/L	NS	Each Occurrence	Within 7 Days
Volatile Organic Compounds	ug/L	8260B	Each Occurrence	Within 7 Days

NOTES:

1. Field and monitoring parameters from WDR Table III.

2. The quantity of leachate seepage shall be estimated and reported in gallons/day or total gallons if flow is non-continuous. Also, refer to WDR Section B.3.

NS - Method not specified.

Table 5
SUMMARY OF SURFACE WATER DETECTION MONITORING REQUIREMENTS
Florin Perkins Landfill
Sacramento County, California

PARAMETER	UNITS	SPECIFIED EPA METHODS	SAMPLING FREQUENCY	REPORTING FREQUENCY
Field Parameters				
Water Depth	feet	NS	Semiannually	Semiannually
Electrical Conductivity	umhos/cm	NS	Semiannually	Semiannually
pH	units	NS	Semiannually	Semiannually
Turbidity	NS	NS	Semiannually	Semiannually
Flow to Waters of U.S.	NA	NA	Semiannually	Semiannually
Monitoring Parameters				
Bicarbonate	mg/L	NS	Semiannually	Semiannually
Calcium	mg/L	NS	Semiannually	Semiannually
Carbonate	mg/L	NS	Semiannually	Semiannually
Chloride	mg/L	NS	Semiannually	Semiannually
Magnesium	mg/L	NS	Semiannually	Semiannually
Nitrate-Nitrogen	mg/L	NS	Semiannually	Semiannually

Sodium	mg/L	NS	Semiannually	Semiannually
Sulfate	mg/L	NS	Semiannually	Semiannually
Total Dissolved Solids	mg/L	NS	Semiannually	Semiannually
Volatile Organic Compounds	ug/L	8260B	Semiannually	Semiannually

NOTES:

1. Field and monitoring parameters from WDR Table IV.
2. Semiannual surface water monitoring is required twice per year when there is water present at the designated surface water monitoring point any time during the reporting period (1 January to 30 June or 1 July to 31 December).
3. Reporting shall include whether there was flow from the facility to waters of the U.S. when the samples were collected.
4. NS - Method not specified.

NOTES:

1. See Appendix A for field data.
2. In-waste Vapor probes VP-3 and VP-5, and VP-7 and VP-8 presumed destroyed, were replaced with VP-3R and VP-5R in September 2018, and VP-7R and VP-8R were replaced in October 2020.
3. VP-5R and VP-6 are identified as detection monitoring locations in the WDRs. However, the quarterly monitoring results indicate they should be a corrective action well based on the Additional Corrective Action Monitoring Program requirements under Section A.6.b. of Order R5-2013-0042.
4. NR - Not recorded, probe plugged.
5. Red font indicates "additional Corrective Action" VOC monitoring (TO-15) when methane exceeds 20% by volume.
6. New gas vents completed October 30, 2019, as part of April 2019, NOV mitigation.

NOTES:

1. See Appendix B for complete laboratory reports with MDL, PQL, and laboratory QC information.
2. J qualifier refers to a trace detection between the MDL and PQL.
3. ND indicates the constituent was not detected at or above the constituent MDL. See Appendix B for constituent MDLs.
4. VOC results in **bold** text indicate a detected value greater than the PQL.

NOTES:

1. Concentration limits from Sanitas™ statistical analysis update (see Appendix C).
2. $VOC_{(NS)}$ - Constituent detected at a concentration equal or greater than the constituent-specific PQLs identified in Appendix B.
3. MW-D is identified in the WDRs as a detection & corrective action well for the NFA and as a background well for the EFA.
4. FPL MW-2 was installed in September 2018 and has not been designated as a corrective action or detection monitoring well to date.
5. TCFM - Trichlorofluoromethane.
6. TR - Trace concentration between the MDL and PQL.
7. Inc - Increasing, Dec - Decreasing.
8. NA -Statistical analysis for trends were not compared as well is background well.

Appendix A
FIELD DATA

Florin Perkins Landfill
4201 Florin Perkins Road
Sacramento, CA

PROJECT NO: 672.11.02
Date: 9/12/24
Field Technician: RGuevara
Coordinated By: J. Butera
Client: GLA - Greg George
Weather: Clear
Barameter: 29.77 ("Hg) **Temp:** 100 °F

Unsaturated Zone - 3Q2024 Quarterly Event
Detection Monitoring Program
Structures and Perimeter Probes (GPs)

STRUCTURES AND PERIMETER PROBES - **QUARTERLY** TO-15 sampling is required for any probe in which methane concentration exceeds 1% by volume. Any probe measurements recorded above this criteria during this event must be sampled **quarterly for 1 year beginning the next quarter regardless of the field readings at that probe.** Record Relative Pressure, CH4, CO2, O2, and Balance Gas using the GEM5000. Calibrate the instrument prior to use. Record weather information above.

Unsaturated Zone - 3Q2024 Quarterly Event
Corrective Action Monitoring Program
Gas Vents (GVs)

Barameter: 29.84 ("Hg) Temp: 65 °F

GAS VENTS - TO-15 sampling is required **SEMIANNUALLY** for any probe in which methane (CH4) concentration exceeds 20% by volume during any quarterly field monitoring event. **Semiannual TO-15 sampling will continue for 1 year (Two SA events) regardless of the field readings at this location.** Record Relative Pressure, CH4, CO2, O2, Balance Gas, and Temp using the GEM5000. Record VOCs using the MiniRae. Calibrate both instruments prior to use. Record weather information above.

PROJECT NO: 672.11.02
Date: 9/11/24
Field Technician: RGuevara
Coordinated By: J. Butera
Client: GLA - Greg George
Weather: Clear
Barameter: 29.80 **("Hg) Temp:** 72 **°F**

Unsaturated Zone - 3Q2024 Quarterly Event
Detection Monitoring Program
Vapor Probes (VPs)

DETECTION VAPOR PROBES - TO-15 sampling is required **QUARTERLY** for any probe in which methane (CH4) concentration exceeds 1.0% by volume during any field monitoring event. **TO-15 sampling must continue for 4 Quarterly events regardless of the field readings at that probe**. Record Relative Pressure, CH4, CO2, O2, Balance Gas, and Temp using the GEM5000. Record VOCs using the MiniRae. Calibrate both instruments prior to use. Record weather information above.

Unsaturated Zone - 4Q2024 Quarterly Event
Detection Monitoring Program
Structures and Perimeter Probes (GPs)

STRUCTURES AND PERIMETER PROBES - **QUARTERLY** TO-15 sampling is required for any probe in which methane concentration exceeds 1% by volume. Any probe measurements recorded above this criteria during this event must be sampled **quarterly for 1 year beginning the next quarter regardless of the field readings at that probe**. Record Relative Pressure, CH4, CO2, O2, and Balance Gas using the GEM5000. Calibrate the instrument prior to use. Record weather information above.

Unsaturated Zone - 4Q2024 Quarterly Event
Corrective Action Monitoring Program
Gas Vents (GVs)

GAS VENTS - TO-15 sampling is required **SEMIANNUALLY** for any probe in which methane (CH4) concentration exceeds 20% by volume during any quarterly field monitoring event. **Semiannual TO-15 sampling will continue for 1 year (Two SA events) regardless of the field readings at this location.** Record Relative Pressure, CH4, CO2, O2, Balance Gas, and Temp using the GEM5000. Record VOCs using the MiniRae. Calibrate both instruments prior to use. Record weather information above.

Sacramento, CA 95864

Subject: **Second Half 2024 Groundwater Monitoring Report**
Teichert Aspen I Property, Sacramento, California
HDR Project No.: 10402442

Dear Mr. Lane:

HDR Inc. (HDR) is pleased to submit this *Second Half 2024 Groundwater Monitoring Report.* Documented in this report are field procedures and results from the groundwater monitoring event conducted on December 19, 2024, at the Teichert Aspen I Property (Site) along its western property boundary (adjacent to the southeast boundary of the Florin-Perkins Landfill and the north boundary of the L&D Landfill).

SCOPE OF WORK

The following activities were conducted during this semiannual monitoring event:

- Recorded static groundwater levels in three monitoring wells,
- Collected groundwater samples from three monitoring wells,
- Disposed of purge water in the Aspen 1 storm water collection pond,
- Delivered groundwater samples to California Laboratory Services in Rancho Cordova, CA,
- Analyzed groundwater samples for volatile organic compounds (VOCs), electrical conductivity (EC), total dissolved solids (TDS), chloride, nitrate as nitrogen, sulfate, total alkalinity, bicarbonate alkalinity as $CaCO_3$, carbonate alkalinity as $CaCO_3$, and hydroxide alkalinity as $CaCO_3$, and
- Prepared this Groundwater Monitoring Report.

FIELD PROCEDURES

On December 19, 2024, static groundwater level measurements were obtained from groundwater monitoring wells MW-1, MW-2, and MW-3 (**Figure 1**). Groundwater depths were measured relative to the north side of the well casings using an electronic water level indicator. Prior to taking a measurement, the cap was removed from each well and the water was allowed to equilibrate with atmospheric pressure for approximately 30 minutes. The depth to water data was used in the field to calculate the volume of standing water present in each well and later to determine static groundwater elevations. The water level indicator probe was decontaminated after each use by washing it in an Alconox® detergent solution followed by a tap-water rinse. The depth-to-water measurements were recorded on Monitoring Well Sampling Logs, copies of which are included in **Appendix A**.

At least three standing water volumes were purged from the monitoring wells prior to collecting groundwater samples. Observations of groundwater conditions during purging, including odor, turbidity, amount of water purged, measurements of water quality parameters including temperature, pH, EC, TDS, and any other pertinent information were recorded on the Monitoring Well Sampling Logs. Purged water was disposed of in the Aspen 1 storm water collection pond.

Immediately after purging, groundwater samples were collected with disposable bailers. Each sample was decanted into three laboratory-supplied 40-milliliter volatile organic analysis vials (VOAs) containing hydrochloric acid and one unpreserved polyethylene container. Care was taken to eliminate headspace in the VOAs.

Groundwater samples were labeled with the project name, sample ID, date, and time the sample was collected. This same information was recorded on a chain-of-custody form. The samples were placed in a cooler chilled with ice, then transported under chain-of-custody procedures to the laboratory. The samples were analyzed for the following:

- VOCs by EPA Method SW8260B
- Total alkalinity, bicarbonate as $CaCO_3$, carbonate as $CaCO_3$, and hydroxide as $CaCO_3$ by SM2320B
- TDS by SM2540C
- EC by EPA Method EPA Method 120.1
- Nitrate as nitrogen, chloride, and sulfate by EPA Method 300.0

Quality Assurance/Quality Control (QA/QC)

Field QA/QC

All non-disposable equipment was decontaminated after each use by washing in an Alconox® detergent solution followed by a tap-water rinse. New tubing and a clean pump were used to purge each well and disposable polyethylene bailers were used to sample the monitoring wells.

Laboratory QA/QC

Samples were received and analyzed by the laboratory within United States Environmental Protection Agency (U.S. EPA) specified holding times. Analytical laboratory QA/QC includes a blank, laboratory control sample (LCS), LCS duplicate (LCSD), matrix spike (MS), and matrix spike duplicate (MSD).

The laboratory MS and MSD recoveries for sulfate and chloride were each outside of QC acceptance limits. However, the QC batch was accepted based on LCS and LCSD recoveries within the acceptance limits. The results are therefore deemed acceptable. Analytical laboratory results and QA/QC are presented in **Appendix B**.

RESULTS

Groundwater Levels

Groundwater elevations were -10.47 feet mean sea level (ft msl) in well MW-1, -11.30 ft msl in well MW-2, and -12.50 ft msl in well MW-3. Groundwater was, on average, 45.05 feet below the tops of the casings. Groundwater elevations in wells MW-1, MW-2, and MW-3 decreased an average of 0.96 feet as compared to the June 2024 monitoring event. The groundwater elevations for this monitoring event are presented on **Table 1** and **Figure 1**. Groundwater elevation contours are not included on **Figure 1**. These contours will be developed as part of the Florin Perkins Landfill monitoring report where the three Aspen 1 wells are included.

Analytical Results

No VOCs were detected in the three wells sampled during the December 2024 monitoring event, and the conventional parameters are within each well's historical range with the following exceptions: at MW-2, bicarbonate, Total Alkalinity and TDS are at historic highs. Current and historical laboratory analytical results are presented on **Table 1**. The analytical results for total alkalinity, sulfate, nitrate and TDS are presented in time-concentration plots on **Figures 2 - 5**, respectively.

Limitations

This report is based on available information and was prepared in accordance with currently accepted geologic, hydrogeologic, and engineering practices. No other warranty is implied or intended. This report has been prepared for the sole use of Teichert Land Co. and applies only to the subject site. Use of this report by third parties shall be at their sole risk. This report was prepared under the direct supervision of the California Professional Geologist whose signature appears below. If you have any questions, please call Mr. Charlie O'Neill at (916) 817-4764.

Sincerely,
HDR

Charlie O'Neill
Professional Geologist #6401, expires 6/30/2025

NOTES

[1] Top of casing was re-surveyed prior to the 10/05/05 monitoring event.

Bold = Detected analytes
CT = Carbon Tetrachloride
EC = Electrical Conductivity
MC = Methylene chloride
MSL = Mean Sea Level
NA = Not Available
ND = Analyte not detected
PCE = Tetrachloroethene
TCFM = Trichlorofluoromethane
TDS = Total Dissolved Solids
TOC = Top of Casing
VOCs = Volatile Organic Compounds
mg/L = milligrams per liter
µg/L = micrograms per liter
µS/cm = microSiemens per centimeter

LABORATORY ANALYTICAL REPORT AND CHAIN-OF-CUSTODY FORMS

CALIFORNIA LABORATORY SERVICES
Committed. Responsive. Flexible.

December 27, 2024

CLS Work Order #: 24L1082
COC #:

Charlie O'Neill
HDR Engineering
2365 Iron Point Road
Folsom, CA 95630

Project Name: Teichert Aspen 1

Enclosed are the results of analyses for samples received by the laboratory on 12/19/24 12:37. Samples were analyzed pursuant to client request utilizing EPA or other ELAP approved methodologies. I certify that the results are in compliance both technically and for completeness.

Analytical results are attached to this letter. Please call if we can provide additional assistance.

Sincerely,

Daniel Johnson
Technical Director

CA SWRCB ELAP Accreditation/Registration number 1233

24L1082

Reported: 12/31/2024 9:59
Project: Florin Perkins Landfill
Project Number: [none]
Project Manager: Gregory George

Notes And Definitions

J	Estimated Value (CLP Flag)
MDL	Method Detection Limit
ND	Analyte Not Detected
PQL	Practical Quantitation Limit
A10	Detection and quantitation limits were raised due to matrix interference.
Q03	Matrix spike recovery(s) was(were) not within the control limits.
S09	The surrogate recovery for this compound was not within the control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.
All results listed in this report are for the exclusive use of the submitting party. Pace Analytical assumes no responsibility for report alteration, separation, detachment or third party interpretation.

Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

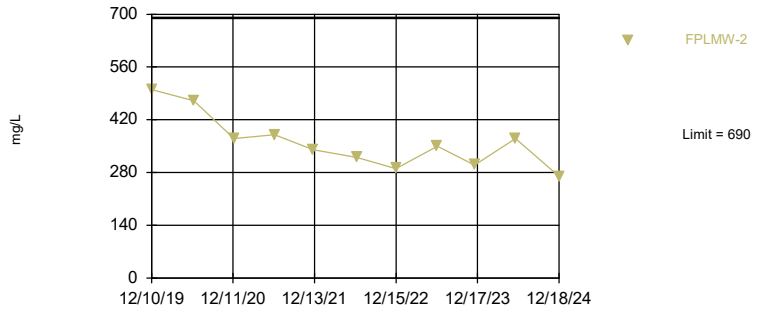
Within Limit

Bicarbonate

Interwell Non-parametric



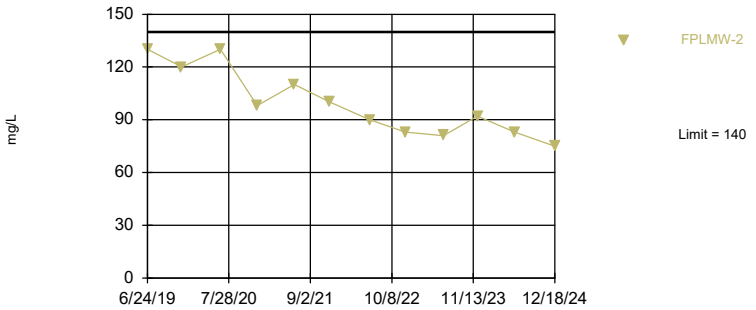
Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 44 background values. 90.04% coverage at alpha=0.01; 93.55% coverage at alpha=0.05; 98.24% coverage at alpha=0.5. Report alpha = 0.1047. After outlier removal distribution was non-normal, so outlier results were invalidated.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Within Limit

Calcium

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 29 background values. 85.35% coverage at alpha=0.01; 90.04% coverage at alpha=0.05; 97.46% coverage at alpha=0.5. Report alpha = 0.2259. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

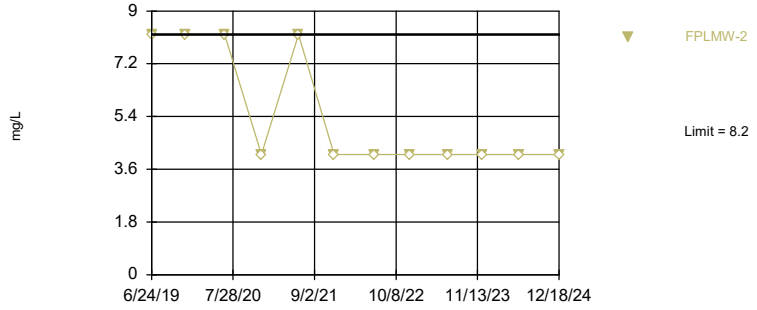
Tolerance Limit Analysis Run 1/23/2025 10:41 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG
Hollow symbols indicate censored values.

Within Limit

Carbonate

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 75%. Limit is highest of 28 background values. 100% NDs. 84.96% coverage at alpha=0.01; 90.04% coverage at alpha=0.05; 97.46% coverage at alpha=0.5. Report alpha = 0.2378. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

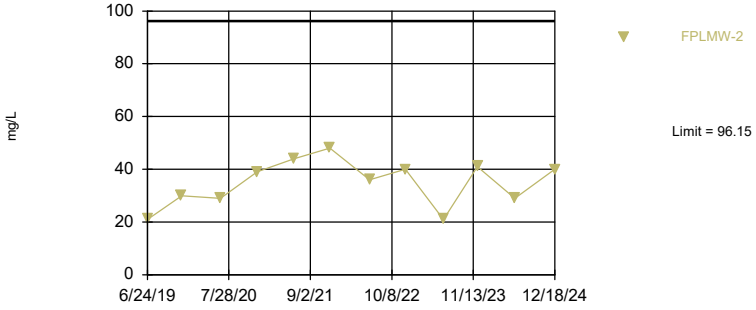
Tolerance Limit Analysis Run 1/23/2025 10:41 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Within Limit

Chloride

Interwell Parametric

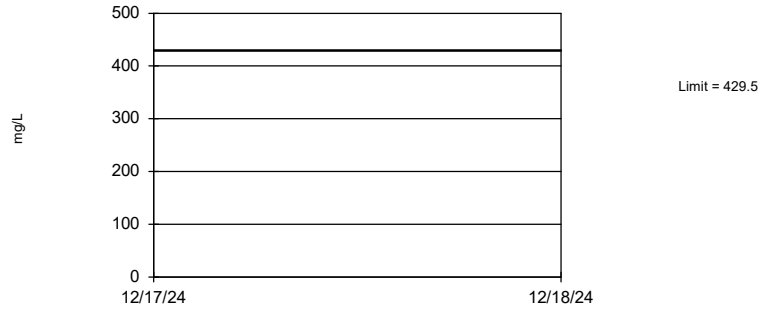


95% coverage. Background Data Summary (based on natural log transformation): Mean=3.584, Std. Dev.=0.4678, n=44. Normality test: Shapiro Wilk @alpha = 0.05, calculated = 0.9603, critical = 0.944. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. One background outlier was removed: 600 (12/10/2019).

Tolerance Limit Analysis Run 1/23/2025 10:41 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Bicarbonate

Interwell Parametric



95% coverage. Background Data Summary (based on cube root transformation): Mean=6.627, Std. Dev.=0.4691, n=83. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9743, critical = 0.971. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. One background outlier was removed: 36 (6/30/2002).

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Calcium

Interwell Non-parametric

Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 75 background values. 93.95% coverage at alpha=0.01; 95.9% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.02134. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

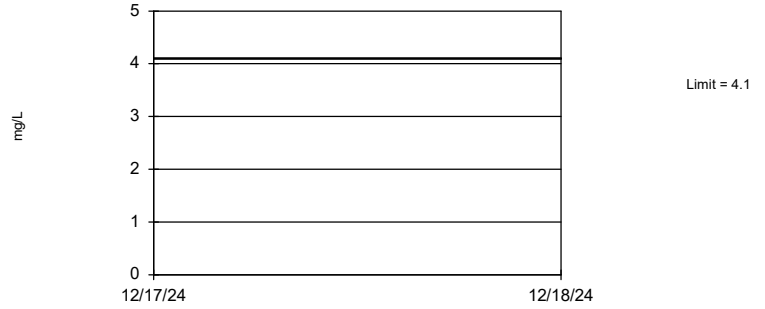
Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Carbonate

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 75%. Limit is highest of 57 background values. 100% NDs. 92.38% coverage at alpha=0.01; 94.73% coverage at alpha=0.05; 98.63% coverage at alpha=0.5. Report alpha = 0.05373. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

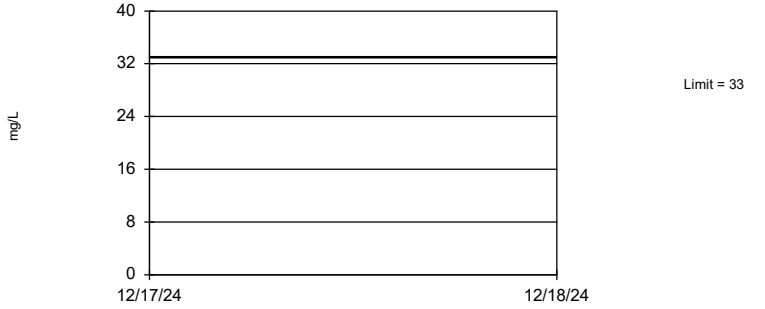
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Chloride

Interwell Non-parametric

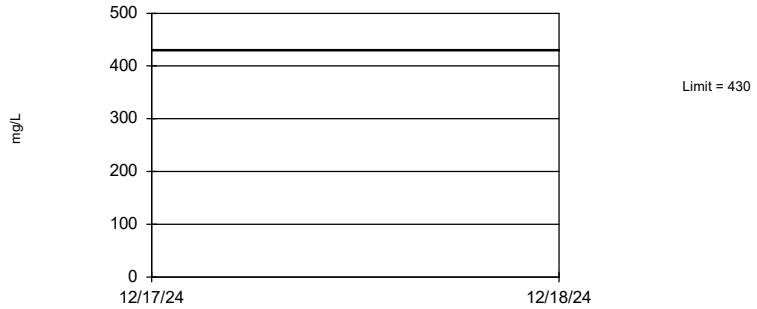


Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 82 background values. 94.73% coverage at alpha=0.01; 96.29% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.01491. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

Tolerance Limit Analysis Run 1/23/2025 10:44 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Bicarbonate

Interwell Non-parametric

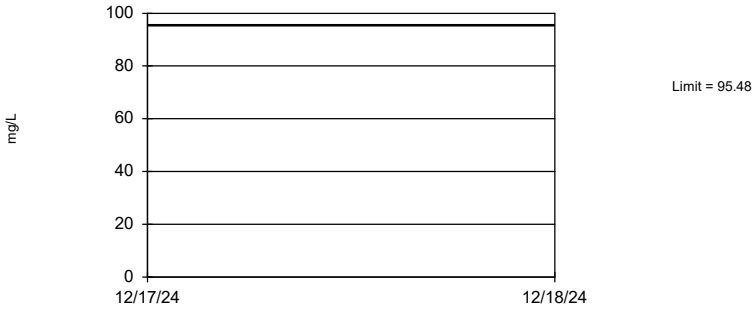


Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 88 background values. 94.73% coverage at alpha=0.01; 96.68% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.01096. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Calcium

Interwell Parametric



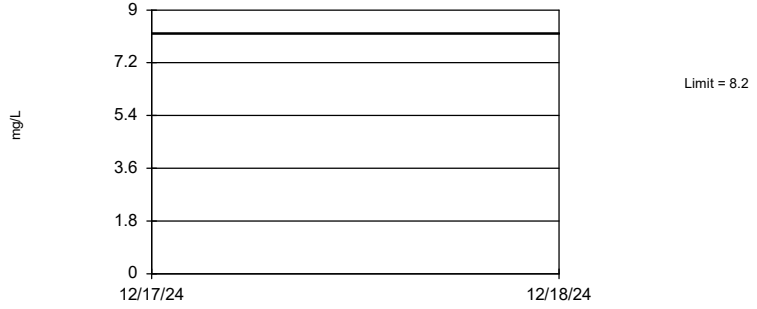
95% coverage. Background Data Summary: Mean=74.09, Std. Dev.=10.54, n=57. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9778, critical = 0.961. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. One background outlier was removed: 220 (6/22/2022).

Tolerance Limit Analysis Run 1/23/2025 10:46 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Carbonate

Interwell Non-parametric



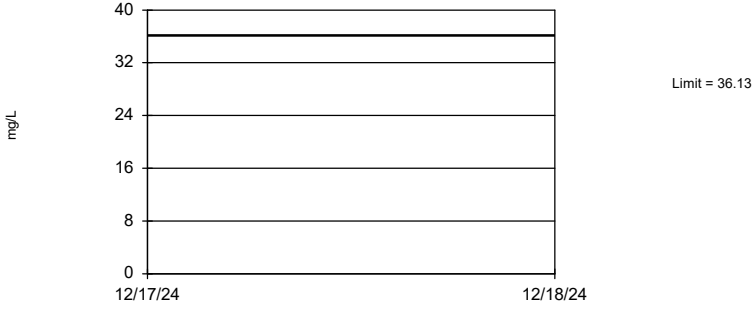
Non-parametric test used in lieu of parametric tolerance limit because censored data exceeded 75%. Limit is highest of 56 background values. 100% NDs. 91.99% coverage at alpha=0.01; 94.73% coverage at alpha=0.05; 98.63% coverage at alpha=0.5. Report alpha = 0.05656. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

Tolerance Limit Analysis Run 1/23/2025 10:46 AM
Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Chloride

Interwell Parametric



95% coverage. Background Data Summary: Mean=24.93, Std. Dev.=5.736, n=85. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9814, critical = 0.972. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. Five background outliers were removed: 8.6 (6/30/2002); 9 (12/26/2002); 10 (5/6/2004); 3.3 (6/25/2019); 6.6 (6/17/2020).

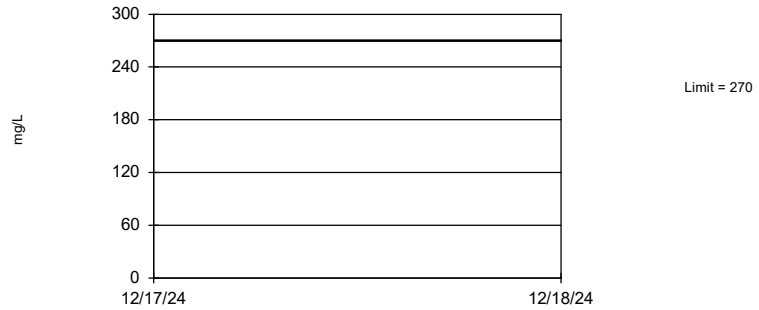
Sulfate

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 90 background values. 95.12% coverage at alpha=0.01; 96.68% coverage at alpha=0.05; 99.41% coverage at alpha=0.5. Report alpha = 0.009888. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

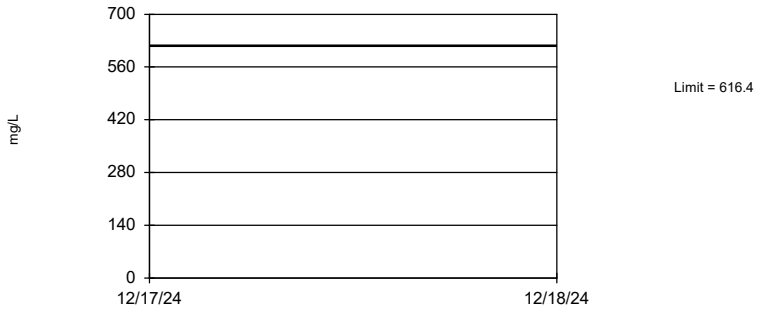
Tolerance Limit Analysis Run 1/23/2025 10:47 AM

Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

TDS

Interwell Parametric



95% coverage. Background Data Summary: Mean=505.3, Std. Dev.=56.94, n=86. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9844, critical = 0.972. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. Four background outliers were removed: 1200 (6/19/2006); 190 (6/25/2019); 270 (6/17/2020); 840 (6/22/2022).

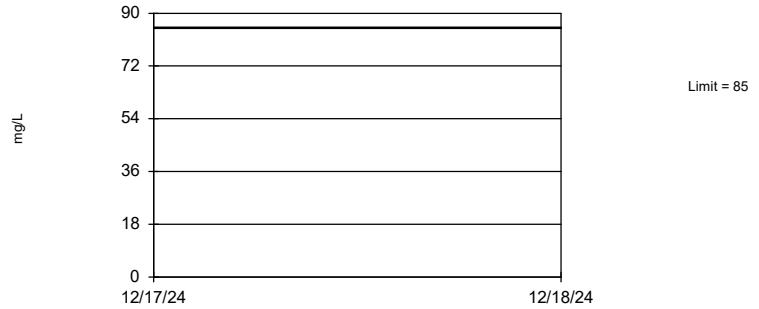
Magnesium

Interwell Non-parametric

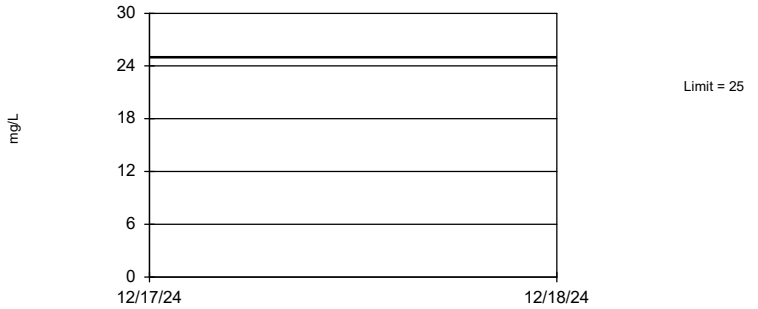


Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 75 background values. 93.95% coverage at alpha=0.01; 95.9% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.02134. After outlier removal distribution was non-normal, so outlier results were invalidated.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Nitrate as N

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 84 background values. 94.73% coverage at alpha=0.01; 96.68% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.01345. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Potassium

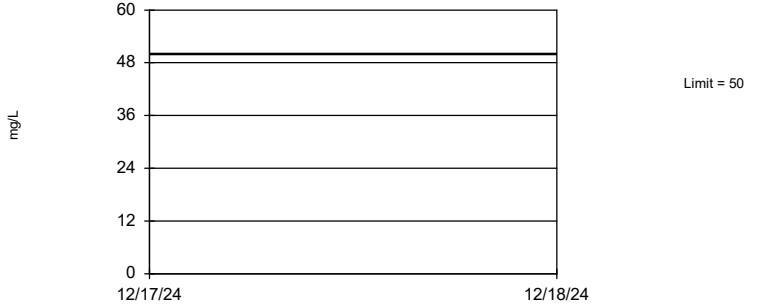
Interwell Parametric

95% coverage. Background Data Summary: Mean=3.068, Std. Dev.=0.6209, n=75. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9706, critical = 0.969. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. No background outliers were found.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Sodium

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 75 background values. 93.95% coverage at alpha=0.01; 95.9% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.02134. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

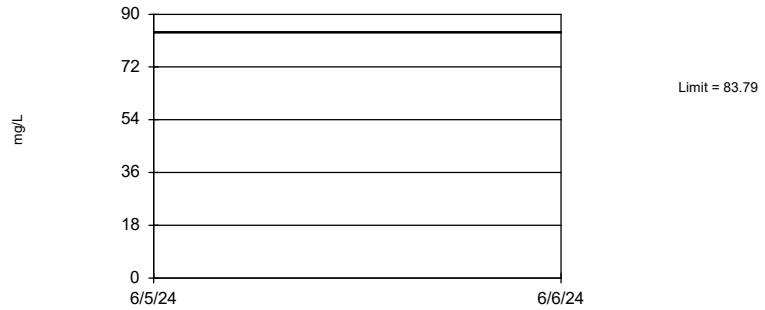
Sulfate

Interwell Parametric



95% coverage. Background Data Summary: Mean=56.57, Std. Dev.=13.89, n=82. Normality test: Shapiro Francia @alpha = 0.05, calculated = 0.9764, critical = 0.971. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. Two background outliers were removed: 6 (7/23/2003); 15 (12/18/2024).

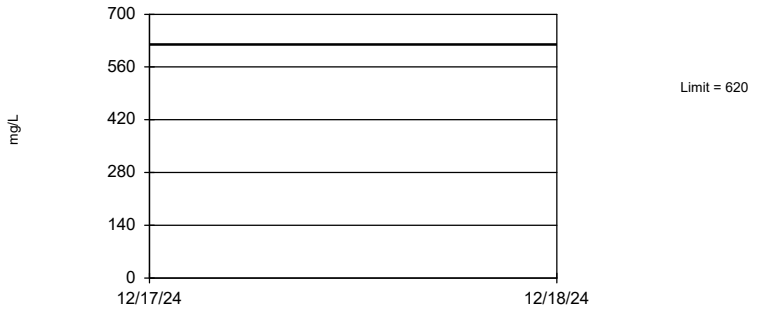
Tolerance Limit Analysis Run 1/23/2025 10:44 AM

Florin Perkins Landfill Client: Geo-Logic Associates Data: FPSanitas

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

TDS

Interwell Non-parametric



Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Francia normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 84 background values. 94.73% coverage at alpha=0.01; 96.68% coverage at alpha=0.05; 99.02% coverage at alpha=0.5. Report alpha = 0.01345. Distribution was found to be non-normal after removal of suspect values, so outliers could not be identified.

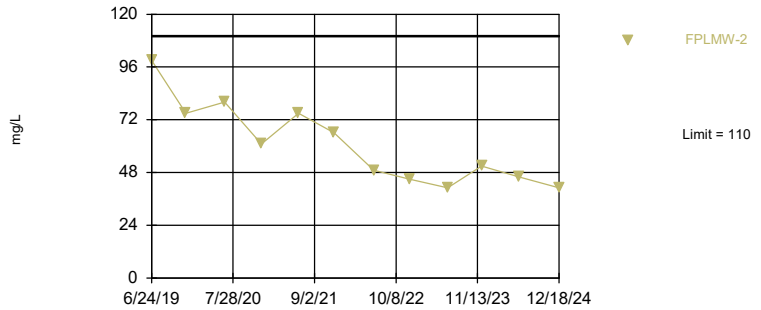
Within Limit

Magnesium

Interwell Non-parametric



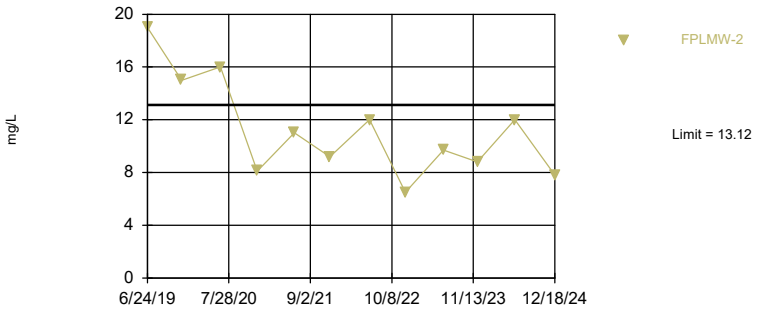
Non-parametric test used in lieu of parametric tolerance limit because the Shapiro Wilk normality test showed the data to be non-normal at the 0.05 alpha level. Limit is highest of 29 background values. 85.35% coverage at alpha=0.01; 90.04% coverage at alpha=0.05; 97.46% coverage at alpha=0.5. Report alpha = 0.2259. After outlier removal distribution was non-normal, so outlier results were invalidated.

Sanitas™ v.10.0.24 For the statistical analyses of ground water by RMC Geoscience, Inc. only. UG

Exceeds Limit: FPLMW-2

Nitrate as N

Interwell Parametric



95% coverage. Background Data Summary (based on square root transformation): Mean=2.868, Std. Dev.=0.3495, n=36. Normality test: Shapiro Wilk @alpha = 0.05, calculated = 0.9479, critical = 0.935. Report alpha = 0.05. EPA 1989 outlier screening was performed on the background data. Eight background outliers were removed: 2.9 (6/30/2002); <0.27 (12/26/2002); 0.95 (7/23/2003); 3.5 (12/10/2003); <0.27 (7/5/2005); 24.8 (12/21/2006); 19.9 (11/8/2007); 2 (6/24/2019).

Appendix D
STANDARD OBSERVATIONS

Standard Observations
Florin Perkins Landfill

Date: 7-12-24

Receiving Waters

Refers to any surface or ground water which actually or potentially receives waste constituents, leachate or surface or ground waters which come in contact with waste material or contaminated soil.

1. Floating and Suspended materials of waste origin? Present ____ Absent ✓ If present state source of affected areas.

2. Describe water color, flow rate, source and size of affected area.

3. Odors? Present ____ Absent ✓ If present, characterize, note source and distance from source.

4. Any evidence of water associated with wildlife? NO

5. Weather conditions: Clear Wind direction ____ Velocity ____
Precipitation, recent ____ Day of observation ____

Perimeter

1. Liquid leaving or entering the unit? Yes ____ No ✓, if yes, estimate flow rate and size of area. Show on a map.

2. Odors: Present ____ Absent ✓. If present, describe, note source and distance of travel of source.

3. Any evidence of erosion and or daylighted refuse:

Waste Management Unit

1. Ponded water at any point on the facility? *Yes* ____ No ✓. If yes, show affected area on map.

2. Evidence of odors: Refer to #3, Receiving waters.
NO

3. Any evidence of erosion and or daylighted refuse?
NO

Inspected by Mark Cisco Title Manager

NO

Waste Management Unit

1. Ponded water at any point on the facility? Yes ____ No ✓. If yes, show affected area on map.

2. Evidence of odors: Refer to #3, Receiving waters.
NO

3. Any evidence of erosion and or daylighted refuse?
NO

Inspected by Mark Cass Title Manager

Standard Observations
Florin Perkins Landfill

Date: 10-4-24

Receiving Waters

Refers to any surface or ground water which actually or potentially receives waste constituents, leachate or surface or ground waters which come in contact with waste material or contaminated soil.

1. Floating and Suspended materials of waste origin? Present____ Absent ✓ If present state source of affected areas.

2. Describe water color, flow rate, source and size of affected area.

3. Odors? Present____ Absent ✓ If present, characterize, note source and distance from source.

4. Any evidence of water associated with wildlife? NO

5. Weather conditions: Clear Wind direction____ Velocity____
   Precipitation, recent____ Day of observation____

Perimeter

1. Liquid leaving or entering the unit? Yes____ No ✓, if yes, estimate flow rate and size of area. Show on a map.

2. Odors: Present____ Absent ✓. If present, describe, note source and distance of travel of source.

3. Any evidence of erosion and or daylighted refuse:
   NO

Request

Hello,

We are preparing a Phase I Environmental Site Assessment for Sacramento County APN 061-0150-042-0000 (3901 Florin Perkins Road, Sacramento, CA) and would like to formally request any documents related to petroleum products and/or hazardous materials for the Site. We are interested in any records related to environmental closure reports, spill reports, cleanup reports, environmental assessments, remediation records, UST records, AST records, building department records, etc.

Thank you and please let me know if you have any questions.

Requester + Staff

In response to PRA request 25-4322, the County has determined that it has disclosable records within the scope of your request and those documents are being provided on NextRequest. The County also has determined that some information within the scope of your request will not be produced because it is exempt from disclosure, pursuant to Government Code § 7927.700, Government Code § 7927.705, and Health & Safety Code § 25509 (b). Senior Office Assistant Pheng Xiong determined that this information is exempt.

July 30, 2025, 8:07am by Staff

Message from requester

Requester + Staff

We will need the following:

Groundwater Monitoring Reports for the past 2 years

Landfill Gas Monitoring Reports for the past 2 years

Recent Correspondence from the last 2 years from a government agency

Any investigation reports

Any remediation reports

Any pending workplans

Any inspection reports from the last year

Thank you.

July 29, 2025, 8:44pm by the requester

Message to requester

Kevin,

As mentioned earlier, we have located over 3500 records going back over 25+ years. Do you wish to have all records uploaded to you or can you be more specific regarding a date range? Please let us know. Thank you.

July 29, 2025, 1:58pm by Staff

Message to requester

Requester + Staff

Thank you for requesting clarification. EMD's records are indexed by addresses, not APNs. The address provided was not the address the records were indexed under. The correct address is 4201 Florin Perkins Rd. We have located over 3500 records for this facility.

The records that you have requested require the Environmental Management Department to search for, collect and review for redaction a large amount of records. The good faith estimate for release of the records will be on or before 9/4//2025. Additional time may be required due to the extremely large amount of records.

Thank you for your patience.

Peggy Silva, Administrative Services Officer – EMD

Message from requester Requester + Staff

Hello. Can you please verify this request? This property is a landfill and as one of the consultants that has worked on this property over the years, we are aware of multiple records/reports related to the property.

Thank you.

