INITIAL STUDY/MITIGATED NEGATIVE DECLARATION

A. BACKGROUND

1. Project Title: Davis Family Warehouses Project (Z25-031)

2. Lead Agency Name and Address: City of Sacramento
Community Development Department
300 Richards Boulevard, 3rd Floor
Sacramento, CA 95811

3. Contact Person and Phone Number: Charles Tschudin
Senior Planner
(916) 808-8145

4. Project Location: East of Florin Perkins Road, south of Jackson Road and north of 23rd Avenue
Sacramento, CA 95826
Assessor's Parcel Numbers (APNs): 061-0150-042, -045 -049, -054, and 078-0202-006

5. Project Sponsor's Name and Address: Sierra View Company General Contractor
Gary Graves
4202 Douglas Boulevard, Suite 100
Granite Bay, CA 95746

6. General Plan Designation: Employment Mixed-Use (EMU) and Neighborhood (N)

7. Existing Zoning Designation: Light Industrial (M-1S-SWR)

8. Required Approvals from Other Public Agencies: Central Valley Regional Water Quality Control Board; Sacramento County Environmental Management Department; Sacramento Metropolitan Air Quality Management District

9. Surrounding Land Uses and Setting:

The approximately 156.5-acre site, identified by APNs 061-0150-042, -045, -049, -054, and 078-0202-006, is located along of Florin Perkins Road, south of Jackson Road and north of 23rd Avenue in the City of Sacramento, California. The project site currently consists of undeveloped land, with the exception of the GreenWaste Florin Perkins Resource Recovery Facility that currently operates and will continue to operate within the central portion of the overall project site, north of the Development Area. An elevated dirt mound and dirt access roads are located in the southern portion of the site. Several

permitted landfills that are closed, capped, and no longer accepting waste also exist on-site. Within the overall project site, the Development Area associated with the proposed project would be a total of approximately 28.38 acres, and would be generally located in the southern and southwestern portion of the overall project site.

Land uses surrounding the Development Area include the GreenWaste Florin Perkins Resource Recovery Facility within the central portion of the overall project site; industrial uses to the north, across Jackson Road; undeveloped land to the east, which is planned for residential development as part of the Aspen 1 Project; light industrial/commercial uses to the south; and light industrial/commercial uses to the immediate west and a distribution center further west, across Florin Perkins Road. The site is designated EMU and N by the City of Sacramento 2040 General Plan and zoned Light Industrial.

10. Project Description Summary:

The Davis Family Warehouses Project (proposed project) would include the development of seven warehouse/office buildings and a trailer storage area. The proposed project would include a Tentative Subdivision Map to subdivide the entire approximately 156.5-acre project site into seven parcels. Building 1 would be located on Parcel 1, Building 2 would be located on Parcel 2, Building 3 would be located on Parcel 3, Building 4 would be located on Parcel 4, Building 5 would be located on Parcel 5, and Building 6 and 7 would be located on Parcel 6. Parcel 7 would include the existing GreenWaste Florin Perkins Resource Recovery Facility. The gross floor area of the office space would total 37,757 square feet (sf), and the gross warehouse space would total 339,827 sf, for a total gross building area of 377,584 sf. The development on Parcel 6 would also include grading of a portion of the site north of Buildings 6 and 7 for drainage purposes related to drainage basin and drainage improvements. A trailer storage area would be located in the southern portion of Parcel 7, with the remainder of the parcel remaining undeveloped.

Primary site access would be provided by Florin Perkins Road and Warehouse Way. The development would include 404 parking spaces. The proposed project would require City approval of a Tentative Subdivision Map to subdivide the approximately 156.5-acre project site into seven parcels, and Site Plan and Design Review.

11. Status of Native American Consultation Pursuant to Public Resources Code (PRC) Section 21080.3.1:

On May 5, 2025, formal invitations to participate in Assembly Bill (AB) 52 consultation on the proposed project were sent by the City to the tribal representation that have previously requested to receive notifications of proposed projects pursuant to PRC Section 21080.3.1 (AB 52). The tribes represented include:

- United Auburn Indian Community (UAIC)
- Wilton Rancheria
- Shingle Springs Band of Mi-Wok Indians
- Buena Vista Rancheria of Me-Wuk Indians

A response was not received from the UAIC, Shingle Springs Band of Mi-Wok Indians, or Buena Vista Rancheria of Me-Wuk Indians within 30 calendar days of the request for formal invitation under AB 52. A response was received from the Wilton Rancheria noting that while the project site is located within the ancestral territory of the Wilton Ranchera,

the Tribe did not have any comments and did not wish to open consultation. Additional responses were not received within the consultation period.

C. ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is "Potentially Significant Impact" as indicated by the checklist on the following pages.

☐ **Aesthetics**	☐ **Agriculture and Forest Resources**	✖ **Air Quality**
✖ **Biological Resources**	✖ **Cultural Resources**	☐ **Energy**
✖ **Geology and Soils**	☐ **Greenhouse Gas Emissions**	✖ **Hazards and Hazardous Materials**
✖ **Hydrology and Water Quality**	☐ **Land Use and Planning**	☐ **Mineral Resources**
☐ **Noise**	☐ **Population and Housing**	☐ **Public Services**
☐ **Recreation**	☐ **Transportation**	✖ **Tribal Cultural Resources**
☐ **Utilities and Service Systems**	☐ **Wildfire**	✖ **Mandatory Findings of Significance**

D. DETERMINATION

On the basis of this IS/MND:

☐ I find that the Proposed Project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

✖ I find that although the Proposed Project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the applicant. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the Proposed Project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" on the environment, but at least one effect 1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and 2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☐ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

E. INTRODUCTION

This IS/MND identifies and analyzes the potential environmental impacts of the proposed project. The information and analysis presented in this document is organized in accordance with the order of the California Environmental Quality Act (CEQA) checklist in Appendix G of the CEQA Guidelines. Where the analysis provided in this document identifies potentially significant environmental effects of the project, mitigation measures are prescribed.

The mitigation measures prescribed for environmental effects described in this IS/MND would be implemented in conjunction with the project, as required by CEQA. The mitigation measures would be incorporated into the project through project conditions of approval. The City would adopt findings and a Mitigation Monitoring and Reporting Program for the project in conjunction with approval of the project.

In August 2023, the City of Sacramento completed a comprehensive update of the City's General Plan,[1] and certified a Master Environmental Impact Report (EIR) for the updated General Plan.[2] The Master EIR is a program EIR, prepared pursuant to Section 15168 of the CEQA Guidelines (Title 14, California Code of Regulations [CCR] Sections 15000 *et seq*.). The Master EIR analyzed full implementation of the General Plan and identified measures to mitigate the significant adverse impacts associated with the General Plan. Consistent with Section 15150 of the CEQA Guidelines, applicable portions of the General Plan and Master EIR are incorporated by reference as part of this IS/MND.

Signed into law on September 29, 2024, AB 98 introduces environmental and operational standards for logistics use facilities within 500 to 900 feet of sensitive receptors, as defined by Government Code Section 65098(e). The proposed project would comply with AB 98 requirements, as the project site is not located within 900 feet of an existing sensitive receptor.

F. PROJECT DESCRIPTION

The following provides a description of the project site's current location and setting, as well as the proposed project components and the discretionary actions required for the project.

Project Location and Setting

The overall project site is identified by APNs 061-0150-042, 061-0150-045, 061-0150-049, 061-0150-054, and 078-0202-006. The project site is located along the east side of Florin Perkins Road, south of Jackson Road and north of 23rd Avenue in the City of Sacramento, California (see Figure 1). APN 061-0150-042 currently consists of GreenWaste Florin Perkins Resource Recovery Facility and an associated dirt access road. APNs 061-0150-045, -049, and -054 currently consist of undeveloped land with an elevated mound of dirt and a dirt access road within the southern portion. APN 078-0202-006 and the northern portion of APN 061-0150-042 currently consist of undeveloped land with an associated dirt access road and a slope along the northern border.

GreenWaste Florin Perkins Resource Recovery Facility currently operates and will continue to operate a facility in the middle portion of the overall project site. Several permitted landfills that are closed, capped, and no longer accepting waste also exist on the overall project site.

---

1 City of Sacramento. *Sacramento 2040 General Plan*. Adopted February 27, 2024.

2 City of Sacramento. *Public Review Draft Master Environmental Impact Report Sacramento 2040 General Plan and Climate Action & Adaption Plan*. August 2023.