Transfer/Processing Facility Inspection Report (53)
Florin Perkins Public Disposal Site -T/P (34-AA-0221)
1/3/2024

Inspection Information

Inspected By: Sacramento County

Local Inspection ID: FA0003172, PR0006508

Inspection Date: 1/3/2024

Time In: 1:30 PM

Inspection Type: Periodic

Time Out:

Inspector: Jason Smalley (LEA)

Inspection Duration:

Operator: Zanker Road Resources Management, Ltd.

Received By: Report emailed to Abel Pereira by Jason Smalley (LEA)

Also Present (Name):

John Lewis (LEA), Abel Pereira (GM), Brandon Brown, Carissa Summers, Isaiah Juarez

Facility/Activity Information

Enforcement Agency: County of Sacramento

SWIS Number: 34-AA-0221

Facility: **Florin Perkins Public Disposal Site -T/P**
4201 Florin Perkins Road
Sacramento, CA 95826

Activity: Large Volume Transfer/Processing Facility

Operational Status: Active

Regulatory Status: Permitted

Land Owners(s):

Nancy Cleavinger, et.al. (Trustee)

The above facility was inspected for compliance with applicable sections of Division 30 of the Public Resources Code (PRC) and Title 14 and Title 27, California Code of Regulations (CCR).

No Violations

Areas of Concern

14 CCR 17414 - Record Keeping Requirements

Monthly putrescible waste percentage records not available at time of inspection. Facility is required to measure putrescible waste percentage in incoming waste stream once each month. Measurements must be logged and made available to the LEA upon request. Current SWFP states that putrescible waste shall not exceed 2% by weight of the daily incoming waste stream. Correct within 30 days. Note: Operator stated that putrescible waste measurements are taken on the 9th of each month.

Incomplete special occurrence logs observed at time of inspection. Logs did not include two recent incidents that were reported by facility staff. Special occurrence logs must include date, time, and description of all incidents, injuries, accidents, and corrective action. Correct within 30 days. Note: The two incidents are shown below.

- Dump truck off-loading material made contact with power line while raising bed.
- Minor employee injury on the sorting line.

14 CCR 17409.4 - Signs

Disposal fee signage not posted at facility entrance. Signage indicating current disposal fees shall be posted in a location that is clearly visible to the customer. Correct within 30 days. Note: Operator stated that handouts listing disposal fees are available in the scale house and are given to the customers upon request.

14 CCR 17409.1 - Roads

Excessive mud observed on vehicle pathways throughout facility. Mud observed being tracked onto scales and exit road leading away from the facility. Onsite roads must be maintained to minimize the tracking of soil onto adjacent public roadways and allow for all-weather access. Correct within 30 days.

14 CCR 17403.9 - Transfer/Processing Report Requirements

Uncovered roll-off container filled with waste tires observed at time of inspection. Standing water from recent rains observed inside tires. TPR page I-5 of I-10 states that waste tire container "will be covered during the wet season to prevent water from settling in the tires". Correct within 7 days. Note: Operator stated that container is usually covered but that tarp may have been removed the last time tires were added.

Inspection Report Comments

Inspection Comments

Weather: Overcast/recent rain, temperature 57F, light wind from the south.

Litter: No visible signs of litter observed outside the perimeter fence. Minimal litter observed inside perimeter fence.

Odor: No offensive odors observed at time of inspection.

Vectors: No vectors observed at time of inspection.

Security: No damage observed to the security fence surrounding the operating area. Facility also has video surveillance and roving night watchmen.

Safety: No safety concerns observed at time of inspection. Two safety spotters (red hard hats) observed on the tipping pad. All employees observed wearing proper PPE for their assigned task.

Fire suppression: Multiple fire suppression stations observed during inspection walkthrough. No visible damaged observed at these stations. Random vehicle fire extinguisher check conducted during inspection. Fire extinguisher was charged and readily available.

Records: Load check and temperature logs were reviewed and approved at time of inspection. Daily tonnage and vehicle logs were emailed by Abel Pereira on 1/4/2023. Permitted daily tonnage and vehicle limits were not exceeded during the reporting period. See AoC section for information on special occurrence and putrescible measurement logs.

Processing/removal timeframe: Based on Q&A with General Manager Abel Pereira at time of inspection. All material processing and removal timeframes are being met. Chipping and grinding of wood waste and sorting of MSW observed at time of inspection.

Inert debris storage: Operator conducts quarterly drone flyovers to determine the amount of inert debris stored on site. Last flyover measured 5900 cubic yards.

Temperature check: Internal temperature of wood chip pile measured 56F. Temperature of ADC pile measured 58F. Temperatures were taken by the operator during the inspection at the request of the LEA.

Corrective Action: All AoC's documented on previous inspection report dated 12/6/2023 have been corrected. Corrective action taken by the operator includes:

- Spilled oil was removed at time of discovery using absorbent dry sweep.
- Load check staff and spotters were provided additional training.
- Letters were mailed to operators responsible for disposing of the material that caused the oil spill.

Standing Comments

1. Operator has submitted an application to the city for a minor modification of their use permit. This modification includes the addition of a modular office building, parking area, and expansion into the 5-acre equipment storage area that resides outside the current permitted facility boundary. The intent of the expansion is to accept, process, and transfer organic waste. The operator is waiting for the City of Sacramento to give final approval for the modified use permit before they submit an Application for Permit Revision the LEA/CalRecycle.

2. As discussed above, the operator is preparing to propose future changes which may include additional perimeter berm construction, three new on-site buildings, increased size of material sales yard, acceptance, processing, and transferring of organic/green waste in an area adjacent to, but outside of their current permitted operations area. Some of these changes will necessitate modification or revision of their solid waste permit. Because the facility is located on a closed landfill, new structures within 1000' of waste must meet 27CCP section 21190 post-closure land use requirements, including gas monitoring and control

requirements. As noted in section 17s of the SWFP, proposed changes which may require permit revision should be submitted to the LEA at least 180 days in advance of the changes being implemented. Additionally, all planned site changes must adhere to provisions of the Florin Perkins Landfill Closure/Post Closure Maintenance Plan.

Closed Disposal Site Inspection Report (188)
Florin-Perkins (Inert) Landfill, Inc. (34-AA-0180)
3/8/2024

Inspection Information

Inspected By: Sacramento County
Local Inspection ID:
Inspection Date: 3/8/2024
Time In: 1:00 PM
Inspection Type: Periodic
Time Out:
Inspector: Jason Smalley
Inspection Duration:
Operator: Florin-Perkins Landfill, Inc.
Received By: Report emailed to Mark Caso
Also Present (Name):

Mark Caso

Facility/Activity Information

Enforcement Agency: County of Sacramento
SWIS Number: 34-AA-0180
Facility: **Florin-Perkins (Inert) Landfill, Inc.**
4201 Florin-Perkins Road
Sacramento, CA 95826
Activity: Inert Waste Disposal Site
Operational Status: Closed
Regulatory Status: Exempt
Land Owners(s):

Cleavinger, Nancy

The above facility was inspected for compliance with applicable sections of Division 30 of the Public Resources Code (PRC) and Title 14 and Title 27, California Code of Regulations (CCR).

No Violations

No Areas of Concern

Inspection Report Comments

Weather: Sunny conditions with light wind from the southwest. Temperature at time of inspection was 65 degrees Fahrenheit.

Drainage and Erosion Control: No erosion observed at time of inspection.

Reporting: Landfill Gas Monitoring Report for Q4/2023 was received by LEA staff on 1/15/2024. No methane above 5% was detected at any of the perimeter compliance wells.

Grading of Fill Surfaces: Small amount of ponding water observed on the north side of the East Fill Area. Recommend filling/regrading this area as weather conditions permit to allow for later run-off.

Slope Stability: All fill area slopes appeared to be in stable condition.

Site Maintenance: Dirt access roads on the north portion of the landfill were not accessible due to recent weather. Recommend stabilizing impassible areas with rock or gravel to allow complete access to the site.

Site Maintenance: Cap vegetation throughout the site was approximately six inches tall. Five to ten large bushes observed growing in various areas on the landfill caps. Recommend removing these bushes to prevent possible root intrusion and animal burrowing . Note: Mr. Caso stated that perimeter fire breaks are cut in June each year.

Postclosure Maintenance: No damage to gas monitoring and control system observed at time of inspection. Gas extraction system was functioning properly.

Postclosure Land Use: Mr. Caso stated that site owners are continuing to explore the possibility of adding multiple warehouses along the south perimeter of the property within 1000 feet of the South Fill Area. Per 27 CCR, section 21190(c), all proposed post closure land uses, other than non-irrigated open space, on sites implementing closure or on closed sites shall be submitted to the LEA, RWQCB, local air district and local land use agency. Construction of structural improvements on top of landfilled areas during the post closure period shall meet the conditions provided in 21190(e). All on-site construction within 1,000 feet of the boundary of any disposal area shall be designed and constructed in accordance with 21190(g).

Security: Perimeter fencing appeared to be in serviceable condition at time of inspection. No evidence of unauthorized access to the site observed.

Inspection Report Comments

Periodic inspection conducted on May 31, 2024. Property Manager Mark Caso accompanied LEA staff during the inspection.

Weather: Sunny conditions with light winds. Temperature at time of inspection was 90 degrees Fahrenheit.

Drainage and Erosion Control: No erosion on landfill slopes observed at time of inspection. South, East, and North Fill Areas appear to be in good condition. Vegetation on the landfill

caps and slopes appear to be stable. Vegetation observed growing in the cobble drainage sloughs installed in the fill areas (see photo 3). Recommend keeping drainage sloughs free of vegetation in order to prevent potential damage and blockage from detritus buildup.

Gas Monitoring and Control: Landfill gas extractions system was in operation at time of inspection. Mr. Caso stated that the extraction system has been functioning without issue since the system was repaired after being vandalized on November 7, 2023.

Site Security: Perimeter fencing appears to be in good condition with no large holes or openings. Mr. Caso stated that there has been no vandalism or unauthorized access reported this review period.

Postclosure Land Use: Mr. Caso stated that site owners are continuing to explore the possibility of adding multiple warehouses along the south perimeter of the property within 1000 feet of the South Fill Area. Per 27 CCR, section 21190(c), all proposed post closure land uses, other than non-irrigated open space, on sites implementing closure or on closed sites shall be submitted to the LEA, RWQCB, local air district and local land use agency. Construction of structural improvements on top of landfilled areas during the post closure period shall meet the conditions provided in 21190(e). All on-site construction within 1,000 feet of the boundary of any disposal area shall be designed and constructed in accordance with 21190(g).

Grading of Fill Surfaces: The area on top of the East Fill where ponding water was observed during the periodic inspection conducted on March 8, 2024 has not been corrected (see photo 2). Mr. Caso informed LEA staff that he is currently working with a contractor to address this issue will have the area filled and graded by October 15, 2024.

Monitoring Frequency and Reporting: Landfill gas monitoring report for Q1/2024 was received by LEA staff on April 30, 2024. Report indicated that no methane was detected at the perimeter gas probes during the quarterly LFG monitoring conducted by Geo-Logic on March 6 and March 7, 2024.

Site Maintenance: All site access roads on the landfill were passable at time of inspection. High vegetation observed growing on and around many of the access roads (see photo 5). Recommend removing vegetation from these roads to reduce fire hazard and maintain accessibility.

Site Maintenance: Vegetation throughout the site was approximately 12 to 18 inches tall (see photo 1). As a fire prevention measure, operator maintains fire breaks along the perimeter of the landfill. Large tree observed growing on the slope of the North Fill Area (see photo 4). Recommend removing trees and large bushes from the landfill cap as soon as possible to prevent root intrusion into the waste and potential damage to the cap.

Todd,

I have been monitoring the winter weather at FPL and am submitting this report to cover precipitation events from December 11th to the 29th 2021.
I conducted site visits on December 13th and continually monitored the site until the 30th after we saw a break in the weather, to be able to give you this report on erosion and ponding water.

The site was in good condition after the storm event on Saturday and Sunday December 11th and 12th. We were in the process of making repairs to the South Fill area down chute entrances with a cast in place concrete bulkhead and cobbled inlet. We completed the bulkhead keyway and cobble work but were only able to grout the West down chute inlet prior to the rain event due to site conditions still soft from the 10-24-21 major storm event. We installed waddles at the cobbled areas to slow the drainage, which worked well. We are still not vegetated at the inlets and slope repair on the East down chute as shown the pictures submitted with this report. We also were not able to re-grout the NFA East down chute but were able to install crushed rock and fines which did a good job as a temporary measure (see photo).
Over all the site performed very well. We have some small ponding water near the slope berms on both South and East Fill areas but this ponding has now receded completely except for the waddled inlets on the SFA. Once grouted the waddles can be removed and water flow will resume normally.
As soon as site conditions (soft ground) permit and are able to get equipment in place, we will finish grouting the SFA East cobbled inlet and the NFA East down slope repair. Then over seed exposed soil and cover with jute netting.
We have encountered some erosion on some of the access roads and will repair with gravel when the site dries and hardens up.
I have attached some photos taken on 12-30-21 showing recent conditions after the last round of storms.

Thank You and Happy New Year,
Mark Caso

Fidelity National Title Company

PRELIMINARY REPORT

In response to the application for a policy of title insurance referenced herein, ***Fidelity National Title Company*** *hereby reports that it is prepared to issue, or cause to be issued, as of the date hereof, a policy or policies of title insurance describing the land and the estate or interest therein hereinafter set forth, insuring against loss which may be sustained by reason of any defect, lien or encumbrance not shown or referred to as an exception herein or not excluded from coverage pursuant to the printed Schedules, Conditions and Stipulations or Conditions of said policy forms.*

The printed Exceptions and Exclusions from the coverage and Limitations on Covered Risks of said policy or policies are set forth in Attachment One. The policy to be issued may contain an arbitration clause. When the Amount of Insurance is less than that set forth in the arbitration clause, all arbitrable matters shall be arbitrated at the option of either the Company or the Insured as the exclusive remedy of the parties. Limitations on Covered Risks applicable to the CLTA and ALTA Homeowner's Policies of Title Insurance which establish a Deductible Amount and a Maximum Dollar Limit of Liability for certain coverages are also set forth in Attachment One. Copies of the policy forms should be read. They are available from the office which issued this report.

This report (and any supplements or amendments hereto) is issued solely for the purpose of facilitating the issuance of a policy of title insurance and no liability is assumed hereby. If it is desired that liability be assumed prior to the issuance of a policy of title insurance, a Binder or Commitment should be requested.

The policy(ies) of title insurance to be issued hereunder will be policy(ies) of Fidelity National Title Insurance Company, a Florida corporation.

Please read the exceptions shown or referred to herein and the exceptions and exclusions set forth in Attachment One of this report carefully. The exceptions and exclusions are meant to provide you with notice of matters which are not covered under the terms of the title insurance policy and should be carefully considered.

It is important to note that this preliminary report is not a written representation as to the condition of title and may not list all liens, defects and encumbrances affecting title to the land.

29. Any claim based on the failure to comply with the provisions of Governmental Laws and Regulations regarding the division of land.

30. Before issuing its policy of title insurance, the Company will require the following:

The Company will require either (a) a complete copy of the trust agreement and any amendments thereto certified by the trustee(s) to be a true and complete copy with respect to the hereinafter named trust, or (b) a Certification, pursuant to California Probate Code Section 18100.5, executed by all of the current trustee(s) of the hereinafter named trusts.

Name of Trust(s):

1.) The NC Cleavinger Family Trust (Agreement) Established January 9, 1991
2.) The AA Hunt Family Trust (Agreement) Established January 5, 1991
3.) The JE Harvey Family Trust (Agreement) Established January 7, 1991
4.) The GC Brown Family Trust Established March 27, 1991
5.) The VA Palmer Family Trust Established January 9, 1991

Said matter affects predecessor's in title.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

31. Information in the possession of the Company indicates that a division of land has occurred or is contemplated in the current transaction involving the Land described in this report. Such contemplated division of land appears to fall within the guidelines necessitating approval by the City, County or other applicable government agency. As a prerequisite to the issuance of any title insurance under this application, at least one of the following requirements must be accomplished to the Company's satisfaction:

A Final Map has been recorded in compliance with City of Sacramento related ordinances/requirements.

Evidence of compliance or waiver from the City of Sacramento

Other evidence, satisfactory to the Company, indicating compliance or non-violation must be furnished.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

EXCEPTIONS
(continued)

32. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below.

Limited Liability Company: EPD & BBD Family Properties LLC, a California limited liability company

a. A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

b. If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendment thereto with the appropriate filing stamps.

c. If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.

d. A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created

e. If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

f. If Limited Liability Company is a Single Member Entity, a Statement of Information for the Single Member will be required.

g. Each member and manager of the LLC without an Operating Agreement must execute in the presence of a notary public the Certificate of California LLC (Without an Operating Agreement) Status and Authority form

33. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the limited partnership named below.

Name: EPD & BBD Family Properties, a California limited partnership

a. A complete copy of the limited partnership agreement and all amendments thereto.

b. Satisfactory evidence that the partnership was validly formed and is in good standing

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

34. The search did not disclose any open mortgages or deeds of trust of record, therefore the Company reserves the right to require further evidence to confirm that the property is unencumbered, and further reserves the right to make additional requirements or add additional items or exceptions upon receipt of the requested evidence.

35. The transaction contemplated in connection with this Report is subject to the review and approval of the Company's Corporate Underwriting Department. The Company reserves the right to add additional items or make further requirements after such review.

END OF EXCEPTIONS

NOTES

Note 1. Note: The charge for a policy of title insurance, when issued through this title order, will be based on the Basic Title Insurance Rate.

Note 2. Pursuant to Government Code Section 27388.1, as amended and effective as of 1-1-2018, a Documentary Transfer Tax (DTT) Affidavit may be required to be completed and submitted with each document when DTT is being paid or when an exemption is being claimed from paying the tax. If a governmental agency is a party to the document, the form will not be required. DTT Affidavits may be available at a Tax Assessor-County Clerk-Recorder.

Note 3. If a county recorder, title insurance company, escrow company, real estate broker, real estate agent or association provides a copy of a declaration, governing document or deed to any person, California law requires that the document provided shall include a statement regarding any unlawful restrictions. Said statement is to be in at least 14-point bold face type and may be stamped on the first page of any document provided or included as a cover page attached to the requested document. Should a party to this transaction request a copy of any document reported herein that fits this category, the statement is to be included in the manner described.

Note 4. Note: Any documents being executed in conjunction with this transaction must be signed in the presence of an authorized Company employee, an authorized employee of an agent, an authorized employee of the insured lender, or by using Bancserv or other approved third-party service. If the above requirement cannot be met, please call the Company at the number provided in this report.

Note 5. Notice: Please be aware that due to the conflict between federal and state laws concerning the cultivation, distribution, manufacture or sale of marijuana, the Company is not able to close or insure any transaction involving Land that is associated with these activities.

Note 6. Your application for title insurance was placed by reference to only a street address or tax identification number. Based on our records, we believe that the legal description in this report covers the parcel(s) of Land that you requested. If the legal description is incorrect, the seller/borrower must notify the Company and/or the settlement company in order to prevent errors and to be certain that the correct parcel(s) of Land will appear on any documents to be recorded in connection with this transaction and on the policy of title insurance.

NOTES
(continued)

Note 7. The following Exclusion(s) are added to preliminary reports, commitments and will be included as an endorsement in the following policies:

A. 2006 ALTA Owner's Policy (06-17-06).

6. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

B. 2006 ALTA Loan Policy (06-17-06)

8. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

9. Any claim of invalidity, unenforceability, or lack of priority of the lien of the Insured Mortgage based on the application of a Tribe's law resulting from the failure of the Insured Mortgage to specify State law as the governing law with respect to the lien of the Insured Mortgage.

C. ALTA Homeowner's Policy of Title Insurance (12-02-13) and CLTA Homeowner's Policy of Title Insurance (12-02-13).

10. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

D. ALTA Expanded Coverage Residential Loan Policy - Assessments Priority (04-02-15).

12. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the Public Records but that would be disclosed by an examination of any records maintained by or on behalf of a Tribe or on behalf of its members.

13. Any claim of invalidity, unenforceability, or lack of priority of the lien of the Insured Mortgage based on the application of a Tribe's law resulting from the failure of the Insured Mortgage to specify State law as the governing law with respect to the lien of the Insured Mortgage.

E. CLTA Standard Coverage Policy 1990 (11-09-18).

7. Defects, liens, encumbrances, adverse claims, notices, or other matters not appearing in the public records but that would be disclosed by an examination of any records maintained by or on behalf of a tribe or on behalf of its members.

8. Any claim of invalidity, unenforceability, or lack of priority of the lien of the insured mortgage based on the application of a tribe's law resulting from the failure of the insured mortgage to specify state law as the governing law with respect to the lien of the insured mortgage.

END OF NOTES

WIRE SAFE™ | Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

FIDELITY NATIONAL FINANCIAL
PRIVACY NOTICE

Effective January 1, 2025

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.,* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.,* loan or bank account information);
- biometric data (e.g., fingerprints, retina or iris scans, voiceprints, or other unique biological characteristics; and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for these main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To prevent and detect fraud;
- To maintain the security of our systems, tools, accounts, and applications;
- To verify and authenticate identities and credentials;
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.
- To provide reviews and testimonials about our services, with your consent.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to affiliated or nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to affiliated or nonaffiliated third parties with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

State-Specific Consumer Privacy Information:

For additional information about your state-specific consumer privacy rights, to make a consumer privacy request, or to appeal a previous privacy request, please follow the link Privacy Request, or email privacy@fnf.com or call (888) 714-2710.

Certain state privacy laws require that FNF disclose the categories of third parties to which FNF may disclose the Personal Information and Browsing Information listed above. Those categories are:

- FNF affiliates and subsidiaries;
- Non-affiliated third parties, with your consent;
- Business in connection with the sale or other disposition of all or part of the FNF business and/or assets;

- Service providers;
- Law endorsement or authorities in connection with an investigation, or in response to a subpoena or court order.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (fnf.com/california-privacy) or call (888) 413-1748.

For Nevada Residents: We are providing this notice pursuant to state law. You may be placed on our internal Do Not Call List by calling FNF Privacy at (888) 714-2710 or by contacting us via the information set forth at the end of this Privacy Notice. For further information concerning Nevada's telephone solicitation law, you may contact: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: aginquiries@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes. For additional information about your Oregon consumer privacy rights, or to make a consumer privacy request, or appeal a previous privacy request, please email privacy@fnf.com or call (888) 714-2710

FNF is the controller of the following businesses registered with the Secretary of State in Oregon:
Chicago Title Company of Oregon, Fidelity National Title Company of Oregon, Lawyers Title of Oregon, LoanCare, Ticor, Title Company of Oregon, Western Title & Escrow Company, Chicago Title Company, Chicago Title Insurance Company, Commonwealth Land Title Insurance Company, Fidelity National Title Insurance Company, Liberty Title & Escrow, Novare National Settlement Service, Ticor Title Company of California, Exos Valuations, Fidelity & Guaranty Life, Insurance Agency, Fidelity National Home Warranty Company, Fidelity National Management Services, Fidelity Residential Solutions, FNF Insurance Services, FNTG National Record Centers, IPEX, Mission Servicing Residential, National Residential Nominee Services, National Safe Harbor Exchanges, National Title Insurance of New York, NationalLink Valuations, NexAce Corp., ServiceLink Auction, ServiceLink Management Company, ServiceLink Services, ServiceLink Title Company of Oregon, ServiceLink Valuation Solutions, Western Title & Escrow Company

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is

necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

Accessing and Correcting Information; Contact Us

If you have questions or would like to correct your Personal Information, visit FNF's Privacy Request website or contact us by phone at (888) 714-2710, by email at privacy@fnf.com, or by mail to:

Fidelity National Financial, Inc.

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE POLICY - 1990 (11-09-18)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy and the Company will not pay loss or damage, costs, attorneys' fees or expenses which arise by reason of:

1. (a) Any law, ordinance or governmental regulation (including but not limited to building or zoning laws, ordinances, or regulations) restricting, regulating, prohibiting or relating (i) the occupancy, use, or enjoyment of the land; (ii) the character, dimensions or location of any improvement now or hereafter erected on the land; (iii) a separation in ownership or a change in the dimensions or area of the land or any parcel of which the land is or was a part; or (iv) environmental protection, or the effect of any violation of these laws, ordinances or governmental regulations, except to the extent that a notice of the enforcement thereof or a notice of a defect, lien, or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

   (b) Any governmental police power not excluded by (a) above, except to the extent that a notice of the exercise thereof or notice of a defect, lien or encumbrance resulting from a violation or alleged violation affecting the land has been recorded in the public records at Date of Policy.

2. Rights of eminent domain unless notice of the exercise thereof has been recorded in the public records at Date of Policy, but not excluding from coverage any taking which has occurred prior to Date of Policy which would be binding on the rights of a purchaser for value without knowledge.

3. Defects, liens, encumbrances, adverse claims or other matters:

   (a) whether or not recorded in the public records at Date of Policy, but created, suffered, assumed or agreed to by the insured claimant;

   (b) not known to the Company, not recorded in the public records at Date of Policy, but known to the insured claimant and not disclosed in writing to the Company by the insured claimant prior to the date the insured claimant became an insured under this policy;

   (c) resulting in no loss or damage to the insured claimant;

   (d) attaching or created subsequent to Date of Policy; or

   (e) resulting in loss or damage which would not have been sustained if the insured claimant had paid value for the insured mortgage or for the estate or interest insured by this policy.

4. Unenforceability of the lien of the insured mortgage because of the inability or failure of the insured at Date of Policy, or the inability or failure of any subsequent owner of the indebtedness, to comply with the applicable doing business laws of the state in which the land is situated.

5. Invalidity or unenforceability of the lien of the insured mortgage, or claim thereof, which arises out of the transaction evidenced by the insured mortgage and is based upon usury or any consumer credit protection or truth in lending law.

6. Any claim, which arises out of the transaction vesting in the insured the estate or interest insured by this policy or the transaction creating the interest of the insured lender, by reason of the operation of federal bankruptcy, state insolvency or similar creditors' rights laws.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART I

This policy does not insure against loss or damage (and the Company will not pay costs, attorneys' fees or expenses) which arise by reason of:

1. Taxes or assessments which are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the public records.

   Proceedings by a public agency which may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the public records.

2. Any facts, rights, interests, or claims which are not shown by the public records but which could be ascertained by an inspection of the land or which may be asserted by persons in possession thereof.

3. Easements, liens or encumbrances, or claims thereof, not shown by the public records.

4. Discrepancies, conflicts in boundary lines, shortage in area, encroachments, or any other facts which a correct survey would disclose, and which are not shown by the public records.

5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b) or (c) are shown by the public records.

6. Any lien or right to a lien for services, labor or material unless such lien is shown by the public records at Date of Policy.

EXCEPTIONS FROM COVERAGE - SCHEDULE B, PART II

(*Variable exceptions such as taxes, easements, CC&R's, etc., are inserted here*)

CALIFORNIA LAND TITLE ASSOCIATION
STANDARD COVERAGE OWNER'S POLICY (02-04-22)
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.
   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 9.b.
5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
6. Any lien on the Title for real estate taxes or assessments imposed or collected by a governmental authority that becomes due and payable after the Date of Policy.
   Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
7 Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

EXCEPTIONS FROM COVERAGE

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This policy treats any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document are excepted from coverage.

This policy does not insure against loss or damage and the Company will not pay costs, attorneys' fees, or expenses resulting from the terms and conditions of any lease or easement identified in Schedule A, and the following matters:

PART I

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land, or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

PART II

(*Variable exceptions such as taxes, easements, CC&R's, etc., are inserted here*)

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (7-01-21)
EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy and We will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, or regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23, or 27.
2. Any power to take the Land by condemnation. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 17.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by You;
   b. not Known to Us, not recorded in the Public Records at the Date of Policy, but Known to You and not disclosed in writing to Us by You prior to the date You became an Insured under this policy;
   c. resulting in no loss or damage to You;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 5, 8.f., 25, 26, 27, 28, or 32); or
   e. resulting in loss or damage that would not have been sustained if You paid consideration sufficient to qualify You as a bona fide purchaser of the Title at the Date of Policy.
4. Lack of a right:
   a. to any land outside the area specifically described and referred to in Item 3 of Schedule A; and
   b. in any street, road, avenue, alley, lane, right-of-way, body of water, or waterway that abut the Land.

   Exclusion 4 does not modify or limit the coverage provided under Covered Risk 11 or 21.
5. The failure of Your existing structures, or any portion of Your existing structures, to have been constructed before, on, or after the Date of Policy in accordance with applicable building codes. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 14 or 15.
6. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transfer of the Title to You is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 30.
7. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake, or subsidence.
8. Negligence by a person or an entity exercising a right to extract or develop oil, gas, minerals, groundwater, or any other subsurface substance.
9. Any lien on Your Title for real estate taxes or assessments, imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 9 does not modify or limit the coverage provided under Covered Risk 8.a or 27.
10. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19 and 21 Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

CLTA/ALTA HOMEOWNER'S POLICY OF TITLE INSURANCE (12-02-13)
EXCLUSIONS

In addition to the Exceptions in Schedule B, You are not insured against loss, costs, attorneys' fees, and expenses resulting from:

1. Governmental police power, and the existence or violation of those portions of any law or government regulation concerning:
   a. building;
   b. zoning;
   c. land use;
   d. improvements on the Land;
   e. land division; and
   f. environmental protection.

   This Exclusion does not limit the coverage described in Covered Risk 8.a., 14, 15, 16, 18, 19, 20, 23 or 27.
2. The failure of Your existing structures, or any part of them, to be constructed in accordance with applicable building codes. This Exclusion does not limit the coverage described in Covered Risk 14 or 15.
3. The right to take the Land by condemning it. This Exclusion does not limit the coverage described in Covered Risk 17.
4. Risks:
   a. that are created, allowed, or agreed to by You, whether or not they are recorded in the Public Records;
   b. that are Known to You at the Policy Date, but not to Us, unless they are recorded in the Public Records at the Policy Date;
   c. that result in no loss to You; or
   d. that first occur after the Policy Date - this does not limit the coverage described in Covered Risk 7, 8.e., 25, 26, 27 or 28.
5. Failure to pay value for Your Title.
6. Lack of a right:
   a. to any land outside the area specifically described and referred to in paragraph 3 of Schedule A; and
   b. in streets, alleys, or waterways that touch the Land.

   This Exclusion does not limit the coverage described in Covered Risk 11 or 21.
7. The transfer of the Title to You is invalid as a preferential transfer or as a fraudulent transfer or conveyance under federal bankruptcy, state insolvency, or similar creditors' rights laws.
8. Contamination, explosion, fire, flooding, vibration, fracturing, earthquake or subsidence.
9. Negligence by a person or an Entity exercising a right to extract or develop minerals, water, or any other substances.

LIMITATIONS ON COVERED RISKS

Your insurance for the following Covered Risks is limited on the Owner's Coverage Statement as follows:

- For Covered Risk 16, 18, 19 and 21, Your Deductible Amount and Our Maximum Dollar Limit of Liability shown in Schedule A.

The deductible amounts and maximum dollar limits shown on Schedule A are as follows:

	Your Deductible Amount	Our Maximum Dollar Limit of Liability
Covered Risk 16:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 10,000.00
Covered Risk 18:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 19:	1.00% of Policy Amount Shown in Schedule A or $5,000.00 (whichever is less)	$ 25,000.00
Covered Risk 21:	1.00% of Policy Amount Shown in Schedule A or $2,500.00 (whichever is less)	$ 5,000.00

ALTA OWNER'S POLICY (07-01-2021)

EXCLUSIONS FROM COVERAGE

The following matters are excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. a. any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) that restricts, regulates, prohibits, or relates to:
   i. the occupancy, use, or enjoyment of the Land;
   ii. the character, dimensions, or location of any improvement on the Land;
   iii. the subdivision of land; or
   iv. environmental remediation or protection.
   b. any governmental forfeiture, police, regulatory, or national security power.
   c. the effect of a violation or enforcement of any matter excluded under Exclusion 1.a. or 1.b.

   Exclusion 1 does not modify or limit the coverage provided under Covered Risk 5 or 6.
2. Any power of eminent domain. Exclusion 2 does not modify or limit the coverage provided under Covered Risk 7.
3. Any defect, lien, encumbrance, adverse claim, or other matter:
   a. created, suffered, assumed, or agreed to by the Insured Claimant;
   b. not Known to the Company, not recorded in the Public Records at the Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   c. resulting in no loss or damage to the Insured Claimant;
   d. attaching or created subsequent to the Date of Policy (Exclusion 3.d. does not modify or limit the coverage provided under Covered Risk 9 or 10); or
   e. resulting in loss or damage that would not have been sustained if consideration sufficient to qualify the Insured named in Schedule A as a bona fide purchaser had been given for the Title at the Date of Policy.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights law, that the transaction vesting the Title as shown in Schedule A is a:
   a. fraudulent conveyance or fraudulent transfer;
   b. voidable transfer under the Uniform Voidable Transactions Act; or
   c. preferential transfer:
      i. to the extent the instrument of transfer vesting the Title as shown in Schedule A is not a transfer made as a contemporaneous exchange for new value; or
      ii. for any other reason not stated in Covered Risk 9.b.
5. Any claim of a PACA-PSA Trust. Exclusion 5 does not modify or limit the coverage provided under Covered Risk 8.
6. Any lien on the Title for real estate taxes or assessments, imposed or collected by a governmental authority that becomes due and payable after the Date of Policy. Exclusion 6 does not modify or limit the coverage provided under Covered Risk 2.b.
7. Any discrepancy in the quantity of the area, square footage, or acreage of the Land or of any improvement to the Land.

EXCEPTIONS FROM COVERAGE

Some historical land records contain Discriminatory Covenants that are illegal and unenforceable by law. This policy treats any Discriminatory Covenant in a document referenced in Schedule B as if each Discriminatory Covenant is redacted, repudiated, removed, and not republished or recirculated. Only the remaining provisions of the document are excepted from coverage.

This policy does not insure against loss or damage and the Company will not pay costs, attorneys' fees, or expenses resulting from the terms and conditions of any lease or easement identified in Schedule A, and the following matters:

NOTE: The 2021 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed as 1 through 7 below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

ATTACHMENT ONE
(CONTINUED)

2006 ALTA OWNER'S POLICY (06-17-06)

EXCLUSIONS FROM COVERAGE

The following matters are expressly excluded from the coverage of this policy, and the Company will not pay loss or damage, costs, attorneys' fees, or expenses that arise by reason of:

1. (a) Any law, ordinance, permit, or governmental regulation (including those relating to building and zoning) restricting, regulating, prohibiting, or relating to
   (i) the occupancy, use, or enjoyment of the Land;
   (ii) the character, dimensions, or location of any improvement erected on the Land;
   (iii) the subdivision of land; or
   (iv) environmental protection;
   or the effect of any violation of these laws, ordinances, or governmental regulations. This Exclusion 1(a) does not modify or limit the coverage provided under Covered Risk 5.
   (b) Any governmental police power. This Exclusion 1(b) does not modify or limit the coverage provided under Covered Risk 6.
2. Rights of eminent domain. This Exclusion does not modify or limit the coverage provided under Covered Risk 7 or 8.
3. Defects, liens, encumbrances, adverse claims, or other matters
   (a) created, suffered, assumed, or agreed to by the Insured Claimant;
   (b) not Known to the Company, not recorded in the Public Records at Date of Policy, but Known to the Insured Claimant and not disclosed in writing to the Company by the Insured Claimant prior to the date the Insured Claimant became an Insured under this policy;
   (c) resulting in no loss or damage to the Insured Claimant;
   (d) attaching or created subsequent to Date of Policy (however, this does not modify or limit the coverage provided under Covered Risk 9 and 10); or
   (e) resulting in loss or damage that would not have been sustained if the Insured Claimant had paid value for the Title.
4. Any claim, by reason of the operation of federal bankruptcy, state insolvency, or similar creditors' rights laws, that the transaction vesting the Title as shown in Schedule A, is
   (a) a fraudulent conveyance or fraudulent transfer; or
   (b) a preferential transfer for any reason not stated in Covered Risk 9 of this policy.
5. Any lien on the Title for real estate taxes or assessments imposed by governmental authority and created or attaching between Date of Policy and the date of recording of the deed or other instrument of transfer in the Public Records that vests Title as shown in Schedule A.

EXCEPTIONS FROM COVERAGE

This policy does not insure against loss or damage, and the Company will not pay costs, attorneys' fees, or expenses that arise by reason of:

NOTE: The 2006 ALTA Owner's Policy may be issued to afford either Standard Coverage or Extended Coverage. In addition to variable exceptions such as taxes, easements, CC&R's, etc., the Exceptions from Coverage in a Standard Coverage policy will also include the Western Regional Standard Coverage Exceptions listed below as 1 through 7 below:

1. (a) Taxes or assessments that are not shown as existing liens by the records of any taxing authority that levies taxes or assessments on real property or by the Public Records; (b) proceedings by a public agency that may result in taxes or assessments, or notices of such proceedings, whether or not shown by the records of such agency or by the Public Records.
2. Any facts, rights, interests, or claims that are not shown by the Public Records at Date of Policy but that could be (a) ascertained by an inspection of the Land, or (b) asserted by persons or parties in possession of the Land.
3. Easements, liens or encumbrances, or claims thereof, not shown by the Public Records at Date of Policy.
4. Any encroachment, encumbrance, violation, variation, easement, or adverse circumstance affecting the Title that would be disclosed by an accurate and complete land survey of the Land and not shown by the Public Records at Date of Policy.
5. (a) Unpatented mining claims; (b) reservations or exceptions in patents or in Acts authorizing the issuance thereof; (c) water rights, claims or title to water, whether or not the matters excepted under (a), (b), or (c) are shown by the Public Records.
6. Any lien or right to a lien for services, labor, material or equipment unless such lien is shown by the Public Records at Date of Policy.]
7. Any claim to (a) ownership of or rights to minerals and similar substances, including but not limited to ores, metals, coal, lignite, oil, gas, uranium, clay, rock, sand, and gravel located in, on, or under the Land or produced from the Land, whether such ownership or rights arise by lease, grant, exception, conveyance, reservation, or otherwise; and (b) any rights, privileges, immunities, rights of way, and easements associated therewith or appurtenant thereto, whether or not the interests or rights excepted in (a) or (b) appear in the Public Records or are shown in Schedule B.

Notice of Available Discounts

Pursuant to Section 2355.3 in Title 10 of the California Code of Regulations Fidelity National Financial, Inc. and its subsidiaries ("FNF") must deliver a notice of each discount available under our current rate filing along with the delivery of escrow instructions, a preliminary report or commitment. Please be aware that the provision of this notice does not constitute a waiver of the consumer's right to be charged the filed rate. As such, your transaction may not qualify for the below discounts.

You are encouraged to discuss the applicability of one or more of the below discounts with a Company representative. These discounts are generally described below; consult the rate manual for a full description of the terms, conditions and requirements for such discount. These discounts only apply to transactions involving services rendered by the FNF Family of Companies. This notice only applies to transactions involving property improved with a one-to-four family residential dwelling.

Not all discounts are offered by every FNF Company. The discount will only be applicable to the FNF Company as indicated by the named discount.

FNF Underwritten Title Companies
CTC - Chicago Title Company
CLTC - Commonwealth Land Title Company
FNTC - Fidelity National Title Company
FNTCCA - Fidelity National Title Company of California
TICOR - Ticor Title Company of California
LTC - Lawyer's Title Company
SLTC - ServiceLink Title Company

Underwritten by FNF Underwriters
CTIC - Chicago Title Insurance Company
CLTIC - Commonwealth Land Title Insurance Co.
FNTIC - Fidelity National Title Insurance Co.
NTINY - National Title Insurance of New York

Available Discounts

CHURCHES OR CHARITABLE NON-PROFIT ORGANIZATIONS (CTIC, CLTIC, FNTIC, NTINY)
On properties used as a church or for charitable purposes within the scope of the normal activities of such entities, provided said charge is normally the church's obligation the charge for an owner's policy shall be fifty percent (50%) to seventy percent (70%) of the appropriate title insurance rate, depending on the type of coverage selected. The charge for a lender's policy shall be forty percent (40%) to fifty percent (50%) of the appropriate title insurance rate, depending on the type of coverage selected.

DISASTER AREA TRANSACTIONS (CTIC, CLTIC, FNTIC, NTINY)
This rate is available for individuals or entities that were victims of a national or state disaster. The rate can be used for a Lender's Policy (Standard or Extended), or an Owner's Policy (Standard or Homeowners coverage). To qualify for this rate, the applicant must, prior to the closing of the applicable transaction, make a written request, including a statement meeting the following criteria:

A. The subject property is in a disaster area declared by the government of the United States or the State of California.

B. The subject property was substantially or totally destroyed in the declared disaster.

C. The subject property ownership has not changed since the time of the disaster.

The rate will be fifty percent (50%) of the applicable rate, and the transaction must be completed within sixty (60) months of the date of the declaration of the disaster.

Notice of Available Discounts
(continued)

DISASTER AREA ESCROWS (CTC, CLTC, FNTC, TICOR, LTC)
This rate is available for individuals or entities that were victims of a national or state disaster. The rate can be used for a loan or a sale escrow transaction. To qualify for this rate, the applicant must, prior to the closing of the applicable transaction, make a written request, including a statement meeting the following criteria:

A. The subject property is in a disaster area declared by the government of the United States or the State of California.

B. The subject property was substantially or totally destroyed in the declared disaster.

C. The subject property ownership has not changed since the time of the disaster.

The rate will be fifty percent (50%) of the applicable rate, and the transaction must be completed within sixty (60) months of the date of the declaration of the disaster. Standard minimum charge applies based upon property type. No other discounts or special rates, or combination of discounts or special rates, shall be applicable. Applies to a single transaction per property.

This rate is applicable to the following Zones/Counties:

Zone 1.A: Orange County
Zone 1.B: Riverside and San Bernardino Counties
Zone 2: Los Angeles County
Zone 3: Ventura County
Zone 10: San Diego County
Zone 12: Imperial County

If used for a sale transaction, the application of this rate assumes the charge for the Residential Sale Escrow Services (RSES) fee will be split evenly between buyer and seller. As such and regardless of how the calculated applicable RSES will be split between the disaster victim and the other principal, the rate will be applied only to one half (1/2) of the calculated applicable RSES fee, regardless of whether the disaster victim is paying half (1/2) of the RSES fee (as is customary) or paying the entire fee. The rate under this provision will be fifty percent (50%) of disaster victims' one half (1/2) portion only and shall not apply to any portion paid by non-disaster victim. Additional services will be charged at the normal rates.