Figure 1
Regional Project Location

Land uses surrounding the Development Area include the GreenWaste Florin Perkins Resource Recovery Facility within the undeveloped land in the central portion of the overall project site; industrial uses to the north, across Jackson Road; undeveloped land to the east, which is planned for residential development as part of the Aspen 1 Project; light industrial/commercial uses to the south; and light industrial/commercial uses to the immediate west and a distribution center further west, across Florin Perkins Road (see Figure 2). The project site is designated EMU and N by the City of Sacramento 2040 General Plan and zoned M-1S-SWR. The Development Area associated with the proposed project is designated as EMU, and the northern portion of the project site, which would not include any improvements as part of the proposed project, is designated as N.

Project Components

The proposed project would include the development of seven warehouse buildings and a trailer storage area (see Figure 3). Buildings 1 through 5 would be located on their own respective parcels, and Buildings 6 and 7 would be located on Parcel 6. Table 1 shows the sf of the office and warehouse portions of the proposed buildings.

Table 1
Building Area

Building	Office Area (sf)	Warehouse Area (sf)	Total (sf)
Building 1	5,141	46,269	**51,410**
Building 2	6,618	59,562	**66,180**
Building 3	6,618	59,562	**66,180**
Building 4	6,618	59,562	**66,180**
Building 5	6,618	59,562	**66,180**
Building 6	3,072	27,655	**30,727**
Building 7	3,072	27,655	**30,727**
Total	**37,757**	**339,827**	**377,584**

The gross floor area of the office space would total 37,757 sf, and the gross warehouse space would total 339,827 sf, for a total gross building area of 377,584 sf. The warehouse buildings would be one-story, with a maximum building height of 44 feet. The proposed trailer storage area would be located in the southern portion of Parcel 7, to the north of Buildings 1, 2, 3, 4, and 5, on top of the landfill cap. All proposed structures located within 1,000 feet of the South Fill Area associated with the GreenWaste Florin Perkins Resource Recovery Facility would be required to comply with the construction requirements included in Title 27, Section 21190(g) of the CCR in order to prevent landfill gas migration into the buildings.

Development of the site would also include associated parking, landscaping, and utility improvements. The proposed project would require City approval of a Tentative Subdivision Map to subdivide the approximately 156.5-acre project site into seven parcels, and Site Plan and Design Review for the Development Area. The details of the proposed project, including required approvals, are described in further detail below.

Tentative Subdivision Map

The proposed project would include a Tentative Subdivision Map to subdivide the entire approximately 156.5-acre project site into seven parcels, Parcel 1 through 7. The 3.44-acre Parcel 1, 3.98-acre Parcel 2, 4.02-acre Parcel 3, 4.02-acre Parcel 4, and 4.47-acre Parcel 5 would include the southern portion of APN 061-0150-042.

Scale: 1"=100'-0"

A1.0

Davis Family Warehouse
3901 Florin Perkins Rd, Sacramento, CA. 95826

The 8.45-acre Parcel 6 would consist of APNs 061-0150-045, -049, and -054, and the approximately 128-acre Parcel 7 would include APN 078-0202-006 and the northern portion of APN 061-0150-042 (see Figure 4). Parcel 7 would include the trailer storage area, but would otherwise remain unchanged, with the GreenWaste Florin Perkins Resource Recovery Facility remaining on the parcel.

Within the overall project site, the Development Area associated with the proposed project would be a total of approximately 28.38 acres, and would be generally located in the southern and southwestern portion of the overall project site.

Site access and circulation improvements, landscaping, and utility infrastructure associated with the proposed project are discussed in further detail below.

Access and Circulation

Parcels 1 through 5 would be primarily accessed by an extension of Warehouse Way, a public street south of the project site, terminating in an on-site cul-de-sac. Parcel 6 would be primarily accessed through a new driveway off of Florin Perkins Road. A private access easement would be established from Warehouse Way to Florin Perkins Road through Parcels 1 through 6, acting as secondary access for all parcels within the Development Area.

A total of 14 truck docks would be included at the proposed warehouse buildings. The proposed project would include a total of 404 parking spaces, 22 of which would be Americans with Disabilities Act (ADA) compliant. In addition, the proposed project would include lockers for 22 bicycles and racks for 22 bicycles.

Landscaping

As shown in Figure 5, landscaped areas would be provided along the project boundaries and around the warehouse/office buildings. Landscaping around the perimeter of the site would include a variety of trees and shrubs. Throughout the site, planters would be installed with trees to provide shaded parking, and shrubs would provide groundcover area. Landscaping trees would be planted in compliance with Section 17.612.040 of the Sacramento Municipal Code. In addition, a landscaped water quality swale would be located to the north of Building 1.

Utilities

The following section describes the water, wastewater, and stormwater drainage infrastructure improvements that would be installed as part of the proposed project.

In addition, it should be noted that natural gas infrastructure would be installed on-site to allow for the use of natural gas during manufacturing processes within the proposed buildings. While the future tenants of the proposed industrial buildings are not currently known, and, therefore, may not use natural gas for manufacturing processes, to provide a conservative analysis, the proposed project has been assumed to include natural gas usage during operations. Pacific Gas and Electric Company (PG&E) would provide natural gas to the project site.

Water

Municipal water for the project area is currently supplied by the City of Sacramento Department of Utilities (DOU). The City uses surface water from the American and Sacramento rivers, as well as groundwater north of the American River to meet the City's demands.