MILITARY DISCOUNT RATE (CTIC, CLTIC, FNTIC)
Upon the Company being advised in writing and prior to the closing of the transaction that an active duty, honorably separated, or retired member of the United States Military or Military Reserves or National Guard is acquiring or selling an owner occupied one-to-four family property, the selling owner or acquiring buyer, as applicable, will be entitled to a discount equal to fifteen percent (15%) of the otherwise applicable rates such party would be charged for title insurance policies. Minimum charge: Four Hundred Twenty-Five And No/100 Dollars ($425.00)

The Company may require proof of eligibility from the parties to the transaction verifying they are entitled to the discount as described. No other discounts or special rates, or combination of discounts or special rates, shall be applicable.

MILITARY RATE (SLTC)
A discount of twenty percent (20%) off the purchase transaction closing and settlement fee or a discount of One Hundred And No/100 Dollars ($100.00) off the refinance closing and settlement fee, will be applied when the loan is guaranteed by the United States Veterans Administration and the escrow fee is being paid by the consumer and is listed as paid by borrower on the Closing Disclosure and final Settlement Statement.

This map/plat is being furnished as an aid in locating the herein described Land in relation to adjoining streets, natural boundaries, and other land, and is not a survey of the land depicted. Except to the extent a policy of title insurance is expressly modified by endorsement, if any, the Company does not insure dimensions, distances, location of easements, acreage or other matters shown thereon.

APPENDIX L

Kevin Grove – Environmental Branch Manager

Professional Background:

Mr. Grove graduated from the University of California, Davis in March 2013. His academic background includes a Bachelor of Science in Environmental Policy Analysis and Planning. Following graduation and an internship with Yolo County Transportation District, Mr. Grove accepted a full-time staff planner position with BSK.

Mr. Grove has managed Phase I Environmental Site Assessments (ESA), Phase II ESAs, aerially deposited lead surveys, paint-stripe sampling and analysis, compost facility permitting, and Waste Discharge Requirement (WDR) facility permitting,. Additionally, Mr. Grove has interpreted aerial photographs, prepared GIS Figures, and conducted a 1600 Permit Vegetation Inventory, Ordinary High-Water Mark and Wetland Delineation Surveys. He prepares California Environmental Quality Act documentation, including Environmental Impact Reports for proposed projects. His work includes conducting special studies, section writing reference development, and quality assurance.

Qualifications

Registrations / Certificates:

Education:

BS, Environmental Policy Analysis & Planning, University of California, Davis 2013

Experience:

BSK Associates, Staff Planner-October 2013 to Current

Yolo County Transportation District, Transportation Planning Intern-June 2013 to October 2013

Relevant Experience:

Phase I Environmental Site Assessments

Numerous Sites **–** Conducted and provided technical oversight for over 30 Phase I Environmental Site Assessment (ESA) sites for banks, lenders, developers, schools, transportation projects, and public agencies throughout California.

EPA Brownfields Assessment Grant, Oroville, California **–** Kevin performed five Phase I ESAs as part of an Environmental Protection Agency (EPA) Brownfields Grant. In addition to the Phase I ESAs, Mr. Grove conducted the brownfields inventory for the area identified as IU2, south of Oroville's downtown area. Approximately 60 properties were identified from databases, site reconnaissance, and properties of interest to the City and community members. Kevin created a database linking the key information to data obtained through EDR, site photographs and created an interactive base map. Sites were screened against criteria and ranked in order of priority.

EPA Brownfields Assessment Grant, Rancho Cordova, California **–** Kevin performed six Phase I ESAs as part of an EPA Brownfields Assessment Grant. In addition to the Phase I ESAs, Mr. Grove conducted the Brownfields petroleum inventory for the area identified as Folsom Boulevard Planning Area. Approximately 44 properties were identified from databases, site reconnaissance, and property of interest to the City.

Kevin created a database linking the key information to data obtained through outside vendors, site photographs, etc., and created an interactive base map. Sites were screened against criteria and ranked in order of priority.

Aerially Deposited Lead and Paint-Stripe Surveys

Kern County Public Works Roadway Improvement Projects – Mr. Grove managed numerous aerially deposited lead (ADL) and paint-stripe surveys throughout Kern County. Mr. Grove successfully coordinated encroachment permits, traffic control subcontractors, scheduling with County officials, sampling procedures, laboratory analysis, data review, and reporting.

Site Assessment

Lafayette Elementary School Addition (Former Lafayette Public Library), Lafayette, California – Mr. Grove performed the Phase I ESA and helped prepare a Preliminary Endangerment Assessment (PEA) for the addition to this elementary school. The scope of work included an ESA in accordance with California Education Code Sections 17210 and 17213.1 which also included evaluation for radon, naturally occurring asbestos (NOA) and mercury. Based on the results of the ESA, a PEA was required to address possible migration of dry-cleaning chemicals in groundwater from a nearby site and sampling of the near-surface soils for lead, termiticides and other pesticides. Following the PEA, Mr. Grove assisted with the preparation and implementation of a Removal Action plan of affected soil at the Site.

Kilgore Property – Proposed Entertainment Center, EPA Brownfields Phase II ESA, City of Rancho Cordova, California – Using GIS, Kevin created all site maps and figures for the project area. Kevin assisted with the ecological screening evaluation to determine the potential presence of endangered species on site. Kevin also conducted inventory, documentation, and graphical representation of all soil samples from the project. Kevin assisted with the writing of the Quality Assurance Project Plan (QAPP).

Utility Pole Storage, Phase I/II ESA, Oroville, California – Mr. Grove prepared a Phase I ESA for a utility pole storage facility. The poles were stored in a former lumber yard with wood treatment processes. Following the Phase I ESA, Mr. Grove prepared a Phase II ESA to evaluate the impact to soil and chemical related to the wood treatment processes.

City of Winters, PG&E Training Center, Phase II ESA, Yolo County, California – Phase II ESA was completed for the Mclish Property, which is the future location of the PG&E Training Center. Kevin created site mapsand figures for the project area using GIS software. These maps included monitoring well locations and ground water flow direction.

Numerous Solar Facilities, California – Mr. Grove prepared numerous Phase I and Limited Phase II ESAs for solar facilities throughout California. The limited Phase II ESAs included soil sampling, geophysical surveys, underground utility locating, and soil vapor sampling.

CEQA / NEPA Services

Grapevine Shopping Center Project, Kern County, California – Kevin assisted with the Environmental Impact Report for the construction of an approximately 45-acre shopping center located in Delano, California. The proposed project includes a movie theater, regional shopping center, multiple fast food restaurants and quality restaurants.

Los Banos Landfill-Clean Closure Project, Initial Study/Mitigated Negative Declaration (IS/MND), Los Banos, California – Mr. Grove prepared an IS/MND for the Old Los Banos Landfill – Clean Closure Project. The project included the removal of waste and cover soils from the inactive City of Los Banos Landfill. Under the project, the removed waste was then transported to Bill Wright Landfill in Los Banos, or Kettleman Hills Landfill in Kettleman City, depending upon the waste profile.

Livermore Composting Facility, IS/MND, Livermore, California – Kevin prepared an IS/MND for a new composting facility in Livermore, California, per the California Environmental Quality Act (CEQA). Mr. Grove distributed the CEQA document to the appropriate agencies, responded to public comments, and provided information to the lead agency for their decision.

Big Sandy Rancheria Expansion, NEPA Environmental Assessment, Fresno County, California – Mr. Grove prepared a Bureau of Indian Affairs (BIA) approved environmental assessment (EA) for the expansion of Big Sandy Rancheria in Auberry, California. The expansion included 32 homes, a community garden, a baseball diamond, a community park, and a maintenance building on 71 acres of undeveloped trust land. In addition to the above infrastructure, the project included the construction of access roads, supporting power infrastructure, phone lines, and a consolidated community septic system. This project was performed under the National Environmental Policy Act (NEPA).

Putah Creek Channel Restoration, NEPA Environmental Assessment, Winters, California – Kevin prepared a United States Army Corps of Engineers (USACE) approved EA for the Putah Creek Channel Restoration in Winters, California. The EA covered three distinct project areas for a combined are of 98 acres and 14,400 linear feet of Putah Creek. Mr. Grove prepared a variety of permits for the project, including a Biological Assessment, Clean Water Act 401 permit and certification, a USACE Nationwide Permit, a USACE Pre-Construction Notification, a Section 7 consultation under the Endangered Species Act with the US Fish and Wildlife Service (USFWS) and USACE, a USFWS 1600 streambed alteration agreement, a construction stormwater pollution prevention plan (SWPPP), a workers environmental awareness plan (WEAP) and a wetland delineation. Mr. Grove also facilitated a cultural resources study under the State Historic Preservation Office (SHPO) regulations.

Walnut Park Project – Winters, California – Mr. Grove prepared a variety of permits for the proposed park, including a Biological Assessment, Clean Water Act 401 permit and certification, a US Army Corps of Engineers (USACE) Nationwide Permit, a USACE Pre-Construction Notification, a Section 7 consultation under the Endangered Species Act with the US Fish and Wildlife Service and USACE, a construction stormwater pollution prevention plan (SWPPP), a workers environmental awareness plan (WEAP) and a wetland delineation. The project received all environmental clearance permits and was completed in 2018.

Heather Farm Park, Walnut Creek, California – Mr. Grove oversaw the biological and cultural investigations for the project prior to construction. He oversaw the enforcement of required mitigation measures, including an initial habitat assessment, burrowing owl survey, nesting bird survey, and cultural survey. Following these mitigation measures, environmental clearance was granted, and construction was able to commence on the project.

CEQA / NEPA Special Studies

Air Modeling and Reporting

- CalEEMod
- Caline4
- CT-EMFAC 5

Noise Modeling

- Federal Highway Administrations (FHWA) Traffic Noise Model TNM 2.5
- FHWA Roadway Construction Noise Model RCNM

Biological Resources

Walnut Park Project, Yolo County, California – Prepared as part of a team the Biological Assessment for the construction of an approximately 5-acre park. The project includes playfields, benches and ancillary play structures.

Putah Creek Restoration Projects, Yolo and Solano County, California – Mr. Grove conducted as part of a team the 1600 Permit, Vegetation Inventory Surveys, mapped various species of trees using GPS locations, tree diameters, and aerial photograph interpretations.

Mr. Grove as part of a team also conducted Ordinary High-Water Mark and Wetland Delineation surveys using centimeter accuracy GPS equipment.

Pleasants Dixon Main Drain/V-Drain Enlargement Project – Burrowing Owl Protocol Survey, Dixon, CA – Mr. Grove assisted with a burrowing owl survey to determine the potential presence of burrowing owls on the project site.

Pleasants Creek Bank Stabilization Project – Breeding Bird Survey, Vacaville, CA – Mr. Grove assisted with a breeding bird survey to determine the potential presence of breeding birds on the project site.

Asbestos-Containing Building Material and Lead-Based Paint Surveys

Numerous Projects, California – Mr. Grove managed numerous projects that required asbestos-containing building material and lead-based paint surveys throughout California. Mr. Grove was responsible for coordinating with subcontractors who would perform the sampling and analysis and provide abatement specifications. Mr. Grove reported the findings of these surveys to clients in addition to other site investigation activities.

Stormwater Pollution Prevention Plans (SWPPP)

Numerous Projects, California – Mr. Grove aided QSDs with the preparation and implementation of multiple SWPPP reports. Projects included but were not limited to stream channel restoration, athletic field construction, and park construction. He is trained for on-site water sampling, BMP inspection, and monitoring. He also has experience with the SMARTS online permitting process for Risk Levels 1, 2 and "exempt" projects.

Spill, Prevention, Control, and Countermeasure (SPCC) Plans

Multiple Projects, California and Nevada – Mr. Grove conducted multiple SPCC site inspections to document the inventory and location of hazardous materials at aggregate facilities throughout northern California and Nevada. Mr. Grove provided technical oversight of the SPCC plans during their implementation at each respective Site. Kevin has also prepared training materials for workers at the facilities where the SPCC is implemented.

Compost Facility Permitting

Multiple Projects, California – Mr. Grove has prepared numerous Technical Reports as required under the State Water Resources Control Board (SWRCB) General Waste Discharge Requirements for Composting Operations. These reports include general site descriptions, site maps, operation details, climatology data, geologic setting, hydrogeologic setting, design information, and monitoring information. These Technical Reports allowed each compost facility to receive coverage under the Compost General Order. In addition, Mr. Grove has assisted with the monitoring required under this General Order and the annual reporting.

Professional Affiliations:

American Public Works Association

Robert "Tony" Martin, PG – Principal Geologist

Professional Background:

Mr. Martin began his career as a geologist in 1987. His academic background includes a Bachelor's, and Post-Baccalaureate studies in Geology at California State University at Fresno. Additionally, Mr. Martin has taken dozens of continuing education classes in hazardous materials, geology, groundwater, environmental chemistry/engineering/law, management and leadership from various colleges across the US. He has been an officer in numerous professional and community-based organizations; and managed professional/technical staff of over 250 people. He has negotiated and coordinated with local, state and federal oversight agencies in the southwestern U.S., and presented to the public at a variety of public participation meetings. Mr. Martin's technical expertise includes environmental consulting, project management and expert witness services for multi-disciplined projects, site assessment, remediation, water resource and CEQA / NEPA related services for transportation, energy, industrial, water, solid waste and Brownfields projects.

Relevant Experience:

Phase I Environmental Site Assessments

Numerous Sites-Conducted and provided technical oversight for hundreds of Phase I Environmental Site Assessment (ESA) sites for banks, lenders, developers, schools, public agencies, and Fortune 500 companies throughout the western United States. Many of the ESAs were used to provide information for the hazardous materials sections of Environmental Impact Reports (EIRs).

Stockton Highway 99 Corridor ISA-Mr. Martin managed, conducted and provided technical oversight for a Caltrans Initial Site Assessment (ISA). The corridor was over 7 miles in length and extended from the interchange with SR-4 to Hammer Lane in Stockton, California. This corridor through an older, industrialized area of town had approximately 9 sets of on-/off-ramps onto this 4-lane highway. The project involved widening the freeway to six lanes, improving sight lines, adding acceleration and deceleration lanes, reducing the number of ramps, and bringing the remaining interchanges up to more modern-day standards.

The project evolved into several Preliminary Site Investigations (PSIs) and Detailed Site Investigations (DSIs) for the areas of concern which included underground storage tanks, ponds, equipment storage yards, wash racks and smaller salvage yards. The PSI also included an Aerially Deposited Lead (ADL) study.

Qualifications

Registrations / Certificates:

Geologist (P.G.)
CA – No. 6768, 1998

Geologist (R.G.)
OR – No. G2817, 2022

Geologist (L.G.)
WA – No.22020436, 2022

Responsible Managing Employee (RME), California
- C57 #467252
2/13/2003 to 9/2/2011
- C57 #490942
2/6/2018 to Present

HAZWOPPER trained per 40CFR1910.120

Education:

Fundamentals of Professional Practice, ASFE, 2000

Numerous continuing education courses in hazardous materials, geology, environmental law, management and leadership.

Post-Baccalaureate Studies in Geology, California State University Fresno, 1986-1987

B.A., Geology, California State University Fresno, 1986

Experience:

BSK Associates- 2013 to Present

Terracon- 2011 to 2013

Kleinfelder- 1994 to 2011

Krazan- 1987 to 1993

Stanislaus County Measure L Sidewalks/Street Improvement Project, Stanislaus County, California-Mr. Martin managed the entire project (geotechnical and hazardous materials services), conducted and provided technical oversight for a Caltrans Initial Site Assessment (ISA) and an Aerially Deposited Lead (ADL) Study. The project included 4 separate areas throughout the County. All of the areas were in or near very old residential areas. Two of the areas also covered some industrial areas. The geotechnical investigation and the ADL Study were each summarized into one report. Whereas, the ISAs were done as four separate reports.

Bradshaw/Sheldon Intersection Improvement Project, Elk Grove, California-Mr. Martin managed the entire project (geotechnical and hazardous materials services) and provided technical oversight for an Aerially Deposited Lead (ADL) Study. The project consisted of replacing the existing bridge at the Sheldon Road and Bradshaw Road intersection with a precast reinforced concrete box culvert (RCBC). The existing bridge was constructed in 1940 and widened in 1970 and was supported on shallow foundations. The RCBC was approximately 260 feet long (oriented northeast to southwest), 35 feet wide (three segments of 10-feet clear width), and approximately 6 feet clear height. The new intersection design consisted of a roundabout and approximately 600 feet of roadway realignment in each direction to accommodate the new intersection. Portions of the Laguna Creek were rerouted near the intersection. This necessitated filling in portions of the existing creek on the northeast side of the intersection and excavating new portions of creek on the southwest and northeast side of the intersection.

Numerous Transportation Sites-Mr. Martin managed, conducted and provided technical oversight for many Phase I Environmental Site Assessment (ESA) for transportation projects. For California transportation projects, the work was done to satisfy the Caltrans Initial Site Assessment (ISA) guidelines, as well as the current American Society of Testing Materials (ASTM) standard and the USEPA All Appropriate Inquiry (AAI) requirements. Some of the projects evolved into Preliminary Site Investigations (PSIs) and Detailed Site Investigations (DSIs) for the areas of concern which included underground storage tanks, ponds, equipment storage yards, wash racks and smaller salvage yards. Additionally, Aerially Deposited Lead (ADL) Studies were frequently conducted. Some of the projects included portions of SR 180 in southern Fresno, State Route 4 ("Crosstown Freeway") in Stockton, several interchanges along I-5 through San Joaquin County and in Southern California, a small portion of State Route 120 in Escalon, the Jack Tone / SR99 Interchange in Ripon, and portions of the I-710 Gap Project east of Los Angeles. Many of the ESAs were also used to provide information for the hazardous materials sections of Environmental Impact Reports (EIRs). The assessments were done in conjunction with the Caltrans design teams or for local self-help agencies.

Dougherty Valley High School Expansion Project, San Ramon, California-Conducted portions of, and provided technical oversight for, a Phase I Environmental Site Assessment for a large addition project at an existing high school. The site was given a letter of no further action by the State of Toxic Substances Control without any Preliminary Endangerment Assessment (PEA) services being required.

Proposed Sand Lane Elementary School, Manteca, California-Conducted portions of, and provided technical oversight for, a Phase I Environmental Site Assessment (ESA), for a proposed elementary school. That ESA was used as the basis for the hazardous materials section of an Environmental Impact Report (EIR). Also, completed the geology and groundwater sections for that EIR.

Lafayette Elementary School Addition (Former Lafayette Public Library), Lafayette, California-Mr. Martin was the project manager and provided technical oversight of a Phase I Environmental Site Assessment (ESA), a Preliminary Endangerment Assessment (PEA), a Supplemental Site Investigation, a Remedial Action Workplan, remedial activities, and a Remedial Action Report for the addition to this elementary school. The scope of work included an ESA in accordance with California Education Code Sections 17210 and 17213.1 which included evaluation for radon, naturally occurring asbestos (NOA) and mercury. Based on the results of the ESA, a PEA was required to address possible migration of dry cleaning chemicals in groundwater from a nearby site and sampling of the near-surface soils for lead, termiticides and other pesticides. Termiticides were found to be present immediately surrounding the building which required cleanup. The cleanup was handled most economically and expeditiously by digging up the shallow soils and disposing of the soil offsite. However, there were challenges such as protecting some adjacent large trees whose wellbeing had to be preserved during digging near their roots.

Bristow Middle School Theater, Brentwood, California-Mr. Martin was the project manager (for part of the project) and provided technical oversight of a Phase I Environmental Site Assessment (ESA), a Preliminary Endangerment Assessment (PEA), for the addition to this middle school. The addition was most recently part of a City park, but at one time was part of an old oilfield. The scope of work included an ESA in accordance with California Education Code Sections 17210 and 17213.1. Based on the results of the ESA which included some limited environmental sampling for residual ag chemicals, a geotechnical investigation and geohazards investigation, a PEA was required to address vertical and lateral extent of residual organochlorine pesticides. This PEA is still underway.

Multiple Wineries, Napa Valley, Lodi, Ripon, Woodbridge and Manteca, California- Mr. Martin managed and/or provided technical oversight for Phase I Environmental Site Assessments for property sale/refinance for numerous properties within Northern California.

Confidential Agricultural Chemical Facility, Sacramento Valley, California-Conducted portions of, and provided technical oversight for, a Phase I Environmental Site Assessment for an agricultural chemical facility which was in an industrial area with other agricultural chemical facilities nearby. Recognized Environmental Concerns (RECs) and Historical RECs were identified, and subsequent Phase II Environmental Site Assessments were performed.

Site Assessment / Phase II Environmental Site Assessments

Multiple Transportation Projects in California-Mr. Martin managed, conducted or provided technical oversight for the hazardous materials investigation (RI/FS, or Caltrans PSI / DSI) for many transportation projects including the State Route 120 (SR 120) relocation project through the City of Escalon, the Jack Tone

/ SR 99 interchange in Ripon, many investigations along the SR 99 Improvement Project through Stockton, numerous interchanges along I-5 throughout California, portions of the I-710 Gap Project east of Los Angeles, and the SR 4 extension through San Joaquin County. . The projects each included the assessment of multiple properties including hazardous waste sites, bulk oil distributors, fuel stations, garages, naturally occurring asbestos (NOA) and numerous other potential environmental concerns. Many of these projects were done for the local self-help agency, or the design teams for said agencies or Caltrans. All received Caltrans and/or FHA funding. The findings were also sometimes included in the Environmental Impact Reports for the projects.

Lemoore Naval Air Station, Lemoore, California-Mr. Martin provided technical interpretation/oversight, regulatory agency negotiation, and project management services for a site assessment and mitigative measures related to a release of approximately 6,600 gallons of fuel to shallow groundwater that occurred on the base over approximately 2 days. The release produced vapor intrusion into a building that caused immediate evacuation of the facility on the base.

Travis Air Force Base, Fairfield, California-Provided technical interpretation, regulatory agency negotiation, and project management services for numerous environmental (RI/FS) projects on the base. The work included the investigation of Ramps 400 / 500 during a time of heightened military alert status.

Fresno Yosemite International Airport (FAT), Fresno, California- Managed and technically oversaw a Preliminary Site Investigation (PSI) for Per- and Polyfluoroalkyl Substances (PFAS) for the Fresno Yosemite International Airport. The airport is a joint civil-military airport that is owned and operated by the City of Fresno. In addition to providing commercial air services, FYI is home base to the California Air National Guard 144th Fighter Wing, the California Army National Guard Aviation Classification Repair Activity Deport (AVCRAD), and the US Forest Service (USFS) / California Department of Forestry (CDF) Air Attack Base. The airport was originally founded as Hammer Airfield in June 1942 and was used as a training facility by the United States Army Air Forces during World War II. After the end of World War II, commercial air service began in 1948. The investigation of the 13 potential release areas included the advancement of 41 shallow borings, the installation of 4 temporary groundwater monitoring wells (maximum depth of 140 feet), the installation of 2 permanent groundwater monitoring wells (maximum depth of 150 feet), the collection and chemical analysis of subsurface soil and groundwater samples, data analysis, and preparation of a report of findings. The investigation is currently still underway.

Stockton Metropolitan Airport (SCK), Stockton, California- Mr. Martin managed and technically oversaw a Preliminary Site Investigation (PSI) for Per- and Polyfluoroalkyl Substances (PFAS) for the Stockton Metropolitan Airport. The work addressed included the advancement of twenty (20) shallow borings, the installation of six (6) temporary groundwater monitoring wells, collection and chemical analysis of subsurface soil samples and groundwater, data analysis, and preparation of a report of findings for the 3 potential release areas on the airport. The workplan for the next phase of the investigation is currently still underway.

Numerous Underground Storage Tank Sites, California-Managed all phases of over 200 underground fuel storage tank removal sampling projects throughout California for Chevron USA, Shell Oil Company, ARCO, Mobil Oil Company and many other clients. Many of these projects required follow-up investigations (RI/FS) and remediation.

Shuttered Industrial Facility, Colusa County, California- Mr. Martin managed and provided technical oversight for an RI/FS of a shuttered industrial facility that had 1,1-DCA, 1,1-DCE, PCE, TCE, 1,4-Dioxane, metals, Cr+6, and fuels in soil and shallow groundwater beneath the site. The last of the RI/FS and sensitive receptor survey is being completed at this time, and interim remedial measures are being undertaken pending conception and approval of a Remedial Action Plan.

Proposed M4 Elementary School, Fresno, California-Provided technical oversight of a Preliminary Endangerment Assessment (PEA) and conducted, managed and provided technical oversight of a cleanup for a large proposed elementary school. The site had underground fuel storage tanks, improperly abandoned domestic wells, asbestos and lead based paints in existing residences, and pesticides (predominantly termiticides) in the shallow soils. This cleanup was conducted while protecting an adjacent middle school and residences from exposure resulting from the cleanup. All phases of the work managed by Mr. Martin were also conducted at or below budgets.

Confidential Former Dry Cleaner Site, Eastern San Francisco Bay Area, California-Mr. Martin managed, provided technical oversight and provided expert witness-related services for a former dry cleaner with soil and groundwater contamination. Groundwater was present beneath the site at a depth of approximately 25 feet below the surface in a two-zone unconfined aquifer. The site is surrounded by three or more UST sites with comingled plumes. Mr. Martin and his project team investigated the dual zone aquifer with numerous monitoring wells ranging in depth from 40 to 100 feet below the ground surface over an area of approximately 6 square blocks. Additionally, vapor encroachment of perchloroethylene (PCE) and related compounds was investigated, and risk assessed. Indoor air for commercial and residential properties were sampled and evaluated. A feasibility study (FS) was submitted which recommended a combined technology of in-situ chemical reduction and enhanced microbial degradation. Also, the FS proposed passive subslab vapor venting once a building is constructed. A remedial action plan (RAP) and notice of intent (NOI) was submitted and approved. Remediation is pending.

Major Oil Company Bulk Plant, Tulare County, California-Managed and/or provided internal oversight for all phases of an RI/FS project which involved the installation of approximately seventeen temporary groundwater monitoring wells, over one dozen permanent monitoring wells, quarterly monitoring, aquifer testing, and remedial system evaluation for a site with up to one foot of free-phase product involving one or more of the following petroleum products: gasoline, diesel, mineral spirits, kerosene, and weed oil. The plume was later noted to extend to approximately 1/2 of a mile from the project site towards a National Priorities List site within an aquifer of extremely high transmissivity.

Major Oil Company Bulk Plant, Kern County, California-Managed and provided oversight for all phases of an RI/FS project which involved the installation of approximately eighteen exploratory soil borings at an oil company bulk plant. Investigation was continued to a depth of approximately 150 feet below ground surface and groundwater was present at that time at over 210 feet below the ground surface. The contaminants of concern were both gas and diesel. Site closure was obtained for the client without any active remediation.

Kozy Shack Pudding Plant, Turlock, California-Mr. Martin conducted and managed a Phase II Environmental Site Assessment of this food processing facility which included a magnetometer, electromagnetometer and ground penetrating radar survey of suspected UST locations and soil and groundwater sampling.

Large Box Retailer Development Site, Kern County, California-Provided project management and overall project oversight for site assessment of a retail development where a portion of the property had been previously used for the storage of vacuum truck tank bottoms and other solids and semi-solids derived from oilfield operations in the area. The solids covered a large area of the property but was found to be limited in their vertical extent (upper 25 feet).

Retail Distribution Center, Merced, California-Provided project management and overall project oversight for an RI/FS project which included the installation of approximately six groundwater monitoring wells, the excavation of approximately 1,500 cubic yards of diesel fuel contaminated soil, the quarterly monitoring of said groundwater monitoring wells, and the construction of a surface impoundment for the bioremediation of the diesel-impacted soil which took 6 weeks to degrade concentrations of TPH-D from several thousand parts per million to less than 20 parts per million.

North Fork Ranger Station, Madera County, California-Managed and provided oversight for various phases of several projects at the North Fork Ranger Station. Those projects included, but were not limited to, site assessments (RI/FS) of 12 underground storage tank sites, a Pesticide Storage Building site assessment, miscellaneous herbicide spill locations, an aeration project, a diesel bioremediation project, and risk assessments. Some of the field assessment was done in Level B and Level C PPE.

Pipeline Leak Site, Avila Beach, California-Managed the emergency initial site investigation (RI/FS) services for this pipeline leak site. The pipeline carried semi-refined crude oil/diesel fuel/unleaded gasoline from an offshore handling facility to a bulk handling facility located on the city's main street. Investigative techniques included a detailed soil vapor contaminant assessment, the advancement of soil borings, and the sampling of groundwater using a Hydropunch and numerous monitoring wells. The aquifer was tested, and tidal fluctuations and groundwater gradient were monitored using dataloggers. The study area covered approximately 6 to 12 square blocks. The emergency investigative services included discrete nighttime services during spring break. Mitigative activities conducted for this pipeline leakage has reportedly totaled over $100 million.

Former Chrome Plating Facility, Fresno County, California-Managed and provided technical oversight of an investigation under State of California Department of Toxics Substances Control (DTSC) regulatory oversight of a facility with near surface soil contaminated by cadmium, cyanide and lead. Soil vapor beneath portions of the site was impacted by PCE, TCE and other volatile organics. Groundwater contains PCE, TCE, Cyanide, Cr+6, and other metals. The site is near a few residential structures and a school and is still under investigation at this time.

Potential Pipeline Leak Site, Tracy, California-Provided senior level review and quality control for a future industrial site which was developed on a site which had a crude oil pipeline that was to be relocated. Investigative techniques included soil sampling and an infrared aerial survey of the pipeline to note temperature gradients which might have been indicative of backfilled excavations and/or leakage.

Confidential Agricultural Chemical Burial Site, Fresno County, California- Mr. Martin provided project management and overall technical oversight for a project which included review of another consultants Phase I ESA, developed an approach for a Phase II ESA, and implementation of the Phase II. During those site assessment activities, approximately 3 dozen drums containing agricultural chemicals as well as miscellaneous farm/home refuse were discovered. Upon its discovery Mr. Martin's team oversaw the excavation, overpacking and disposal of the drums containing chemicals, investigation of the burial area for information as to who buried the materials and when, overexcavation of contaminated soil and confirmation sampling. Later, Mr. Martin provided expert witness and percipient witness testimony in the cost recovery litigation for the discovery. That litigation was successful.

Tire Fire Site, Fresno, California- Mr. Martin managed and provided technical oversight of a bank owned site that had a large tire fire. The tires smoldered for months leaving a fine ash high in semi-volatiles and metals. A biodegradable polymer fixent was sprayed over the ash to limit airborne dust from impacting nearby residents and to inhibit leaching. Additionally, site security measures were implemented to prevent trespassing. Later the ash (with polymer) was removed and hauled to a hazardous waste disposal facility and confirmation testing was done to confirm the adequacy of excavation.

Quitclaimed Pipeline Easement, Gustine, California-Managed this project which involved third-party observation and review of a crude oil cleanup performed by an oil company in a large farm complex. The cleanup involved the excavation and disposal of over 100,000 cubic yards of contaminated soil by the oil company. Successfully provided expert witness support to the farming operation's litigation team.

Confidential Agricultural Facility, San Joaquin County, California-Managed, interpreted, provided technical oversight and supplied technical support and expert witness services to a litigation team for a defendant who was being sued by an adjacent property owner due to high groundwater conditions and elevated nitrates in the shallow perched groundwater. Additionally, worked to optimize water use, implement best management practices related to water and fertilizer use and provide subsurface assessment of the vadose zone, perched aquifer and deep unconfined aquifer on the subject site and adjacent properties. Ongoing monitoring required by the State of California RWQCB was also conducted. This project is still ongoing.

Confidential Agricultural Facility, Kern County, California-Managed, interpreted, provided technical oversight and supplied technical support to a litigation team for a property owner with agricultural chemicals in soil of a chemical mixing area of a large farm complex. Work was conducted in Level C PPE.

Confidential Oil Field, Los Angeles County, California-Managed and provided technical oversight of ongoing methane monitoring of both abandoned and active wells in accordance with local community, county, and State of California Division of Oil, Gas, and Geothermal Resources (DOGGR) standards and regulations.

Confidential Residential and Park Development Site, Former Pipeline Leak Location, Tracy, California- Managed, interpreted, provided technical oversight and supplied technical support and expert witness services to a litigation team for a residential development on a site which had a historic pipeline that carried crude oil and semi-refined product. Investigative techniques included soil and groundwater sampling, working cooperatively with the oil company and their consultant to develop a soil management plan for any future discovered contamination, work with the developer's counsel to draft disclosure language to future home buyers and work as an expert witness with the developer's counsel for cost recovery.

PG&E Maintenance Facility, Fresno, California-Managed, interpreted, provided technical oversight to a prime consulting firm for a RI/FS of PCBs in shallow soil. Fieldwork was conducted in Level C PPE.

Confidential Residential Development Site, Former Pipeline Leak Location, Santa Nella, California- Managed this project which involved third-party observation and review of a crude oil cleanup performed by an oil company on a large residential development.

The cleanup involved the excavation and disposal of millions of cubic yards of contaminated soil by the Oil Company, dewatering and treatment of groundwater, additional site assessment in the pipeline ROW, risk assessment and formulation of a soil management plan. Mr. Martin also worked with the developer's counsel on cost recovery, which to date has been settled out of court.

Water Supply

Confidential Property, Central Coast, California – A permit for surface water diversion and use was filed with the State of California Water Resources Control Board (SWRCB) in 1989 for this Central Coast site. The use of the water was to be for fire protection, stock watering, irrigation and domestic use. The permit was approved in 1996. A site inspection was conducted by the SWRCB in 2007. The site was noted to be out of compliance with the approved permit. Upon realizing they were out of compliance, BSK was contracted to get the project back on track so that the water rights would not be lost. Mr. Martin managed and provided technical oversight for the licensing project. As part of the project, Mr. Martin oversaw the review, data analysis and summary of approximately seven years of back-data that had gone unreported. He specified a variety of measuring devices for the diversion, the onsite water storage ponds and another onsite water source. He reviewed contractor submittals during a retrofit project for the measuring devices. Generally

speaking, the site has a "Permit for Diversion and Water Use". After issuance, the applicant was required to do ongoing submissions while the "project" was being completed. Now that the project is completed, the permit is awaiting licensing by the SWRCB.

Wastewater / Waste Discharge Requirements (WDRs)

City of Auburn Wastewater Treatment Plant, Auburn, California – Mr. Martin managed and provided technical oversight of WDR ground and surface water monitoring for a municipal wastewater treatment plant whose effluent is discharged to a surface water body. Additionally, Mr. Martin cooperatively worked with two other firms to identify problems with the treatment system that allowed high coliform bacteria concentrations to make it into groundwater and the plant effluent. This was long term work that was performed over a period of about a decade.

Multiple Wineries, Napa Valley, Lodi, Ripon, Woodbridge and Manteca, California- Mr. Martin managed and/or provided technical oversight for Waste Discharge Requirement (WDR) monitoring of groundwater, wastewater, land application areas, etc., design of land application areas and a variety of other related services On many of these projects services were provided for 10-15 years or more.

Rosedale Spreading Basin WDRs, Kern County, California- Mr. Martin managed and/or provided technical oversight for Waste Discharge Requirement (WDR) monitoring of groundwater and a variety of other related services.

Pacific Coast Producers, Woodland and Oroville, California- Mr. Martin managed and provided technical oversight of the production of a Sampling and Analysis Plan (SAP), and ongoing groundwater monitoring for these facilities. The Woodland facility is reportedly one of the world's largest retail tomato canning facilities. The Oroville facility cans peaches, pears, fruit cocktails as well as some salsas.

California Natural Products, Lathrop, California- Mr. Martin managed and provided technical oversight negotiations with the State of California Central Valley Regional Water Quality Control Board, Waste Discharge Requirement (WDR) monitoring of groundwater, wastewater, land application areas, etc., production of a Sampling and Analysis Plan (SAP), and assisted with an Operations and Maintenance Plan (O&M Plan) and a variety of other related services for this facility that processes rice and soy into food products such as rice syrup, rice syrup solids, rice milk, a variety of soy food products, teas, and soups.

Remediation & Compliance

Crude Oil Soil Contamination Site, Sunset Midway Oil Field, Kern County, California-Managed and provided technical oversight of an RI/FS/remediation project in which a total of 23,700 cubic yards of crude oil-contaminated soil were excavated from numerous areas of a future retail site from depths of up to 35 feet. All the crude oil-affected soils were placed in four specially-designed containment cells constructed on site in the future parking areas. Excavation activities at the site also included the removal of approximately 15,000 cubic yards of unaffected soil. Mr. Martin's involvement also included

negotiations with the national retail client, the State of California Division of Oil, Gas, and Geothermal Resources, the State of California Regional Water Quality Control Board, the local municipality, and attorneys and civil engineers for all parties. Coordination of excavation surveying and analytical laboratory subcontractors was also accomplished. Total cost of the mitigative measures, limited investigation, confirmatory sampling, and regulatory negotiations was approximately 1/3 of the next lowest consultant's estimate. Total cost of the services performed was approximately $600,000. Mr. Martin's approach for this project saved millions of dollars in development costs. Because of the success of the project, a local redevelopment agency contracted Mr. Martin's firm for similar services on their adjacent property involving 1,000 cubic yards of crude oil-affected soils to be excavated from a stream channel and drainage diversions, placing those soils in containment cells on their property.

Southern California Edison Pole Treatment Facility, Visalia, California-QA/QC and project management oversight for a wooden utility pole treatment facility in which more than 250,000 gallons of creosote and 900,000 gallons of diesel with pentachlorophenol were used for pole treatment. This site was listed on the USEPA National Priorities List (NPL). Over 7 groundwater excavation wells have been installed within the 2-aquifer system as part of the RI/FS. Over one billion gallons of water have been extracted and treated using carbon absorption and/or u.v./ozone remedial treatment. Numerous pilot tests, soil vapor extraction tests, and bioventing tests were also performed on site. Additionally, site history research, treatment system operation and maintenance, and miscellaneous disposal-related activities were performed.

Los Vaqueros Project, Contra Costa, California-Managed and wrote portions of a Construction Activity Stormwater Pollution Prevention Plan for the Vasco Road Realignment (12 miles). The area of the relocation included hazardous materials concerns, up to 100-foot deep cuts and fills, and endangered species concerns. Additionally, managed, and was involved in the design, construction, operation and maintenance of a water treatment system for a dewatering effluent which contained free-phase crude oil and other refined and semi-refined petroleum products. The system was designed in four working days, permitted through the State of California RWQCB in one working day, and constructed in eleven days. The system was designed to treat in excess of 600 gallons/minute and was manned around the clock for approximately 3 months due to safety, security, and property-related issues. To avoid flooding the excavation, the treatment system could not be shut off, even for system maintenance. Over 17 million gallons of water were treated. Mr. Martin also assisted the Contra Costa Water District with technical support for mediation.

The quick service provided to the District saved the District over $500,000/day in delay costs. The District was able to recover approximately 98 percent of all costs claimed. This project earned Mr. Martin and his project team the "President's Award" for best overall project within Kleinfelder that year.

Numerous Post-Incident Locomotive Horn Testing, Multiple Locations, California- Mr. Martin, managed and/or performed numerous locomotive horn tests following accidents for one major and a couple of minor railroads in support of the legal teams' accident investigations. Testing was done in accordance with 49CFR.

Former Disco Facility, Stockton, California-Managed the design, permitting, construction and first 2 years of operation/maintenance/monitoring for a project in which Mr. Martin and his project team evaluated a plume of TPH and 1,2 DCA groundwater contamination. The contamination originated from a former fueling facility and migrated approximately 400-500 feet offsite, traversing beneath a major highway and to within 100 feet of an elementary school. In addition to its sizeable length, the plume was over 140 feet deep, had migrated 100 feet vertically into groundwater, and was in two separate hydraulic zones. The client had previously attempted to control the plume and remediate the site over the course of 11 years with little success. Under pressure from regulators, the client was asked to develop a new approach subject to their review and approval. Mr. Martin and his project team developed an innovative strategy involving aggressive deep air sparging and high vacuum SVE to remediate the source area and capillary fringe contamination. For the fugitive offsite plume that comprised primarily 1,2 DCA, we constructed and are currently operating and maintaining a remote ozone sparge curtain. The curtain comprises five triple-nested wells that inject air mixed with ozone to oxidize dissolved contamination as it traverses the curtain. The essence of this approach was to eliminate the source area contamination while controlling migration of the offsite plume, as opposed to a more costly approach of trying to remediate the entire plume at once. We outlined our approach to the regulators, which was approved without reservation. We utilized horizontal direction drilling (HDD) to place a 2-inch casing through which individual lines of tubing were run to supply the remediation wells. Also, run though the casing were electrical lines to individually activate solenoids at each wellhead, thus allowing enormous control and flexibility in optimizing operation of the curtain and the 15 sparge points it entails. The system is still in operation and results are exceeding expectations. The solvent concentration at the leading edge of the fugitive plume has dropped by over 75% to nearly non-detectable levels. The petroleum concentrations in the source area have dropped by an average of approximately 80%.

Brownfields

Brownfields Hazardous Materials and Petroleum Community-Wide Site Assessment Grants, Rancho Cordova, California-Mr. Martin managed and provided technical oversight of the portfolio of projects for the City of Rancho Cordova's two (Community Wide Site Assessment-Petroleum and Community Wide Site Assessment-Hazardous Materials) Brownfields grants. That work included community outreach, a grant area planning project (which included grant area research, and field reconnaissance), Phase I Environmental Site Assessments, Sampling and Analysis Plans, geophysical surveys, Phase II Environmental Site Assessments, etc.), and even a planning level study with a GIS deliverable. This work was conducted from 2011 to 2017.

Purity Oil Recyclers, Superfund Site, Fresno County, California-Involved with potentially responsible party group (PRPs) in the management of field activities such as groundwater sampling (RI/FS), remedial system design, regulatory agency negotiations, etc. The site is listed on the USEPA National Priorities List (NPL). The estimated remediation cost for this project was later estimated to exceed over $100,000,000.