Figure 4
Tentative Subdivision Map

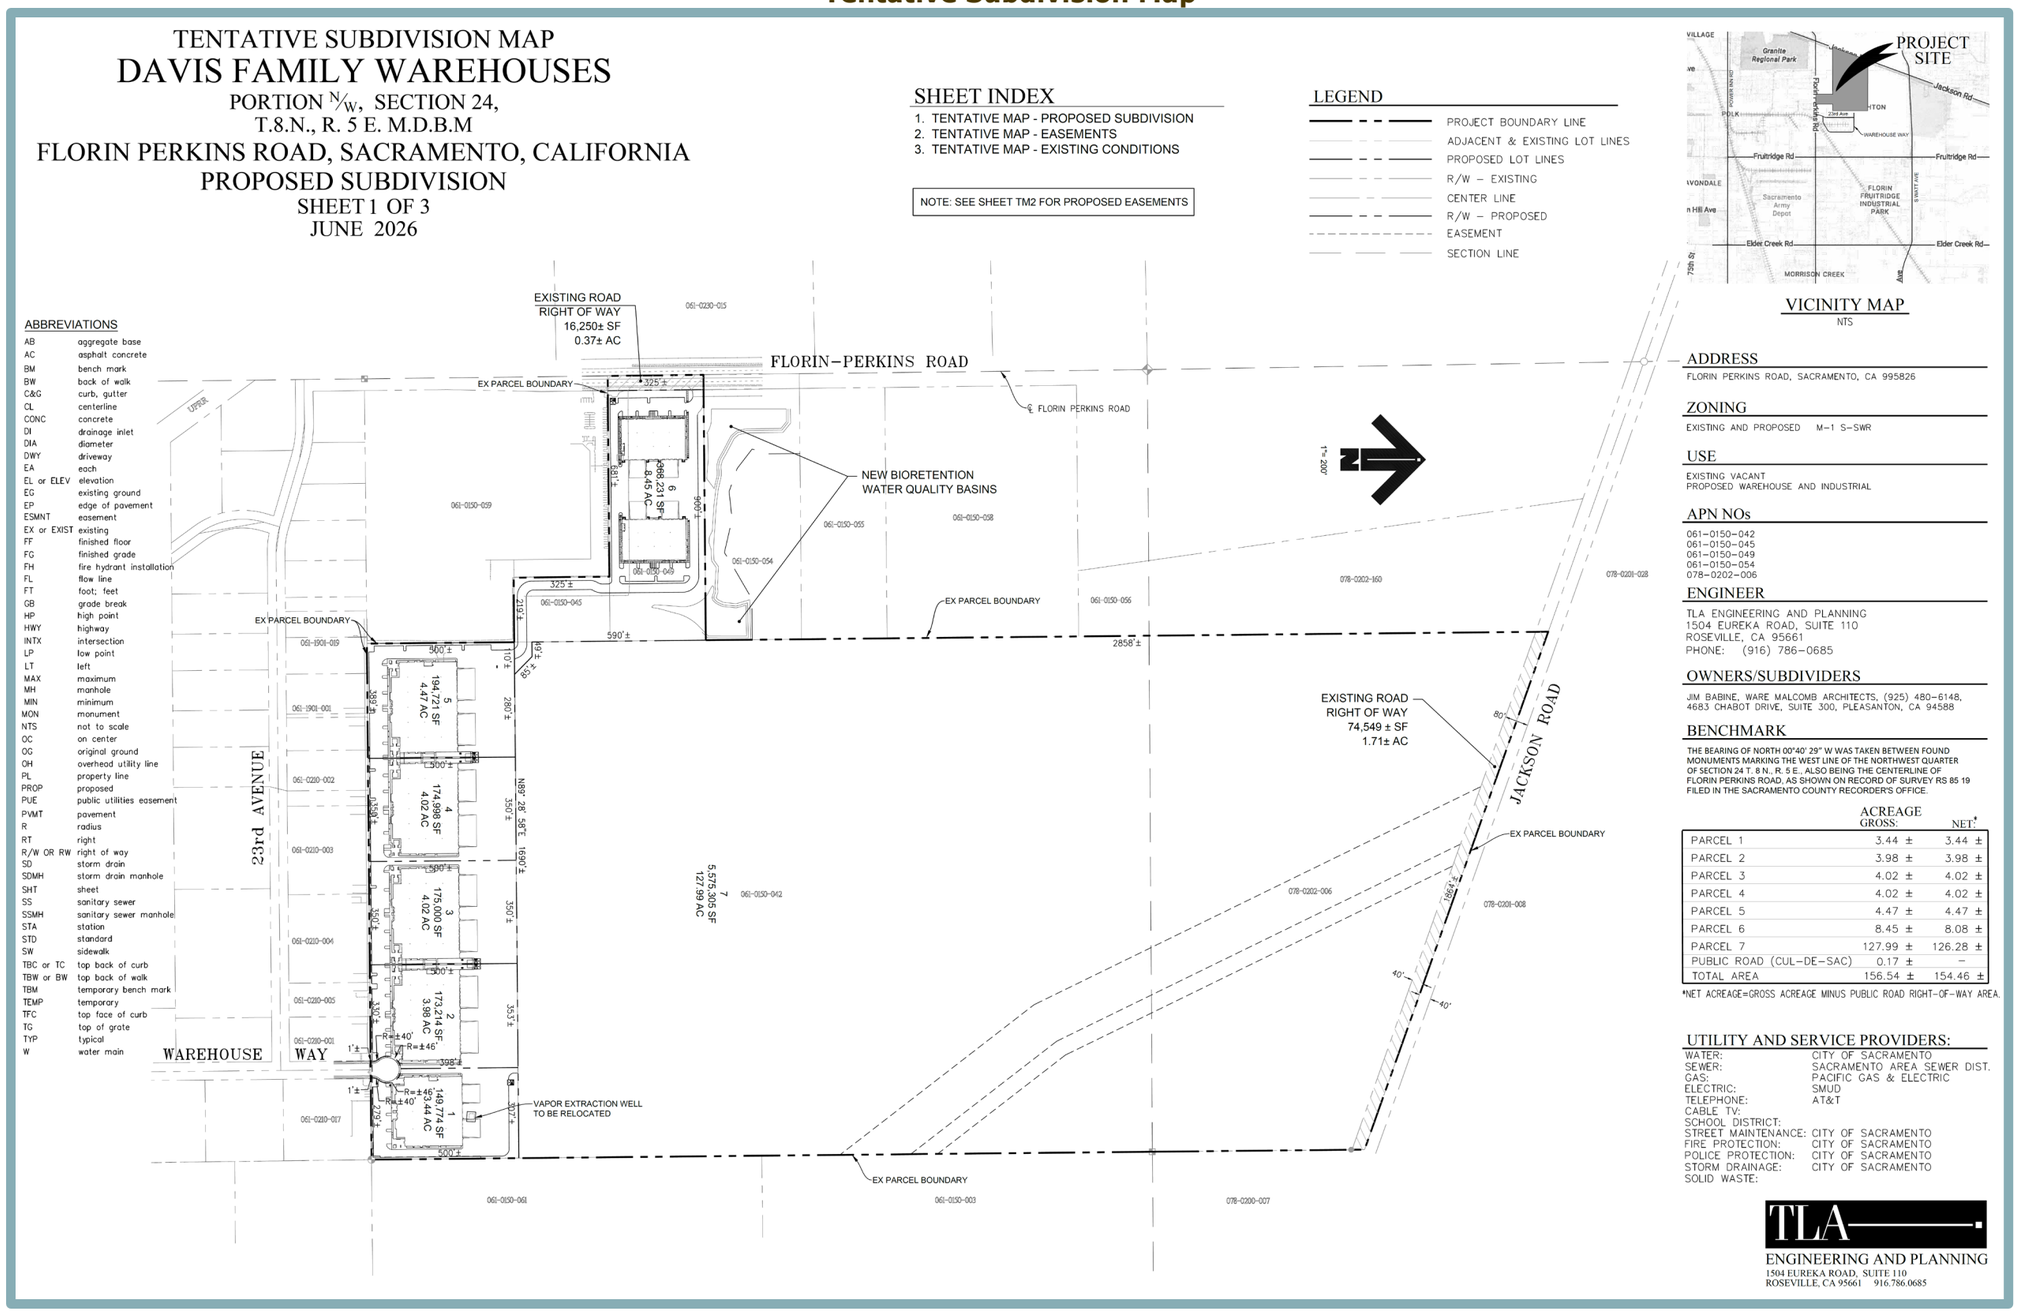

Figure 5
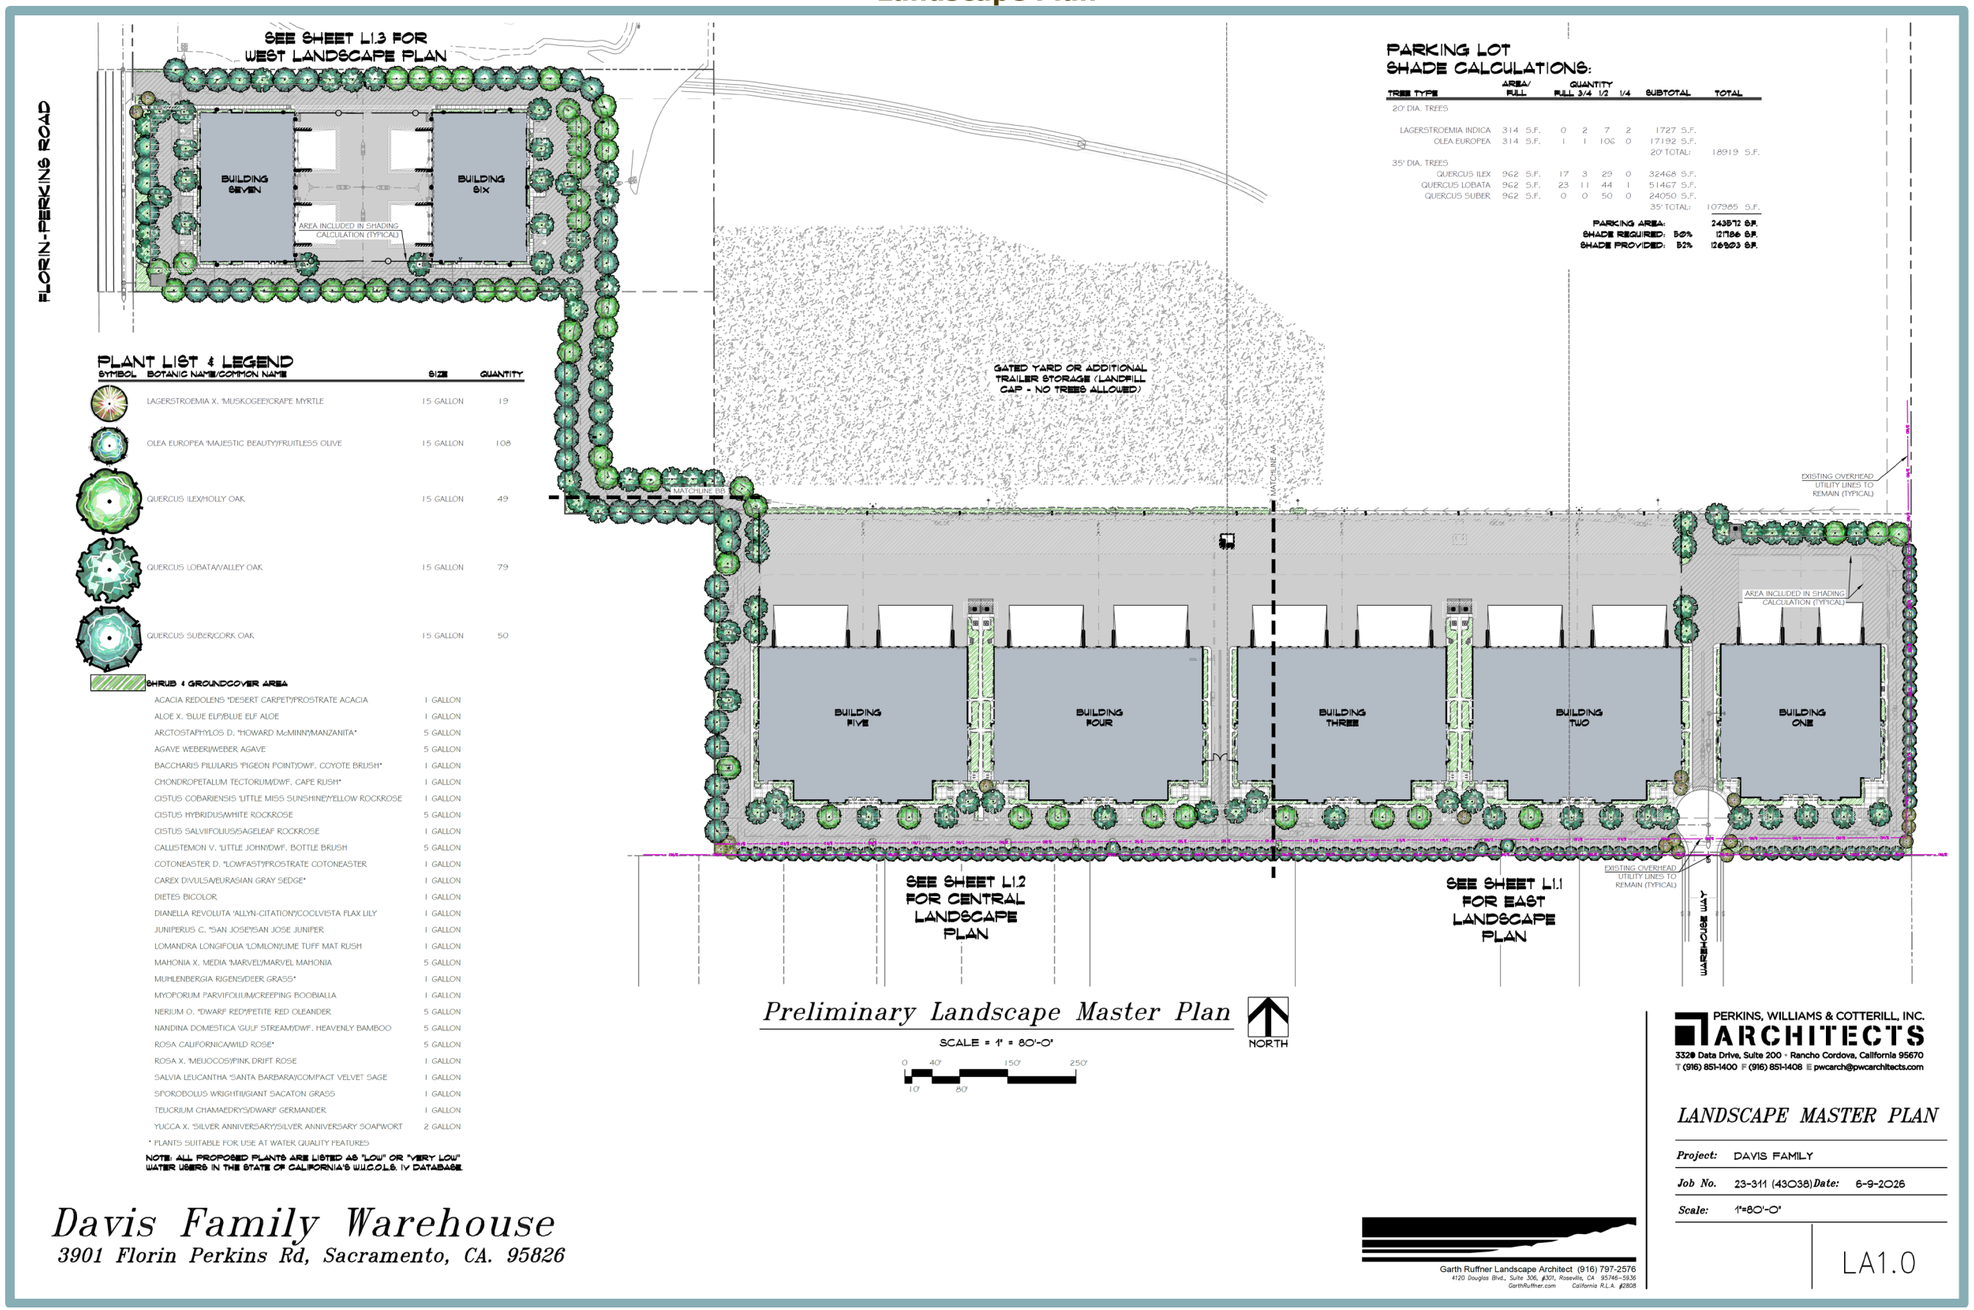
Landscape Plan



Pursuant to Section 13.2.3 of the City of Sacramento Design and Procedure Manual, a water study would be required, and the proposed project would be subject to the new DOU water impact fees, which are based on the City water meter size. Existing water mains in the immediate project vicinity are located to the northwest of the Development Area along Florin Perkins Road and along Warehouse Way to the south of the Development Area (see Figure 6 and Figure 7). From the two points of connection at the existing water mains, fire water lines and two-inch domestic water lines would extend into the project site with connection to each proposed industrial building.

Wastewater

Wastewater treatment for the project area is currently provided by the Sacramento Area Sewer District (SacSewer). The project site is located within the SacSewer Sewer Basin 13 and would be subject to the new DOU sewer impact fee, which is based on flow generation.[3] Wastewater generated in the project area is collected in the City's separated sewer system through a series of sewer pipes and flows into the SacSewer interceptor system, where the sewage is conveyed to the EchoWater Resource Recovery Facility (EchoWater Facility). The EchoWater Facility is owned and operated by SacSewer and provides sewage treatment for the entire City. The proposed project requested a sanitary sewer shed shift to shift the southeastern portion of the project site from the SacSewer NE CE Gravel West shed into SacSewer SEA shed. SacSewer conditionally approved the request dependent on the required extension of the eight-inch public sewer main in Warehouse Way to the northern boundary of the project site, and the maintenance of a 20-foot public sewer easement through the parcel. New six-inch sewer lines would extend from Buildings 1 through 5 and connect to the extension of the eight-inch public sewer main in Warehouse Way on the northern boundary of the site, and new six-inch sewer lines would extend from Buildings 6 and 7 and connect to the existing sanitary sewer manhole located within Florin Perkins Road.

Stormwater Drainage

The City's DOU provides storm drainage service throughout the City by using drain inlets, pumps, and canals. The City provides stormwater drainage through either the City's Combined Sewer System (CSS) or into individual drainage sumps located throughout the City. Stormwater collected by the CSS is transported to SacSewer's EchoWater Facility, where runoff is then treated prior to discharge into the Sacramento River. The project site is located within the City's Separated Sewer System, and, therefore, stormwater drainage at the project site is collected by individual drainage sumps.

The proposed project would include approximately 30.66 acres of new impervious surfaces as part of the development of the buildings and associated parking lot. The Development Area would include two drainage management areas (DMAs) (see Figure 8). Stormwater runoff from the new impervious surfaces within the DMAs would be directed to new drain inlets and manholes located throughout the boundaries of the Development Area, which would convey flows to new 12-to 36-inch storm drain lines. On-site stormwater drainage from DMA 1, which would consist of 32.11 acres, 18.29 of which would be impervious, would be transported by a network of new 12- to 36-inch storm drain pipes into the proposed 22,000-sf WQ Basin 1 located to the northeast of the proposed Building 6, or to the proposed WQ Swale 1 located to the north of Building 1. Runoff from the trailer storage area on the landfill cap would be discharged into the proposed WQ Swale 2 located to the north of the trailer storage area before being discharged into WQ Basin 1.

PRELIMINARY
STORM WATER MANAGEMENT PLAN

SHEET C08 OF 8

On-site stormwater drainage from DMA 2, which would consist of 13.44 acres, 12.37 of which would be impervious, would be transported through the new network of 12- to 36-inch storm drain lines into the proposed 16,600-sf WQ Basin 2 located to the north of the proposed Building 7. The project site would be built up slightly above exiting ground to provide adequate cover for storm drain infrastructure and to provide positive drainage away from the proposed buildings. The on-site water quality basins would treat all the proposed impervious areas for the on-site drainage. All excess runoff would discharge into the existing wetland detention/retention basin located north of Buildings 6 and 7.