Brownfields Hazardous Materials and Petroleum Community-Wide Site Assessment Grants, Oroville, California-Mr. Martin managed and provided technical oversight of the portfolio of projects for the City of Oroville's two Brownfields grants. That work has to-date included community outreach, a property screening and prioritization evaluation, Phase I Environmental Site Assessments, and Phase II Environmental Site Assessments, etc. This work is currently ongoing.

Former Spreckels Sugar Plant 2, Manteca, California-Managed all aspects of a Phase I / II Environmental Site Assessment for the Former Spreckels Sugar Plant No. 2. The site has been the location of a former beet sugar processing plant since 1916. The property continues to be redeveloped as a 362 acre mixed-use development called "Spreckels Park."

Because of a pending property sale, the entire project was conducted on a fast-track basis. Initially, Mr. Martin and his project team started the project by conducting a Phase I Environmental Site Assessment (ESA) in accordance with ASTM Standard E 1527-94. The ESA included but was not limited to a search of environmental databases and lists, a very thorough site reconnaissance, evaluation of the manufacturing process, evaluation of aerial photographs, numerous personal interviews, a review of Spreckels Development's files dating back to approximately 1915, a review of regulatory agency files, etc. Based on the assessment, twenty-seven recommendations were made for further investigation or mitigation.

A Phase II Environmental Site Assessment (RI/FS) was conducted to address the 27 recommendations in the ESA. Members of the Development Committee asked that all environmental concerns known to the project team be investigated, including rumors. During the "fast-track project," a total of approximately 1,000 soil samples and approximately 40 discrete groundwater samples were collected from approximately 500 borings and surface sample locations for lithological logging purposes, field screening and for potential chemical analysis. Approximately 600 of the samples obtained were analyzed for selected constituents. Groundwater samples were also obtained from 11 existing groundwater monitoring and production wells on site. Additionally, twenty-two (22) groundwater-monitoring wells were installed on the property; all of which were later sampled for chemical analysis. Building material samples were also analyzed for lead-based paints and asbestos. Soil-gas probes were installed in select areas. Geophysical techniques (magnetometer, electromagnetometer and ground penetrating radar) were used to search for buried debris throughout areas of concern. In the areas identified by geophysical methods, exploratory trenching was used for confirmation purposes. The data accumulated during the field and laboratory studies were summarized and evaluated. Statistical and Risk Assessment approaches were also utilized. The results of the Phase II assessments were detailed in approximately 40 different reports which were submitted to the Client, and subsequently to the appropriate regulatory agencies for review. Regulatory closure was requested for many of the areas investigated. Mitigation measures were proposed for a few other concerns.

Mr. Martin also represented the client in the regulatory closure process for existing on-site wastewater ponds, disposal areas and other portions of the property. The ponds on site were under a pre-existing Waste Discharge Requirements (WDRs) and a Monitoring and Reporting Program (MRP)> The ponds on site consisted of three "mud ponds" which contained the sediment that was rinsed off the sugar beets as they entered the process, A group of five "lime ponds" and three "wastewater ponds". During the processing of the sugar beets the beets are sliced/diced and boiled to extract the sugar. As part of the process lime is added to the solution to remove impurities. Once used, the lime solution is the consistency of a thick milkshake. The spent lime solution was pumped to these ponds and allowed to sit for years to get the lime to dry. The five lime ponds were cycled so that ponds were in various stages of dewatering. The pond with the least water content would then be excavated and sent by conveyor to a rotary kiln where the organic impurities were burned out of the lime and the lime was reused. Approximately 200,000 cubic yards of spent lime was on site in the lime ponds. The lime was tested to show it was not hazardous. Mr. Martin then negotiated with the Central Valley Regional Water Quality Control (CVRWQCB) staff that the spent lime was not even a waste as it was being dried, impurities removed, and then reused on site. Together with a senior geotechnical engineer, Mr. Martin showed that the blending of the spent lime with the silts and clays in the mud ponds was a valid reuse of the materials to stabilize the fine grained soil and not application of a waste to the land. It was also shown through a series of leachibility tests that the mix was unlikely to impact groundwater quality. Nevertheless, the mixed material was only used under industrial areas of the redevelopment where it was going to be paved to further inhibit leaching. This approach saved the developer tens of millions of dollars and avoided killing the project.

Stockton Downtown Redevelopment and Brownfields Sites, Stockton, California-Provided technical support to an EPA contractor for the former McCormick & Baxter Creosoting Co. Superfund site. Managed and provided technical oversight of a Phase I / Phase II Environmental Site Assessment of the Delta View Apartments on the south shore of the Stockton Waterfront. Managed and provided technical oversight for a portion of the City of Stockton Brownfields site. This site was the winner of a 2002 EPA Region IX Phoenix Award. Also, managed and provided technical oversight for the evaluation of two alternative baseball stadium sites as a portion of the Environmental Impact Reports for the Stockton Mudville Nine (A – Affiliate of the Oakland A's). Eventually, the North Shore Alternative was selected, and that site went on to be the 2008 winner of the EPA Region IX Phoenix Award.

Later provided technical oversight for the evaluation of several properties around the new EDD site on the south end of the channel for the City of Stockton Redevelopment Agency. Many of these projects included cleanup, third-party review of other consultants' work, and legal team support in cost recovery.

Solid Waste

Sierra Conservation Center, Jamestown, California-Managed and provided technical oversight for several years for groundwater and vadose zone monitoring at this Central California Prison Landfill.

Rice Road Landfill, Fresno, California-Managed and provided technical oversight for groundwater and landfill gas monitoring at this site.

Florin-Perkins Landfill, Sacramento, California-Mr. Martin was the project manager and provided third party technical oversight for construction quality assurance for the landfill cap of three large waste cells. The 3-foot-thick low-permeability soil cap consisted of foundation, engineered, and vegetative layers. Also assisted in some erosion mitigation and landfill gas waste characterization.

Committees and Commissions:

- City of Fresno Little Hoover Commission, Fresno, California (Water Division, Sewer Division and Wastewater Treatment Facility)
- Sacramento Chapter, American Public Works Association, Board Member and Chapter Officer, 2011 to 2017. Past President and Committee Chair 2017 to Present.
- San Joaquin Engineer's Council, Chair and longtime board member, 2012 to 2020

Awards:

- Stan Wilkening Member of the Year, Sacramento Chapter of the American Public Works Association, 2010
- President's Award for Outstanding Project, Los Vaqueros Water Conveyance Pipeline, Kleinfelder, 1996
- Interdisciplinary Award, Disco Remediation Site, Kleinfelder, 2003
- Co-author, "Fast-Track Water Treatment, Los Vaqueros Water Conveyance Pipeline Project, Byron, California", Technical Papers of the 12th Annual Environmental Management and Technology Conference West, Zenobia and Martin, (HazMat '96 West)
- Co-author, "Emergency Construction, Operation and Maintenance of a 600 gpm Dewatering Treatment System", Technical Seminar, Zenobia, Martin and Paulson, April 1996
- Co-author, "Removal of MTBE and other Oxygenates in Groundwater using Emerging Technologies", Technical Seminar, Jenkins and Martin, Denver, Colorado, February 2003

1 INTRODUCTION

BSK Associates (BSK) has performed a Limited Phase II Environmental Site Assessment (Phase II ESA) for the Subject Property located at Sacramento County Assessor Parcel Numbers (APN) 061-0150-049-0000, 061-0150-045-000 & a portion of 061-0150-042-000 & 061-0150-054-000 which has an address of 3901 Florin Perkins Road Sacramento, California (Site, Figure 1). The Subject Property is approximately 45.25-acres and is zoned as "Light Industrial – Site Improvements/Solid Waste Restricted" (City of Sacramento, 2025). The Subject Property is a portion of the Florin Perkins Landfill.

2 PROJECT BACKGROUND

According to the Phase I ESA dated October 22, 2025, prepared by BSK Associates, the following recognized environmental conditions (RECs) were identified on the Subject Property:

1. Two Historic Structures (Approximately 1940s) – Potential Termiticide and/or Lead-based Paint Application
2. Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation of Hazardous Materials
3. Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of Hazardous Materials
4. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
5. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill gases)
6. Groundwater Monitoring Well Drums – Potential Hazardous Material Release
7. Soil Pile (South) – Potential Hazardous Material and/or Petroleum Product Release
8. Soil Pile (North) – Potential Hazardous Material and/or Petroleum Product Release
9. Stained Concrete and Soil in Blower System Area – Hazardous Material Release

At the request of the client, the following RECS were investigated as part of this Limited Phase II ESA:

1. Two Historic Structures (Approximately 1940s) – Potential Termiticide and/or Lead-based Paint Application
2. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
3. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill gases)
4. Soil Pile (South) – Potential Hazardous Material and/or Petroleum Product Release
5. Soil Pile (North) – Potential Hazardous Material and/or Petroleum Product Release

3 PURPOSE

The purpose of this Limited Phase II ESA was to further investigate selected areas identified in BSK's Phase I ESA report dated October 22, 2025

Please note it was not the intent of the Phase II ESA to address all RECs and environmental concerns associated with the property. This Limited Phase II ESA also did not evaluate the extent of the contamination or ascertain cleanup costs for any contaminants present.

4 PRE-FIELD ACTIVITIES

Before starting any work, BSK field personnel reviewed BSK's approved Limited Phase II Environmental Site Assessment sampling proposal, "Limited Phase II Environmental Site Assessment" dated April 6, 2026, and obtained necessary field equipment and sampling supplies.

It was BSK's understanding that boring permits were not required from Sacramento County.

Prior to conducting field work, BSK personnel marked the site and contacted Underground Service Alert North (USAN) on April 16, 2026, to locate and mark subsurface utilities in the immediate vicinity of work.

5 FIELD SAMPLING

Former Structures

On May 4-6, 2026, BSK collected discrete surface and subsurface soil samples from eight (8) boring locations around the former structures on the Site. Surface soil samples were collected in the upper 0-6-inches of soil and subsurface soil samples were collected from 2-3-feet below ground surface (bgs). BSK focused this portion of the investigation on structures observed on-Site that were visible in historic topographic photographs provided in the Phase I ESA. The 1949/1950 topographic map presented in Appendix A of BSK's October 22, 2025, Phase I Investigation Report shows what appears to be the maximum extent of buildings on-Site during years in which lead-based paint, and termiticides could have been used on-Site and is the map used by BSK to derive the number of borings for analysis.

Residual Agricultural Chemical Soil Testing

On May 4-6, 2026, BSK collected discrete surface soil samples from twenty (20) boring locations to evaluate for residual agricultural chemicals. All soil samples were obtained from a depth of 0 – 6 inches. Twenty (20) discrete soil samples were collected from the twenty (20) boring locations. The twenty (20) discrete soil samples were composited by the analytical laboratory into five (5) 4-point composite samples.

Former Florin Perkins Landfill Operation Soil Testing

On May 4-6, 2026, BSK collected additional subsurface soil samples from eight (8) of the boring locations to evaluate for residual hazardous materials related to the former landfill. The eight (8) selected borings were advanced to approximately 2-3' bgs and soil samples were collected at 30-36" bgs to evaluate surface, and subsurface conditions.

Soil Stockpiles Sampling

On May 4-6, 2026, BSK collected one (1), 4-point composite soil sample from each of the soil stockpiles on the Site. Stockpile soil samples were collected by advancing the sampling device (i.e., stainless-steel scoop, shovel, hand auger, etc.) approximately one to two feet into the soil stockpile to obtain a representative stockpile soil sample. Soil samples were collected in 6-inch stainless steel tubes, with four (4) tubes per sample (4-point composite).

6 LABORATORY ANALYSIS AND ANALYTICAL RESULTS

6.1 Former Structures Soil Testing

BSK analyzed eight (8) discrete soil samples collected from 0-6" bgs and eight (8) discrete soil samples from 2-3' bgs for a total of sixteen (16) discrete soil samples near the former structures for:

- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- Polychlorinated Biphenyls (PCBs) by EPA Method 8082; and
- Lead by EPA Method 6010B

The soil sampling results, associated laboratory QA/QC and chain-of-custody documentation are detailed in the attached analytical report included in Appendix A. Soil sampling results are summarized in Table 1, and in the following text.

The results of the chemical analysis are as follows:

Organochlorine Pesticides (OCPs)

- Chlordane (technical) was detected in 2 of 16 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.0870 mg/kg. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold level for this analyte.
- Dieldrin was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.018 mg/kg. The concentrations of dieldrin were below the respective San Francisco Bay Regional Water Quality Control Board (SFBRWQCB) Environmental Screening Levels (ESLs) for residential, commercial/industrial, and construction worker settings and below the respective Soluble Threshold Limit Concentration (STLC) trigger level and Total Threshold Limit Concentration (TTLC) for classification of hazardous waste. Please note, there is no Toxicity Characteristic Leaching Potential (TCLP) threshold level for this analyte.
- Heptachlor Epoxide was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.014 mg/kg. The concentrations of heptachlor epoxide were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective TCLP trigger level, STLC trigger level, and TTLC.
- Alpha-Chlordane was detected in 2 of 16 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.010 mg/kg. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold level for this specific analyte. However, the regulatory values for total chlordane are assumed to be equal to alpha-chlordane plus gamma-chlordane. The combination of alpha-chlordane and gamma-chlordane are below the respective TCLP trigger, level, STLC trigger level, and TTLC.
- Gamma-Chlordane was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.026 mg/kg. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold level for this specific analyte. However, the regulatory values for total chlordane are assumed to be equal to alpha-chlordane plus gamma-chlordane. The combination of alpha-chlordane and gamma-chlordane are below the respective TCLP trigger, level, STLC trigger level, and TTLC.
- The remaining OCPs were not detected above the laboratory reporting limit.

Polychlorinated Biphenyls (PCBs)

PCBs were not detected above the laboratory reporting limit in the sixteen (16) discrete soil samples.

Lead

Lead was detected in 16 of 16 samples and ranged in concentration from 7.9 to 78 mg/kg. The total concentrations of lead were below the SFBRWQCB ESLs for residential, commercial/industrial, and

construction worker settings. FB4@0-6" (78 mg/kg) and FB5@0-6" (71 mg/kg) exceeded the STLC trigger level of 50 mg/kg and required a WET analysis. The STLC analysis of FB4@0-6" had a soluble lead concentration of 2.6 mg/L and FB5@0-6" had a concentration of 1.9 mg/L and were both below the STLC screening level of 5.0 mg/L. The concentrations of lead were below the respective TCLP trigger levels and TTLC for classification of hazardous waste.

6.2 Residual Agricultural Chemical Soil Testing

BSK analyzed five 4-point composite soil samples collected from a total of twenty sample locations across the Subject Property for:

- Organochlorine Pesticides (OCPs) by EPA Method 8081A

The soil sampling results, associated laboratory QA/QC and chain-of-custody documentation, are included as Appendix A. Soil sampling results are summarized in Table 2, and in the following text.

OCPs were not detected above the laboratory reporting limits in the five 4-point composite soil samples analyzed.

6.3 Former Florin Perkins Landfill Operation Soil Testing

BSK analyzed eight (8) discrete soil samples collected from 0-6" bgs and eight (8) discrete soil samples from 30-36" bgs for a total of sixteen (16) discrete soil samples in the areas of the Florin Perkins Landfill operations on the Subject Property for:

- CAM-17 Metals by EPA Method 6020
- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- Semi-Volatile Organic Compounds (SVOCs) including Polynuclear Aromatic Hydrocarbons (PAHs)
- Total Petroleum Hydrocarbons (TPH) by GC-FID EPA 8015B w/SGT
- Polychlorinated Biphenyls (PCBs) by GC-ECD
- Volatile Organic Compounds (VOCs) by EPA 8260D
- pH by EPA 9045D

The soil sampling results, associated laboratory QA/QC and chain-of-custody documentation, are included in Appendix A. Soil sampling results are summarized in Table 2, and in the following text.

The results of the soil samples on the Subject Property for the respective analytes are as follows.

CAM-17 Metals and pH

- Arsenic was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 2.9-3.5 mg/kg. The arsenic concentrations from these samples exceed the SFBRWQCB ESLs for a residential (0.032 mg/kg), commercial/industrial (0.14 mg/kg), and construction worker (1.1 mg/kg) set by the SFBRWQCB. Although these limits were exceeded, arsenic is naturally occurring in many rock assemblages and their subsequent soils in California. The concentrations detected in the samples are typical to California (Hunter, Davis and Roach, 2005) and are not believed to be representative of FPL operations. The concentrations of arsenic were below the respective STLC and TCLP trigger levels and TTLC for classification of hazardous waste.
- Barium was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 89-230 mg/kg. Barium is also naturally occurring in California rocks and soil. The concentrations of barium were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective TCLP and STLC trigger levels and TTLC for classification of hazardous waste.
- Chromium was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 36-62 mg/kg. Chromium is also naturally occurring in California rocks and soil. Please note, there are no SFBRWQCB ESLs for chromium. Four (4) samples (AG6/FPL2@30-36" [57 mg/kg], AG12/FPL4@30-36" [60 mg/kg], AG15/FPL5@30-36" [61 mg/kg], AG16/FPL6@30-36" [62 mg/kg]) exceeded the STLC trigger level of 50 mg/kg and required a CA-WET analysis. The results of the CA-WET analysis were below the laboratory reporting limit of 0.50 mg/L and below the STLC screening level of 5.0 mg/L in all four (4) samples analyzed. The concentrations of chromium were below the respective STLC and TCLP trigger levels and TTLC for classification of hazardous waste.
- Cobalt was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <13-30 mg/kg. Cobalt is also naturally occurring in California rocks and soil. The concentrations of cobalt were below the respective SFBRWQCB ESLs for a commercial/industrial setting. The concentration of cobalt at AG12/FPL4@0-6" (27 mg/kg) and AG15/FPL5@0-6" (30 mg/kg) exceeded the SFBRWQCB ESL for a residential setting (23 mg/kg) and construction worker setting (22 mg/kg). The concentrations of cobalt were below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- Copper was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 14-36 mg/kg. Copper is also naturally occurring in California rocks and soil. The concentrations of copper were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.

- Lead was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 7.2-22 mg/kg. Lead is also naturally occurring in California rocks and soil. The concentrations of lead were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective TCLP and STLC trigger levels and TTLC for the classification of hazardous waste.
- Nickel was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 16-80 mg/kg. Nickel is also naturally occurring in California rocks and soil. The concentrations of nickel were below the respective SFBRWQCB ESLs for residential and commercial/industrial settings. The concentration of nickel exceeded the SFBRWQCB ESL for a construction worker setting (63 mg/kg) at AG3/FPL1@30-36" (80 mg/kg). The concentrations of nickel are below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- Vanadium was detected in 16 of 16 samples above the laboratory reporting limit and ranged in concentration from 44-66 mg/kg. Vanadium is also naturally occurring in California rocks and soil. The concentrations of vanadium were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- The remaining CAM-17 metals were not detected above the laboratory reporting limit.
- pH ranged from 6.01 to 7.59.

Organochlorine Pesticides (OCPs)

OCPs were not detected above the laboratory reporting limits in the sixteen (16) discrete soil samples analyzed.

Semi-Volatile Organic Compounds (SVOCs) including Polynuclear Aromatic Hydrocarbons (PAHs)

The following total SVOCs were detected at the ranges as noted below:

- 1-Methylnaphthalene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-24 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.
- Acenaphthene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-390 µg/kg. The concentrations of acenaphthene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.

- Anthracene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-700 µg/kg. The concentrations of anthracene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Benzo(a)anthracene was detected in 5 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-1,800 µg/kg. The concentration of anthracene at AG16/FPL6@0-6" (1,800 µg /kg) exceeded the SFBRWQCB ESL for a residential setting (1,100 µg /kg). The remaining concentrations of Benzo(a)anthracene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Benzo(a)pyrene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-1,700 µg/kg. The concentration of benzo(a)pyrene at AG16/FPL6@0-6" (1,700 µg /kg) exceeded the SFBRWQCB ESL for a residential setting (110 µg/kg). The remaining concentrations of benzo(a)pyrene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Benzo(b)fluoranthene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-2,000 µg/kg. The concentration of benzo(b)fluoranthene at AG16/FPL6@0-6" (2,000 µg/kg) exceeded the SFBRWQCB ESL for a residential setting (1,100 µg /kg). The remaining concentrations of benzo(b)fluoranthene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Benzo(g,h,i)perylene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-1,100 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.
- Benzo(k)fluoranthene was detected in 3 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-1.5 µg/kg. The concentrations of benzo(k)fluoranthene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Carbazole was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-440 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.

- Chrysene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-2,000 µg/kg. The concentrations of chrysene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Dibenzo(a,h)anthracene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-260 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.
- Fluoranthene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-3,700 µg/kg. The concentrations of fluoranthene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Fluorene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-200 µg/kg. The concentrations of fluorene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Indeno(1,2,3-cd)pyrene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-900 µg/kg. The concentrations of indeno(1,2,3-cd)pyrene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Naphthalene was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-20 µg/kg. The concentrations of chrysene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- Phenanthrene was detected in 4 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-2,600 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.
- Pyrene was detected in 6 of 16 samples above the laboratory reporting limit and ranged in concentration from <1.0-3,700 µg/kg. The concentrations of pyrene were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please

note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.

- The remaining SVOCs were not detected above the laboratory reporting limit.

TPH-Diesel and Motor Oil

The following total petroleum hydrocarbons were detected at the ranges as noted below:

- TPH-Diesel was detected in 1 of 16 samples above the laboratory reporting limit and ranged in concentration from <2.0-14 mg/kg. The concentrations of TPH-Diesel were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- TPH-Motor Oil was detected in 2 of 16 samples above the laboratory reporting limit and ranged in concentration from <10-70 mg/kg. The concentrations of TPH-Motor Oil were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.

Polychlorinated Biphenyls (PCBs)

PCBs were not detected above the laboratory reporting limits in the sixteen (16) discrete soil samples.

Volatile Organic Compounds (VOCs)

VOCs were not detected about the laboratory reporting limits in the sixteen (16) discrete soil samples.

6.4 Soil Stockpile Soil Testing

BSK analyzed two (2) 4-point composite soil samples (SB1 Composite & SB2 Composite) from each of the soil stockpiles on the Site for the following:

- CAM-17 Metals by EPA Method 6020
- Organochlorine Pesticides (OCPs) by EPA Method 8081A
- Semi-Volatile Organic Compounds (SVOCs) including Polynuclear Aromatic Hydrocarbons (PAHs)
- Per- and Polyfluoroalkyl Substances (PFAS) by EPA Method 1633
- Total Petroleum Hydrocarbons (TPH) by GC-FID EPA 8015B w/SGT
- Polychlorinated Biphenyls (PCBs) by GC-ECD

- Volatile Organic Compounds (VOCs) by EPA 8260D
- pH by EPA 9045D

The soil sampling results, associated with laboratory QA/QC and chain-of-custody documentation, are detailed in the attached analytical report and included as Appendix A. Soil sampling results are summarized in Table 1, and in the following text.

The results of the soil samples on the Subject Property for the respective analytes are as follows:

CAM-17 Metals and pH

The following CAM-17 metals were detected at the ranges as noted below:

- Arsenic was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 4.0-4.3 mg/kg. The arsenic concentrations from these samples exceed the regulatory standard for soil in a residential (0.032 mg/kg), commercial/industrial (0.14 mg/kg), and construction worker (1.1 mg/kg) set by the SFBRWQCB. Although these limits were exceeded, arsenic is naturally occurring in many rock assemblages and their subsequent soils in California. The concentrations detected in the samples are typical to California (Hunter, Davis and Roach, 2005). The concentrations of arsenic were below the respective STLC and TCLP trigger levels and TTLC for classification of hazardous waste.
- Barium was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 110-120 mg/kg. Barium is also naturally occurring in California rocks and soil. The concentrations of barium were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective TCLP and STLC trigger levels and TTLC for classification of hazardous waste.
- Chromium was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 28-46 mg/kg. Chromium is also naturally occurring in California rocks and soil. Please note, there are no SFBRWQCB ESLs for chromium. The concentrations of chromium were below the respective TCLP and STLC trigger levels and TTLC for classification of hazardous waste.
- Cobalt was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <13-13 mg/kg. Cobalt is also naturally occurring in California rocks and soil. The concentrations of cobalt were below the respective SFBRWQCB ESLs for a commercial/industrial setting and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- Copper was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 21-30 mg/kg. Copper is also naturally occurring in California rocks and soil. The concentrations of copper were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective STLC trigger

level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.

- Lead was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 7.0-32 mg/kg. Lead is also naturally occurring in California rocks and soil. The concentrations of lead were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective TCLP and STLC trigger levels and TTLC for the classification of hazardous waste.
- Nickel was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 26-61 mg/kg. Nickel is also naturally occurring in California rocks and soil. The concentrations of nickel were below the respective SFBRWQCB ESLs for residential and commercial/industrial settings and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- Vanadium was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 38-47 mg/kg. Vanadium is also naturally occurring in California rocks and soil. The concentrations of vanadium were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- Zinc was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <63 to 64 mg/kg. Zinc is also naturally occurring in California rocks and soil. The concentrations of zinc were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings and below the respective STLC trigger level and TTLC. Please note, there is no TCLP threshold for this analyte for the classification of hazardous waste.
- The remaining CAM-17 metals were not detected above the laboratory reporting limit.
- pH ranged from 8.07 to 8.30.

Organochlorine Pesticides (OCPs)

The following OCPs were detected at the ranges as noted below:

- Chlordane (technical) was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.059. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold for this analyte.
- Alpha-Chlordane was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.0055. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold level for this analyte. However, the regulatory values for total chlordane are assumed to be equal to alpha-chlordane plus gamma-chlordane. The combination

of alpha-chlordane and gamma-chlordane are below the respective TCLP trigger, level, STLC trigger level, and TTLC.

- Gamma-Chlordane was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <0.050-0.011. Please note, there are no SFBRWQCB ESLs, TTLC, TCLP threshold, or STLC threshold level for this analyte. However, the regulatory values for total chlordane are assumed to be equal to alpha-chlordane plus gamma-chlordane. The combination of alpha-chlordane and gamma-chlordane are below the respective TCLP trigger, level, STLC trigger level, and TTLC.
- The remaining OCPs were not detected above the laboratory reporting limit.

Semi-Volatile Organic Compounds (SVOCs) including Polynuclear Aromatic Hydrocarbons (PAHs)

The following total SVOCs were detected at the ranges as noted below:

- Benzo(g,h,i)perylene was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <1.0-1.3 µg/kg. Please note, there are no SFBRWQCB ESLs for this analyte. Additionally, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of a hazardous waste.
- The remaining SVOCs were not detected above the laboratory reporting limit.

Per- and Polyfluoroalkyl Substances (PFAS)

The following total PFAS were detected at the ranges as noted below:

- PFOA was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 0.240-0.328 ng/g dry. The concentrations of PFOA in SB1 Composite (0.240 ng/g dry) and SB2 Composite (0.328 ng/g dry) at exceed the SFBRWQCB ESL for a residential setting (0.019 ng/g) and commercial/industrial setting (0.078 ng/g). The concentrations of PFOA were below the respective SFBRWQCB ESL for a construction worker setting. Please note, there are no STLC or TCLP thresholds or TTLC for this analyte for the classification of hazardous waste.
- PFDA was detected in 2 of 2 samples above the laboratory reporting limit and ranged in concentration from 0.375-0.400 ng/g dry. The concentrations of PFDA in SB1 Composite (0.400 ng/g dry) and SB2 Composite (0.375 ng/g dry) exceed the SFBRWQCB ESLs for a residential setting (0.13 ng/g). The concentrations of PFDA were below the respective SFBRWQCB ESLs for a commercial/industrial and construction worker settings. Please note, there are no STLC or TCLP thresholds or TTLC for this analyte for the classification of hazardous waste.
- PFDoA was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <0.237-0.375 ng/g dry. The concentrations of PFDoA were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker

settings. Please note, there are no STLC or TCLP thresholds or TTLC for this analyte for the classification of hazardous waste.

- PFOS was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <0.237-1.05 ng/g dry. The concentrations of PFOS were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC or TCLP thresholds or TTLC for this analyte for the classification of hazardous waste.
- The remaining PFAS compounds analyzed were not detected above the laboratory reporting limit.

TPH-Diesel and Motor Oil

The following total petroleum hydrocarbons were detected at the ranges as noted below:

- TPH-Diesel was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <4.0-9 mg/kg. The concentrations of TPH-Diesel were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.
- TPH-Motor Oil was detected in 1 of 2 samples above the laboratory reporting limit and ranged in concentration from <20-310 mg/kg. The concentrations of TPH-Motor Oil were below the respective SFBRWQCB ESLs for residential, commercial/industrial, and construction worker settings. Please note, there are no STLC/TCLP trigger levels or TTLC for this analyte for the classification of hazardous waste.

Polychlorinated Biphenyls (PCBs)

- PCBs were not detected above the laboratory reporting limit in the two (2) 4-point composite soil samples analyzed.

Volatile Organic Compounds (VOCs)

VOCs were not detected about the laboratory reporting limits in the two (2) 4-point composite soil samples.

7 FINDINGS AND CONCLUSIONS

The soil sampling results from the locations and depths identified in this Limited Phase II ESA, exceed the SFBRWQCB ESLs as follows:

Former Structures Soil Testing

Chemical analysis of the soil samples from the locations and depths associated with former structures did generally contain low to medium concentrations of lead. The concentrations detected are appropriate for a commercial/industrial use. It is recommended that whenever possible soil is kept moist to reduce dust from construction activities. Some organochlorine pesticides were also detected in the samples in very low concentrations. None of the concentrations of any of the analytes detected would classify the soil as a hazardous waste.

Residual Agricultural Chemical Soil Testing

Chemical analysis of the soil samples from this area did not contain any detectable concentrations of organochlorine pesticides.

Former Florin Perkins Landfill Operation Soil Testing

Chemical analysis of the soil samples from the locations and depths associated with former Florin Perkins Landfill operations did generally contain low to medium concentrations of some metals. The concentrations detected are appropriate for a commercial/industrial use, although the concentrations of a few of the metals exceed the construction worker ESL. It is recommended that whenever possible soil is kept moist to reduce dust from construction activities. Some PAHs (semi-volatile organics) were also detected in the samples which may have been the result of asphalts, fire debris, plastics, or a byproduct of incomplete combustion. Low concentrations of TPH-D and TPH-MO were also detected in some of the samples. None of the concentrations detected would classify the soil as a hazardous waste.

Soil Stockpiles

Chemical analysis of the soil samples obtained from the soil stockpiles did generally contain low to medium concentrations of some metals. The concentrations detected are appropriate for a commercial/industrial use, although the concentrations of arsenic exceed the construction worker ESL. It is recommended that whenever possible soil is kept moist to reduce dust from construction activities. Some chlordanes and PAHs (semi-volatile organics) were also detected in the samples below ESLs. None of the concentrations detected would classify the soil as a hazardous waste. The PFAS compounds PFOA and PFDA were also detected exceeding one or more of the ESLs. Neither the Federal government or California currently have hazardous waste concentrations set for PFOA or PFDA. PFDOA and PFOS were detected in concentrations below the ESLs. Neither the Federal government or California currently have hazardous waste concentrations set for PFDOA or PFOS. Low concentrations of TPH-D and TPH-MO were also detected in some of the samples. None of the concentrations detected would classify the soil as a hazardous waste.

Based on the results of the soil sampling performed, further investigation and remediation activities are not recommended to evaluate the RECs investigated in this report, except as follows:

1) Additionally, BSK recommends that the soil stockpiles be either properly disposed of offsite or not be removed from the Subject Property due to the elevated concentrations of PFOA and PFDA. Please note, additional sampling and analysis of the stockpiles may be required by the receiving landfill prior to acceptance. In the future, added care should also be taken to chemically analyze import soil for suspect analytes prior to acceptance.
2) Although the soil samples collected exceeded the SFBRWQCB ESLs for arsenic in a commercial/industrial and construction worker setting, it should be noted that arsenic and most metals are naturally occurring in many rock assemblages and their subsequent soils in California. The concentrations detected in the samples are typical to California (Hunter, Davis and Roach, 2005).
3) If during future Subject Property development activities evidence of contamination is discovered, the signatories of this Report should be contacted immediately for further consultation. Excess soil should not be hauled off the Subject Property for reuse or disposal without adequate environmental evaluation.

8 LIMITATIONS

The analyses and recommendations submitted in this report are based upon a limited field investigation. The report does not reflect variations which may occur beyond the sampled area. The nature and extent of such variations may not become evident until exposed. If variations then appear, a re-evaluation of the recommendations of this report will be necessary after performing on-site observations during the excavation period and noting the characteristics of the variations.

The findings of this report are valid as of the present. However, changes in the conditions of the Site can occur with the passage of time, whether caused by natural processes or the work of man, on this property or adjacent property. In addition, changes in applicable or appropriate standards may occur, whether they result from legislation, governmental policy or the broadening of knowledge.

This Report has been prepared in accordance with generally accepted environmental consulting practices in Sacramento, California at the time the services were performed. BSK's services were performed for the sole purpose of evaluating environmental conditions at the Site.

This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of BSK's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on our experience in the area. It is possible that conditions could vary between or beyond the data evaluated. No other warranties, either expressed or implied, are made. The passage of time, natural processes, or

human intervention on the facility or adjacent properties and changes in the regulations can cause changed conditions, which can invalidate the findings and conclusions presented in this Report.

BSK makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

J = Estimated Value

TTLC - Total Threshold Limit Concentration values

STLC - Soluble Threshold Limit Concentration values

n = non-cancer hazard

c = cancer risk

* = The regulatory values shown are for total chlordane which is assumed to be equal to alpha-chlordane plus gamma-chlordane.

-- = No regulatory value

= non-RCRA California Hazardous Waste

= highlighted numbers exceed one or more listed screening or trigger levels

RE: Report for SJE0152 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/5/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an “as received” basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Elaine M. Phillips, Project Manager

Case Narrative

Project and Report Details		Invoice Details	
Client:	BSK Associates - Sacramento	**Invoice To:**	BSK Associates - Corporate
Report To:	Kevin Grove	**Invoice Attn:**	BSK Associates-Corp
Project #:	E25000948.002.002	**Project PO#:**	-
Received:	5/05/2026 - 16:00		
Report Due:	5/27/2026		

Sample Receipt Conditions

Cooler: Default Cooler

Temperature on Receipt ºC: 0.4

Containers Intact
COC/Labels Agree
Received On Ice
Sample(s) arrived at lab on same day sampled.
Packing Material - Other
Sample(s) were received in temperature range.
Initial receipt at BSK-SAC

Detailed Narrative

Chain of Custody Notes

Date: 5/7/26
Initials: EMP
Note: Changed the Sample ID for SJE0152-03 from AG15 (0"-6") to AG15/FPL5 (0"-6"), SJE0152-04 from AG16 (0"-6") to AG16/FPL6 (0"-6"), and SJE0152-05 from AG Composite (1-4) to AG Composite (AG13-16). Added STLC/TCLP decision to SJE0152-03, -04, -06, and -07 and removed Arsenic from SLE0152-05 as per Kevin Grove.

Analysis Comment

Date: 5/19/26
Initials: EMP
Comment: Added Chromium STLC to SJE0152-06 and -07, as per Kevin Grove.

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

CV0.0	CCV recovery was above method acceptance limits; no material impact on reported result as sample detection is below the reporting limit for this parameter.
DL1.0	Sample required a dilution due to the matrix or high concentration of non-target analytes.
HC.d1	Hydrocarbon pattern does not resemble Diesel.
HC.o	Results are primarily attributable to overlap from another hydrocarbon range.
MS1.0	Matrix spike recoveries exceed control limits.
MS2.1	MS/MSD RPD exceeds control limit. Reportable results in parent sample may have some degree of variability, higher than that inherent in the method.

Report Distribution

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method, all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Report for SJE0153 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/5/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an “as received” basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Elaine M. Phillips, Project Manager

Detailed Narrative

Chain of Custody Notes

Date: 5/7/26
Initials: EMP
Note: Added STLC/TCLP decision for Lead to SJE0153-01 through -08, as per Kevin Grove.

Analysis Comment

Date: 5/18/26
Initials: EMP
Comment: Added Lead, STLC to SJE0153-01, as per Kevin Grove.

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

CV0.0	CCV recovery was above method acceptance limits; no material impact on reported result as sample detection is below the reporting limit for this parameter.
MS1.0	Matrix spike recoveries exceed control limits.
MS1.1	Matrix spike recovery exceeds upper control limit. Reported results for parent matrix should be considered estimated due to matrix interferences.
MS2.1	MS/MSD RPD exceeds control limit. Reportable results in parent sample may have some degree of variability, higher than that inherent in the method.

Report Distribution

Recipient(s)	Report Format	CC:
Kevin Grove	FINAL.RPT	csemilla@bskassociates.com

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method , all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible .

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Report for SJE0198 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/6/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an “as received” basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Elaine M. Phillips, Project Manager

Case Narrative

Project and Report Details		Invoice Details	
Client:	BSK Associates - Sacramento	**Invoice To:**	BSK Associates - Corporate
Report To:	Kevin Grove	**Invoice Attn:**	BSK Associates-Corp
Project #:	E25000948.002.002	**Project PO#:**	-
Received:	5/06/2026 - 15:30		
Report Due:	5/15/2026		

Sample Receipt Conditions

Cooler: Default Cooler

Temperature on Receipt ºC: 1.4

Containers Intact
COC/Labels Agree
Received On Ice
Sample(s) arrived at lab on same day sampled.
Sample(s) were received in temperature range.
Initial receipt at BSK-SAC

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

DL1.0	Sample required a dilution due to the matrix or high concentration of non-target analytes.
DL1.1	Sample required a dilution due to the high concentration of a target analyte.
HC.d1	Hydrocarbon pattern does not resemble Diesel.
MS1.0	Matrix spike recoveries exceed control limits.
MS1.3	Matrix spike recovery data unavailable or unreliable due to significant dilution required for matrix interferences.
SR4.1	Surrogate compound diluted outside of quantitation range due to matrix interferences. Recovery data unavailable or unreliable due to dilution.

Report Distribution

Recipient(s)	Report Format	CC:
Kevin Grove	FINAL.RPT	csemilla@bskassociates.com

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method , all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible .

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Report for SJE0214 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/6/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an “as received” basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Elaine M. Phillips, Project Manager

Case Narrative

Client:	BSK Associates - Sacramento	**Invoice To:**	BSK Associates - Corporate
Report To:	Kevin Grove	**Invoice Attn:**	BSK Associates-Corp
Project #:	E25000948.002.002	**Project PO#:**	-
Received:	5/06/2026 - 15:30		
Report Due:	5/15/2026		

Sample Receipt Conditions

Cooler: Default Cooler
Temperature on Receipt ºC: 1.4

Containers Intact
COC/Labels Agree
Received On Ice
Sample(s) arrived at lab on same day sampled.
Sample(s) were received in temperature range.
Initial receipt at BSK-SAC

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

DL1.0	Sample required a dilution due to the matrix or high concentration of non-target analytes.
DL1.1	Sample required a dilution due to the high concentration of a target analyte.
MS1.0	Matrix spike recoveries exceed control limits.
MS1.3	Matrix spike recovery data unavailable or unreliable due to significant dilution required for matrix interferences.
SR4.1	Surrogate compound diluted outside of quantitation range due to matrix interferences. Recovery data unavailable or unreliable due to dilution.

Report Distribution

Recipient(s)	Report Format	CC:
Kevin Grove	FINAL.RPT	csemilla@bskassociates.com

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method , all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible .

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Report for SJE0215 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/6/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an “as received” basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Elaine M. Phillips, Project Manager

Report To:	Kevin Grove	**Invoice Attn:**	BSK Associates-Corp
Project #:	E25000948.002.002	**Project PO#:**	-
Received:	5/06/2026 - 15:30		
Report Due:	5/28/2026		

Sample Receipt Conditions

Cooler: Default Cooler
Temperature on Receipt ºC: 1.4

Containers Intact
COC/Labels Agree
Received On Ice
Sample(s) arrived at lab on same day sampled.
Sample(s) were received in temperature range.
Initial receipt at BSK-SAC

Detailed Narrative

Analysis Comment

Date: 5/19/26
Initials: EMP
Comment: Added Lead STLC to SJE0215-07, as per Kevin Grove.

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

MS1.0 Matrix spike recoveries exceed control limits.

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method , all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible .

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

RE: Report for SJE0150 Davis Family Warehouse Phase II

Dear Kevin Grove,

Thank you for using BSK Associates for your analytical testing needs. In the following pages, you will find the test results for the samples submitted to our laboratory on 5/4/2026. The results have been approved for release by our Laboratory Director as indicated by the authorizing signature below.

The samples were analyzed for the test(s) indicated on the Chain of Custody (see attached) and the results relate only to the samples analyzed. BSK certifies that the testing was performed in accordance with the quality system requirements specified in the 2016 TNI Standard. Any deviations from this standard or from the method requirements for each test procedure performed will be annotated alongside the analytical result or noted in the Case Narrative. Unless otherwise noted, the sample results are reported on an "as received" basis.

This certificate of analysis shall not be reproduced except in full, without written approval of the laboratory.

If additional clarification of any information is required, please contact your Client Services Representative, Elaine M. Phillips , at (916) 853-9293.

Thank you again for using BSK Associates. We value your business and appreciate your loyalty.

Sincerely,

Stephane Maupas, Regional Manager - Client Services

Packing Material - Other
Sample(s) were received in temperature range.
Initial receipt at BSK-SAC

Detailed Narrative

Chain of Custody Notes

Date: 5/7/26
Initials: EMP
Note: Changed the Sample ID for SJE0150-03 from AG3 (0"-6") to AG3/FPL1 (0"-6"), SJE0150-05 from AG Composite (1-4) to AG Composite (AG1-4), SJE0150-07 from AG6 (0"-6") to AG6/FPL2 (0"-6"), SJE0150-10 from AG Composite (6-9) to AG Composite (AG5-8), SJE0150-13 from AG9 (0"-6") to AG9/FPL3 (0"-6"), SJE0150-16 from AG12 (0"-6") to AG12/FPL4 (0"-6"), and SJE0150-17 from AG Composite (13-16) to AG Composite (AG9-12). Added STLC/TCLP decision to SJE0150-03, -07, -11, -12, -16, -18, and -19 and removed Arsenic from SLE0150-05, -10, and -17 as per Kevin Grove.