Earthwork

Development of the proposed project would require cut and fill associated with raw earthwork, as well as the water quality basins and swales. Raw earthwork would include approximately 47,850 cubic yards (CY) of cut and 56,650 CY of fill, with a net 8,800 CY of fill required.

Site Plan and Design Review

The proposed project would require approval of Site Plan and Design Review for the construction of the warehouse/office buildings and associated site improvements. As detailed in Sacramento City Code Section 17.808.100, the purpose of the Site Plan and Design Review is to ensure that the physical aspects of development projects are consistent with the 2040 General Plan and applicable Specific Plans and/or Transit Village Plans, as well as with applicable design guidelines. Additionally, the purpose of the permit is to ensure a development is of high quality and is compatible with and complementary to surrounding development; to ensure streets and other public access ways and facilities, parking facilities, and utility and other infrastructure, both on-site and off-site, are adequate and available to support a development and conform to City development standards; to promote energy efficiency and water conservation; and to avoid or minimize, to the extent feasible, adverse environmental effects of development.

Discretionary Actions

Implementation of the proposed project would require the following discretionary actions by the City of Sacramento:

- Tentative Subdivision Map Approval. The proposed project would require approval of a Tentative Map to subdivide the approximately 156.5-acre project site into seven parcels.
- Site Plan and Design Review. Pursuant to Section 17.808.100 of the City of Sacramento Code, Site Plan and Design Review shall be required for the proposed project.

G. ENVIRONMENTAL CHECKLIST

The following Checklist contains the environmental checklist form presented in Appendix G of the CEQA Guidelines. The checklist form is used to describe the impacts of the proposed project. A discussion follows each environmental issue identified in the checklist. Included in each discussion are project-specific mitigation measures recommended, as appropriate, as part of the proposed project. For this checklist, the following designations are used:

Potentially Significant Impact: An impact that could be significant, and for which no mitigation has been identified. If any potentially significant impacts are identified, an EIR must be prepared.

Less Than Significant with Mitigation Incorporated: An impact that requires mitigation to reduce the impact to a less-than-significant level.

Less-Than-Significant Impact: Any impact that would not be considered significant under CEQA relative to existing standards.

No Impact: The project would not have any impact.

I. AESTHETICS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect on a scenic vista?	☐	☐	✖	☐
b. Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway?	☐	☐	✖	☐
c. In non-urbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?	☐	☐	✖	☐
d. Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	☐	☐	✖	☐

Discussion

a,b. Examples of typical scenic vistas include mountain ranges, ridgelines, or bodies of water as viewed from a highway, public space, or other area designated for the express purpose of viewing and sightseeing. In general, a project's impact to a scenic vista would occur if development of the project would substantially change or remove a scenic vista. Existing scenic resources in the City of Sacramento include major natural open space features such as the American River and Sacramento River, including associated parkways. In addition, according to the Master EIR, scenic resources in the City include the State Capitol building, Tower Bridge, and Sutter's Fort. The project site does not contain scenic resources and is not within an area designated as a scenic resource or vista. In addition, the Master EIR concluded that with implementation of General Plan policies, development under the 2040 General Plan would not result in substantial changes to important scenic resources. Because the proposed project would be consistent with Development Area's EMU General Plan designation, the proposed project would not result in significant impacts related to scenic resources beyond what has previously been anticipated by the City.

According to the California Scenic Highway Mapping System, the project site is located approximately 7.47 miles northeast of the nearest Officially Designated State Scenic Highway, which is the portion of State Route (SR) 160 located within Sacramento County.[4] The project site is not visible to motorists travelling along the officially designated scenic portion of SR 160 and, as a result, development of the proposed project would not affect scenic resources within a State Scenic Highway. Furthermore, the project site does not contain any scenic resources such as trees, rock outcroppings, or historic buildings.

Based on the above, the proposed project would not have a substantial adverse effect on a scenic vista and would not substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State Scenic Highway. Thus, a ***less-than-significant*** impact would occur.

[4] California Department of Transportation. *California Scenic Highway Mapping System.* Available at: https://caltrans.maps.arcgis.com/apps/webappviewer/index.html?id=465dfd3d807c46cc8e8057116f1aacaa. Accessed June 2026.

c. The project site is undeveloped with the exception of the GreenWaste Florin Perkins Resource Recovery Facility that currently operates and will continue to operate within the central portion of the overall project site, north of the Development Area. Land uses surrounding the Development Area include the GreenWaste Florin Perkins Resource Recovery Facility within the undeveloped land in the central portion of the overall project site; industrial uses to the north, across Jackson Road; undeveloped land to the east, which is planned for residential development as part of the Aspen 1 Project; light industrial/commercial uses to the south; and light industrial/commercial uses to the immediate west and a distribution center further west, across Florin Perkins Road. Therefore, the site is in an urbanized area and, in accordance with the CEQA Guidelines, the relevant threshold is whether the project would conflict with applicable zoning and other regulations governing scenic quality.

The proposed project is subject to Site Plan and Design Review in accordance with Sacramento City Code Section 17.808.100, which would ensure that the proposed project is consistent with the 2040 General Plan, as well as with applicable design guidelines included in the Citywide Commercial Design Guidelines.[5] Accordingly, the City's Site Plan and Design Review process would ensure that the proposed development would not conflict with applicable zoning and other regulations governing scenic quality.

The immediate project vicinity is characterized by existing commercial and industrial uses. As such, the proposed project would be visually compatible with the surrounding existing uses. The proposed project would be consistent with the site's land use designation, and would comply with applicable policies set forth by the 2040 General Plan. In addition, the project would be subject to applicable regulations and standards set forth in the Sacramento City Code Chapter 17.220, Article II, including requirements pertaining to height, density, floor area ratios, and setbacks. Finally, new landscaping would be provided primarily bordering the proposed buildings, consistent with the requirements established by Sacramento City Code Chapter 7.612. Pursuant to Section 17.612.010 of the City Code, the proposed project would be required to include and maintain landscaping within all required front-yard and street side-yard setbacks. Additionally, a landscaped planter is required to separate all surfaced areas from the adjacent public street. Pursuant to Section 17.612.040, trees are required to be planted and maintained throughout the surface parking facility to ensure that, within 15 years after establishment of the parking facility, at least 50 percent of the parking facility will be shaded. All planting, soil volumes, and maintenance would be required to comply with the parking facility tree shading design and maintenance guidelines.

In addition, the proposed project would be consistent with the Development Area's current General Plan designation of EMU and the zoning designation of M-1S-SWR. Therefore, the City has generally anticipated the development of the site with the proposed uses.

Based on the above, the proposed project would not conflict with applicable zoning and other regulations governing scenic quality, and a ***less-than-significant*** impact would occur.

d. The project site is undeveloped with the exception of the GreenWaste Florin Perkins Resource Recovery Facility that currently operates and will continue to operate in the center of the project site. Development of the proposed project would include the

[5] City of Sacramento Community Development Department. *Citywide Commercial Design Guidelines – Site Plan and Design Review Guidelines Checklist*. July 4, 2019.

construction of seven new warehouse buildings. As a result, the proposed project would introduce new sources of light and glare to the project site. Potential sources of light and glare associated with the proposed project would include interior light spilling through windows, exterior lighting, parking lot lighting, and light reflected off windows. The type and intensity of light and glare would be similar to that of the surrounding industrial developments.

The proposed project would be required to comply with General Plan Policy LUP-4.6, which requires lighting to be shielded from view and directed downward, which would be ensured through the Site Plan and Design Review process. Through compliance with applicable General Plan policies, the proposed project would not be expected to cause a public annoyance related to new sources of glare or create new sources of light that would be cast onto oncoming traffic or nearby future residential uses.

All components of the proposed project would be subject to Site Plan and Design Review by the City of Sacramento to ensure light and glare do not obstruct day or nighttime views in the area. Citywide design guidelines for lighting requires even illumination and prohibits unwanted glare towards adjacent or other sensitive areas. Pursuant to the Citywide Commercial Design Guidelines, downlighting and other features reducing sky-lighting are encouraged. Compliance with such standards would ensure that on-site lighting would be directed within the project site and would not substantially illuminate adjacent properties.