Analysis Comment

Date: 5/19/26
Initials: EMP
Comment: Added Chromium, STLC to SJE0150-12 and -19, as per Kevin Grove.

Report Amendments

Date: 6/19/26
Initials: EMP
This amended report supersedes any previous reports issued by the laboratory. Amendments to this report are as follows: Added pH, CAM-17 metals, EPA 8260D, EPA 8081/8082, EPA 8270E, and TPH-DRO/MRO w/ SGT to AJE0150-13, as per email received from Kevin Grove.

Data Qualifiers

The following qualifiers have been applied to one or more analytical results:

BS	Blank spike recoveries did not meet acceptance limits.
BS1.0	Blank spike recovery for this analyte was above upper control limit; no material impact on reported result as sample is ND for this parameter.
CV0.0	CCV recovery was above method acceptance limits; no material impact on reported result as sample detection is below the reporting limit for this parameter.
DL1.1	Sample required a dilution due to the high concentration of a target analyte.
HT1.0	Holding time exceeded. Sample was received at the lab past holding time.
HT1.2	Holding time exceeded. Sample was extracted past the holding time.
HT1.3	Holding time exceeded. Sample was analyzed past the holding time.
MS1.0	Matrix spike recoveries exceed control limits.
MS1.2	Matrix spike recovery exceeds lower control limit. Reported results for parent matrix should be considered estimated due to matrix interferences.
MS1.4	Matrix spike recovery data unreliable due to significant parent sample concentration relative to fortification level (>4x).
MS2.1	MS/MSD RPD exceeds control limit. Reportable results in parent sample may have some degree of variability, higher than that inherent in the method.
SR2.0	Surrogate recovery exceeds lower control limit due to matrix interference as confirmed by re-analysis. Associated results should be considered biased low.

Volatile Organics (Standard List) by GC/MS									
2-Chlorotoluene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
2-Hexanone	EPA 8260D	ND	20	ug/kg	1	AJE0476	05/07/26	05/07/26	
4-Chlorotoluene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
4-Methyl-2-pentanone	EPA 8260D	ND	20	ug/kg	1	AJE0476	05/07/26	05/07/26	
Acetone	EPA 8260D	ND	50	ug/kg	1	AJE0476	05/07/26	05/07/26	
Benzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Bromobenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Bromochloromethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Bromodichloromethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Bromoform	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Bromomethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Carbon Disulfide	EPA 8260D	ND	50	ug/kg	1	AJE0476	05/07/26	05/07/26	
Carbon Tetrachloride	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Chlorobenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Chloroethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Chloroform	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Chloromethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
cis-1,2-Dichloroethene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
cis-1,3-Dichloropropene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Dibromochloromethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Dibromomethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Dibromochloropropane (DBCP)	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Dichlorodifluoromethane	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Dichloromethane	EPA 8260D	ND	10	ug/kg	1	AJE0476	05/07/26	05/07/26	
Ethylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Hexachlorobutadiene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Hexachloroethane	EPA 8260D	ND	20	ug/kg	1	AJE0476	05/07/26	05/07/26	
Isopropylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
m,p-Xylenes	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Methyl-t-butyl ether	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Naphthalene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
n-Butylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
n-Propylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
o-Xylene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
p-Isopropyltoluene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
sec-Butylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Styrene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
tert-Butylbenzene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Tetrachloroethene (PCE)	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Toluene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Total Xylenes	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
trans-1,2-Dichloroethene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
trans-1,3-Dichloropropene	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26	
Trichloroethene (TCE)	EPA 8260D	ND	5.0	ug/kg	1	AJE0476	05/07/26	05/07/26

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

Certificate of Analysis

Notes:

- The Chain of Custody document and Sample Integrity Sheet are part of the analytical report.
- Any remaining sample(s) for testing will be disposed of according to BSK's sample retention policy unless other arrangements are made in advance.
- All positive results for EPA Methods 504.1 and 524.2 require the analysis of a Field Reagent Blank (FRB) to confirm that the results are not a contamination error from field sampling steps. If Field Reagent Blanks were not submitted with the samples, this method requirement has not been performed.
- Samples collected by BSK Analytical Laboratories were collected in accordance with the BSK Sampling and Collection Standard Operating Procedures.
- J-value is equivalent to DNQ (Detected, not quantified) which is a trace value. A trace value is an analyte detected between the MDL and the laboratory reporting limit. This result is of an unknown data quality and is only qualitative (estimated). Baseline noise, calibration curve extrapolation below the lowest calibrator, method blank detections, and integration artifacts can all produce apparent DNQ values, which contribute to the un-reliability of these values.
- (1) - Residual chlorine and pH analysis have a 15 minute holding time for both drinking and waste water samples as defined by the EPA and 40 CFR 136. Waste water and ground water (monitoring well) samples must be field filtered to meet the 15 minute holding time for dissolved metals.
- Field tests are outside the scope of laboratory accreditation and there is no certification available for field testing.
- Summations of analytes (i.e. Total Trihalomethanes) may appear to add individual amounts incorrectly, due to rounding of analyte values occurring before or after the total value is calculated, as well as rounding of the total value.
- RL Multiplier is the factor used to adjust the reporting limit (RL) due to variations in sample preparation procedures and dilutions required for matrix interferences.
- Due to the subjective nature of the Threshold Odor Method , all characterizations of the detected odor are the opinion of the panel of analysts. The characterizations can be found in Standard Methods 2170B Figure 2170:1.
- The MCLs provided in this report (if applicable) represent the primary MCLs for that analyte.
- (2) - Formerly known as Bis(2-Chloroisopropyl) ether.
  Unless otherwise noted, TOC results by SM 5310C method do not include purgeable organic carbon, which is removed along with the inorganic carbon interference. The POC contribution to TOC is considered to be negligible .

The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.

July 29, 2026 BSK Project E25000948

Sierra View General Contractors
Attn: Gary Graves
4202 Douglas Blvd., Suite 100
Granite Bay, CA 95746

SUBJECT: Letter of Clarification
Limited Phase II Environmental Site Assessment
A Portion of 3901 Florin Perkins Road
Sacramento, California 95826

Dear Mr. Graves:

The purpose of this letter is to address the remaining Recognized Environmental Conditions (RECs) identified in BSK's Phase I Environmental Site Assessment (ESA) dated October 22, 2025 that were not evaluated in BSK's Limited Phase II ESA dated June 24, 2026.

BACKGROUND

The term Recognized Environmental Condition (REC) is defined by the American Society of Testing and Materials (ASTM) as "the presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment." (ASTM E 1527-21, pp. 1). Therefore, although a REC may be identified, this does not mean that a mitigative measure would be appropriate within the California Environmental Quality Act documentation. In particular, off-Subject Property RECs are investigated/remediated by the responsible party under the oversight of the applicable regulatory agency.

Therefore, BSK has summarized the on-Subject Property RECs and off-Subject Property RECs from the Phase I ESA below and identified which RECs were evaluated in the Limited Phase II ESA and provided clarification on why the remaining RECs were not investigated as part of the Limited Phase II ESA.

October 22, 2025 On-Subject Property RECs

1. Two Historic Structures (Approximately 1940s) – Potential Termiticide and/or Lead-Based Paint Application
2. Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation of Hazardous Materials
3. Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of Hazardous Materials

October 22, 2025 Off-Subject Property RECs

1. Railroad spur visible in 1949/1950 Topographic Map – Potential Hazardous Material and/or
2. Petroleum Product Release
3. Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation
4. of Hazardous Materials
5. Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of
6. Hazardous Materials
7. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
8. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill
9. gases)
10. L&D Landfill Company (8635 Fruitridge Rd.) – Hazardous Material and/or Petroleum Product
11. Release
12. Sacramento Army Depot (8350 Fruitridge Rd.) – Soil and Groundwater Contamination

The following RECs were evaluated in the Limited Phase II ESA as outlined in BSK's authorized proposal dated April 6, 2026:

1. Two Historic Structures (Approximately 1940s) – Potential Termiticide and/or Lead-based Paint Application
2. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
3. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill gases)
4. Soil Pile (South) – Potential Hazardous Material and/or Petroleum Product Release
5. Soil Pile (North) – Potential Hazardous Material and/or Petroleum Product Release

The following RECs were not evaluated in the Limited Phase II ESA for the reasons below:

- *REC #2 – Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation of Hazardous Materials*

  The gravel pit observed in the 1967 topographic map and the 1972 aerial photograph was a result of former gravel mining on the Subject Property. As noted in the Phase I ESA, the gravel pit was identified as a REC due to the potential accumulation of hazardous materials. Additionally, the gravel pit was mapped and visible in the area of the South Fill area, a former landfill cell. This area has an engineered cap that would preclude BSK from boring through the cap to perform sampling.

- *REC #3 – Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of Hazardous Materials*

  The pond visible in the 1967 topographic map and 1964 aerial photograph was a result of former gravel mining on the Subject Property. As noted in the Phase I ESA, the pond was identified as a REC due to the potential accumulation of hazardous materials. Additionally, the pond was mapped and visible in the area of the South Fill area, a former landfill cell. This area has an engineered cap that would preclude BSK from boring through the cap to perform sampling.

- *REC # 6 – Groundwater Monitoring Well Drums – Potential Hazardous Material Release*

  The drums are a result of the ongoing groundwater monitoring required for the Florin Perkins Landfill operations. As these drums have the potential to release, they qualify as a REC, however, it is BSK's understanding that these drums will be properly removed and disposed as needed in accordance with regulatory requirements during the Subject Property improvements. Therefore, additional investigation was not warranted at the time of the Limited Phase II ESA.

- *REC # 9 – Stained Concrete and Soil in Blower System Area – Hazardous Material Release*

  The stained concrete and soil in the blower system area is the result of operating the landfill gas

blower system on the Subject Property. It is BSK's understanding that the landfill gas blower system will need to be relocated off of the Subject Property and that the stained concrete and soil would be removed and disposed of in accordance with regulatory requirements during the Subject Property improvements. Therefore, additional investigation was not warranted at the time of the Limited Phase II ESA.

As stated previously, the off-Subject Property RECs are typically investigated/remediated by the responsible party under the oversight of the applicable regulatory agency. For this reason, these RECs were not evaluated in the Limited Phase II ESA.

CONCLUSIONS

As stated in the Limited Phase II ESA, BSK does not recommend further investigation and remediation activities for the RECs investigated in the Limited Phase II ESA, except as follows:

1) "Additionally, BSK recommends that the soil stockpiles be either properly disposed of offsite or not be removed from the Subject Property due to the elevated concentrations of PFOA and PFDA. Please note, additional sampling and analysis of the stockpiles may be required by the receiving landfill prior to acceptance. In the future, added care should also be taken to chemically analyze import soil for suspect analytes prior to acceptance.
2) Although the soil samples collected exceeded the SFBRWQCB ESLs for arsenic in a commercial/industrial and construction worker setting, it should be noted that arsenic and most metals are naturally occurring in many rock assemblages and their subsequent soils in California. The concentrations detected in the samples are typical to California (Hunter, Davis and Roach, 2005).
3) If during future Subject Property development activities evidence of contamination is discovered, the signatories of this Report should be contacted immediately for further consultation. Excess soil should not be hauled off the Subject Property for reuse or disposal without adequate environmental evaluation."

LIMITATIONS

This Letter has been prepared in accordance with generally accepted environmental consulting practices in Lemoore, California at the time the services were performed. BSK's services were performed for the sole purpose of evaluating environmental conditions at the Site.

This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of BSK's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on our experience in the area. It is possible that conditions could vary between or beyond the data evaluated. No other warranties, either expressed or implied, are made. The passage of time, natural processes, or

human intervention on the facility or adjacent properties and changes in the regulations can cause changed conditions, which can invalidate the findings and conclusions presented in this Report.

BSK makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided.

CLOSING

Thank you for the opportunity to submit this scope of services and estimate for your consideration. We look forward to working with you on this project. Please call Robert "Tony" Martin, PG at (916) 517-2122 if you have questions or require additional information or services.

Respectfully submitted,
BSK Associates

ENGINEERING & PLANNING

Davis Family Warehouse
Florin Perkins Rd./Warehouse Way

City of Sacramento

Stormwater Quality
Post Construction Stormwater Management

June, 2026

1504 EUREKA ROAD SUITE 110 ROSEVILLE, CA 95661 916.786.0685 Fax 916.786.0529 www.tla-inc.com

Introduction

The Davis Family Warehouse (Project) is a proposed industrial warehouse complex located on the undeveloped parcels of existing parcels 1 through 7 APN 061-0150-042, -049, -045 and -054 in the Davis Family complex. The total project area is approximately 45.4 acres, inclusive of the offsite improvements in the ROW along Florin Perkins Rd. and offsite ROW area on Warehouse Way. It will consist of 7 warehouse buildings of varying sizes with truck parking on 4 proposed parcels.

Current Conditions

The site is currently undeveloped with a large portion (7+/- ac. truck lot) being located on top of an existing landfill cap. Nearly all the site drains to an existing wetlands basin north of existing parcel 7, on the east side of Florin Perkins Rd. A small amount of onsite drainage, mainly on existing parcel 1, drains to an existing basin to the north. All drainage and related storm runoff, both predevelopment and post development, on the site located within the limits of the abandoned landfill is retained onsite within the existing wetland basin. There is no existing city, county, or private drainage infrastructure within the project's area. All accumulated runoff infiltrates and evapotranspires.

The soil is mostly (60%) poor draining San Joaquin-Urban land complex with a light vegetative cover. The remaining portion is covered in Xerarents-San Joaquin complex type C soil. Overall, it is safe to assume the existing soil is poorly drained. The terrain only drops around 3 feet across the property with a slope of approximately 0-1% on average.

Proposed Development

The project will develop the entirety of the site south of the landfill cap and to the west of the cap up to Florin Perkins Rd. and the ex. wetlands basin. Approximately 32.11 acres (DMA 1) of onsite drainage, split up, will discharge to a proposed 22,000 SF water quality basin at the eastern portion of proposed parcel 4. The drainage from DMA1 is split between the northern portions of proposed buildings 1 through 5, including the eastern portion of building 6 and the truck parking on the landfill cap. The building portion of DMA1 will be hard piped into WQ Basin 1 aside from the northern portion of building 1 being discharged into a water quality swale (WQ swale 1) while the cap area will discharge into a proposed water quality swale (WQ swale 2) and then enter WQ basin 1. Approximately 13.44 acres (DMA 2) which includes the southern portions of buildings 1 through 5 and building 7 including the western portion of building 6 will discharge into a proposed 16,600 SF water quality basin (WQ basin 2) at the western portion of parcel 4. The site will be built up slightly above exiting ground to provide adequate cover for storm drain infrastructure and to provide positive drainage away from the proposed buildings.

The onsite water quality basins will treat all the proposed impervious areas for the mentioned on-site drainage. The drainage management areas (DMA's) have the following characteristics.

DMA 1:

Total Area	1,398,672 SF	(32.11 acres)
Impervious area	796,793 SF	(18.29 acres)
Pervious area	601,879 SF	(13.82 acres)

DMA 2:

Total Area	539,189 SF	(13.44 acres)
Impervious area	80,056 SF	(12.37 acres)
Pervious area	46,458 SF	(1.07 acres)

Post-Construction Treatment

The site was evaluated in accordance with the Sacramento Region Stormwater Quality Design Manual (SRSQDM) utilizing the Commercial Sites Low Impact Development (LID) Credits & Treatment BMP Sizing (Template). The project is subject to stormwater treatment and hydromodification measures. The Project utilizes two volume base bioretention basins which were analyzed with Appendix D-2: Commercial Sites LID. The project also utilizes two vegetated swales to assist in limiting the size of the SWQ basin for DMA1. No flow through planters are proposed.

Source control measures are typical for industrial projects, including routine maintenance of the parking lots, spill control measures, allowed legal use of pesticides in the landscape, city standard trash enclosures, collection of condensates, and professional grounds maintenance.

Runoff reductions measures include the planting of new trees in the Project and disconnected roof drains where feasible. The project is not proposing the use of disconnected pavement or the use of porous pavement. The developer has the right to implement these features, where feasible, at the time of construction documents to reduce the size of basins if desired.

Trash Control will be the multi-benefit trash treatment system of the bioretention basin and screened outlets. Allowances will be made for emergency overflow in the event the screens become blocked.

In the basin area, the underlying soil type is 60% Soil Group D and 40% Soil Group C. For the basin design, underlying soil shall have a minimum of 0.5in/hr and a media depth of 1.5ft minimum.

Water Quality Basin 1 Design (DMA 1)	
Top Surface Area	27,500 sf
Infiltrating Surface Area	22,000 sf
Ponding Depth	1.0 ft
Planting Media Depth	1.5 ft
Gravel Depth	1.0 ft min

Water Quality Basin 2 Design (DMA 2)	
Top Surface Area	32,500 sf
Infiltrating Surface Area	26,400 sf
Ponding Depth	1.0 ft
Planting Media Depth	1.5 ft
Gravel Depth	1.0 ft min

Full capture screens will be added to each outlet from the water quality basin.

Water Quality Swale Results

WQ Swale #1 (Bldg 1 north):
From Table VS-3 Design Data Summary Sheet; WQF=IxCxA where I=0.18in/hr, C=0.95, A=1.93ac water quality flow is 0.33 cfs.

WQ Swale #2 (Landfill Cap lot):
From Table VS-3 Design Data Summary Sheet; WQF=IxCxA where I=0.18in/hr, C=0.95, A=10.0ac water quality flow is 1.72 cfs.

Preliminary Conclusions & Considerations

The onsite stormwater quality facilities have been designed to treat and manage the runoff generated by the 2-year average design storm per Sac City/County's stormwater quality manual. All excess runoff will discharge into the existing wetland detention/retention basin located north of buildings 6 & 7. Per city of Sacramento DOU's Cite Plan & Design Review comment #5, the project will require onsite retention in the existing wetland basin to accommodate 1.5 times the average yearly rainfall volume plus 1 foot of freeboard. This analysis will be performed during the construction documents phase of the project.

A preliminary shed map with peak flow calculations has been prepared to size onsite drainage infrastructure (See Appendix B). The 10-year peak flows entering WQ Basins 1 & 2 are 43.6 cfs and 26.6 cfs respectively. Onsite runoff can be managed by storm drain lines 36 inches and smaller. The post development 10-year peak flow entering the existing wetland retention is 70.2 cfs. WQ Basins 1 & 2 will implement overflow weirs for flows exceeding the 10-year event.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Data Source Information

Soil Survey Area: Sacramento County, California
Survey Area Data: Version 26, Sep 2, 2025

Vegetated Swale

Description

A vegetated swale is a wide, shallow, open channel planted with dense, sod-forming vegetation and designed to accept runoff from adjacent surfaces. As the runoff slows and travels through the vegetation and over the soil surface, pollutants are removed by a variety of physical and chemical mechanisms, including sedimentation, filtration, adsorption, and microbial degradation and conversion.

Photo source unknown

Siting Considerations

- Drainage area: 10 acres maximum per swale.
- Longitudinal Bottom Slope: 0.5%-2.5%
- Underdrains recommended based on feedback from the project geotechnical engineer (typically for slopes less than 1%). For slopes up to 5%, check dams should be used to reduce slopes to 2.5%.
- Minimum Bottom width: 2 ft.
- Side slopes: 3:1 or flatter.
- Liners may be required in areas where swales may be impacted by hazardous materials or where spills may occur (e.g., retail gasoline outlets, auto maintenance businesses, processing/manufacturing areas).
- Surface flow into swale preferred instead of underground conveyance.

Pollutant Removal Effectiveness	
Sediment	Medium
Nutrients	Low
Trash	Low
Metals*	Medium
Bacteria*	Low
Oil and Grease	Medium
Organics*	Medium

The following is a partial list of the most common target pollutants for the Sacramento area: copper, lead, mercury, pathogens, diazinon, and chlorpyrifos. For more complete information refer to:

http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml

Source: CASQA California Stormwater BMP Handbook, January 2003

Vector Considerations

- Potential for mosquitoes due to standing water will be greatly reduced or eliminated if the swale is properly designed, constructed, and maintained.

Advantages

- Relatively inexpensive when used to replace part of a conventional storm drainage system and integrated into site landscaping.

- Provides both stormwater treatment and conveyance.
- Reduces runoff volume during small storm events.
- Attractive and easy to maintain.
- Potential LEED Credits
    - Credit 6.1 – Stormwater Design – Quantity Control
    - Credit 6.2 – Stormwater Design – Quality Control

Limitations

- May conflict with water conservation ordinances related to landscape irrigation needs.
- May not be appropriate for industrial sites or locations where spills may occur unless liner is used to prevent infiltration.

General Maintenance Recommendations (Low to Moderate)

- Periodically remove debris and sediment from inlets and swale.
- Repair/replace vegetation as necessary to maintain full cover and prevent erosion.
- See Table VS-2 for additional vegetation maintenance recommendation.

How Does a Vegetated Swale Work?

A vegetated swale differs from a conventional drainage channel or roadside ditch due to the incorporation of specific features that enhance stormwater pollutant removal. A vegetated swale is designed to control flow velocities through the vegetation in the swale and to provide sufficient contact time to promote settling and filtering of the runoff flowing through it. Greater surface area and contact time promote greater runoff treatment efficiencies. The volume of runoff can also be reduced through infiltration into underlying soils.

Runoff is treated as it flows through, not over, the vegetation in a vegetated swale. Vegetation can cause considerable turbulence, resulting in energy loss and retardance of flow. To provide adequate treatment, the vegetation must be dense and strong.

Other Names: Grassy swale, bioswale

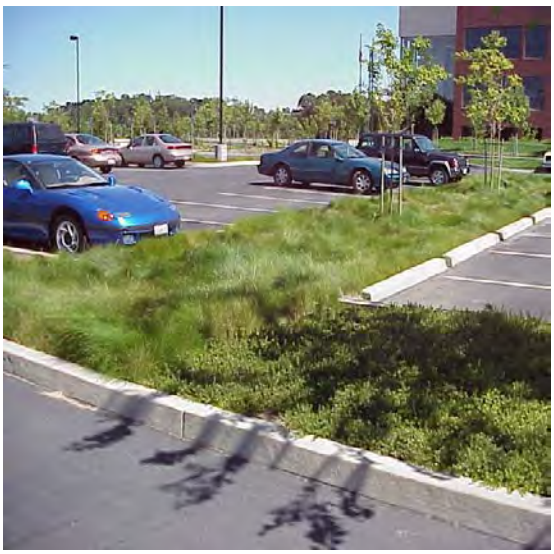
Alternative vegetation is encouraged but is subject to approval of local permitting agency. Parking lot swale at Elk Grove Marketplace, Elk Grove, California. Photo: CKB Environmental

Planning and Siting Considerations

- Select location where site topography allows for the design of a channel with sufficiently mild slope (unless small drop structures are used) and enough surface area to maintain non-erosive velocities in the channel.

- Integrate swales into open space buffers, undisturbed natural areas, and other landscape areas when possible. Do not place in open space or wetland preserve areas where future maintenance could be prohibited.
- For parking lot design, stalls can be shortened if tire curbs are provided around the perimeter of the swale and cars are allowed to overhang the swale (see Farm Bureau photo).
- In parking lots, plan areas for pedestrians to cross swales without damaging vegetation.
- The required swale length to meet treatment criteria for a 1-acre project site is typically in the range of 75 to 100 feet. The length will vary depending on several variables, including the geometry of the swale and the runoff coefficient for the site.

Early Design is Critical!
Vegetated swales must be located on the site plan at the earliest possible design phase when laying out the building and parking footprints and before the site grading plan is prepared.



Vegetated Swale Planted with Native Clump Grasses (note that trees should be located outside of flowline), U.S. Farm Bureau, Sacramento. Photo: City of Sacramento.

Roadside Swale. Photo: City of Spokane

Design Criteria

Design criteria for vegetated swales are listed in Table VS-1. Use the Design Data Summary Sheet provided at the end of this fact sheet (Table VS-3) to record design information for the permitting agency's review.

Table VS-1. Vegetated Swale Design Criteria

Design Parameter	Criteria	Notes
Contributing drainage area	≤ 10 acres	For larger areas, break up into sub-sheds of 10 acres or less, with a swale for each.
Water Quality design flow	WQF	See Appendix E in this Design Manual.
Roughness coefficient (n) for treatment design	0.2	Reflects the roughness associated with shallow flow through dense vegetation.
Roughness coefficient (n) for conveyance design	0.1	Reflects the roughness of swale when depth of flow is above the height of the grass. To be used to determine capacity of swale to convey peak hydraulic flows.
Minimum contact time for treatment of the WQF	7 minutes	Provide sufficient length to yield minimum contact time for the WQF
Minimum bottom width	2 ft	
Maximum bottom width	10 ft	Swales wider than 10 feet must meet additional flow spreading requirements.
Maximum side slopes	3:1	Side slopes must allow for ease of mowing. Steeper slopes may be allowed with adequate slope stabilization
Longitudinal slope	0.5-2.5%	
Check dams	As required	For longitudinal slope > 2.5% but less than 5%, and as a means of promoting more infiltration. Spacing as required to maintain maximum longitudinal bottom slope ≤ 2.5%.
Underdrains	As required	For longitudinal slope < 1.0%
Maximum depth of flow (treatment)	3-5 in	1 inch below top of vegetation
Maximum flow velocity (treatment)	1 ft/sec	Based on Manning's n - 0.20. Concentrated inlet flow must be spread.
Inlet Design/Curb cuts	≥ 12 in wide	To prevent clogging and promote flow spreading, pavement should be slightly higher than swale. Include energy dissipaters/flow spreaders such as cobble, porous concrete, or gravel at inlet.
Trees, shrubs, and plants (if applicable)		Should be located outside of the flow area.

Design Procedure

*Record all of your calculations on the **Vegetated Swale Design Data Summary Sheet** (Table VS-3) at the end of this section. The data sheet will be checked by the agency plan review staff.*

Step 1 – Determine the vegetated swale's function

The vegetated swale can be designed to function as both a treatment control measure for the stormwater quality design flow and as a conveyance system to pass the peak hydraulic design flows, if the swale is located "on-line".

Step 2 – Calculate Water Quality Flow (WQF)

Using Appendix E in this Design Manual, determine the contributing area and stormwater quality design flow, WQF.

Step 3 – Provide for peak hydraulic design flows

Using local hydrologic design criteria, calculate flows greater than WQF to be diverted around or flow through the swale. Design the diversion structure, if needed.

Step 4 – Design the vegetated swale using Manning's Equation

Swales can be trapezoidal or parabolic in shape, as illustrated in Figure VS-1. While trapezoidal channels are the most efficient for conveying flows, parabolic configurations provide good water quality treatment and may be easier to mow since they don't have sharp breaks in slope.

Use a roughness coefficient (n) of 0.20 with Manning's Equation to design the treatment area of a swale to account for the flow through the vegetation. To determine the capacity of the swale to convey peak hydraulic flows (for example, the 10-year event with 1 ft. of freeboard), use a roughness coefficient (n) of 0.10 with Manning's Equation.

Manning's Equation

$$Q = \frac{1.49}{n} \frac{A^{5/3}}{P^{2/3}} \times s^{1/2}$$

Where:

Q = WQF, (cfs)

A = Cross sectional area of flow, (ft2)

P = Wetted perimeter of flow, (ft)

s = Bottom slope in flow direction, (ft/ft)

n = Manning's n (roughness coefficient)

For treatment design, solve Manning's equation by trial and error to determine a bottom width that yields a flow depth of 3 to 5 inches at the design WQF and the swale geometry (i.e., side slope and s value) for the site under design.

Step 5 – Design Inlet Controls

- For flow introduced along the length of the swale through curb cuts, provide minimum curb cut widths of 12 inches and avoid short-circuiting the swale by providing the minimum contact time of 7 minutes.
- For swales that receive direct concentrated runoff at the upstream end, provide an energy dissipater, as appropriate, and a flow spreader such as a pea gravel diaphragm flow spreader at the upstream end of the swale.

Step 6 – Select Vegetation

A full, dense cover of sod-forming vegetation is typically recommended for vegetated swales, since most pollutant removal performance studies are based on use of grass. Alternative vegetation such as trees, shrubs and groundcovers may also be allowed; check with the local permitting agency.

Vegetated swale,
The City of Sacramento

Select vegetation that:

- Will be dense and strong enough to stay upright, even in flowing water and steep slopes;
- Has minimum need for fertilizers;
- Provides shading (if necessary);
- Is not prone to pests and will not require a lot of pesticide/herbicide application, consistent with any integrated pest management (IPM) practices or policies of the local permitting agency;
- Will withstand being inundated for periods of time; and
- Needs little supplemental water, consistent with local water conservation ordinances. Bunch-type grasses or grass mixes are preferred (i.e. Sisyrinchium bellum - blue-eyed grass).

The Alameda Countywide C.3 Stormwater Technical Guidance handbook (https://cleanwaterprogram.org/index.php/resources/recources/development.html) contains a detailed plant list for consideration, although vegetation selection must be approved by the permitting agency. Do not use bark or similar buoyant material in the swale or around drain inlets or outlets.

Construction Considerations

- Divert runoff (other than necessary irrigation) during the period of vegetation establishment. Where runoff diversion is not possible, cover graded and seeded areas with suitable erosion control materials.
- Install sediment controls (e.g., staked straw wattles) around the swale to prevent high sediment loads from entering the swale during ongoing upstream construction activities.
- Repair, seed, or re-plant damaged areas immediately.
- Apply erosion control measures as needed to stabilize side slopes and inlet areas.

Long-term Maintenance

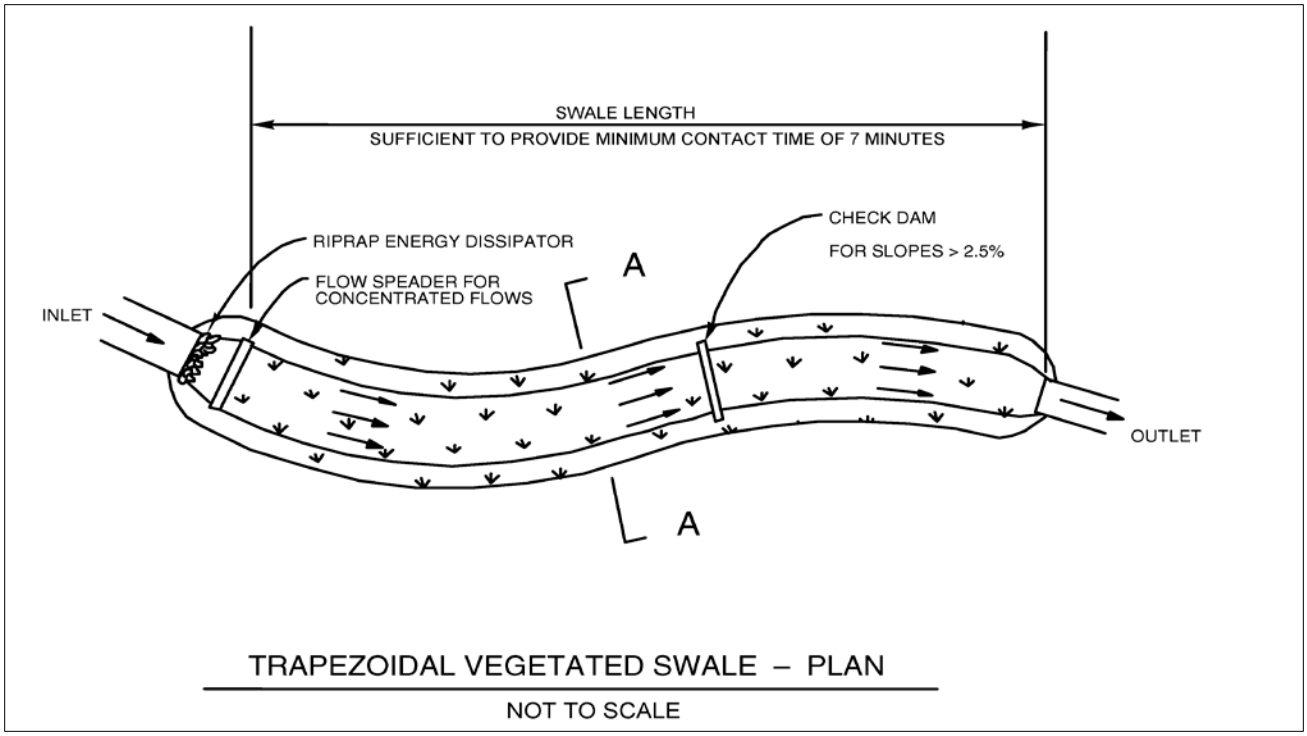
The local permitting agencies in the Sacramento area will require execution of a maintenance agreement or permit with the property owner for projects including a vegetated swale. Check with the local permitting agency about the timing for execution of the agreement. Such agreements will typically include requirements such as those outlined in Table VS-2. The property owner or his/her designee will be responsible for compliance. See Appendix B for additional information about maintenance requirements and sample agreement language.

*Swales with rock in the flowline are **discouraged** due to high maintenance needs (including use of weed killers) and potential for mosquito breeding.*

Table VS-2. Inspection and Maintenance Recommendations for Vegetated Swales

Activity	Schedule
Mow grass to maintain a height of 4 to 6 inches or above depth of flow at WQF.	As needed to maintain optimum grass height
Use integrated pest management (IPM) techniques to minimize use of fertilizers, pesticides and herbicides.	As needed.
Remove trash and debris from the swale (especially at the outlet)	As needed.
Inspect swale for signs of erosion, vegetation damage/coverage, channelization problems, debris build-up and excessive sedimentation in bottom of channel. Correct problems (e.g., remove sediment or stabilize, re-seed eroded areas) as soon as possible.	At least twice annually. Schedule one inspection at the end of the wet season so that summer maintenance can be scheduled to prepare swale for wet season. Additional inspections after periods of heavy runoff are desirable.
Remove sediment in inlet areas, channel, culverts, and outlets whenever flow into the swale is retarded or blocked.	As needed.

Activity	Schedule
Repair ruts or holes in the channel by removing vegetation, adding and tamping suitable soil, and reseeding. Replace damaged vegetation.	As needed.
Inspect swale for obstructions (e.g., debris accumulation, invasive vegetation) and pools of standing water that can provide mosquito breeding habitat. Correct observed problems as soon as possible.	At least twice during the wet season after significant storms. Additional inspections after periods of heavy runoff are desirable.
Reconstruct or replace the control measure when it is no longer functioning properly.	See projected lifespan in Appendix B for informational purposes.



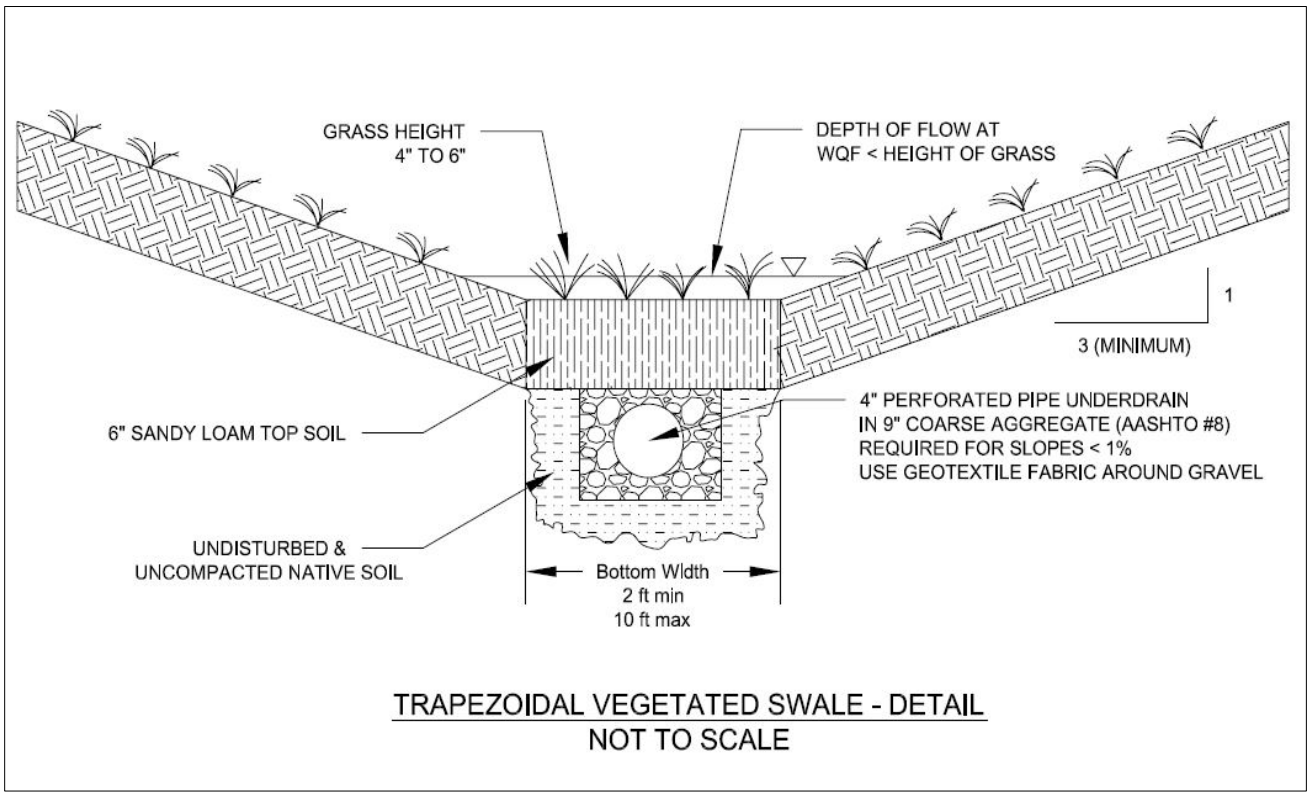


Figure VS-1. Vegetated Swale

Note: 6" sandy loam top soil layer only required if deemed necessary by the project geotechnical engineer to promote the swale's function.

Water Quality Detention Basins

Description

Source: County of Sacramento, Department of Water Resources

A stormwater quality detention basin (also called a water quality basin or extended detention basin) is designed to hold stormwater runoff from small storms and the initial runoff ("first flush") from larger storms for a regulated downstream release. Pollutants are removed from stormwater through gravitational settling and biological processes depending on the type of basin. There are three types of water quality detention basins:

- Wet stormwater quality detention basins (wet basins) that store a permanent pond of water
- Dry extended stormwater quality detention basins (dry-extended basins) that temporarily store stormwater runoff
- Combination (wet/dry) stormwater quality detention basins (combination basins) that combine the wet and dry basin treatment systems

Stormwater quality basins must incorporate features that treat dry-weather flows (such as irrigation runoff). Wet basins and combination basins treat the dry weather flows within the permanent pond (micropool); however, dry basin designs must include an additional feature such as a submerged gravel bed or other agency approved feature.

Pollutant Removal Effectiveness

	Dry Basin	Wet Basin
Sediment	Medium	High
Nutrients	Low	Medium
Trash	High	High
Metals	Medium	High
Bacteria	Medium	High
Oil and Grease	Medium	High
Organics	Medium	High

The following is a partial list of the most common target pollutants for the Sacramento area: copper, lead, mercury, pathogens, diazinon, and chlorpyrifos. For more complete information refer to:

http://www.waterboards.ca.gov/water_issues/programs/tmdl/integrated2010.shtml

Source: CASQA California Stormwater BMP Handbook, January 2003

Siting Considerations

- Drainage area: typically greater than 20 acres
- Longitudinal bottom slope: At least 2% in dry basins. Can undulate in wet basins.
- Side slopes: 3:1 or flatter for basin; 3:1 or steeper for permanent ponds.
- Impermeable liners may be required in areas with high groundwater.

Vector Considerations

- Potential for mosquitoes due to standing water will be greatly reduced or eliminated if the basins and associated features are properly designed, constructed, operated and maintained.
- Permanent ponds shall be stocked with mosquito fish for vector control.

Advantages

- May provide both stormwater quality treatment and flood control if designed for flood flows.
- Mitigate increased volume and flow impacts caused by development.
- If properly designed, constructed, and maintained, have substantial aesthetic and recreational value and provide wildlife habitat.
- Viewed as a public amenity when integrated into a park or open space setting and properly designed and landscaped.

Photo: Bilby Road, The City of Elk Grove

- Wet basins: Permanent ponds can provide significant water quality improvement across a broad spectrum of constituents including dissolved nutrients.
- Wet basins: Can treat dry weather flows without the need for additional features.
- Dry basins: May be easier to maintain than wet basins.
- Potential LEED Credits
    - Credit 6.2 – Stormwater Design – Quality Control

Limitations

- May pose some safety concerns where there is public access.
- Cannot be placed on steep, unstable slopes.
- Wet basins: Need a supplemental water source to replenish and maintain the permanent pond.
- Wet basins: Are typically not permitted if routine pumping of ground or surface water would be needed to maintain the permanent pond. Check with the local permitting agency.
- Dry basins: May require more land than combination and wet ponds.

How Does a Water Quality Detention Basin Work?

Stormwater quality detention basins allow particles and associated pollutants to settle out. Permanent ponds (micropools) may enhance pollutant removal through biological and chemical processes. The volume of runoff may also be reduced through infiltration and evaporation. Dry basins fill up during a storm event and detain the water quality volume for a period of 48 hours. Wet basins allow stormwater runoff to slowly pass through the pond displacing water from the permanent pond. Combination basins include both a permanent pond and additional storage for detaining a portion of the water quality volume for a period of 48 hours.