As part of demonstrating compliance with applicable lighting standards, a Photometric Study was prepared for the proposed project, which shows that the lighting intensity at the areas immediately outside the boundaries of the project site would reach near-zero (see Figure 9, Figure 10, and Figure 11). Even while some areas would not reach zero, the project site is surrounded by industrial development and receptors that would be sensitive to lighting associated with the proposed project do not exist in close enough proximity to the project site to be affected by the proposed lighting.

Based on the above, implementation of the project would result in a ***less-than-significant*** impact with respect to creating a new source of substantial light or glare which would adversely affect day or nighttime views in the area.

II. AGRICULTURE AND FOREST RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	☐	☐	☐	✖
b. Conflict with existing zoning for agricultural use, or a Williamson Act contract?	☐	☐	☐	✖
c. Conflict with existing zoning for, or cause rezoning of, forest land (as defined in Public Resources Code section 12220(g)), timberland (as defined by Public Resources Code section 4526), or timberland zoned Timberland Production (as defined by Government Code section 51104(g))?	☐	☐	☐	✖
d. Result in the loss of forest land or conversion of forest land to non-forest use?	☐	☐	☐	✖
e. Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use or conversion of forest land to non-forest use?	☐	☐	☐	✖

Discussion

a,e. The majority of project site currently consists of undeveloped land. The GreenWaste Florin Perkins Resource Recovery Facility currently operates and will continue to operate a facility in the central portion of the project site. According to the California Department of Conservation's Farmland Mapping and Monitoring Program (FMMP), the site is designated as "Grazing Land," "Farmland of Local Importance" and "Other Land."[6] While Farmland of Local Importance is defined as land of importance to the local agricultural economy, according to PRC Section 21060.1, "agricultural land" is defined as Prime Farmland, Farmland of Statewide Importance, or Unique Farmland. As such, the project site does not contain, and is not located adjacent to Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland). In addition, the project site is not actively farmed and is located near existing development, thereby, precluding any potential agricultural uses on the site. Due to the lack of Farmland or designated agricultural areas on-site, ***no impact*** related to the conversion of Farmland to a non-agricultural use would occur.

b. The project site is not currently used for agricultural purposes, is not under a Williamson Act contract, and is not designated or zoned for agricultural uses. Therefore, buildout of the proposed project would not conflict with existing zoning for agricultural use or a Williamson Act contract, and ***no impact*** would occur.

c,d. The project site is not considered forest land (as defined in PRC Section 12220[g]), timberland (as defined by PRC Section 4526), and is not zoned Timberland Production (as defined by Government Code Section 51104[g]). The project site is currently zoned M-1S-SWR. Therefore, the proposed project would have ***no impact*** with regard to conversion of forest land or any potential conflict with forest land, timberland, or Timberland Production zoning.

[6] California Department of Conservation. *California Important Farmland Finder.* Available at: https://maps.conservation.ca.gov/DLRP/CIFF/. Accessed June 2026.

III. AIR QUALITY. *Would the project:*		Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a.	Conflict with or obstruct implementation of the applicable air quality plan?	☐	✖	☐	☐
b.	Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard?	☐	✖	☐	☐
c.	Expose sensitive receptors to substantial pollutant concentrations?	☐	☐	✖	☐
d.	Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?	☐	☐	✖	☐

Discussion

a,b. The City of Sacramento is located within Sacramento County, which is within the boundaries of the Sacramento Valley Air Basin (SVAB) and under the jurisdiction of the Sacramento Metropolitan Air Quality Management District (SMAQMD). Federal and State ambient air quality standards (AAQS) have been established for six common air pollutants, known as criteria pollutants, due to the potential for pollutants to be detrimental to human health and the environment. The criteria pollutants include particulate matter (PM), ground-level ozone, carbon monoxide (CO), sulfur oxides, nitrogen oxides (NO_X), and lead. At the federal level, Sacramento County is designated as severe nonattainment for the 8-hour ozone AAQS, nonattainment for the 24-hour $PM_{2.5}$ AAQS, and attainment or unclassified for all other criteria pollutant AAQS. At the State level, the area is designated as a serious nonattainment area for the 1-hour ozone AAQS, nonattainment for the 8-hour ozone AAQS, nonattainment for the PM_{10} and $PM_{2.5}$ AAQS, and attainment or unclassified for all other State AAQS.

As a part of the SVAB federal ozone nonattainment area, the SMAQMD works with the other local air districts within the Sacramento area to develop a regional air quality management plan under the Federal Clean Air Act (FCAA) requirement. The regional air quality management plan is called the State Implementation Plan (SIP) which describes and demonstrates how Sacramento County, as well as the Sacramento nonattainment area, would attain the required federal ozone standard by the proposed attainment deadline. In accordance with the requirements of the FCAA, the SMAQMD, along with the other air districts in the region, prepared the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan (Ozone Attainment Plan) in December 2008. The California Air Resources Board (CARB) determined that the Ozone Attainment Plan met FCAA requirements and approved the Plan on March 26, 2009 as a revision to the SIP. An update to the plan, the 2017 Revisions to the Sacramento Regional 8-Hour Ozone Attainment and Reasonable Further Progress Plan (2017 Ozone Attainment Plan), was prepared and adopted by CARB on November 16, 2017. An additional update to the plan was prepared and adopted by CARB on October 15, 2018, and known as the 2018 Updates to the California SIP.

Nearly all development projects in the Sacramento region have the potential to generate air pollutants that may increase the difficultly of attaining federal and State AAQS. Therefore, evaluation of air quality impacts is required. In order to evaluate ozone and other criteria air pollutant emissions and support attainment goals for those pollutants for which the area is designated nonattainment, SMAQMD has developed the Guide to Air Quality Assessment in Sacramento County (SMAQMD Guide), which includes

recommended thresholds of significance, including mass emission thresholds for construction-related and operational ozone precursors, as the area is under nonattainment for ozone.[7] The SMAQMD's recommended thresholds of significance for the ozone precursors reactive organic compounds (ROG) and NO_X, which are expressed in lbs/day and tons/yr, are presented in Table 1. As shown in the table, SMAQMD has construction and operational thresholds of significance for PM_{10} and $PM_{2.5}$ expressed in both pounds per day (lbs/day) and tons per year (tons/yr). The construction and operational thresholds for PM_{10} and $PM_{2.5}$ only apply to those projects that have implemented all applicable Best Available Control Technologies (BACTs) and Best Management Practices (BMPs).

Table 2
SMAQMD Thresholds of Significance

Pollutant	Construction Threshold	Operational Threshold
NO_X	85 lbs/day	65 lbs/day
ROG	N/A[1]	65 lbs/day
PM_{10}	80 lbs/day and 14.6 tons/yr[2]	80 lbs/day and 14.6 tons/yr[3]
$PM_{2.5}$	82 lbs/day and 15 tons/yr[2]	82 lbs/day and 15 tons/yr[3]

1 The application of architectural coatings is typically the largest source of ROG emissions during construction activity. SMAQMD addresses construction-related emissions of ROG through the implementation of Rule 442, which regulates ROG emissions from architectural coatings. Therefore, SMAQMD has not adopted a threshold for construction-related ROG emissions.

2 The identified construction thresholds of significance for PM_{10} and $PM_{2.5}$ are only applicable when all feasible construction BMPs are applied. The SMAQMD's construction BMPs are also known as Basic Construction Emission Control Practices. (SMAQMD, *Basic Construction Emission Control Practices (Best Management Practices),* July 2019)

3 The identified operational thresholds of significance for PM_{10} and $PM_{2.5}$ are only applicable when all feasible operational BMPs and BACTs are applied. The implementation of BACTs apply only to stationary source operational emissions. (SMAQMD, *Operational Best Management Practices for PM from Land Use Development Projects*, October 2020)

Source: SMAQMD Thresholds of Significance Table, April 2020.

The City of Sacramento, as the CEQA Lead Agency for the proposed project, uses the SMAQMD's thresholds of significance. Therefore, if the proposed project's emissions exceed the pollutant thresholds presented in Table 1, the project could have a significant effect on air quality, the attainment of federal and State AAQS, and could conflict with or obstruct implementation of the applicable air quality plan.

Because construction equipment emits relatively low levels of ROG, and ROG emissions from other construction processes (e.g., asphalt paving, architectural coatings) are typically regulated by SMAQMD, SMAQMD has not adopted a construction emissions threshold for ROG. SMAQMD has, however, adopted a construction emissions threshold for NO_X, as shown in Table 1, above.