Other Names: water quality basin, extended detention basin, dry extended basin, wet ponds, wet extended-detention basins, dry ponds

Planning and Siting Considerations

Photo: Rain Garden, City of Elk Grove

- Plan water quality basins to be aesthetically-pleasing public amenities (see Figure DB-1).
- Where possible, design water quality basins as a joint use with parks (passive recreation), open space, wildlife habitat, aesthetic amenities and/or flood control detention facilities (see Figures DB-1 and DB-2). Generally, the area within the water quality volume (WQV) is not well suited for recreation facilities such as ballparks, picnic areas and restrooms.
- Ponds present special design considerations such as the selection of appropriate vegetation and nuisance abatement in order to function properly as both a water quality control measure and a public amenity.
- Use dry basins if dry weather flows are not sufficient to maintain the permanent pond of wet and combination ponds. See Figure DB-4.
- Wet and combination basins may require a supplemental water source to maintain the permanent pond until the entire drainage shed is built out.
- Wet and combination basins require submitting water balancing calculations to ensure that the permanent pond volume will be maintained in the dry season. Use an evaporation rate of 0.45 in/day for the Sacramento area.
- May be required to include aeration and/or fountains for permanent ponds with depths greater than 6 feet.
- Place top soil within the top 12" of the basin to help support plant growth.
- Consider utilizing trees and shrubs for habitat esthetics, shade, and runoff reduction.
- Refer to the local agency drainage criteria for flood control design.
- Consider re-circulating dry-weather flows in a water feature or as irrigation water to conserve water and benefit water quality.
- Provide vehicle/equipment access for maintenance of the basins and inlet/outlet structures. May be required to include a boat ramp for harvesting of aquatic plants. Refer to the local agency for specific design criteria. Access could be combined with other uses such as walking or bicycle paths.
- Impermeable liners may be required in areas with high groundwater.
- May require approval from State Division of Safety of Dams (http://www.water.ca.gov/damsafety).

Figure DB-1. Park Incorporating Water Quality Detention with Wet Pond

Figure DB-2. Water Quality Detention Pond Incorporating Wet Pond and Natural Contours

Design Criteria

Design criteria for stormwater detention basins are listed in Table DB-1.

Table DB-1. Water Quality Detention Basin Design Criteria

Design Parameter	Criteria for Basin Type			Notes
	Dry	Wet	Combo	
Drainage area	Typically > 20 acres			
Design volume	WQV	1.25 WQV	1.125 WQV	See Figure DB-3 and Appendix E in this manual for details.
	Or as dictated greater by SAHM modeling (for projects with hydromodification requirement)			
Drawdown Time	48 hrs			See Appendix E
Depth of Basin/ Permanent Pond	NA	4 – 8 ft	4 – 8 ft	A 4 ft pond depth ensures an open water area, retards cattail growth, reduces stagnation, and allows for mosquito fish. Water deeper than 4 ft increases the residence time and results in less heating/stagnation in summer.
Basin Shape	Length 3X width (minimum)			Always maximize the distance between the inlet and outlet. Whenever possible, shape the basin to gradually expand from the inlet then gradually contract toward the outlet (e.g., teardrop).
Side slopes (H:V)	3:1 or flatter 3:1 or steeper			Basin side slopes Permanent ponds side slopes
Embankment side slope (H:V)	4:1 or flatter 3:1 or flatter			Inside Outside (without retaining wall)
Longitudinal slope/ bottom surface	Slope at least 2%	Undulate the bottom depth	Undulate the bottom depth	
Basin freeboard	1 ft			
Treatment for dry-weather flows	Submerged gravel bed	Permanent pond	Permanent pond	Other dry weather treatment features for dry basins may be approved by the permitting agency on a case-by-case basis.
Vegetation	Appropriate for extended dry periods	Appropriate for extended wet periods	Appropriate for both wet and dry periods	
Sediment Forebay Volume	5 to 10% maximum of the total design volume			Sediment forebays may not be required; check with the local permitting agency.

Step 1a – Calculate Water Quality Volume (WQV)

Using Appendix E in this manual, determine the stormwater quality design volume, WQV, for the contributing area. See Figure DB-3 and table DB-1 for the volume requirements for dry, combination and wet basins.

Step 1b – SAHM Modeling for Hydromodification Management (If applicable)

Upsize the water quality basin volume as necessary based upon modeling results if implementing as a hydromodification management control.

Step 2 – Design the Basin

Design the basin to:

- Provide the required volume as determined in step 1.
- Meet criteria on Table DB-1 regarding depth, shape, side slope and longitudinal slope
- Incorporate a sediment forebay if required by the local agency. See step 3.
- Maximize residence time by placing the inlet and outlet on opposite ends of the basin. Ensuring the length is at least three times the width, as measured down the center of the flow path. For permanent ponds, incorporate additional features to maximize residence time, such as:
    - Contouring the basin bottom to baffle flows and promote mixing.
    - Using islands or peninsulas.
    - If possible, designing the deepest point to be at least 8 ft. deep.
- Incorporate access. See step 5.
- Incorporate a concrete low flow channel in dry basins (see Figures DB-4 and DB-5).
- Consider an aquatic bench with emergent vegetation around the perimeter of wet ponds and permanent pools to help with water quality and to provide a safety feature.

See Figure DB-4 for an example of a dry extended detention basin.

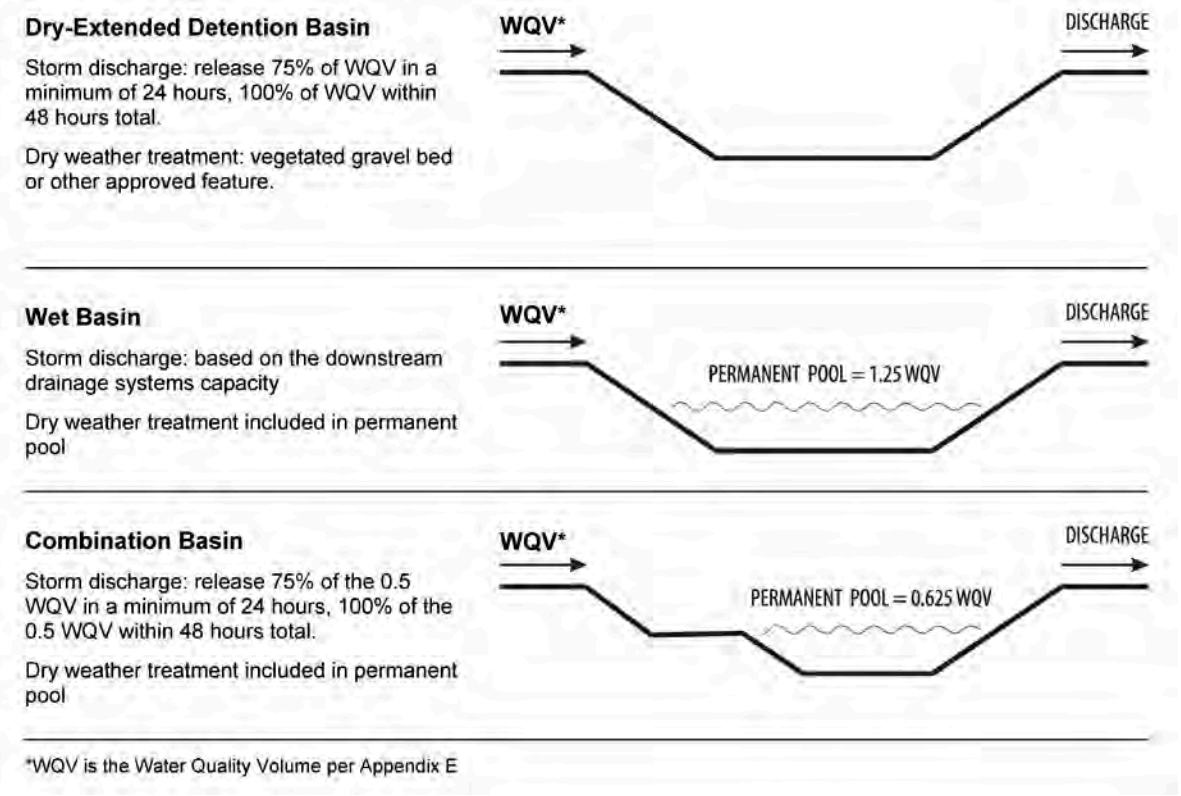

Figure DB-3. Basin Criteria to Control Stormwater Pollution

Step 3 – Sediment Forebay

A sediment forebay may be required (check with local permitting agency) at each inflow point in order to trap sediment where it can be easily cleaned out. The forebay size should be about 5% to 10% maximum of the total design volume and designed to release in 3-5 minutes.

For easy-maintenance, design the sediment forebay(s) to include:

- An access road. See step 5 for detailed information.
- Concrete lining to prevent equipment from sinking during cleaning.
- A concrete wall to separate the forebay from the rest of the water quality basin. The concrete wall should include overflow weir allowing flows to exit at non-erosive velocities during the 2-year and 10-year frequency design storms.

Step 4 - Design the Inlet and Outlet

Inlet Design

Design the inlet structure to:

- Dissipate energy of incoming flows to prevent erosion and prevent resuspension of previously deposited sediment.
- For permanent ponds, set pipe invert approximately two (2) feet from pond bottom above sediment storage.

- Install trash/access control rack. Check with the local agencies details.
- Provide access per Step 5.

Outlet Design

The goal of the outlet design criteria is to detain flows for a sufficient period of time to permit the settling of smaller sized sediments while meeting the release criteria so that storage is available for subsequent storm events. Outlets should be designed in accordance to Figure DB-6 or equal design as approved by the local agency and shall include trash racks to keep debris from clogging the outlet without interfering with the hydraulic capacity. In addition, flap gates should be installed to avoid the effects of backwater in the downstream creek or channel. The release criteria for the basins are as follows:

- Dry Basin - A dry basin is required to release 75 percent of the water quality volume in a minimum of 24 hours and the total design volume over an additional 24 hours for a total release time of 48 hours. The WQV should not be discharged too quickly or pollutant removal will be compromised.
- Wet basins - A wet basin is required to maintain the permanent pond volume while discharging based on the downstream drainage systems capacity.
- Combination basins - A combination basin is required to maintain the permanent pond volume while releasing 75 percent of the 0.5 WQV in a minimum of 24 hours and the remainder 25 percent of the 0.5 WQV over an additional 24 hours for a total release time of 48 hours.

For hydromodification management, outlet design is to be confirmed using SAHM or other equivalent continuous simulation tools

Step 5 – Access Design

Provide a way for maintenance vehicles to access all structures and cells within the basin such as the basin bottom, sediment forebay, inlets and outlets, low flow channels and submerged gravel beds. Design access roads to have an all weather access surface, a width of 15’ to 20’ (check with the local permitting agency for required width) and a minimum turning radius of 40 feet. Design access ramps to be concrete or other impervious surface (check with local permitting agency) to the basin bottom with a maximum slope of 10% and a width of 15 feet. Place gates across all access ramps to discourage access.

Step 6 – Design for Safety

Incorporate features for safety:

- Consider fencing the facility with post and cable (6” x 6” post minimum) or other approved fencing material to discourage access.
- Hinge and lock gates on structures.
- Provide gates or removable bollards across access roads.

If applicable, design the dam embankment for safety:

- Obtain approval from State Division of Safety of Dams, if required based on the size of the dam/storage volume. If that is not required, nonetheless design the embankment-spillway-outlet system to prevent catastrophic failure.
- Design the embankment not to fail during 100-year and larger storms.
- Create embankment slopes to be 3:1 or flatter for outside slopes and 4:1 or flatter for inside slopes and plant them with turf forming grasses.
- Compact embankment soils in accordance to geotechnical engineer's specifications.
- Design spillway structures and overflows in accordance with local drainage criteria.

Step 7- Incorporate Treatment for Dry-Weather Flows

For wet and combination basins, the permanent pond provides treatment for dry-weather flows. For dry basins, it is necessary to provide dry-weather flow treatment such as a vegetated submerged gravel bed or other equal treatment that is approved by the local permitting agency. See Figure DB-4.

Dry weather flows vary by land use, drainage basin size, soil types and other factors. Determine dry weather design flows, Q, using the values in Table DB-2 or other criteria acceptable to the local agency.

Table DB-2. Dry Weather Design Flows

Vegetated Submerged Gravel Beds

Vegetated submerged gravel beds can be used to reduce contaminants in dry weather flows within or outside of a dry basin (See Figure DB-4). Design vegetated submerged gravel beds so that:

- Anticipated dry weather flows pass through the gravel bed without overland flow or flooding.

- Anticipated dry weather flows pass through the gravel bed without dry out (excessive dry headspace) at the inlet zone of the bed.
- The bed remains functional in the likely event of changing hydraulic conductivity (As the bed clogs with roots and sediment, it should not flood.)
- Water levels are fully controllable through the use of inlet and outlet structures.
- The system achieves desired removal of contaminants.
- The gravel bed shall be planted with emergent plants (See Table DB-3).
- The top 3" of the gravel bed shall be above the outlet flow line.
- Gravel shall be held to 2" below the outfall flow line within a 4 foot radius of the outfall pipe.

Basin geometry: Choose a length-to-width ratio that results in a sufficient hydraulic gradient to push the water through the gravel bed. A length-to-width ratio of 5 to 10 is common, but other length-to width ratios can be used provided the hydraulic gradient is adequate. (As the length-to-width ratio is increased, the linear velocity of the water passing through the gravel bed increases, the pressure drop increases, and the hydraulic gradient decreases. At some point, the hydraulic gradient is not sufficient to push the water through the gravel bed, resulting in overland flow.)

Design Criteria: Design using the following criteria:

- The gravel media - 1" to 1-1/2" in size.
- The bed depth – d = 2 feet (The depth of media is selected by allowing consideration for bottom sediment buildup and rooting requirements of desired vegetation.)
- The design porosity of the gravel bed - $\varepsilon = 0.3$
- The effective hydraulic conductivity shall be less than 95,000 ft/day.
- Nominal hydraulic detention time through the gravel bed, $\tau = 2$ days.

$$\textbf{Surface Area} = SA = L\,W = (\tau\,Q) / (d\,\varepsilon) = (2\ \text{days})Q/(2\ \text{feet})(0.3)(86400\ \text{sec/day})$$

Where Q= dry weather design flow rate (cfs)

Step 8 - Prepare a Landscaping Plan

Retain a certified landscape architect or wetland specialist to prepare a landscaping plan that includes:

- a planting layout showing what species to plant where
- plant sizes (e.g. seed, plug, 1-gallon container, etc.)
- planting techniques
- plant spacing
- soil amendments
- hydroseed specifications
- Irrigation specifications (which must conform to applicable local regulations)

Consider the following when choosing plants:

- Do not plant trees at the base of any access ramps, around any inlet, outlet or culvert, or within 5 to 10 feet of a concrete structure or channel.
- Cluster trees and shrubs when possible to make mowing of basin easier.
- Trees may not be allowed on the basin floor (check with local permitting agency).
- Use native plants.
- Choose plants that are adapted to the site conditions, including the expected degree of inundation/soil moisture.
- Incorporate plants known to improve water quality.
- Where possible, specify an array of plant types, including emergent species (in channels/ponds), herbaceous species, and trees and shrubs (along the outer borders). This results in a more natural system and enhances the aesthetic and wildlife value. However, shrubs and trees should not be used for clay-lined permanent ponds or basins.

See Tables DB-3 and DB-4 for a list of suitable plants for different degrees of inundation/soil saturation. These lists are not comprehensive; other plants may be used as deemed suitable by the project's landscape architect.

Table DB-3. Plants for Areas that are Periodically Inundated

Scientific Name	Common Name	Propagation Method			Notes
		PLUG	CONTAINER STICK	SEED	
Emergent species					
Carex densa	Dense sedge	✓	✓		Best where soil is saturated for greater duration
Carex barbarae	Santa Barbara sedge	✓	✓		
Cyperus eragrostis	Tall faltsedge	✓	✓		
Eleocharis macrostachya	Creeping spikerush	✓	✓		
Juncus balitcus	Baltic rush	✓	✓		
Juncus xiphioides	Irish-leaved rush	✓	✓		
Grasses					
Hordeum brachyantherum	Meadow barley			✓	
Leptochloa fascicularis	Bearded sprangle-top			✓	
Muhlenbergia rigens	Deergrass			✓	
Paspalum distichum	Paspalum			✓	
Phalaris arundinaceae	Reed canary grass			✓	
Phalaris lemmonii	Lemmon's canary grassed			✓	
Herbaceous species					
Polygonum lapathifolium	Willow weed	✓	✓		Locate where soil is most apt to be saturated
Polygonum punctatum	Dotted smartweed	✓	✓		
Verbena hastate	Blue vervain		✓	✓	Locate near borders where soil dries out first

Table DB-4. Plants to Use In/Adjacent to a Permanent Pond

Scientific Name	Common Name	Propagation Method					Notes
		PLUG	CONTAINER STICK	POLE CUTTINGS	TUBER	SEED	
Aquatic species							
Ceratophyllum demersum	Hornwort	✓	✓				
Elodea canadensis	Common waterweed	✓	✓				
Potomogeton pectinatus	Sago pondweed				✓		
Emergent species							
Carex barbarae	Santa Barbara sedge	✓	✓				Best at pond border where soils are saturated/ periodically inundated
Juncus balitcus	Baltic rush	✓	✓				
Juncus effuses	Soft rush	✓	✓				
Scirpus acutus var. *Occidentalis*	Hard-stem bulrush	✓	✓				Adapted to water levels up to 3 feet
Scirpus americanus	Three square	✓	✓				Best at pond border
Grasses							
Hordeum brachyantherum	Meadow barley					✓	Adjacent to pond, where soils are saturated to the surface but not inundated
Leptochloa fascicularis	Bearded sprangle-top					✓	
Paspalum distichum	Paspalum					✓	
Herbaceous species							
Baccharis douglasii	Marsh baccharis	✓	✓				
Euthamia occidentalis	Western goldenrod	✓	✓				
Polygonum lapathifolium	Willow weed	✓	✓				Can be grown along the pond borders where soils are saturated to the surface
Polygonum punctatum	Dotted smartweed	✓	✓				
Sagittaria latifolia	Broad-leaf arrowhead	✓	✓				
Shrubs (may not be appropriate if pond is clay lined)							
Baccharis salicifolia	Mule fat		✓				
Cephalanthus occidentalis	Common buttonbush		✓				Can be grown on the pond banks; accepts greater soil saturation than the California rose

Scientific Name	Common Name	Propagation Method					Notes
		PLUG	CONTAINER STICK	POLE CUTTINGS	TUBER	SEED	
Rosa californica	California rose		✓				Can be grown on the pond banks, ideally where there is minimal surface soil saturation
Trees (should not be used for clay-lined permanent ponds)							
Alnus rhombifolia	White alder		✓				Can be grown on pond berms/ borders
Populus fremontii	Fremont's cottonwood		✓	✓			
Salix exigua	Sandbar willow		✓	✓			
Salix gooddingii	Goodding's black willow		✓	✓			
Salix lasiolepis	Arroyo willow		✓	✓			
Salix laevigata	Red willow		✓	✓			
Salix lucida var. *lasiandra*	Shining willow		✓	✓			

Construction Considerations

- Before acceptance of the basin by the local agency, the accumulated sediment must be removed.
- See "Recommended Planting Guidelines" later in this fact sheet for information on planting techniques and recommended planting times.
- Take steps to ensure plants become established:
  - Plant emergent species bordering the permanent pond in saturated soil, so the plants will become established. Maintain the water level in the pond to allow for soil saturation or shallow inundation around the base of the plants, but avoid significant flooding and inundation of stems and leaves during the first year. Tall plugs and plantings can tolerate greater depths of inundation as long as a significant portion of the stems and leaves of the plantings remain above the water surface.
  - Provide drip irrigation for plantings in areas that will not be saturated to the surface or inundated. Irrigate as needed at least during the first two years--until the plants can survive on annual rainfall and/or groundwater.
  - Irrigate hydroseeded areas only if needed for plant establishment. Hydroseeded portions of the bank do not need irrigation in years of normal rainfall. If a period of drought occurs after hydroseeding, supplemental watering may be needed to establish germination in the first year.

Long-term Maintenance

Regional detention basins usually will be maintained by the local agency. A long-term maintenance plan (i.e., adaptive management plan) shall be prepared by the developer/owner and approved by the local agency prior to acceptance of the basin.

If the basin will be privately maintained, the local agencies will require execution of a maintenance agreement with the property owner prior to final acceptance of a private development project, including acceptance of the water quality basin. Check with the local permitting agency about the timing for execution of the agreement. The maintenance agreement will typically include requirements such as those in Table DB-5. The property owner or his/her designee will be responsible for compliance. See Appendix B for additional information about maintenance requirements and sample agreement language.

Table DB-5. Inspection and Maintenance Recommendations for Water Quality Detention Basins

Activity	Schedule
Inspect the facility for needed maintenance.	Twice a year.
Remove trash and debris.	At least twice a year.
Remove sediment, debris and litter that accumulates in the sediment forebay (To clean the sediment-collection area for a wet basin, it may be necessary to drain, pump or partially drawdown the pond area.)	Every 3 to 5 years or when 6 to 12 inches have accumulated, whichever comes first. Cleanout stakes or permanent markers are recommended to track accumulation.
Remove sediment that accumulates in the concrete low flow channel (if applicable).	Annually.
Control weeds and invasive plant species. Carefully weed areas to avoid removing the native species.	Regularly during the first 2 years and then as needed.
Use integrated pest management (IPM).Refer to Landscaping fact sheet elsewhere in this chapter.	As needed.
Irrigate plants. Refer to Efficient Irrigation fact sheet elsewhere in this chapter.	As needed during the establishment period (see Construction Considerations) and during periods of drought.
Replant any bare areas. Investigate why the die-off occurred and take remedial action to correct the problem.	In the event of extensive die-off.
Harvest vegetation around the perimeter of permanent ponds so that mosquito fish are not impeded by thick vegetation.	Each summer. More frequently if required by local vector control agencies.
Harvest vegetation in channels.	As needed.
Where permitted by the Department of Fish and Game or other agency regulations, stock wet ponds with mosquito fish (Gambusia spp.) to enhance natural mosquito and midge control.	As needed.
Control any erosion by redirecting or dissipating the water source. If necessary, recontour, mulch, and/or reseed.	When there are signs of erosion, including gullies, rills, and evidence of sheet erosion.
Reconstruct or replace the control measure when it is no longer functioning properly.	See projected lifespan in Appendix B for informational purposes.
Prune trees (if applicable).	Every 3-5 years.

Recommended Planting Guidelines

Propagation Methods

Plugs. Plugs are clumps of plant roots, rhizomes or tubers combined with associated soil. To propagate plants with plugs, follow these guidelines:

- Plant plugs during the fall dormant period, preferably between October 1 and November 15.
- Collect plugs from a suitable collection site in the vicinity of the constructed basins, using a qualified botanist or nursery staff. Plugs can be removed manually or salvaged with an excavator or backhoe. Collect plugs from healthy specimens free of insects, weeds and disease. Use either whole plants or plant divisions. The minimum recommended size is 1 foot x 1 foot.
- When possible, plant plugs immediately after collection. When necessary, plugs can be stored in a cool, moist, shaded location for a maximum of one day.
- Space plugs 1 foot to 6 feet apart, depending on the size of the plug. Smaller plugs can be planted at the minimum distance to promote faster spreading and cover. Plant larger plugs from cattail and bulrush species at 3 foot to 6 foot intervals.
- Prepare a hole slightly larger than the diameter of each plug and place the root system of the plug into the hole. Use a breaking bar or similar technique to create the planting hole. Manual planting with a spade is recommended for wet soils. Power augers can be used to create holes in dry soils. Alternatively, in lieu of individual holes, create a trench along the narrow axis of the pond; manually place plants at specified elevations in relation to the proximity of permanently saturated soils as shown on the planting plan.
- If the plug has an established root system, make sure the base of the stem and top of the root collar are level with the ground surface. Secure tubers to prevent floating. Place rhizomes in the soil with a slight upward angle.
- Backfill the hole or trench containing the plug(s) with soil and tamp it down to assure good soil contact and secure the plug.
- Cut back the vegetative portion of the plant to prevent water loss and wilting, and encourage the growth of roots and new shoots. Plugs of wetland plants should be grown in saturated soil.
- For wetland plants, the soil should not be allowed to dry out after planting.

Container Stock. When planting using container stock, follow these guidelines:

- Dig planting holes twice as wide and deep as the container size. It is recommended that container plantings receive a balanced time released fertilizer tablet that is placed at the bottom of the planting hole prior to installation of the plant.
- Space plants as shown on the planting plan.
- When planting, make sure the root collar and base of the stem are level with the adjacent soil surface. Berms for water retention and mulch can be used enhance plant establishment.
- Backfill the soil and tamp it down to assure contact with the roots. Promptly water to promote the settling of soil.

Pole Cuttings. Follow these guidelines when using pole cuttings:

- Collect pole cuttings from the young wood of dormant trees that are healthy and free of diseases.
- Size pole cuttings to have at least five viable nodes; to have a diameter at the base between 1/2 and 2 inches (1 inch is optimum); and to be between 2 and 4 feet long.
- Collect pole cuttings no more than 10 days prior to planting. Place them in cool water to promote swelling of the nodes, and keep the water fresh by aeration and/or by daily replacement.
- Following the production of the nodes (2-5 days), plant the pole cuttings in a rich organic medium mixed with native soil to encourage the production of a fibrous root system.
- Place pole cuttings in a hole approximately 3 feet deep (as determined by the length of the cutting--generally 75 percent of the length of the cutting should be planted beneath the soil surface). Backfill with native soil, or a rich organic medium mixed with native soil. Tamp down the soil to remove air pockets and assure soil contact with the cutting.

Seeds. Follow these guidelines when seeding:

- Plant seeds in the fall, preferably during the early portion of the dormant season. Time seeding to occur after plugs, container stock and pole cuttings are installed.
- Scarify the soil surface with a rake prior to seeding, taking care not to damage previously planted vegetation.
- Plant seeds at the ratios and rates specified by the supplier. The certified germination percentage should be provided by the supplier. Use seeds free of weeds and diseases.
- Broadcast seeds over the scarified planting area, using a hand-held spreader. Seed can be mixed with a slow-released fertilizer (16-20-0).
- Rake the surface to cover the seeds with about one eighth to one quarter inch of soil.

Appendix D-2: Commercial Sites: Low Impact Development (LID) Credits and Treatment BMP Sizing Calculations

Name of Drainage Shed: DMA 1 Davis Family Warehouses
Location of project: Sacramento

Fill in Blue Highlighted boxes

Step 1 - Open Space and Pervious Area Credits

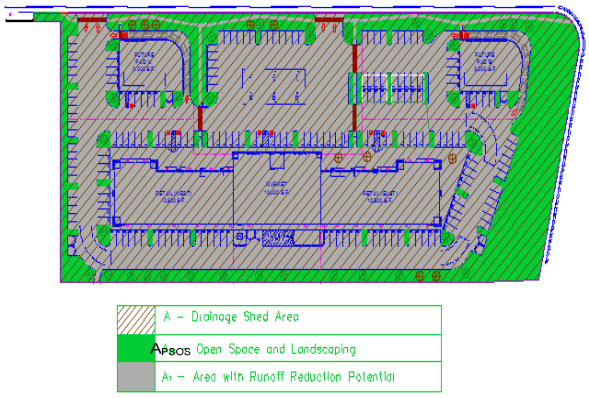
Is your project within the drainage area of a common drainage plan that includes open space? If not, skip to 1 b.

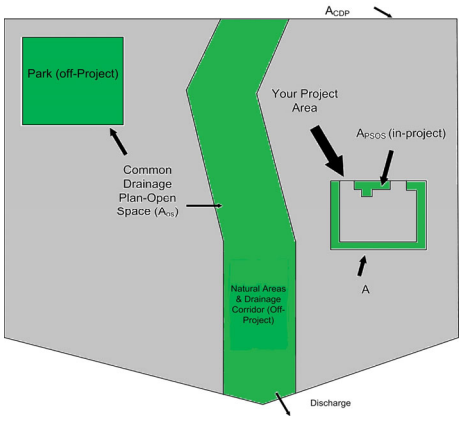
1 a. Common Drainage Plan Area		acres	A_{CDP}	
Common Drainage Plan Open Space (Off-project)	0	acres	A_{OS}	**see area example below**
a. Natural storage reservoirs and drainage corridors	0	acres		
b. Buffer zones for natural water bodies	0	acres		
c. Natural areas including existing trees, other vegetation, and soil	0	acres		
d. Common landscape area/park	0.00	acres		
e. Regional Flood Control/Drainage basins	0	acres		
1 b. Project Drainage Shed Area (Total)	32.11	acres	A	sf ~~1636705~~ ~~37.573577~~ ac
Project-Specific Open Space (In-project, communal)**	13.82	acres	A_{PSOS}	
a. Natural storage reservoirs and drainage corridors	0.00	acres		
b. Buffer zones for natural water bodies	0.00	acres		
c. Natural areas including existing trees, other vegetation, and soil	0.00	acres		**see area example below**
d. Landscape area/park	13.82	acres		
e. Flood Control/Drainage basins	0.00	acres		

** Doesn't include impervious areas within individual lots and surrounding individual units. That is accounted for below using Form D-1a in Step 2.

Area with Runoff Reduction Potential	$A - A_{PSOS}$ =	18.29	acres	A_T
Assumed Initial Impervious Fraction	A_T / A =	0.57		I

Open Space & Pervious Area LID Credit (Step 1)
$(A_{OS}/A_{CDP}+A_{PSOS}/A)x100$ = 43 pts





Step 2 - Runoff Reduction Credits

Runoff Reduction Treatments	Impervious Area Managed			Efficiency Factor		Effective Area Managed (A_C)	
Porous Pavement:							
Option 1: Porous Pavement (see Fact Sheet, excludes porous pavement used in Option 2)	0	acres	x		=	0.000	acres
Option 2: Disconnected Pavement (see Fact Sheet, excludes porous pavement used in Option 1)	use Form D-2a for credits →					0.00	acres
Landscaping used to Disconnect Pavement (see Fact Sheet)	0.0000	acres			=	0.00	acres
Disconnected Roof Drains (see Fact Sheet and/or Table D-2b for summary of requirements)	0	acres			=	0.00	acres
Ecoroof (see Fact Sheet)	0	acres			=	0.00	acres
Interceptor Trees (see Fact Sheet)	use Form D-2b for credits →					0.07	acres
Total Effective Area Managed by Runoff Reduction Measures				A_C		0.07	acres
Runoff Reduction Credit (Step 2)				$(A_C / A_T)*100$ =		0	pts

Table D-2a

Porous Pavement Type	Efficiency Multiplier
Cobblestone Block Pavement	0.40
Pervious Concrete/Asphalt	0.60
Modular Block Pavement &	0.75
Reinforced Grass Pavement	1.00

Table D-2b

Maximum roof size	Minimum travel distance
≤ 3,500 sq ft	21 ft
≤ 5,000 sq ft	24 ft
≤ 7,500 sq ft	28 ft
≤ 10,000 sq ft	32 ft

Form D-2a: Disconnected Pavement Worksheet

See Fact Sheet for more information regarding Disconnected Pavement credit guidelines

Effective Area Managed (A_C)

Pavement Draining to Porous Pavement

2. Enter area draining onto Porous Pavement	0.00	acres	Box K1
3. Enter area of Receiving Porous Pavement (excludes area entered in Step 2 under Porous Pavement)	0.00	acres	Box K2
4. Ratio of Areas (Box K1 / Box K2)	0.00		Box K3

5. Select multiplier using ratio from Box K3 and enter into Box K4

Ratio (Box D)	Multiplier
Ratio is ≤ 0.5	1.00
Ratio is > 0.5 and < 1.0	0.83
Ratio is > 1.0 and < 1.5	0.71
Ratio is > 1.5 and < 2.0	0.55

	1		Box K4
6. Enter Efficiency of Porous Pavement (see table below)			Box K5

Porous Pavement Type	Efficiency Multiplier
Cobblestone Block Pavement	0.40
Pervious Concrete Asphalt Pavement	0.60
Modular Block Pavement Porous Gravel Pavement	0.75
Reinforced Grass Pavement	1.00

7. Multiply Box K2 by Box K5 and enter into Box K6	0.00	acres	Box K6
8. Multiply Boxes K1,K4, and K5 and enter the result in Box K7	0.00	acres	Box K7
9. Add Box K6 to Box K7 and multiply by 60%, and enter the Result in Box K8 This is the amount of area credit to enter into the "Disconnected Pavement" Box of Form D-2			0.00 acres

Form D-2b: Interceptor Tree Worksheet

See Fact Sheet for more information regarding Interceptor Tree credit guidelines

New Evergreen Trees

1. Enter number of new evergreen trees that qualify as Interceptor Trees in Box L1.	50	trees	Box L1
2. Multiply Box L1 by 200 and enter result in Box L2	10000	sq. ft.	Box L2

New Deciduous Trees

3. Enter number of new deciduous trees that qualify as Interceptor Trees in Box L3.	50	trees	Box L3
4. Multiply Box L3 by 100 and enter result in Box L4	5000	sq. ft.	Box L4

Existing Tree Canopy

5. Enter square footage of existing tree canopy that qualifies as Existing Tree canopy in Box L5.		sq. ft.	Box L5
6. Multiply Box L5 by 0.5 and enter the result in Box L6	0	sq. ft.	Box L6

Total Interceptor Tree EAM Credits

Add Boxes L2, L4, and L6 and enter it into Box L7	15000	sq. ft.	Box L7
Divide Box L7 by 43,560 and multiply by 20% to get effective area managed and enter result in Box L8 This is the amount of area credit to enter into the "Interceptor Trees" Box of Form D-2	0.07	acres	Box L8

Step 3 - Runoff Management Credits

Capture and Use Credits

Impervious Area Managed by Rain barrels, Cisterns, and automatically-emptied systems

(see Fact Sheet) - enter gallons, for simple rain barrels | 0.00 acres

Automated-Control Capture and Use System

(see Fact Sheet, then enter impervious area managed by the system) | 0.00 acres

Bioretention/Infiltration Credits

Impervious Area Managed by Bioretention BMPs

(see Fact Sheet)

Bioretention Area 15,200 sq ft
Subdrain Elevation 18 inches
Ponding Depth, inches 12 inches | 5.20 acres

Impervious Area Managed by Infiltration BMPs

(see Fact Sheet)

Drawdown Time, hrs 12 drawdown_hrs_inf
Soil Infiltration Rate, in/hr 0.50 soil_inf_rate

Sizing Option 1: Capture Volume, acre-ft 0.00 capture_vol_inf | 0.00 acres

Sizing Option 2: Infiltration BMP surface area, sq ft 0 soil_surface_area | 0.00 acres

Basin or trench? Basin approximate BMP depth 0.50 ft

Impervious Area Managed by Amended Soil or Mulch Beds

(see Fact Sheet) Mulched Infiltration Area, sq ft mulch_area | 0.00 acres

Total Effective Area Managed by Capture-and-Use/Bioretention/Infiltration BMPs | 5.20 A_{LIDc}

Runoff Management Credit (Step 3) A_{LIDC}/A_T*200 = 56.9 pts

Total LID Credits (Step 1+2+3) LID compliant, check for treatment sizing in Step 4 100.313

Does project require hydromodification management? If yes, proceed to using SacHM.

Adjusted Area for Flow-Based, Non-LID Treatment $A_T - A_C - A_{LIDC}$ = 13.02 A_{AT}

Adjusted Impervious Fraction of A for Volume-Based, Non-LID Treatment A_{AT} / A = 0.41 I_A

Further treatment is required, see choose flow-based or volume-based sizing in Step 4

Step 4a Treatment - Flow-Based (Rational Method)

Calculate treatment flow (cfs): Flow = Runoff Coefficient x Rainfall Intensity x Area

Look up value for i in Table D-2c (Rainfall Intensity) 0.18 i

Obtain A_{AT} from Step 3 13.02 A_{AT}

Use C = 0.95 0.95 C

Flow = 0.95 * i * A_{AT} 2.23 cfs

Table D-2c

Rainfall Intensity			
Roseville	i =	0.20	in/hr
Sacramento	i =	0.18	in/hr
Folsom	i =	0.20	in/hr

Cap A_{AT} + Bldg 1 A_{AT} 367,418 sf 8.43 AC
WQF (Q=CiA), C=0.95, i=0.18, A=14.55 1.44 cfs < 2.23 cfs Delta = 0.78
Extra basin area needed
Extra area 6,800 sf infiltration rate 5 inches / hr
Added Treatment Flow 2833 cf/hr 0.79 cfs total basin area 22,000 sf

Step 4b Treatment - Volume-Based (ASCE-WEF)

Calculate water quality volume (Acre-Feet): WQV = Area x Maximized Detention Volume (P_0)

Obtain A from Step 1 32.11 A 12 hrs Specified Draw Down time

Obtain P_0: Maximized Detention Volume from figures E-1 to E-4 in Appendix E of this manual using I_A from Step 2. 0.20 P_0

Calculate treatment volume (acre-ft):

Treatment volume = A x (P_0 / 12) 0.54 Acre-Feet Add 23,526 Total Area = 38,726 sf

Appendix D-2: Commercial Sites: Low Impact Development (LID) Credits and Treatment BMP Sizing Calculations

Name of Drainage Shed: DMA 2 Davis Family Warehouses
Location of project: Sacramento

Fill in Blue Highlighted boxes

Step 1 - Open Space and Pervious Area Credits

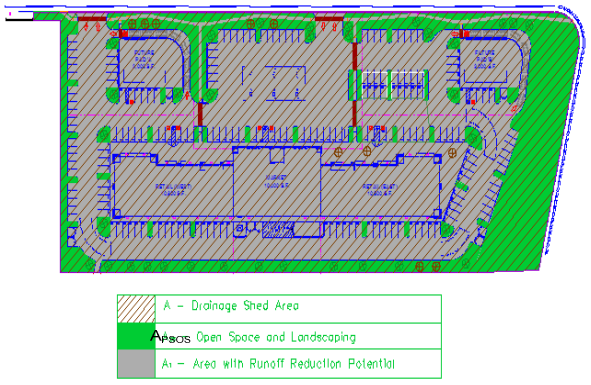
Is your project within the drainage area of a common drainage plan that includes open space? If not, skip to 1 b.

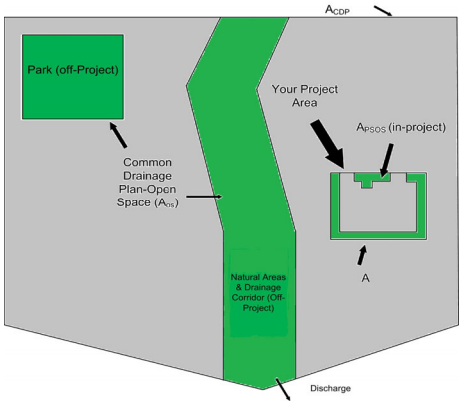
1 a. Common Drainage Plan Area	0	acres	A_{CDP}	
Common Drainage Plan Open Space (Off-project)	0	acres	A_{OS}	**see area example below**
a. Natural storage reservoirs and drainage corridors	0	acres		
b. Buffer zones for natural water bodies	0	acres		
c. Natural areas including existing trees, other vegetation, and soil	0	acres		
d. Common landscape area/park	0	acres		
e. Regional Flood Control/Drainage basins	0	acres		
1 b. Project Drainage Shed Area (Total)	13.44	acres	A	
Project-Specific Open Space (In-project, communal)**	1.07	acres	A_{PSOS}	
a. Natural storage reservoirs and drainage corridors	0.00	acres		
b. Buffer zones for natural water bodies	0.00	acres		
c. Natural areas including existing trees, other vegetation, and soil	0.00	acres		**see area example below**
d. Landscape area/park	1.07	acres		
e. Flood Control/Drainage basins	0.00	acres		

** Doesn't include impervious areas within individual lots and surrounding individual units. That is accounted for below using Form D-1a in Step 2.

Area with Runoff Reduction Potential	$A - A_{PSOS} =$	12.38	acres	A_T
Assumed Initial Impervious Fraction	$A_T / A =$	0.92		I

Open Space & Pervious Area LID Credit (Step 1)
$(A_{OS}/A_{CDP}+A_{PSOS}/A)x100 =$ 8 pts





Step 2 - Runoff Reduction Credits

Runoff Reduction Treatments	Impervious Area Managed			Efficiency Factor		Effective Area Managed (A_C)	
Porous Pavement:							
Option 1: Porous Pavement (see Fact Sheet, excludes porous pavement used in Option 2)	0	acres	x		=	0.000	acres

Reinforced Grass Pavement	1.00

7. Multiply Box K2 by Box K5 and enter into Box K6	0.00	acres	Box K6
8. Multiply Boxes K1,K4, and K5 and enter the result in Box K7	0.00	acres	Box K7
9. Add Box K6 to Box K7 and multiply by 60%, and enter the Result in Box K8 This is the amount of area credit to enter into the "Disconnected Pavement" Box of Form D-2			0.00 acres

Form D-2b: Interceptor Tree Worksheet

See Fact Sheet for more information regarding Interceptor Tree credit guidelines

New Evergreen Trees

1. Enter number of new evergreen trees that qualify as Interceptor Trees in Box L1.	50	trees	Box L1
2. Multiply Box L1 by 200 and enter result in Box L2	10000	sq. ft.	Box L2

New Deciduous Trees

3. Enter number of new deciduous trees that qualify as Interceptor Trees in Box L3.	50	trees	Box L3
4. Multiply Box L3 by 100 and enter result in Box L4	5000	sq. ft.	Box L4

Existing Tree Canopy

5. Enter square footage of existing tree canopy that qualifies as Existing Tree canopy in Box L5.	0	sq. ft.	Box L5
6. Multiply Box L5 by 0.5 and enter the result in Box L6	0	sq. ft.	Box L6

Total Interceptor Tree EAM Credits

Add Boxes L2, L4, and L6 and enter it into Box L7	15000	sq. ft.	Box L7
Divide Box L7 by 43,560 and multiply by 20% to get effective area managed and enter result in Box L8 This is the amount of area credit to enter into the "Interceptor Trees" Box of Form D-2	0.07	acres	Box L8

Step 3 - Runoff Management Credits

Capture and Use Credits

Impervious Area Managed by Rain barrels, Cisterns, and automatically-emptied systems

(see Fact Sheet) — - enter gallons, for simple rain barrels — 0.00 acres

Automated-Control Capture and Use System

(see Fact Sheet, then enter impervious area managed by the system) — 0.00 acres

Bioretention/Infiltration Credits

Impervious Area Managed by Bioretention BMPs

(see Fact Sheet)

Bioretention Area: 16,600 sq ft
Subdrain Elevation: 12 inches
Ponding Depth, inches: 12 inches

5.68 acres

Impervious Area Managed by Infiltration BMPs

(see Fact Sheet)

Drawdown Time, hrs: 12 drawdown_hrs_inf
Soil Infiltration Rate, in/hr: 0.50 soil_inf_rate

Sizing Option 1: Capture Volume, acre-ft: 0.00 capture_vol_inf — 0.00 acres

Sizing Option 2: Infiltration BMP surface area, sq ft: 0 soil_surface_area — 0.00 acres

Basin or trench? ____ approximate BMP depth: 1.43 ft

Impervious Area Managed by Amended Soil or Mulch Beds

(see Fact Sheet) — Mulched Infiltration Area, sq ft: ____ mulch_area — 0.00 acres

Total Effective Area Managed by Capture-and-Use/Bioretention/Infiltration BMPs — 5.68 A_{LIDc}

Runoff Management Credit (Step 3) — A_{LIDC}/A_T*200 = 91.8 pts

Total LID Credits (Step 1+2+3) LID compliant, check for treatment sizing in Step 4 — 100.3

Does project require hydromodification management? If yes, proceed to using SacHM.

Adjusted Area for Flow-Based, Non-LID Treatment — $A_T - A_C - A_{LIDC}$ = 6.63 A_{AT}

Adjusted Impervious Fraction of A for Volume-Based, Non-LID Treatment — A_{AT} / A = 0.49 I_A

Further treatment is required, see choose flow-based or volume-based sizing in Step 4

Step 4a Treatment - Flow-Based (Rational Method)

Calculate treatment flow (cfs): Flow = Runoff Coefficient x Rainfall Intensity x Area

Look up value for i in Table D-2c (Rainfall Intensity): 0.18 i

Obtain A_{AT} from Step 3: 6.63 A_{AT}

Use C = 0.95: 0.95 C

Flow = 0.95 * i * A_{AT}: 1.13 cfs

Table D-2c

Rainfall Intensity			
Roseville	i =	0.20	in/hr
Sacramento	i =	0.18	in/hr
Folsom	i =	0.20	in/hr

Extra area: 9,800 sf — infiltration rate: 5 inches / hr
Added Treatment Flow: 4083 cf/hr — 1.13 cfs — total basin area: 26,400 sf

Step 4b Treatment - Volume-Based (ASCE-WEF)

Calculate water quality volume (Acre-Feet): WQV = Area x Maximized Detention Volume (P_0)

Obtain A from Step 1: 13.44 A — 12 hrs — Specified Draw Down time

Obtain P_0: Maximized Detention Volume from figures E-1 to E-4 in Appendix E of this manual using I_A from Step 2.: 0.24 P_0

Calculate treatment volume (acre-ft):

Treatment volume = A x (P_0 / 12): 0.27 Acre-Feet

Introduction

The proposed Davis Family Warehouse (project) site is located east of Florin Perkins Road, between 23rd Avenue and Jackson Road in the City of Sacramento, California (APNs 061-0150-042, -045, -049 and -054). The project site (approximately 120.52-acres) consists of two undeveloped lots with associated access roads. Surrounding land uses include the GreenWaste Florin Perkins Resource Facility to the north, which is planned to expand into the northern undeveloped land; undeveloped land to the east, which is planned to be developed for residential use (Aspen 1 – New Brighton); light industrial/commercial uses to the south; and light industrial/commercial to the immediate west and a distribution center farther west across Florin Perkins Road. The project area and site plan are presented in Figures 1 and 2. Figure 3 shows the location of the project site relative to the future Aspen 1 – New Brighton development.

The project site is designated Employment Mixed-Use (EMU) by the City of Sacramento 2040 General Plan and zoned Light Industrial. The proposed project would include the development of seven (7) warehouse/office buildings with a gross total of 378,720 sf.

The purposes of this assessment are to quantify the existing noise and vibration environments, identify potential noise and vibration impacts resulting from the project, identify appropriate mitigation measures, and provide a quantitative and qualitative analysis of impacts associated with the project. Specifically, impacts are identified if project-related activities would cause a substantial increase in ambient noise levels at existing sensitive uses in the project vicinity, or if project-generated noise or vibration levels would exceed applicable federal, state, or City of Sacramento standards at nearby existing or future sensitive uses.

Noise and Vibration Fundamentals

Noise

Noise is often described as unwanted sound. Sound is defined as any pressure variation in air that the human ear can detect. If the pressure variations occur frequently enough (at least 20 times per second), they can be heard and are designated as sound. The number of pressure variations per second is called the frequency of sound and is expressed as cycles per second, or Hertz (Hz). Definitions of acoustical terminology are provided in Appendix A.

Measuring sound directly in terms of pressure would require a very large and awkward range of numbers. To avoid this, the decibel scale was devised. The decibel scale uses the hearing threshold (20 micropascals of pressure) as a point of reference, defined as 0 dB. Other sound pressures are then compared to the reference pressure, and the logarithm is taken to keep the numbers in a practical range. The decibel scale allows a million-fold increase in pressure to be expressed as 120 dB. Another useful aspect of the decibel scale is that changes in decibel levels correspond closely to human perception of relative loudness. Noise levels associated with common noise sources are provided in Figure 4.

The perceived loudness of sounds is dependent upon many factors, including sound pressure level and frequency content. However, within the usual range of environmental noise levels,

perception of loudness is relatively predictable and can be approximated by filtering the frequency response of a sound level meter by means of the standardized A-weighting network. There is a strong correlation between A-weighted sound levels (expressed as dBA) and community response to noise. For this reason, the A-weighted sound level has become the standard tool of environmental noise assessment. All noise levels reported in this section are in terms of A-weighted levels.

Community noise is commonly described in terms of the ambient noise level, which is defined as the all-encompassing noise level associated with a given noise environment. A common statistical tool to measure the ambient noise level is the average, or equivalent, sound level (L_{eq}). The L_{eq} is the foundation of the day-night average noise descriptor, DNL (or L_{dn}), and shows very good correlation with community response to noise. The Day-Night Average sound level (DNL) is based upon the average noise level over a 24-hour day, with a +10-decibel weighting applied to noise occurring during nighttime (10:00 p.m. to 7:00 a.m.) hours. The nighttime penalty is based upon the assumption that people react to nighttime noise exposures as though they were twice as loud as daytime exposures. Because DNL represents a 24-hour average, it tends to disguise short-term variations in the noise environment. DNL-based noise standards are commonly used to assess noise impacts associated with traffic, railroad, and aircraft noise sources.

Vibration

Vibration is like noise in that it involves a source, a transmission path, and a receiver. While vibration is related to noise, it differs in that noise is generally considered to be pressure waves transmitted through air, while vibration is usually associated with transmission through the ground or structures. As with noise, vibration consists of amplitude and frequency. A person's response to vibration will depend on their individual sensitivity as well as the amplitude and frequency of the source.

Vibration can be described in terms of acceleration, velocity, or displacement. A common practice is to monitor vibration in terms of velocity in inches per second peak particle velocity (IPS, PPV) or root-mean-square (VdB, RMS). Standards pertaining to perception as well as damage to structures have been developed for vibration in terms of peak particle velocity as well as RMS velocities. As vibrations travel outward from the source, they excite the particles of rock and soil through which they pass and cause them to oscillate. Differences in subsurface geologic conditions and distance from the source of vibration will result in different vibration levels characterized by different frequencies and intensities. In all cases, vibration amplitudes will decrease with increasing distance. The maximum rate, or velocity of particle movement, is the commonly accepted descriptor of the vibration "strength".

Human response to vibration is difficult to quantify. Vibration can be felt or heard well below the levels that produce any damage to structures. The duration of the event influences human response, as does frequency. Generally, as duration and vibration frequency increase, the potential for adverse human response increases.

According to the Transportation and Construction-Induced Vibration Guidance Manual (Caltrans, June 2004), operation of construction equipment and construction techniques generate ground vibration. Traffic traveling on roadways can also be a source of such vibration. At high enough

amplitudes, ground vibration has the potential to damage structures and/or cause cosmetic damage. Ground vibration can also be a source of annoyance to individuals who live or work close to vibration-generating activities. However, traffic rarely generates vibration amplitudes high enough to cause structural or cosmetic damage.

Environmental Setting – Existing Ambient Noise and Vibration Environment

Existing Noise-Sensitive Land Uses in the Project Vicinity

Noise-sensitive land uses are generally defined as locations where people reside or where the presence of unwanted sound could adversely affect the primary intended use of the land. Places where people live, sleep, recreate, worship, and study are generally considered to be sensitive to noise because intrusive noise can be disruptive to these activities.

The project area is surrounded by industrial land uses and land that is currently undeveloped. Industrial land uses are not considered to be noise-sensitive, but rather noise-generating. The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). The project area and nearby land use zoning are shown in Figure 1.

Existing Overall Ambient Noise Environment within the Project Vicinity

The existing ambient noise environment within the project vicinity is defined primarily by noise from traffic on Florin Perkins Road, operations at the GreenWaste Florin Perkins Resource Facility, and by intermittent activities associated with Mather Airport. To generally quantify existing ambient noise environment within the project vicinity, BAC conducted long-term (continuous) ambient noise level surveys March 6th-10th and 13th-15th, 2026, at the two locations shown in Figure 1. Photographs of the noise survey location are provided in Appendix B.

Larson Davis Laboratories (LDL) precision (Type 1) integrating sound level meters were used to complete the noise level measurements. The meters were calibrated immediately before use with an LDL Model CA200 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all specifications of the American National Standards Institute requirements for Type 1 sound level meters (ANSI S1.4). The complete results of the noise surveys are contained in Appendix C in tabular format and graphically in Appendix D and summarized in Table 1.

Table 1
Summary of Long-Term Ambient Noise Survey Results[1]

Site Description[2]	Date	DNL (dB)	Average Measured Hourly Noise Levels (dB)			
			Daytime[3]		Nighttime[4]	
			L_{50}	L_{max}	L_{50}	L_{max}
Site 1: NW project area near Florin Perkins Rd	Friday, March 6, 2026	71	66	77	58	76
	Saturday, March 7, 2026	67	62	76	52	75
	Sunday, March 8, 2026	65	58	76	52	74
	Monday, March 9, 2026	71	64	76	58	74

	Saturday, March 14, 2026	58	46	61	48	66
	Sunday, March 15, 2026	53	45	58	46	56

[1] Detailed summaries of the noise monitoring results are provided in Appendices C and D.
[2] Long-term noise survey locations are shown in Figure 1.
[3] Daytime hours: 7:00 a.m. to 10:00 p.m.
[4] Nighttime hours: 10:00 p.m. to 7:00 a.m.

Source: BAC 2026

As indicated in Table 1, measured existing day-night average noise levels (DNLs) were highest on weekdays. Table 1 data also indicate that average measured hourly noise levels (L_{50} and L_{max}) were generally consistent during the monitoring period (i.e., relatively small range of measured values).

Existing Ambient Vibration Environment within the Project Vicinity

During site visits for noise monitoring equipment deployment and retrieval, existing vibration levels within the project area and immediate project vicinity were imperceptible by BAC field staff. Therefore, the existing vibration environment in the project area and immediate project vicinity is considered to be negligible.

Regulatory Setting

Standards for acceptable noise and vibration exposure in the City of Sacramento are contained within the City's General Plan and /or within the City's Municipal Code. The criteria which were applied to this project are reproduced below.

Federal

Federal Transit Administration (FTA)

Although no standardized criteria have been developed for assessing construction noise impacts, The Federal Transit Administration's *Transit Noise and Vibration Impact Assessment Manual* contains guidance for use in assessing potential noise associated with project construction.

Where local noise ordinances provide guidance with respect to construction noise, they typically relate to nuisance and hours of allowed activity, and sometimes specify limits in terms of maximum levels, but are generally not practical for assessing the impact of a construction project. The following guidelines can be considered reasonable criteria for assessment: construction noise levels of 90 dBA L_{eq} and 80 dBA L_{eq}[1] at residential land uses during daytime and nighttime hours, respectively. If these criteria are exceeded, there may be adverse community reaction.

Federal Interagency Commission on Noise (FICON)

The City of Sacramento does not currently have adopted policies for assessing the potential for noise impacts associated with increases in ambient noise levels from project-generated off-site traffic. As a result, criteria developed by the Federal Interagency Commission on Noise (FICON) was utilized in this assessment. Specifically, FICON has developed a graduated scale for use in the assessment of project-related noise level increases. The criteria shown in Table 2 were developed by FICON as a means of developing thresholds for impact identification for project-related noise level increases. The FICON standards have been used extensively in the preparation of the noise sections of Environmental Impact Reports that have been certified in many California cities and counties, including the City of Sacramento.

The use of the FICON standards is considered conservative relative to thresholds used by other agencies in the State of California. For example, the California Department of Transportation (Caltrans) requires a project-related traffic noise level increase of 12 dB for a finding of significance, and the California Energy Commission (CEC) considers project-related noise level increases between 5 to 10 dB significant, depending on local factors. Therefore, the use of the FICON standards, which set the threshold for finding of significant noise impacts as low as 1.5 dB, provides a very conservative approach to impact assessment for this project.

Table 2
Significance of Changes in Cumulative Noise Exposure

Ambient Noise Level (DNL) Without Project	Change in Ambient Noise Level (DNL) Due to Project
<60 dB	+5.0 dB or more
60 to 65 dB	+3.0 dB or more
>65 dB	+1.5 dB or more

Source: Federal Interagency Committee on Noise (FICON)

Based on the FICON research, as shown in Table 2, a 5 dB DNL increase in noise levels due to a project is required for a finding of significant noise impact where ambient noise levels without the project are less than 60 dB DNL. Where pre-project ambient conditions are between 60 dB DNL and 65 dB DNL, a 3 dB DNL increase is applied as the standard of significance (Table 2). Finally, in areas already exposed to higher noise levels, specifically pre-project noise levels

[1] Table 7-2 of the *Transit Noise and Vibration Impact Assessment Manual* (FTA Report No. 0123, September 2018)

greater than 65 dB DNL, a 1.5 dB DNL increase is considered by FICON as the threshold of significance (Table 2).

Federal Transit Administration (FTA)

Policy ERC-10.5 of the Sacramento 2040 General Plan requires construction projects to comply with applicable vibration criteria for residential and commercial uses developed by the Federal Transit Administration (FTA). The FTA criteria applicable to damage typically associated with construction activities are presented in Table 3.

Table 3
FTA Criteria for Assessing Vibration Damage to Structures

Building Category	Level (VdB)[1]
I. Reinforced-concrete, steel or timber (no plaster)	102
II. Engineered concrete and masonry (no plaster)	98
III. Non-engineered timber and masonry buildings	94
IV. Buildings extremely susceptible to vibration damage	90

[1] RMS velocity in decibels (VdB) re 1 micro-inch/second

Source: 2018 FTA Noise and Vibration Manual, Table 12-3

State of California

California Environmental Quality Act (CEQA)

The State of California has established regulatory criteria that are applicable to this assessment. Specifically, Appendix G of the State of California Environmental Quality Act (CEQA) Guidelines are used to assess the potential significance of impacts pursuant to local General Plan policies, Municipal Code standards, or the applicable standards of other agencies. According to Appendix G of the CEQA guidelines, the project would result in a significant noise or vibration impact if the following occur:

A. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or other applicable standards of other agencies.

B. Generation of excessive groundborne vibration or groundborne noise levels.

C. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, the project would expose people residing or working in the project area to excessive noise levels.

It should be noted that audibility is not a test of significance according to CEQA. If this were the case, any project which added any audible amount of noise to the environment would be considered significant according to CEQA. Because every physical process creates noise, the

use of audibility alone as significance criteria would be unworkable. CEQA requires a substantial increase in noise levels before noise impacts are identified, not simply an audible change.

It should be noted that the closest airport to the project area has been identified as Sacramento Mather Airport, located approximately 3.5 miles east of the project area. After review of Figure 1-2 of the Mather Airport Land Use Compatibility Plan Update, it was determined that the project area is not located within any of the Airport's Influence Areas. Additionally, based on information contained in the Noise Policy Map of the Land Use Compatibility Plan (Figure 4-1), the project site has been determined to be located well outside of the Airport's 60 dB CNEL contours. Because the project area is not within the vicinity of a private airstrip, an airport land use plan, or within two miles of a public airport, the last threshold listed above (criterion C) is not relevant and is not discussed further as there would be no potential for airport-related impacts associated with the project.

Local

Sacramento 2040 General Plan

The Environmental Resources and Constraints Element of the Sacramento 2040 General Plan contains the City's noise- and vibration-related policies. Specific policies of relevance to this assessment are reproduced below.

ERC-10.1 **Exterior Noise Standards.** The City shall require noise mitigation for all development where the noise mitigation for all development where the projected exterior noise levels exceed those shown in Table ERC-1, to the extent feasible.

ERC-10.3 **Interior Noise Standards.** The City shall require new development to include noise attenuation to assure acceptable interior noise levels appropriate to the land use, as follows:

- 45 dBA DNL for residential, transient lodgings, hospitals, nursing homes, and other uses where people normally sleep; and
- 45 dB L_{eq} (peak hour with windows closed) for office buildings and similar uses.

ERC-10.4 **Interior Noise Review for Multiple, Loud, Short-Term Events.** In cases where new development is proposed in areas subject to frequent, high-noise events (such as aircraft overflights, or train and truck passbys), the City shall evaluate interior noise impacts at proposed sensitive receptors. The evaluation shall incorporate measures necessary to meet the 45 dBA DNL standard.

ERC-10.5 **Interior Vibration Standards.** The City shall require construction projects that are anticipated to generate significant vibration levels to use appropriate methods (i.e., type of equipment, low-impact tools, modifying operations, increasing setback distance, vibration monitoring) to ensure acceptable interior vibration levels at nearby residential and commercial uses based on the current City or Federal Transit Administration (FTA) criteria.

ERC-10.9 Construction Noise Controls. The City shall limit the potential noise impacts of construction activities on surrounding land uses through noise regulations in the City Code that address permitted days and hours of construction equipment, and sound attenuation devices.

Sacramento Municipal Code

The provisions of the Sacramento Municipal Code of relevance to this assessment are reproduced below.

8.68.060 Exterior noise standards.

A. The following noise standards unless otherwise specifically indicated in this article shall apply to all agricultural and residential properties.

1. From 7:00 a.m. to 10:00 p.m. the exterior noise standard shall be 55 dBA.
2. From 10:00 p.m. to 7:00 a.m. the exterior noise standard shall be 50 dBA.

B. It is unlawful for any person at any location to create any noise which causes noise levels when measured on agricultural or residential property to exceed for the duration of time set forth following, the specified exterior noise standards in any one hour by:

Cumulative Duration of Sound	Noise Level Descriptor*	Allowance Decibels
Cumulative period of 30 minutes per hour	L_{50}	0
Cumulative period of 15 minutes per hour	L_{25}	+5
Cumulative period of 5 minutes per hour	L_{8}	+10
Cumulative period of 1 minutes per hour	L_{2}	+15
Level not to be exceeded for any time per hour	L_{max}	+20
*Added column by BAC		

C. Each of the noise limits specified in subsection B of this section shall be reduced by 5 dBA for impulsive or simple tone noises, or for noises consisting of speech or music.

D. If the ambient noise level exceeds that permitted by any of the first four noise limit categories specified in subsection B of this section, the allowable noise limit shall be increased in 5 dBA increments in each category to encompass the ambient noise level. If the ambient noise level exceeds the fifth noise limit category, the maximum ambient noise level shall be the noise limit for that category.

8.68.080 Exemptions.

The following activities shall be exempted from the provisions of this chapter:

A. Noise sources due to the erection (including excavation), demolition, alteration or repair of any building or structure between the hours of 7:00 a.m. and 6:00 p.m. on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday, and between 9:00 a.m. to 6:00

p.m. on Sunday; provided, however, that the operation of an internal combustion engine shall not be exempt pursuant to this subsection if such engine is not equipped with suitable exhaust and intake silencers which are in good working order. The director of building inspections may permit work to be done during the hours not exempted by this subsection in the case of urgent necessity and in the interest of public health and welfare for a period not to exceed three days. Application for this exemption may be made in conjunction with the application for the work permit or during progress of the work.

Impact Analysis

Thresholds of Significance

Based on CEQA guidelines and adopted City of Sacramento General Plan and Municipal Code noise standards, noise and vibration impacts at sensitive areas of existing uses in the project vicinity are considered significant if the following were to result from the project:

- Increases in exterior ambient noise levels resulting from project-generated off-site traffic of 5 dBA DNL or more where baseline (no project) ambient conditions at existing sensitive land uses are less than 60 dBA DNL (Table 2 FICON criteria).
- Increases in exterior ambient noise levels resulting from project-generated off-site traffic of 3 dBA DNL or more where baseline (no project) ambient conditions at existing sensitive land uses are between 60 dBA DNL and 65 dB DNL (Table 2 FICON criteria).
- Increases in exterior ambient noise levels resulting from project-generated off-site traffic of 1.5 dBA DNL or more where baseline (no project) ambient conditions at existing sensitive land uses exceed 65 dB DNL (Table 2 FICON criteria).
- In terms of determining the temporary noise increase due to project on-site operations at existing sensitive land uses, an impact would occur if those activities would noticeably increase ambient noise levels above background levels at those locations. The threshold of perception of the human ear is approximately 3 to 5 dB – a 5 dB change is considered to be clearly noticeable. For the analysis of project on-site operations noise level increases at existing sensitive land uses, a noticeable increase in ambient noise levels is assumed to occur where those activities would result in an increase by 5 dB or more over existing ambient noise levels.
- On-site operations noise levels exceeding Municipal Code Section 8.68.060 exterior noise level limits at sensitive land uses.
- Construction noise levels exceeding the FTA reasonable noise impact assessment criterion of 90 dBA L_{eq} during daytime hours and 80 dBA L_{eq} during nighttime hours at existing sensitive land uses.
- Vibration levels associated with project construction exceeding established FTA criteria for assessing vibration damage to structures (Table 3).

Impact 1: Increases in Existing Off-Site Traffic Noise Levels due to the Project

According to the project site plans, the project proposes two access points: one off Florin Perkins Road on the west end of the site, and one at the terminus of Warehouse Way in a new cul-de-sac on the south end of the site. The Warehouse Way cul-de-sac will be accessed via 23rd Avenue, which connects to Florin Perkins Road. Based on this information, the greatest impact from project-generated off-site traffic is expected to along Florin Perkins Road and 23rd Avenue/Warehouse Way cul-de-sac. The project site access points and identified roadways are shown in Figures 1 and 2.

To assess noise impacts due to project-related traffic increases on the identified roadways, BAC utilized trip generation forecasts contained in a technical memorandum prepared by the project's transportation consultant, Kittelson & Associates (*3901 Florin Perkins Road Traffic Impact Study – Draft Trip Generation Memorandum, dated February 2, 2026*) with the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA-RD-77-108). The FHWA Model was used in conjunction with the CALVENO reference noise emission curves, and accounts for vehicle volume and speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the project vicinity, and is generally considered to be accurate within 1.5 dB if the input variables are properly accounted for. The FHWA Model was developed to predict hourly L_{eq} values for free-flowing traffic conditions. To calculate a day-night average (DNL), average daily traffic (ADT) volume data is manipulated based on the assumed day/night distribution of traffic.

Trip generation forecasts prepared by Kittelson & Associates indicate that the project is estimated to generate 1,198 weekday daily vehicle trips, with 9% of those daily trips (109) attributed to trucks. For this analysis, it was conservatively assumed that all project trips could occur on either Florin Perkins Road or 23rd Avenue. However, it is more likely that project trips would be more evenly distributed between the two roadways. Based on the cited daily trip generation estimates, assuming a 50%/50% day/night trip distribution and given a vehicle speed of 45 mph (posted), project-generated traffic noise level exposure is predicted to be approximately 65 dB DNL at a distance of 50 feet from the centerline of Florin Perkins Road. Given the same information above and a vehicle speed of 30 mph (posted), project-generated traffic noise level exposure is predicted to be approximately 64 dB DNL at a distance of 50 feet from the centerline of 23rd Avenue. Complete listings of FHWA Model inputs and predicted project-generated traffic noise levels for the roadways are provided in Appendices E-1 and E-2 of this report.

According to existing (2026) traffic count data provided by the City of Sacramento, the segment of Florin Perkins Road located within the project vicinity (Folsom Boulevard to Fruitridge Road) currently experiences an average daily traffic (ADT) volume of approximately 21,094 vehicles (calculated average over a 3-day monitoring period). Given an ADT of 21,094 vehicles, medium truck/heavy truck percentages of 5%/5% (assumption based on existing land uses along roadway – industrial and commercial), a day/night trip distribution of 72%/25%, and a vehicle speed of 45 mph (posted), existing day-night average noise level exposure computes to approximately 74 dB DNL at a distance of 50 feet from the centerline of Florin Perkins Road. According to the same traffic count data, 23rd Avenue (from Florin Perkins Road to Warehouse Way) currently experiences an average daily traffic (ADT) volume of approximately 2,940 vehicles (calculated

average over a 3-day monitoring period). Given an ADT of 2,940 vehicles, medium truck/heavy truck percentages of 5%/5% (assumption based on existing land uses along roadway – industrial and commercial), a day/night trip distribution of 75%/25%, and a vehicle speed of 30 mph (posted), existing day-night average noise level exposure computes to approximately 64 dB DNL at a distance of 50 feet from the centerline of 23rd Avenue. Complete listings of FHWA Model inputs and predicted existing traffic noise levels for the roadways are provided in Appendices E-3 and E-4 of this report.

Based on the FICON criteria shown in Table 2, a 5 dB DNL increase in noise levels due to a project is required for a finding of significant noise impact where ambient noise levels without the project are less than 60 dB DNL. Where pre-project ambient conditions are between 60 dB DNL and 65 dB DNL, a 3 dB DNL increase is applied as the standard of significance (Table 2). In areas already exposed to higher noise levels, specifically pre-project noise levels in excess of 65 dB DNL, a 1.5 dB DNL increase is considered by FICON as the threshold of significance (Table 2). A significant impact would only be identified where the project-generated traffic noise level increase would exceed the applicable FICON significance thresholds and where sensitive land uses are present along the roadway segment.

Given a computed existing (pre-project) traffic noise level of approximately 74 dB DNL, and a predicted project-generated off-site traffic noise level of approximately 65 dB DNL, the project-related increase in traffic noise levels along Florin Perkins Road is calculated to be 0.5 dB DNL at 50 feet from the centerline of the roadway. Given a computed existing (pre-project) traffic noise level of approximately 64 dB DNL, and a predicted project-generated off-site traffic noise level of approximately 64 dB DNL, the project-related increase in traffic noise levels along 23rd Avenue is calculated to be 2.9 dB DNL at 50 feet from the centerline of the roadway. Project-related increases in traffic noise levels ranging from 0.5 dB DNL to 2.9 dB DNL would satisfy the applicable FICON criteria. It should be noted that existing noise-sensitive uses were not identified within 50 feet from the centerline of either Florin Perkins Road or 23rd Avenue within the project vicinity.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Off-Site Noise Impacts Associated with Project On-Site Operations

The proposed project includes the construction of seven (7) warehouse buildings – identified as Buildings 1-7. According to the provided site plans, all the proposed buildings will have parking areas and loading docks. Figure 2 shows the locations of the proposed buildings, loading docks and parking areas.

Noise generated by trucks arriving and departing the site (i.e., on-site truck circulation), backing into the loading bays/docks, and trailer coupling/decoupling have been identified as primary noise sources associated with the project. Once the trucks are docked at the loading bays, they will be loaded and unloaded from within the building, so no outside loading/unloading activities would occur, and noise generated by such activities would be contained within the building. Other primary noise sources associated with the project have been identified as on-site passenger vehicle circulation and building rooftop mechanical equipment (HVAC). However, it is the

experience of BAC in similar industrial warehouse projects that mechanical equipment (HVAC) noise would either be housed in equipment rooms or located on the roof of the building and shielded by screen walls (parapets).

As mentioned previously, the closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile (approximately 2,800 feet) to the north off Jackson Road. Given the large setback, project on-site operations noise levels are expected to be well below City of Sacramento noise level limits for residential land uses at those locations. As a result, the following impact discussions of project on-site operations noise focus on compliance with the City's noise level limits at the future noise-sensitive land uses proposed within the adjacent Aspen 1 – New Brighton development to the east.

Figure 3 shows the project site and proposed locations of land uses within the Aspen 1 – New Brighton development. As shown in Figure 3 of this report, the project site would be located adjacent to land designated for Parks within the Aspen 1 – New Brighton development. Section 8.68.060(B) of the Sacramento Municipal Code states that the City's noise level limits are applicable to agricultural or residential properties. Based on the information above, the City's exterior noise level limits were applied to on-site operations and assessed at the closest areas designated for residential land use within the Aspen 1 development. Satisfaction with the City's noise level limits at the closest future residential land uses of the Aspen 1 development would ensure compliance at more distant residential land uses within the development.

Noise generated by those operations were quantified through a combination of reference noise level data and application of accepted noise modeling techniques. This section includes impact discussions for each of the above-identified on-site project noise sources, presented as Impacts 2 through 5, then followed by Impact 6 which presents predicted combined noise levels associated with the combination of each of the project's various noise sources.

Impact 2: On-Site Truck Circulation Noise Generation

The project proposes two access points: one off Florin Perkins Road on the west end of the site, and one at the terminus of Warehouse Way in a new cul-de-sac on the south end of the site. The Warehouse Way cul-de-sac will be accessed via 23rd Avenue, which connects to Florin Perkins Road. The project site access points and proposed on-site truck circulation route are shown in Figure 2.

Heavy truck arrivals and departures, and on-site truck circulation, will occur at low speeds. To quantify the noise generation of slow moving trucks, BAC utilized single-event passby noise test results for slow-moving heavy trucks conducted at the West El Camino truck stop in Sacramento, California. The passby measurements were conducted at a reference distance of 50 feet at a location suitable for isolation of individual passby events. During the truck passbys, Larson-Davis Laboratories Model 820 and 2900 sound level meters and frequency analyzers were used to quantify noise levels and event frequency content for each event. The results of the heavy truck measurements in terms of Sound Exposure Level (SEL) ranged from 77 dB SEL to 85 dB SEL, with a mean of 83 dB SEL. Because on-site heavy truck circulation could occur throughout the

course of an hour (i.e., in excess of 30 minutes), the applicable noise level descriptor for on-site truck circulation would be the median noise level metric (L_{50}).

According to the traffic impact study, the project is estimated to generate 109 total weekday daily truck trips, with 10 weekday AM peak hour trips and 17 weekday PM peak hours trips. For this analysis, it was conservatively assumed that the project could generate 17 truck trips during a given worst-case busy weekday daytime or nighttime hour. Given 17 truck trips per hour, and an SEL of 83 dB per passby (conservatively assuming they would all be heavy trucks), the hourly average noise level generated by on-site truck circulation computes to 60 dB L_{eq} at a reference distance of 50 feet from the truck route.

Based on the truck trip generation data and worst case busy hour assumptions above, project on-site truck circulation noise exposure at the closest residential land use designation areas of the future Aspen 1 – New Brighton development was calculated, and the results of those calculations are presented in Table 4.

Table 4
Predicted On-Site Truck Circulation Noise at Sensitive Uses of Aspen 1 – New Brighton

Land Use[1]	Distance (ft)[2]	Predicted Noise Level, L_{50} (dB)[3]	City Noise Standard, L_{50} (dB)	
			Daytime	Nighttime
Residential Mixed-Use	1,000	40	**55**	**50**
Low Density Residential	1,150	39		

[1] Location of future land use designation areas are shown in Figure 3.
[2] Distance scaled from closest on-site truck circulation lane/route to closest residentially designated areas of Aspen 1 using provided site plan, approved Aspen 1 land use plan map, and Google Earth.
[3] Predicted worst-case hourly noise level based on peak hour trip generation data contained in traffic study.

Source: BAC 2026

As indicated in Table 4, worst-case project on-site truck circulation noise levels are predicted to satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas proposed within the Aspen 1 – New Brighton development.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). Given the large setback, project on-site truck circulation noise levels are expected to be below existing ambient noise conditions at those locations. As a result, project-generated increases in ambient noise levels are expected to be below 5 dB at those closest identified existing noise-sensitive land uses located one mile away.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Impact 3: Heavy Truck Backing and Trailer Coupling/Decoupling Noise Generation

In addition to noise generated by on-site truck circulation, noise will also be generated during brief periods of trucks backing into loading bays (backup beepers) and trailer coupling/decoupling at

the warehouse buildings. It is reasonably assumed that heavy trucks would not be permitted to idle while on-site, and that refrigerator trucks (if applicable) would be plugged into loading bay power. Figure 2 shows the locations of the proposed warehouse building loading/unloading bays.

To quantify the noise generated by backup warning devices and trailer coupling/decoupling, BAC conducted noise level measurements of a similar warehouse/distribution facility in Patterson California over a 46-hour period beginning Wednesday, August 26, 2015. Figure 5 (below) shows a photograph of the noise measurement position and adjacent truck distribution facility.

Figure 5
Patterson Truck Distribution Facility Noise Monitoring Location

The noise level results from the Patterson facility indicate that average measured hourly noise levels for the entire monitoring period were 54 dB L_{eq} at 100 feet from the effective noise center of the truck backing, coupling and decoupling area. Because on-site heavy truck backing and coupling could occur throughout the course of an hour (i.e., in excess of 30 minutes), the applicable noise level descriptor for on-site truck backing and coupling would be the median noise level metric (L_{50}).

Based on the cited BAC measurement data, project truck backing and coupling/decoupling noise exposure at the closest residential land use designation areas of the future Aspen 1 development was calculated, and the results of those calculations are presented in Table 5.

Table 5
Predicted Truck Backing and Trailer Coupling/Decoupling Noise at Sensitive Uses of Aspen 1

Land Use[1]	Distance (ft)[2]	Predicted Noise Level, L_{50} (dB)[3]	City Noise Standard, L_{50} (dB)	
			Daytime	Nighttime
Residential Mixed-Use	885	35	**55**	**50**
Low Density Residential	1,100	33		

[1] Location of future land use designation areas are shown in Figure 3.
[2] Distance scaled from the effective noise center of the closest proposed loading docks (Building 1) to closest residentially designated areas of Aspen 1 using provided site plan, approved Aspen 1 land use plan map, and Google Earth.
[3] Predicted hourly noise level based on BAC measurement data.

Source: BAC 2026

Table 5 data indicate that project truck loading dock activity noise levels are predicted to satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas proposed within the Aspen 1 – New Brighton development.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). Given the large setback, project loading dock activity noise levels are expected to be below existing ambient noise conditions at those locations. As a result, project-generated increases in ambient noise levels are expected to be below 5 dB at those closest identified existing noise-sensitive land uses located one mile away.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Impact 4: On-Site Passenger Vehicle Circulation Noise Generation

To quantify project on-site passenger vehicle circulation noise exposure, BAC utilized the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA-RD-77-108) with trip generation forecasts contained in a technical memorandum prepared by the project's transportation consultant, Kittelson & Associates (*3901 Florin Perkins Road Traffic Impact Study – Draft Trip Generation Memorandum, dated February 2, 2026*). The FHWA Model was developed to predict hourly L_{eq} values for free-flowing traffic conditions and is considered to be accurate within 1.5 dB in most situations.

Because on-site passenger vehicle circulation could occur throughout the course of an hour (i.e., in excess of 30 minutes), the applicable noise level descriptor for on-site passenger vehicle circulation would be the median noise level metric (L_{50}). To quantify project on-site passenger vehicle circulation noise relative to the City's median noise level metric (L_{50}), it is necessary to identify the number of vehicle movements occurring during a typical busy hour of operations. According to the traffic impact study, the project is estimated to generate 1,198 total weekday daily passenger vehicle trips, including 214 weekday AM peak hour trips and 218 weekday PM peak hours trips. For this analysis, it was conservatively assumed that the project could generate 218 vehicle trips during a given worst-case busy weekday daytime or nighttime hour. It was further conservatively assumed that all those hourly vehicle trips could occur in the closest on-site vehicle

circulation route/lane to a sensitive receiver location. However, it is more likely that those vehicle trips would be more evenly distributed within the project area.

Based on the vehicle trip generation data and worst case busy hour assumptions above, project on-site passenger vehicle circulation noise exposure at the closest residential land use designation areas of the future Aspen 1 – New Brighton development was calculated, and the results of those calculations are presented in Table 6.

Table 6
Predicted On-Site Passenger Vehicle Noise at Sensitive Uses of Aspen 1 – New Brighton

Land Use[1]	Distance (ft)[2]	Predicted Noise Level, L_{50} (dB)[3]	City Noise Standard, L_{50} (dB)	
			Daytime	Nighttime
Residential Mixed-Use	730	29	**55**	**50**
Low Density Residential	950	27		

[1] Location of future land use designation areas are shown in Figure 3.
[2] Distance scaled from closest on-site passenger vehicle circulation lane/route to closest residentially designated areas of Aspen 1 using provided site plan, approved Aspen 1 land use plan map, and Google Earth.
[3] Predicted worst-case hourly noise level based on peak hour trip generation data contained in traffic study.

Source: BAC 2026

As shown in Table 6, worst-case project on-site passenger vehicle circulation noise levels are predicted to satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas proposed within the Aspen 1 – New Brighton development.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). Given the large setback, project on-site passenger vehicle circulation noise levels are expected to be below existing ambient noise conditions at those locations. As a result, project-generated increases in ambient noise levels are expected to be below 5 dB at those closest identified existing noise-sensitive land uses located one mile away.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Impact 5: Rooftop Mechanical Equipment (HVAC) Noise Generation

Heating, ventilating, and air conditioning (HVAC) requirements for the proposed warehouse office buildings will most likely be met using packaged roof-mounted systems. As a means of determining potential noise exposure due to rooftop mechanical equipment, BAC utilized reference file data collected for previous studies. BAC reference file data for HVAC systems indicate that a 12.5-ton packaged unit can be expected to generate an A-weighted sound power level of 85 dB. The locations of the proposed project buildings are shown in Figure 2.

Because mechanical equipment operation typically generates sustained, steady-state noise levels, the applicable noise level descriptor for HVAC equipment would be the median noise level metric (L_{50}). Using the sound power data cited above, project HVAC equipment noise level

exposure at the closest residential land use designation areas of the future Aspen 1 development was calculated, and the results of those calculations are presented in Table 7.

Table 7
Predicted Rooftop Mechanical Equipment Noise at Sensitive Uses of Aspen 1 – New Brighton

Land Use[1]	Distance (ft)[2]	Predicted Noise Level, L_{50} (dB)[3]	City Noise Standard, L_{50} (dB)	
			Daytime	Nighttime
Residential Mixed-Use	800	27	**55**	**50**
Low Density Residential	1,050	25		

[1] Location of future land use designation areas are shown in Figure 3.
[2] Distance scaled from exterior facade of closest proposed building (Building 1) to closest residentially designated areas of Aspen 1 using provided site plan, approved Aspen 1 land use plan map, and Google Earth.
[3] Predicted worst-case hourly noise level based BAC measurement data.

Source: BAC 2026

Table 7 data indicate that project HVAC equipment noise levels are predicted to satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas proposed within the Aspen 1 – New Brighton development.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). Given the large setback, project HVAC equipment noise levels are expected to be below existing ambient noise conditions at those locations. As a result, project-generated increases in ambient noise levels are expected to be below 5 dB at those closest identified existing noise-sensitive land uses located one mile away.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Impact 6: Combined On-Site Operations Noise Generation

Calculated combined noise levels from analyzed on-site operations at the closest residential land use designation areas of the future Aspen 1 – New Brighton development are presented in Table 8. It should be noted that due to the logarithmic nature of the decibel scale, the sum of two noise values which differ by 10 dB equates to an overall increase in noise levels of 0.4 dB. When the noise sources are equivalent, the sum would result in an overall increase in noise levels of 3 dB.

Table 8
Calculated Combined On-Site Operations Noise at Sensitive Uses of Aspen 1 – New Brighton

	Predicted On-Site Operations Noise Level, L_{50} (dB)[1]					City Noise Standard, L_{50} (dB)	
Land Use	Vehicle Circ.	Truck Circ.	Loading Docks	HVAC	Combined, L_{50} (dB)[2]	Daytime	Nighttime
Residential Mixed Use	29	40	35	27	42	**55**	**50**
Low Density Residential	27	39	33	25	41		

[1] Predicted operations noise levels presented in Impacts 2-4.
[2] Calculated combined noise level exposure from analyzed on-site operations noise sources.

Source: BAC 2026

As shown in Table 8, combined project on-site operations noise levels are calculated to comply with the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas proposed within the Aspen 1 – New Brighton development.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile to the north (8550 Jackson Road). Given the large setback, noise levels from combined on-site operations are expected to be below existing ambient noise conditions at those locations. As a result, project-generated increases in ambient noise levels are expected to be below 5 dB at those closest identified existing noise-sensitive land uses located one mile away.

Based on the analysis provided above, this impact is identified as being ***less than significant***.

Noise Impacts Associated with Project Construction Activities

Impact 7: Project Construction Activities Noise

During project construction, heavy equipment would be used for grading, excavation, paving and building construction. These activities would increase ambient noise levels in the immediate project vicinity. Construction noise levels generated at the project site would vary depending on the type and amount of equipment in use at any time, the location where that equipment is operating, and how well the equipment is maintained. Noise exposure at existing sensitive receptors would also vary depending on the proximity of equipment activities to the receptor, the degree of shielding present between the construction equipment and receptor (e.g., soundwalls, intervening topography, atmospheric absorption, ground attenuation, etc.).

Table 9 includes the range of maximum noise levels for equipment commonly used in general construction projects at full-power operation at 50 feet. It should be noted that not all the construction equipment/activities identified in Table 9 would be required of this project.