The proposed project's construction and operational emissions were quantified using the CalEEMod web-based software version 2022.1.1.45 – a Statewide model designed to provide a uniform platform for government agencies, land use planners, and environmental professionals to quantify air quality emissions, including greenhouse gas (GHG) emissions, from land use projects. The model applies inherent default values for

7 Sacramento Metropolitan Air Quality Management District. *Air Quality Pollutants and Standards*. Available at: http://www.airquality.org/air-quality-health/air-quality-pollutants-and-standards. Accessed August 2025.

various land uses, including construction data, vehicle mix, trip length, average speed, etc. Where project-specific information is available, such information is applied in the model. The proposed project's modeling assumed the following:

- Construction was estimated to begin in June 2026 and occur over an approximately two-year and three-month period;[8]
- Approximately 8,800 cubic yards (CY) of soil would be imported to the project site during grading;
- The proposed project's trip generation has been updated to be consistent with the project-specific trip generation provided in the Trip Generation Memorandum prepared for the proposed project by Kittelson & Associates;[9]
- The proposed project would use natural gas during operations;
- During project operations, seven emergency generators would operate on-site; and
- During project operations, seven forklifts would operate on-site.

The proposed project's estimated emissions associated with construction and operations and the proposed project's contribution to cumulative air quality conditions are provided below. All CalEEMod results are included as Appendix A to this IS/MND.

Construction Emissions

During construction of the proposed project, various types of equipment and vehicles would temporarily operate on the project site. Construction exhaust emissions would be generated from construction equipment, vegetation clearing and earth movement activities, construction worker commutes, and construction material hauling for the entire construction period. The aforementioned activities would involve the use of diesel- and gasoline-powered equipment that would generate emissions of criteria pollutants. Project construction activities also represent sources of fugitive dust, which includes PM emissions. As construction of the proposed project would generate air pollutant emissions intermittently within the site and vicinity, until all construction has been completed, construction is a potential concern because the project site is in a non-attainment area for ozone, PM_{10}, and $PM_{2.5}$.

To apply the construction thresholds presented in Table 1, projects must implement all feasible SMAQMD Basic Construction Emission Control Practices/BMPs and BACTs related to dust control. The required measures would be incorporated into the project through Mitigation Measure III-1 as presented below. Consequently, project construction is assumed to include compliance with the required rules and regulations, and the project's PM emissions are assessed in comparison to the thresholds presented in Table 1 above.

According to the CalEEMod results, the proposed project would result in maximum unmitigated construction criteria air pollutant emissions as shown in Table 2.

[8] It is noted that when the air quality analysis was conducted, project construction was anticipated to commence in June 2026. While this is no longer the case, the analysis conducted for this Initial Study/Mitigated Negative Declaration is conservative because construction fleets and electricity generation are becoming more efficient over time due to state regulations; thus, modeling construction at an earlier start date provides a more conservative analysis.

[9] Kittelson & Associates. *3901 Florin Perkins Road Traffic Impact Study – Trip Generation Memorandum DRAFT*. February 2, 2026.

Table 3
Maximum Unmitigated Construction Emissions

Pollutant	Construction Emissions	Threshold of Significance	Exceeds Threshold?
ROG	7.74 lbs/day	N/A	**N/A**
NO_X	29.21 lbs/day	85 lbs/day	**NO**
PM_{10}	21.08 lbs/day and 0.96 tons/yr	80 lbs/day and 14.6 tons/yr	**NO**
$PM_{2.5}$	11.29 lbs/day and 0.36 tons/yr	82 lbs/day and 15 tons/yr	**NO**

Source: CalEEMod, July 2026 (see Appendix A).

As shown in Table 2, the proposed project's maximum unmitigated construction-related emissions would be below the applicable thresholds of significance. Therefore, construction activities associated with development of the proposed project would not substantially contribute to the SVAB's non-attainment status for ozone or PM. Furthermore, the proposed project would be required to comply with all SMAQMD rules and regulations for construction, which would further reduce construction emissions of criteria pollutants to levels lower than those presented in Table 2. The applicable rules and regulations would include, but would not be limited to, the following:

- Rule 403 related to Fugitive Dust;
- Rule 404 related to Particulate Matter;
- Rule 407 related to Open Burning;
- Rule 442 related to Architectural Coatings;
- Rule 453 related to Cutback and Emulsified Asphalt Paving Materials; and
- Rule 460 related to Adhesives and Sealants.

Thus, in accordance with SMAQMD guidance, and with implementation of Mitigation Measure III-1, the proposed project would be considered to have a less-than-significant impact on air quality during construction.

Operational Emissions

Operational emissions of ROG, NO_X, and PM would be generated by the proposed project from both mobile and stationary sources. Emissions would also occur from area sources, such as landscape maintenance equipment exhaust.

The estimated operational emissions for the proposed project are presented below in Table 3. The proposed emergency generators would be required to comply with SMAQMD's emission standards related to emergency generators as established by BACT Determination Number 402. SMAQMD's BACT Determination Number 402 is the only BACT applicable to the proposed project. The proposed project would implement all feasible operational BMPs and BACTs and would use the operational non-zero thresholds of significance for PM_{10} and $PM_{2.5}$. Consequently, the project's PM emissions are assessed in comparison to the thresholds presented in Table 1 above.

Table 4
Maximum Unmitigated Operational Emissions

Pollutant	Project Emissions	Operational Threshold	Exceeds Threshold?
ROG	23.60 lbs/day	65 lbs/day	**NO**
NO_X	31.53 lbs/day	65 lbs/day	**NO**
PM_{10}	10.34 lbs/day and 1.68 tons/yr	80 lbs/day and 14.6 tons/yr	**NO**
$PM_{2.5}$	3.74 lbs/day and 0.50 tons/yr	82 lbs/day and 15 tons/yr	**NO**

Source: CalEEMod, July 2026 (see Appendix A).

As shown in Table 3, the proposed project's maximum unmitigated operational criteria pollutant emissions would be below the applicable thresholds of significance. Therefore, the proposed project would not substantially contribute to the SVAB's non-attainment status for ozone or PM during operations, and a less-than-significant impact would occur associated with operations of the proposed project.

Cumulative Emissions

A cumulative impact analysis considers a project over time in conjunction with other past, present, and reasonably foreseeable future projects whose impacts might compound those of the project being assessed. Due to the dispersive nature and regional sourcing of air pollutants, air pollution is already largely a cumulative impact. The non-attainment status of regional pollutants, including ozone and PM, is a result of past and present development and, thus, cumulative impacts related to these pollutants could be considered cumulatively significant.

Adopted SMAQMD rules and regulations, as well as the thresholds of significance, have been developed with the intent to ensure continued attainment of AAQS, or to work towards attainment of AAQS for which the area is currently designated non-attainment, consistent with applicable air quality plans. As future attainment of AAQS is a function of successful implementation of SMAQMD's planning efforts, according to the SMAQMD Guide, by exceeding the SMAQMD's project-level thresholds for construction or operational emissions, a project could contribute to the region's non-attainment status for ozone and PM emissions and could be considered to conflict with or obstruct implementation of the SMAQMD's air quality planning efforts.

As discussed above, the proposed project would result in construction and operational emissions below all applicable SMAQMD thresholds of significance for criteria pollutants. Therefore, the proposed project would not be considered to result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment, and impacts would be considered less than significant.

Conclusion

As discussed above, both construction-related and operational emissions resulting from implementation of the proposed project would be below SMAQMD's applicable thresholds of significance. Because the proposed project would result in emissions below the applicable thresholds of significance during both construction and operations, the proposed project would not violate an AAQS, contribute substantially to an existing or projected air quality violation, or result in PM concentrations greater than the applicable thresholds. However, without compliance with applicable SMAQMD Basic Construction Emission Control Practices/BMPs, a ***potentially significant*** impact could result.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

III-1. *Prior to the initiation of any ground-disturbing activities, the project applicant shall show on project improvement plans by way of notation that the following Sacramento Metropolitan Air Quality Management District (SMAQMD) Basic Construction Emission Control Practices/BMPs shall be implemented during all construction activities associated with the proposed project:*

- *Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads;*
- *Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered;*
- *Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited;*
- *Limit vehicle speeds on unpaved roads to 15 miles per hour (mph);*
- *All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used;*
- *Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [CCR, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site;*
- *Provide current certificate(s) of compliance for the CARB's In-Use Off-Road Diesel-Fueled Fleets Regulation (CCR, Title 13, Sections 2449 and 2449.1). For more information contact CARB at 877-593-6677, doors@arb.ca.gov, or www.arb.ca.gov/doors/compliance_cert1.html; and*
- *Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determined to be running in proper condition before it is operated.*

Proof of compliance with this measure shall be submitted to the City of Sacramento for review and approval.

c. Some land uses are considered more sensitive to air pollution than others, due to the types of population groups or activities involved. Heightened sensitivity may be caused by health problems, proximity to the emissions source, and/or duration of exposure to air pollutants. Children, pregnant women, the elderly, and those with existing health problems are especially vulnerable to the effects of air pollution. Sensitive receptors are typically defined as facilities where sensitive receptor population groups (i.e., children, the elderly, the acutely ill, and the chronically ill) are likely to be located. Accordingly, land uses that

are typically considered to be sensitive receptors include residences, schools, playgrounds, childcare centers, retirement homes, convalescent homes, hospitals, and medical clinics. The nearest sensitive receptor to the project site is a single-family residence located approximately 0.5-mile to the north of the site at 8550 Jackson Road. However, the future Aspen 1 Residential Mixed-Use development would be located approximately 50 feet east of the project site and, although not required, is also considered within this analysis related to operational toxic air contaminant (TAC) emissions, as discussed below.