Table 9
Maximum Reference Noise Levels for Common Construction Equipment

Equipment Description	Maximum Noise Level at 50 Feet (dBA)

Source: 2018 Federal Transit Administration Noise and Vibration Impact Assessment Manual, Table 7-1

As noted in the Regulatory Setting section of this report, Section 8.68.080.A. of the Sacramento Municipal Code exempts noise associated with the erection (including excavation), demolition, alteration or repair of any building or structure between the hours of 7:00 a.m. and 6:00 p.m. on Monday, Tuesday, Wednesday, Thursday, Friday and Saturday, and between the hours of 9:00 a.m. to 6:00 p.m. on Sunday provided that the operation of an internal combustion engine shall not be exempt pursuant to this subsection if such engine is not equipped with suitable exhaust and intake silencers in good working order. It is reasonably assumed for the purpose of this analysis that on-site project construction activities would be performed in compliance with Municipal Code Section 8.68.080.A. Therefore, noise associated with project on-site construction equipment and activities would be exempt from compliance with Sacramento Municipal Code noise level standards. Although Municipal Code Section 8.68.080.A would exempt on-site project construction noise, the following section includes an analysis of project construction noise relative to compliance with Federal Transit Administration (FTA) noise level criteria for guidance in the assessment of construction noise.

The closest existing noise-sensitive use to the project area has been identified as a single-family residence located approximately one ½ mile, or approximately 2,800 feet, to the north (8550 Jackson Road). The closest future noise-sensitive uses to the project area, identified as an area designated for Residential Mixed Use within the Aspen 1 development, is located approximately

750 feet to the east. The distances from these existing and future noise-sensitive receptor locations to the most significant sources of on-site construction would vary depending on the phase of construction. For a general assessment of potential construction noise impacts, the FTA recommends utilizing the noise emission levels shown in Table 9, adjusting those levels for the percentage of the hour the equipment would be operating, correcting for distance by assuming mobile equipment operates at the center of the project, and considering ground effects where appropriate.

For this project, there will be periods of time when the construction equipment is located closer to noise-sensitive uses than the effective center of the project site, so calculating construction noise from the center of the site is not considered appropriate for this evaluation. However, because the noisiest construction equipment tends to be mobile (i.e. earthmoving equipment), calculating construction noise levels using the closest point of construction activity to the noise-sensitive uses is also not considered appropriate. For this evaluation, distances of 2,900 feet (8550 Jackson Road) and 850 feet (Aspen 1 Residential Mixed Use) were conservatively assumed for the construction noise evaluation. After correction for usage and multiple equipment operating concurrently, project construction noise was calculated using the Federal Highway Administration's Roadway Construction Noise Model (RCNM) to be approximately 49 dBA L_{eq}/L_{50} at a distance of 2,900 feet (8550 Jackson Road) and 60 L_{eq}/L_{50} at a distance of 850 feet (Aspen 1 Residential Mixed Use). The RCNM analysis conservatively assumes concurrent, combined operations of a dozer, front loader, compactor, backhoe, and grader at the receiver distances.

As outlined in the Regulatory Setting of this assessment, the FTA establishes noise level limits of 90 dB L_{eq} during daytime hours and 80 dB L_{eq} during nighttime hours for residential uses affected by construction projects. The estimated construction noise levels of 49 dBA L_{eq}/L_{50} and 60 dBA L_{eq}/L_{50} at the closest identified existing and future noise-sensitive receptors would be well below FTA noise standards during both daytime and nighttime hours. It should be noted that Section 8.68.080 of the Sacramento Municipal Code exempts construction activities from compliance with applicable City noise standards provided those activities occur between the hours of 7:00 a.m. and 6:00 p.m., Monday through Saturday, and between 9:00 a.m. and 6:00 p.m. on Sunday.

Based on the analysis above, project on-site construction activities are not expected to result in a noise impact (i.e., adverse community reaction) at the closest identified existing or future noise-sensitive receptors as defined by federal criteria (FTA). Nonetheless, to reduce the potential for annoyance, the following measures should be incorporated into project on-site construction operations:

- All on-site project construction activities shall occur pursuant to the hours and days exempted by Sacramento Municipal Code Section 8.68.080, and/or hours and days required by the City of Sacramento.
- The project should utilize temporary construction noise control measures including the use of temporary noise barriers, or other appropriate measures as mitigation for noise generated during construction of projects.
- All noise-producing project equipment and vehicles using internal-combustion engines should be equipped with manufacturers-recommended mufflers and be maintained in good working condition.

- All mobile or fixed noise-producing equipment used on the project site that are regulated for noise output by a federal, state, or local agency should comply with such regulations while in the course of project activity.
- Electrically powered equipment should be used instead of pneumatic or internal-combustion-powered equipment, where feasible.
- Material stockpiles and mobile equipment staging, parking, and maintenance areas should be located as far as practicable from noise-sensitive receptors.
- Project area and site access road speed limits should be established and enforced during the construction period.

Vibration Impacts Associated with Project Activities

Impact 8: Vibration Generated by On-Site Project Construction & Operations

During project construction, heavy equipment would be used for grading, excavation, paving, and building construction, which would generate localized vibration in the immediate vicinity of the construction. Policy ERC-10.5 of the Sacramento 2040 General Plan requires all construction projects that are anticipated to generate significant vibration levels to use appropriate methods (i.e., type of equipment, low-impact tools, modifying operations, increasing setback distance, vibration monitoring) to ensure acceptable interior vibration levels at nearby residential and commercial uses based on the current City or Federal Transit Administration (FTA) criteria.

The closest existing off-site structures to the project area have been identified as industrial warehouse buildings located to the south and west. Although the construction-related vibration criteria contained in General Plan Policy ERC-10.5 do not pertain to industrial uses (i.e., residential and commercial uses only), an analysis of project construction vibration levels at the nearby warehouse buildings was nonetheless conducted. Table 10 includes the range of vibration levels for equipment commonly used in general residential construction projects at 25 feet. Table 10 data also include projected construction equipment vibration levels at the nearest existing off-site structures to the project area located approximately 50 feet away (industrial warehouse buildings to the south and west).

Table 10
Reference and Projected Vibration Source Amplitudes for Construction Equipment

Equipment	Reference Maximum Vibration Level at 25 feet, VdB (rms)	Projected Maximum Vibration Level, VdB (rms)[1] Closest Off-Site Industrial Warehouse Buildings (50 ft)
Vibratory Roller	94	84
Hoe Ram	87	76
Large bulldozer	87	76
Caisson drilling	87	76
Loaded trucks	86	74
Jackhammer	79	64
Small bulldozer	58	57

[1] RMS velocity in decibels (VdB) re 1 micro-inch/second.

Source: 2018 FTA Transit Noise and Vibration Impact Assessment Manual and BAC calculations

Based on the data presented in Table 10, vibration levels generated from project on-site construction activities are predicted to be well below the FTA threshold for damage to engineered structures (98 VdB) at 25 feet from those activities (Table 3 criterion). Additionally, based on the projected vibration levels presented in Table 10, and given the large setbacks to the closest identified existing and future sensitive uses (residence at 8550 Jackson Road and future Residential Mixed Use area of Aspen 1), project construction vibration levels at those locations are expected to be well below the threshold of human perception (65 VdB).

During site visits for noise monitoring equipment deployment and retrieval, existing vibration levels within the project area and immediate project vicinity were imperceptible by BAC field staff. Therefore, it is expected that the project would not result in the exposure of people to excessive groundborne vibration levels at proposed uses of the development.

Finally, the project proposes industrial/warehouse land uses. While traffic/trucks traveling on roadways are a source of vibration, these sources rarely generate vibration amplitudes high enough to cause structural or cosmetic damage. Further, vibration levels generated by project on-site traffic/truck passbys will be at low speed and are expected to dissipate rapidly with distance. Based on the information above, project on-site operations are not expected to generate appreciable vibration.

Based on the analysis provided above, vibration levels due to and upon the project are expected to be satisfactory relative to the applicable FTA vibration impact criteria for damage to structures.

Noise Impacts Upon the Project

The California Supreme Court issued an opinion in *California Building Industry Association v. Bay Area Air Quality Management District (2015)* holding that CEQA is primarily concerned with the impacts of a project on the environment and generally does not require agencies to analyze the impact of existing conditions on a project's future users or residents. Nevertheless, the City of Sacramento has policies that address existing/future conditions affecting the proposed project, which are discussed in the following section. The following section includes an analysis of future traffic noise exposure within the interior areas of the proposed warehouse offices of the development, and an evaluation of compliance with applicable Sacramento 2040 General Plan interior noise level criteria.

Issue 1: Future Traffic Noise Levels at Proposed Interior Office Areas

Policy ERC-10.3 of the Sacramento 2040 General Plan requires that new development include noise attenuation to assure an interior noise level of 45 dB L_{eq} (peak hour with windows closed) within new office spaces. Standard building construction typically results in an exterior to interior noise reduction of approximately 25 dB with windows closed and approximately 15 dB with windows open. Therefore, provided that future traffic noise levels do not exceed 70 dB L_{eq} at exterior building facades of proposed warehouse buildings with offices, standard construction is expected to be adequate to comply with the General Plan 45 dB L_{eq} interior noise level standard within project office areas. The closest major roadway to the project site is Florin Perkins Road.

The FHWA Traffic Noise Model (FHWA-RD-77-108) was used with existing traffic count data to calculate future Florin Perkins Road traffic noise levels at the project site. Future Florin Perkins Road traffic volumes adjacent to the project site were conservatively assumed to increase by a factor 50% in the future, resulting in a 2 dB increase in traffic noise levels relative to existing conditions. According to existing (2026) traffic count data provided by the City of Sacramento, the segment of Florin Perkins Road adjacent to the project site currently experiences average weekday hourly traffic volumes of 1,932 vehicles during an AM peak hour and 2,028 vehicles during a PM peak hour. Given a worst-case busy peak hour of 2,028 vehicles, medium truck/heavy truck percentages of 5%/5% (assumption based on existing land uses along roadway – industrial and commercial), and a vehicle speed of 45 mph (posted), existing Florin Perkins Road traffic noise level exposure computes to approximately 66 dB L_{eq} at the exterior building facade of the closest proposed warehouse building of the development (Building 7) located approximately 160 from the roadway centerline. Conservatively assuming an increase in traffic volumes of 50%, future Florin Perkins Road traffic noise level exposure at the exterior building facade of Building 7 is calculated to be 2 dB higher than existing exposure, or 68 dB L_{eq}.

Based on the above-identified exterior to interior noise reduction typically achieved with standard building construction, standard construction practices are expected to be adequate to reduce future Florin Perkins Road traffic noise levels to a state of compliance with the General Plan 45 dB L_{eq} interior noise level standard within the closest proposed interior office areas to the roadway (Building 7). Nonetheless, mechanical ventilation (air conditioning) should be provided for all project buildings with offices to allow the occupants to close doors and windows as desired to achieve compliance with the General Plan 45 dB L_{eq} interior noise level criterion.

Conclusion

This report evaluates potential noise and vibration impacts associated with the proposed Davis Family Warehouse project in Sacramento, CA. The assessment concludes that the project would result in less than significant noise and vibration impacts.

Appendix A
Acoustical Terminology

Acoustics The science of sound.

Ambient Noise The distinctive acoustical characteristics of a given space consisting of all noise sources audible at that location. In many cases, the term ambient is used to describe an existing or pre-project condition such as the setting in an environmental noise study.

Attenuation The reduction of an acoustic signal.

A-Weighting A frequency-response adjustment of a sound level meter that conditions the output signal to approximate human auditory response.

Decibel or dB Fundamental unit of sound. A Bell is defined as the logarithm of the ratio of the sound pressure squared over the reference pressure squared.

CNEL Community Noise Equivalent Level. Defined as the 24-hour average noise level with noise occurring during evening hours (7 – 10 p.m.) weighted by a factor of three and nighttime hours weighted by a factor of 10 prior to averaging.

Frequency The measure of the rapidity of alterations of a periodic signal, expressed in cycles per second or hertz.

Impulsive Noise Sound of short duration, usually less than one second with an abrupt onset and rapid decay.

DNL/L_{dn} Day/Night Average Sound Level. Similar to CNEL but with no evening weighting.

L_{eq} Equivalent or energy-averaged sound level.

L_{max} The highest root-mean square (RMS) sound level measured over a given period of time.

Loudness Ratio A subjective term for the sensation of the magnitude of perceived sound.

Masking The amount (or the process) by which the threshold of audibility for one sound is raised by the presence of another (masking) sound.

Noise Unwanted sound.

Peak Noise The level corresponding to the highest (not RMS) sound pressure measured over a given period of time. This term is often confused with the Maximum level, which is the highest RMS level.

RT_{60} The time it takes reverberant sound to decay by 60 dB once the source has been removed.

SEL A rating, in decibels, of a discrete event, such as an aircraft flyover or train passby, that compresses the total sound energy of the event into a 1-s time period.

Threshhold of Hearing The lowest sound that can be perceived by the human auditory system, generally considered to be 0 dB for persons with perfect hearing.

Threshhold of Pain Approximately 120 dB above the threshold of hearing.

RE: 3901 Florin Perkins Road Traffic Impact Study – Trip Generation Memorandum DRAFT

Introduction

Kittelson & Associates, Inc. (Kittelson) prepared this *Trip Generation Memorandum* for the proposed warehouse project at 3901 Florin Perkins Road (hereafter referred to as 'proposed project') in the City of Sacramento, California. This memo documents the project-generated vehicular trip findings and will support the subsequent local transportation analysis conducted for the proposed project.

This memorandum includes a brief description of the proposed project and presents the trip generation methodology and results based on industry standard resources.

PROJECT DESCRIPTION

The project applicant proposes to construct five new concrete panel buildings consistent with the industrial zoning use with warehouse truck dock facilities in the vacant lot located at 3901 Florin Perkins Road in Sacramento, California. Based on the project information provided to Kittelson to date, including the submitted planning entitlement application and site plan, the proposed development consists of approximately 456,848 square feet. This includes the building area across five buildings, warehouse space with ancillary office uses, as well as associated onsite circulation and parking facilities. The project proposes two accesses: one access road connecting the proposed project from Florin Perkins Road and the other at the proposed cul-de-sac at the end of Warehouse Way, south of the project site. The proposed project is designed to accommodate truck activity associated with logistics and industrial operations. The site plan indicates multiple loading dock areas, internal truck circulation areas, and onsite parking, reflecting a development that is expected to generate a substantial proportion of truck trips relative to passenger vehicle trips.

For analysis purposes, consistent with our approved scope of work, one of the five buildings, with an area of approximately 203,000 square feet, is assumed to function as a high-cube warehouse while the remaining four buildings are categorized as general light industrial land use.

Project Travel Demand

TRIP GENERATION

Trip generation is a key consideration for determining local effects of the proposed project on the transportation network. Kittelson used the Trip generation rates published in the *Institute of Transportation Engineers (ITE) Trip Generation Manual, 12th Edition* to estimate the number of trips the proposed project would generate. ITE trip rates are tied to specific land use codes. The ITE land use codes found to be most applicable to the project are:

- High-Cube Transload and Short-Term Storage Warehouse (ITE 154)
- General Light Industrial (ITE 110)

Given that specific tenant operations have not yet been identified for the high-cube warehouse building, a generalized high-cube warehouse land use category was selected rather than a more specialized fulfillment center, parcel hub, or cold storage classification. Details on how the land use category was selected are provided in Table 1.

The ITE 154 land use category is intended to capture warehouse facilities with significant truck activity and short-term storage or transload operations, without assuming the highly specialized operational characteristics associated with e-commerce fulfillment centers or parcel distribution hubs. The ancillary office space shown on the site plan is intended to support on-site warehouse operations and does not function as a standalone office use; therefore, office area is included in the total warehouse gross floor area for trip generation estimates.

DRAFT

Table 1: High-Cube Warehouse Land Use Comparison and Selection Criteria for this Project

ITE Land Use Code	Land Use Name	Typical Characteristics	Typical Operations	Why / Why Not for This Project
154	High-Cube Transload and Short-Term Storage Warehouse	High clear height; large footprint; multiple dock doors; truck-oriented design	General logistics, transload, short-term storage; varied tenants	**Selected.** Best represents a shell high-cube warehouse with unknown tenants. Captures truck-heavy activity without assuming a specific operational model.
155	High-Cube Fulfillment Center Warehouse	High-cube buildings; large employee areas; higher auto trip share	E-commerce fulfillment (e.g., Amazon); intensive picking/packing	Not selected. Assumes a specific fulfillment operation with elevated employee trips, which is not confirmed.
156	High-Cube Parcel Hub Warehouse	Extremely high dock counts; time-sensitive operations; distinct peak hours	Parcel sorting/distribution (e.g., UPS, FedEx)	Not selected. Assumes parcel hub operations and concentrated off-peak activity not indicated for this project.
157	High-Cube Cold Storage Warehouse	High-cube building with refrigeration; food-related logistics; specialized equipment	Cold/frozen storage; food distribution; fewer employee trips but specialized truck activity	Not selected. Assumes refrigerated or cold-storage operations, which are not identified in the application materials or site plan.
150	Warehousing	Traditional warehouse; lower clear height; fewer docks	General storage	Not selected. Does not reflect modern high-cube building characteristics and would likely under-represent truck activity.

Source: *ITE Trip Generation Manual 12th Edition, High-Cube Warehouse Vehicle Trip Generation Analysis* (2016)[1].

Trip generation estimates were developed using gross floor area (square feet) as the independent variable, consistent with ITE guidance for high-cube warehouse and light industrial land uses (as shown in Table 2 and Table 3). We used the following building square footage for calculating the trip generation estimates. This is based on the planning entitlement application materials and the site plan provided to Kittelson by the City.

- High-Cube Warehouse (one building): approximately 203,000 square feet
- General Light Industrial (four buildings): approximately 254,000 square feet

In addition to total vehicle trips, weekday truck trips were estimated by selecting "*Truck*" as the trip type within the ITE web-based database. Truck trips are presented separately to support

[1] Institute of Transportation Engineers (ITE). *High-Cube Warehouse Vehicle Trip Generation Analysis* (2016). http://newpromisefarms.com/files/2018/07/HighCube-Warehouse-Oct-2016-Study-ITE.pdf

subsequent evaluation of site access, queuing, and operational considerations involving large vehicles in the next steps of the local transportation analysis.

Total Project Trips	**457 KSF**	**109 (9%)**	**5**	**5**	**10**	**9**	**8**	**17**

NOTE: Percentages shown in parentheses represent the proportion of weekday daily truck trips relative to total weekday daily vehicle trips for the corresponding land use.

DRAFT

Summary

As summarized in Table 3, the proposed project is estimated to generate 214 vehicle trips (162 inbound, 52 outbound) during the weekday AM peak hour and 218 vehicle trips (85 inbound, 133 outbound) during the weekday PM peak hour. Of the 1,198 daily total trips that are generated on a weekday, 9% (109) of them are truck trips.

The project's peak hour traffic is driven primarily by general light industrial operations, with the high-cube warehouse component contributing a smaller share of total trips but a proportionally higher share of truck activity.

Next Steps

Upon receiving approval from the City on the trip generation estimates, Kittelson will develop the project trip distribution estimates based on the existing counts, traffic patterns, and proximity to major arterials, state routes, and freeways.

DRAFT

Appendix M

Sanitary Sewer Shed Justification Technical Memo

TLA
ENGINEERING & PLANNING

July 22, 2025

RE: Davis Family Warehouse Project and Tentative Parcel Map
Sanitary Sewer Shed Shift Justification Technical Memo

This technical memo (TM) outlines the justifications to allow the applicant to pursue a sanitary sewer shed shift for the eastern portion of the proposed development.

During the first review of the Design Review and Parcl Map application, Sacramento Area Sewer District had the following comment.

> "The subject property is within the SacSewer Service Area but is located more than 200 feet from an available public sewer. Per the SacSewer ordinance, the property is not required to connect to public sewer. Please contact the Environmental Management Department (EMD) for onsite waste disposal facilities if necessary."

This comment is based on the fact that the east portion of the project (Buildings 1, 2, & 3, APN 061-0150-042) is within the NE CE Gravel West (CEGW) Shed and is intended to connect to a proposed sewer trunk line within the planned Aspen 1 Development. See the attached Existing Shed and Aspen 1 Sewer Study Exhibits. Note that the comment did not address the fact that the western portion of our project (Buildings 4 & 5 and the bioretention basin, APN 061-0150-045, 049, & 054) are within the SEA Shed and have sewer facilities nearby within the Florin-Perkins Road and Warehouse Way rights-of-way.

The Aspen 1 Development has not progressed in any meaningful way in over a decade, and there is no reason to believe it will happen any time soon, if at all. Because the Aspen 1Development has not progressed, leaving our eastern portion with no sewer facilities with the CEGW Shed to connect with, the District suggested we contact the Environmental Management Department to consider on-site sewage disposal. We do not believe that on-site treatment is a viable option for our project given the site and development characteristics and the proximity of other viable sewer facilities in its vicinity within the SEA Sewer Shed.

We are requesting the District Staff allow us to submit a Shed Shift Study and, if the study supports it, allow a shed shift to place Building 1, 2, and 3 on the east portion of the project in the SEA Shed and connect to the sewer in Warehouse Way. We believe this is a justified request based on the following information.

Existing Infrastructure
Both the west and east portions of the project have existing sewer facilities that can serve it. The west portion is withing the SEA Shed and is planned to connect to the existing sewer line in Floring Perkins Road. There is a sanitary sewer manhole (SSMH 807) within the road right-of-way approximately 25-feet south of our project. We discussed this with staff at our meeting and were in agreement that this portion of the project can connect to the sewer without any adjustment to the sheds.

According to the District's facilities map panel LL25, there is an existing manhole (SSMH103) located in Warehouse Way at our boundary that is within the SEA shed. The eastern portion of the project can connect to this manhole provided the District allow a shed shift.

In addition, the project site has an existing capped and closed landfill on it This cap cannot be graded, penetrated, in any way. The project plans to use this portion of the site as paved truck/trailer parking area. A septic system will not be allowed in this area.

Project Constraints
The applicant is proposing to maximize the potential for the site to its highest and best use within the General Plan and Zoning allowances. The plan has maximized the building square footage and is mostly impervious. The pervious areas within the site are smaller areas scattered throughout for landscape buffers and shade trees. These areas are not large enough for an on-site sewage disposal/septic system. Reserving an area large enough for would significantly impact the viability of the project. And as mentioned in the Existing Infrastructure section, the landfill area cannot have sewage disposal facilities on it.

Soils Conditions
The project applicant contracted with Mathew Moyneur. P.E. formerly with UES and currently with Raney Geotechnical, Inc. for a geotechnical study and a preliminary evaluation of the site for on-site sewage disposal. They found that the surface and near-surface clay soils within the upper 10 feet of the site are not conducive for a septic system. Specifically, the clay soils will exhibit very, very low percolation and infiltration characteristics, which will render an onsite septic system ineffective. In their opinion, construction of an onsite septic system is not feasible from a geotechnical perspective, and we recommend approval to connect the warehouses to the existing adjacent sewer system. Please see the Raney Geotechnical letter attached.

Anticipated Demand
Section 201.1 of the Sacramento Area Sewer District Stands and Specifications outlines the methods for estimating the design flows. For industrial use (section 201.1.6), use the larger flow, as determined by one of the following methods:

- Specific known industrial development
- 6 ESDs per gross acre

Specific to the project we are proposing, the following is an estimated of the peak discharge:
Turley & Associates, the MEP consultant for the project, provided a waste water discharge flow analysis for the east part of the site. Their analyses estimate an average daily waste discharge of less than 9,000

gpd, only 0.009 mgd. With a peaking factor of 4, The peak flow rate is estimated to be 0.036 mgd. This would result in a depth flow of approximately 0.5 inches, depending on pipe diameter.

Using the alternative method of 6 ESD per acre:
Section 201.1.2 AVERAGE DRY WEATHER FLOW (ADWF)
Domestic flow factor of 310 gallons/day/ESD
ADWF = 310 gpd/ESD * 6 ESD/Ac * 20 ac = 37,200 gpd = 0.0372 mgd
Peaking Factor (PF) =1.8 * ADWF^.05 =1.973
Iinflow and Infiltration (I/I) =1,600 gpd/Ac = 1,600*20 = 32,000 gpd = 0.032 mgd

Peak Waste Water Flow
(PWWF) = ADWF * PF + I/I = 37,200*1.973 + 32,000 = 105,396 gpd = 0.105 mgd (0.163 cfs).
A 6-inch pipe at 0.5% slope would be less than half full with this flow rate.

Adjacent Swap of Land
Although the area in question is only 20 acres, the project sits on a much larger collection of properties under the same ownership extending north to Jackson Road (Highway 16). The far north portion is in the SEA Shed. The ownership is willing to include this portion of the property in the sewer study to see if it can connect to the Aspen 1 development. If it would help with the justification for a shed shift, they are open to adjusting a similar sized area from the SEA Shed to the CEGW shed resulting in a smaller overall change to either shed area.

Conclusion
In conclusion, we believe a shed shift is justified for this project. The area is small, approximately 20 acres, will generate a low waste discharge, has easy access to the facilities in Shed SEA, has no foreseeable way to connect to the systems in the CEGW Shed, and does not have a development plan or proper soils for an on-site disposal system

Septic System Discussion
DAVIS FAMILY WAREHOUSES
Florin Perkins Road and 23rd Avenue
Sacramento, California

As discussed, we understand you would like to connect to the existing sewer system adjacent to the Davis Family Warehouses project site in Sacramento, California. However, we understand the local jurisdiction is requesting onsite septic disposal for the site. In our opinion, construction of an onsite septic system is not feasible from a geotechnical perspective and we recommend approval to connect the warehouses to the existing adjacent sewer system.

While at another firm (UES), I prepared a *Geotechnical Engineering Report* dated June 9, 2023 (UES Project No. 4630.2300019.0000) for the Davis Family Warehouses site. The *Geotechnical Engineering Report* found that the surface and near-surface soils generally consist of sandy lean to fat clay underlain by interbedded layers of variably cemented silty sands and/or sandy silts (locally referred to as "hardpan"). Infiltration testing was performed at a depth of about one foot below the existing ground surface at the site. Results of the infiltration testing indicates the near-surface soils had an infiltration rate of about ¼-inch per hour.

In our opinion, the surface and near-surface clay soils within the upper 10 feet of the site at are not conducive for a septic system. Specifically, the clay soils will exhibit very, very low percolation and infiltration characteristics, which will render an onsite septic system ineffective.

In our opinion, construction of an onsite septic system is not feasible from a geotechnical perspective and we recommend approval to connect the warehouses to the existing sewer system.

If you have questions regarding this letter, please do not hesitate to contact me at (916) 371-0434.

Very truly yours,

RANEY GEOTECHNICAL, INC

I. EXECUTIVE SUMMARY

1.1. PURPOSE STATEMENT

This sanitary sewer study for the Davis Family Warehouse Industrial project has been prepared based on Minimum Sewer Study Requirements by Sacramento Area Sewer District (SASD). The purpose of this study is to demonstrate that the proposed 7 Warehouse buildings can be gravity served to the existing sewer main located within Warehouse Way and by the existing sewer line in Florin Perkins Rd. Additionally, this preliminary study will analyze the impact of the proposed shed shift and the feasibility of extending public sewer north of the project site on Florin Perkins Rd.

1.2. PROJECT AND STUDY CHARACTERISTICS

The project consists of two separate onsite sewer sheds that will connect to existing SASD sewer infrastructure in Florin Perkins Rd. & Warehouse Way. The project is currently located within SASD's Gravel West sewer shed. The project will be proposing a shed shift to place the southeast portion of the site in SASD's CE Gravel West sewer shed on Warehouse Way into SASD's SEA shed due to site sewer constructability restrictions. The purpose of this preliminary sewer study is to determine the feasibility of providing sewer main extension on Florin Perkins Rd. and onsite sewer impact to the SEA shed per conditions set forth by SASD. The construction of the project will be phased however, the trunk main sewer extension located within the Florin Perkins and the public sewer for buildings 1 through 6 will be installed in the initial phase.

1.3. FINDINGS

It was determined by this study that this project's contribution to the sewer system does not have a significant impact on existing flow and pipe sizes downstream and sewer trunk main can be extended on Florin Perkins Rd. to accommodate the existing parcels to the north of the project site. Buildings 1 through 5 have a combined 121 equivalent single dwellings (ESD's) and a peak wet weather flow of 0.1060 mgd (0.1642 cfs) and will connect to an existing sewer manhole located at the project's connection point in Warehouse Way located in SASD's CE Gravel West sewer shed. Buildings 6 & 7 have a combined 46 equivalent single dwellings (ESD's) and a peak wet weather flow of 0.0412 mgd (0.0637 cfs) and will connect to an existing

sewer manhole in Florin Perkins Road just to the south of the project's frontage in the SEA shed. Per conditions set forth by SASD, the project will require sewer improvements to be extended north up Florin Perkins Rd. to provide sewer access to the parcels north of the project up to Jackson Rd per the proposed shed shift. Per this preliminary feasibility study, the fully developed peak wet weather flow generated by the project and parcels to the north within the offsite shed area is 0.5005cfs (See Exhibits 1 & 2).

II. INTRODUCTION

2.1. LEVEL OF STUDY

Based on the Sacramento Area Sewer District (SASD) Minimum Sewer Study General Requirements from the Section 200.2.1 of the SASD Standards and Specifications dated July 24, 2022, this study provides the information to establish the project's internal system and forms the basis for preliminary plans. Sewer sheds, total ESD's at nodes, flow rates, pipeline slopes, and preliminary invert and rim elevations have been calculated to provide a level of detail to seamlessly translate to improvement plans and a level 3 sewer study, see Exhibit 1 – Davis Family Warehouse Sewer Shed Maps.

2.2. LOCATION

The project is located within the City of Sacramento, approximately 1,000-feet south of the existing Green Waste Florin Perkins Resource Recovery Facility, west of South Watt Avenue, north of existing industrial buildings on 23rd Avenue, and east of Florin Perkins Road. The project site has a total area of 45.6 gross acres, zoned M-1-S-SWR and is being entitled for 5 industrial warehouse buildings. The total developable area for sewer ESD evaluation is approximately 25.6 acres.

2.3 ON-SITE TOPOGRAPHY

The site topography is extremely flat, with the northern half of the site draining to the north and the southern half of the site draining to the south. Elevations throughout the development area vary from 45 to 50 feet. Vertical Datum NGVD 29.

2.4 LAND USE AND ZONING

The area is currently designated general plan use of Light Industrial with a zoning of M1. The proposed development will convert existing vacant land to a planned development consisting of 7 buildings with associated utility and hardscape improvements servicing the buildings.

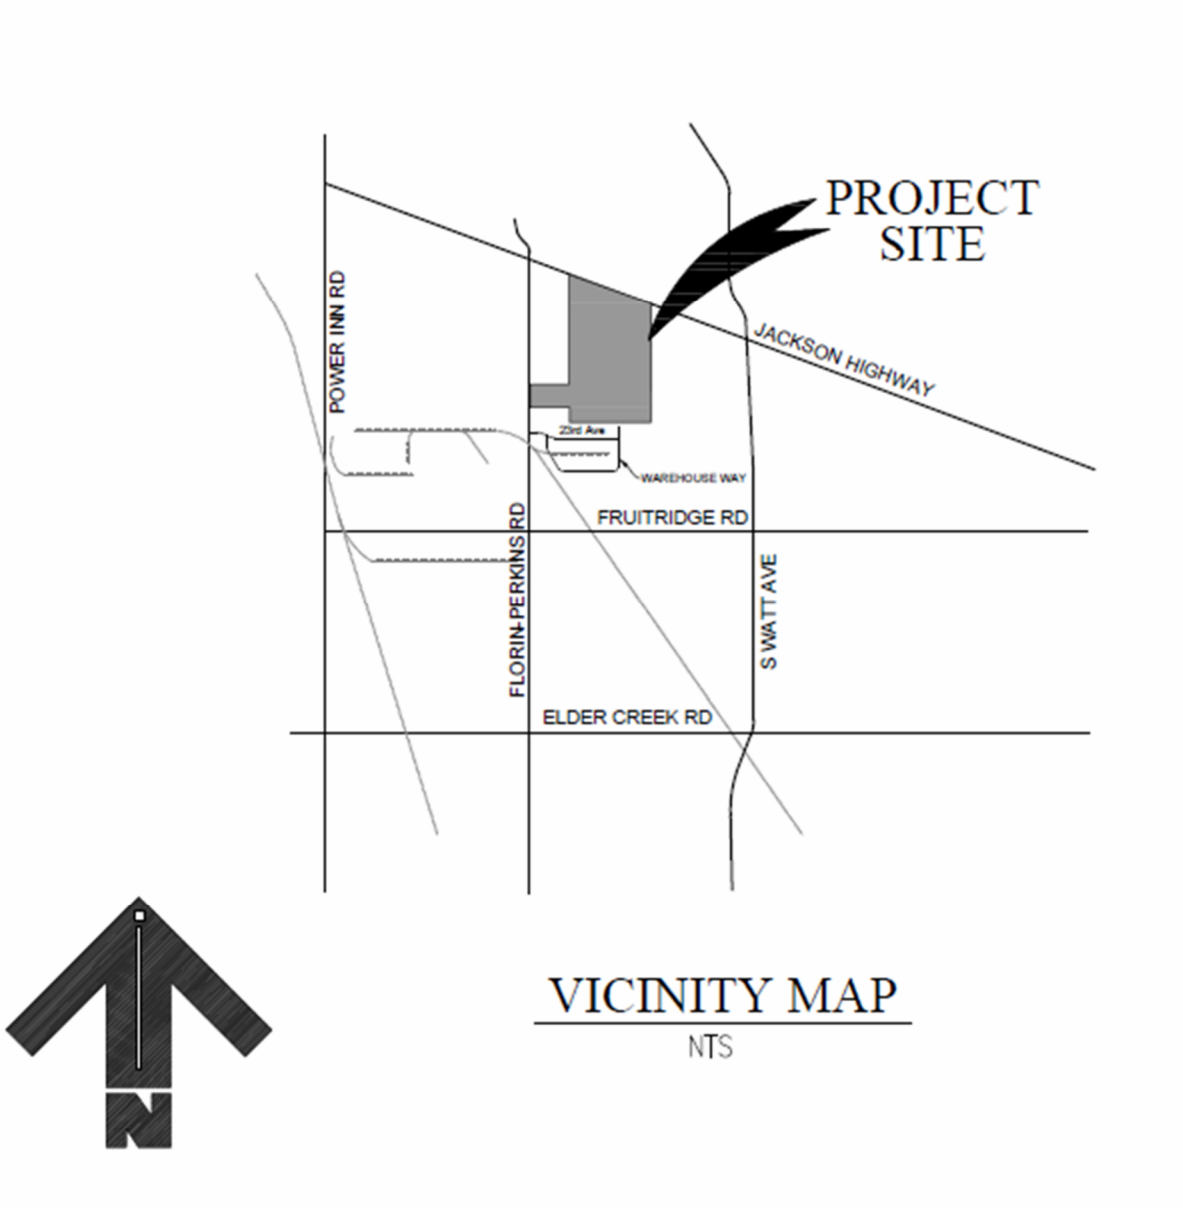

Figure 1 – Vicinity Map

III. DESIGN

3.1 ASSUMPTIONS

Since the project's onsite eastern shed located in CE Gravel West is bounded to the west and north by existing developments, it is reasonable to assume that there will be no future upstream development connecting to onsite 8" sewer servicing the development through the project site. However, since the land to the north of the eastern onsite shed is undeveloped, it is reasonable to assume that parcels to the north would utilize the extension of the 12-inch sewer line in the future, which has been analyzed as part of this feasibility study. Additionally, this study assumes that downstream existing sewer facilities currently have capacity to carry the study area flows. The existing 12-inch trunk main in Florin Perkins services the existing industrial developments down to the Fruitridge Rd intersection.

3.2 APPROACH AND DESIGN CRITERIA

The design approach for this sewer study began with compilation of known data and resources, and the layout and land use summary with densities for the proposed Davis Family Warehouse project including the following:

- Current City of Sacramento Improvement Standards.
- Sacramento Area Sewer District Standards and Specifications, September 27, 2023

From these resources, the following tables provide a summary of ESD data, formulas used to calculate average dry weather and peak wet weather flows, and design / capacity criteria to size pipelines.

Abbreviations Used in the tables include:

ADWF Average Dry Weather Flow AC Acre
ESD Equivalent Single-Family Dwelling GPD Gallons per Day
I & I Inflow and Infiltration
MGD Million Gallons per Day PF Peaking Factor
PWF Peak Dry Weather Flow PUD Planned Unit Development PWWF
Peak Wet Weather Flow

Table 1. Land Uses and ESDs

Land Use	Abbrev.	City Land Use Zoning	ESDs / acre
Light Industrial	ECLR	M-1	6

Source: 2023 Sacramento Area Sewer District Standards and Specifications

Table 2. Design Flow Factors

Item	Value
ESD Flow Factor ~ ADWF ~ Single Family Res.	310 GPD per ESD

Source: 2023 Sacramento Area Sewer District Standards and Specifications

Table 3. Design Flow Formulas

Collector	Formula or Value
PWWF (MGD) =	(ADWF)x(PF) + I / I
ADWF (MGD)=	(310 GPD/ESD) x (#ESD/AC) x (#AC) / 1,000,000
PF =	$3.5 – (1.8 \times ADWF^{0.05})$, Minimum is 1.2, ADWF in MGD
Rainfall Dependent I / I	1600 GPD/AC ~ New development

Source: 2023 Sacramento Area Sewer District Standards and Specifications

Table 4. Pipe Slope and Velocities

Collector Pipe Diameter	Minimum Slope	Min. Velocity ~ fps at 0.5 and 1.0 full
8-inch	0.0035	2.0
12-inch	0.0020	2.0

Source: 2023 Sacramento Area Sewer District Standards and Specifications

Major items of the design criteria are listed below:

- *The Equivalent Dwelling Units (ESD) for Industrial is 6 ESDs per acre with an average daily flow of 310 gpd.*
- *Where the number of dwellings is greater than 6 dwellings per acre, the actual number of dwellings was used.*
- *Manning's flow equation has been used for hydraulic analysis of the proposed system.*
- *The Manning's coefficient of friction (n=0.013) has been used for all pipe material.*
- *For the proposed system a maximum depth of flow less than 70% of the pipe capacity has been used.*
- *A minimum slope of 0.0035 was used for the 8-inch pipe in some areas. The minimum slope serving less than 6 ESDs is 0.0070.*
- *Manholes with a change in direction of more than 20 degrees have a drop of 0.1 feet.*
- *Peaking Factor of 3.5 - 1.8 x $Q_a^{0.05}$ (minimum 1.2) for residential subdivision. Minimum*

Peaking Factor is 1.2.

- *Combined rainfall inflow and groundwater infiltration rate (I/I) of 1,600 gpd has been used for (new - less than 5 years old) existing areas to account for rainfall inflow and groundwater infiltration.*
- *Sewer lines shall be located 6-feet south or east of street centerlines.*
- *The minimum depth of cover for all main lines shall be 5-feet.*
- *When two pipelines of the same size enter a manhole such that the flow does not change directions, or changes 20 degrees and less, the invert grade at the exit must be at least 0.05 foot below that of the entrance pipe for precast manhole bases.*
- *When two pipelines of the same size enter a manhole such that the flow of one must change direction more than 20 degrees or if flow in a single pipe line must change direction more than that amount, the invert grade at the exit must be at least 0.10 foot below that of the entrance pipe.*

This study utilizes an 8-inch sewer line on-site and connects to the proposed 8" sewer system constructed within Warehouse Way for the eastern sewer shed located in the SEA shed. This study also utilizes an 8-inch sewer line on-site and connects to a proposed 12-inch sewer line in Florin Perkins Rd for the western shed. A spreadsheet has been developed and is included in this report showing the various design parameters and conditions, see Exhibit 2.

As previously mentioned, this project is in conformance with the current general plan and zoning designations. This sewer study assumes that the design of the existing 12-inch sewer line located within Florin Perkins used these same general plan and zoning designations, therefore, the offsite sewer lines have been preliminarily sized to accommodate the project and northern parcels as designed.

IV. CONCLUSION

At the beginning of this study, a description of SASD Minimum Sewer Study Requirements for a Level Three report included:

- Ensure technical compliance with the latest SASD minimum sewer requirements.
- Establish sewer sheds and size the backbone and internal collector sewer systems and establish depth of pipes and verify cover. This study's focus is on topography within the project and upstream sewer sheds, collector sewers and their capacity, and the projects preliminary sewer layout.

This study achieves the SASD requirements and has:

- Identified the project's sanitary sewer point of connections and Calculated wastewater flows using the Industrial land uses / areas / ESD unit counts based on SASD design criteria.
- Confirmed that calculated flows do not exceed POC capacity.
- Confirmed that the parcels to the north of the development can be serviced by extending the existing 12-inch trunk main north to the Jackson Rd. intersection.

It was determined by this study that this project's contribution to the sewer system does not have a significant impact on existing flow and pipe sizes. The project will add approximately 0.1472 mgd to SASD's SEA shed and an additional 0.2890 mgd at full build out of the parcels north of the project (0.4362 mgd total). Additionally, it was determined that the portion of onsite sewer servicing buildings 2 through 5 will need to be placed at minimum slope of 0.7% to achieve a design PWWF velocity of 2 ft/s minimum. This will be implemented in the improvement plan phase and will be mentioned in the final sewer study submitted to SASD. Lastly, based off record drawings provided by SASD, it is determined that at minimum slope for 12" sewer line at 0.2%, public sewer in Florin Perkins Rd. can be extended north to Jackson Rd. to service parcels north of the project site, meeting SASD depth and design standards, see Exhibit 3.

Notes:

$Q_a=(310) \times 10^{-6} \times \Sigma ESDs$

1. Peaking Factor $=PF = 3.5 - 1.8 \times Q_a^{0.05}$
2. Inflow & Infiltration = I & I : New Areas= 1400gpd/ac
3. Q_D=Design Q = (PF x Q_a)+ I & I
4. Manning's Coefficient, n=0.013
5. Assumed starting HGL = (D/S INV. + 0.7x Pipe Dia)
6. A drop of 0.10' was considered in runs where there was a change in direction with intermitent manholes between nodes, otherwise a 0.05' drop was provided.