The major pollutant concentrations of concern are localized carbon monoxide (CO), TAC emissions, and criteria pollutant emissions, which are addressed in further detail below.

Localized CO Emissions

Localized concentrations of CO are related to the levels of traffic and congestion along streets and at intersections. Pursuant to the SMAQMD Guide, emissions of CO are generally of less concern than other criteria pollutants, as operational activities are not likely to generate substantial quantities of CO, and the SVAB has been in attainment for CO for multiple years.[10] The proposed project would not contribute to high levels of traffic congestion that could result in long-term generation of CO. Additionally, due to the continued attainment of California Ambient Air Quality Standards (CAAQS) and National Ambient Air Quality Standards (NAAQS), and advances in vehicle emissions technologies, the likelihood that any single project would create a CO hotspot is minimal. Therefore, the proposed project would result in a less-than-significant impact related to localized CO emissions.

TAC Emissions

Health risks associated with TACs are a function of both the concentration of emissions and the duration of exposure, where the higher the concentration and/or the longer the period of time that a sensitive receptor is exposed to pollutant concentrations would correlate to a higher health risk. The CARB's Air Quality and Land Use Handbook: A Community Health Perspective (Handbook) provides recommended setback distances for sensitive land uses from major sources of TACs, including, but not limited to, freeways and high traffic roads, gas stations, chrome plating operations, distribution centers, and rail yards. The CARB has identified diesel particulate matter (DPM) from diesel-fueled engines as a TAC; thus, high volume freeways, stationary diesel engines, and facilities attracting heavy and constant diesel vehicle traffic are identified as having the highest associated health risks from DPM.

The proposed project would involve components that would result in emissions of TACs. In particular, implementation of the proposed project would result in emissions of DPM during project construction and from the on-site use of heavy-duty diesel trucks and an emergency generator during operation. Each source of TACs is discussed in further depth in the sections below.

Construction Emissions

Short-term, construction-related activities could result in the generation of TACs, specifically DPM, from on-road haul trucks and off-road equipment exhaust emissions. However, construction is temporary and occurs over a relatively short duration in

[10] Sacramento Metropolitan Air Quality Management District. *Guide to Air Quality Assessment, Chapter 4: Operational Criteria Air Pollutant and Precursor Emissions*. October 2020.

comparison to the operational lifetime of the proposed project. Health risks are typically associated with exposure to high concentrations of TACs over extended periods of time (e.g., 30 years or greater). As discussed above, construction of the proposed project is anticipated to occur over an approximately two-year and three-month period. Additionally, DPM is known to be highly dispersive, and only portions of the site would be disturbed at a time throughout the construction period. Operation of construction equipment would occur intermittently throughout the course of a day, rather than continuously at any one location on the project site. Operation of construction equipment within portions of the overall Development Area would allow for the dispersal of emissions, and would ensure that construction activity is not continuously occurring in the portions of the project site closest to the nearest existing receptor, a single-family residence located approximately 0.5-mile to the north of the Development Area at 8550 Jackson Road.

In addition, all construction equipment and operation thereof would be regulated per the CARB's In-Use Off-Road Diesel Vehicle Regulation. The In-Use Off-Road Diesel Vehicle Regulation includes emissions reducing requirements such as limitations on vehicle idling, disclosure, reporting, and labeling requirements for existing vehicles, as well as standards relating to fleet average emissions and the use of Best Available Control Technologies. Thus, on-site emissions of PM would be reduced, which would result in a proportional reduction in DPM emissions and exposure of nearby residences to DPM. Project construction would also be required to comply with all applicable SMAQMD rules and regulations, particularly associated with permitting of air pollutant sources.

Because construction equipment on-site would not operate for long periods of time and would be used at varying locations within the sites, associated emissions of DPM would not occur at the same location (or be evenly spread throughout the entire project site) for long periods of time. Due to the temporary nature of construction and the relatively short duration of potential exposure to associated emissions, the potential for any one sensitive receptor in the area to be exposed to concentrations of pollutants for a substantially extended period of time would be low. Therefore, construction associated with the proposed project would not be expected to expose any sensitive receptors to substantial pollutant concentrations.

Heavy Duty Truck Circulation

As discussed above, construction of the proposed project would require soil hauling, which would involve the use of heavy-duty trucks. According to the CalEEMod modeling for the proposed project, construction of the proposed project would involve approximately 14 daily one-way trips daily associated with soil hauling. Thus, the proposed project would not exceed 100 trucks per day during construction, which is the amount to be considered a distribution center by CARB.

In addition, during operations, the proposed project would involve the development of seven warehouse/office buildings and a trailer storage area, which would result in approximately 90 heavy-duty diesel truck trips per day associated with the movement of goods to and from the site. As discussed above, the proposed project would comply with AB 98 requirements, as the project site is not located within 900 feet of an existing sensitive receptor.

While truck trips associated with the proposed project would not exceed 100 trucks per day, which is the amount to be considered a distribution center by CARB, the future Aspen 1 Residential Mixed-Use development would locate new sensitive receptors within 1,000

feet of the project site (which is the CARB-recommended setback distance for sensitive land uses from a distribution center). Thus, in order to confirm that an impact to future sensitive receptors at the Aspen 1 Residential Mixed-Use development would not occur, a Health Risk Assessment (HRA) has been conducted to analyze potential impacts associated with heavy-duty diesel-powered trucks travelling to and from the project site during project operations.

The operation of heavy-duty diesel-powered trucks associated with the proposed project could result in an increase in emissions of DPM within the project site and on the surrounding roadways. To assess the increase in DPM emissions associated with the heavy-duty diesel trucks travelling to and from the project site, the anticipated truck route was mapped, including one idling point at the truck parking area within the project site.

DPM is considered a subset of $PM_{2.5}$ emissions. Thus, the estimated concentration of $PM_{2.5}$ was used as a proxy to represent emissions of DPM. Emission rates for the heavy-duty diesel-powered trucks were obtained through the CARB's mobile source emissions inventory (EMFAC) 2025 database. Once the emissions of DPM were determined, the concentration of DPM at nearby receptors was then estimated using the American Meteorological Society/Environmental Protection Agency (AMS/EPA) Regulatory Model (AERMOD). Finally, the associated cancer risk and non-cancer hazard index were calculated using the CARB's Hotspot Analysis Reporting Program Version 2 (HARP 2) Risk Assessment Standalone Tool (RAST), which calculates the cancer and non-cancer health impacts using the risk assessment guidelines of the 2015 Office of Environmental Health Hazard Assessment (OEHHA) Guidance Manual for Preparation of Health Risk Assessments.[11] The modeling was performed in accordance with the USEPA's User's Guide for the AMS/EPA Regulatory Model – AERMOD[12] and the 2015 OEHHA Guidance Manual. The exposure period in HARP 2 RAST was set to a 30-year exposure period. The results of the dispersion modeling are included as Figure 12. As shown in the figure, the maximally exposed receptor, represented by a white "X", is located at the future Aspen 1 Residential Mixed-Use development approximately 50 feet east of the project site.

Based on the foregoing methodology, the cancer risk and non-cancer hazard indices were estimated for the maximally exposed receptor, are presented in Table 4.

Table 5
Maximum Unmitigated Cancer Risk and Hazard Index Associated with Heavy-Duty Diesel Trucks

	Cancer Risk (per million persons)	Acute Hazard Index	Chronic Hazard Index
Heavy-Duty Diesel Trucks DPM Health Risks	0.99	0.00	0.0002
Thresholds of Significance	*10*	*1.0*	*1.0*
Exceed Thresholds?	**NO**	**NO**	**NO**
Sources: AERMOD, and HARP 2 RAST, June 2026 (see Appendix A).

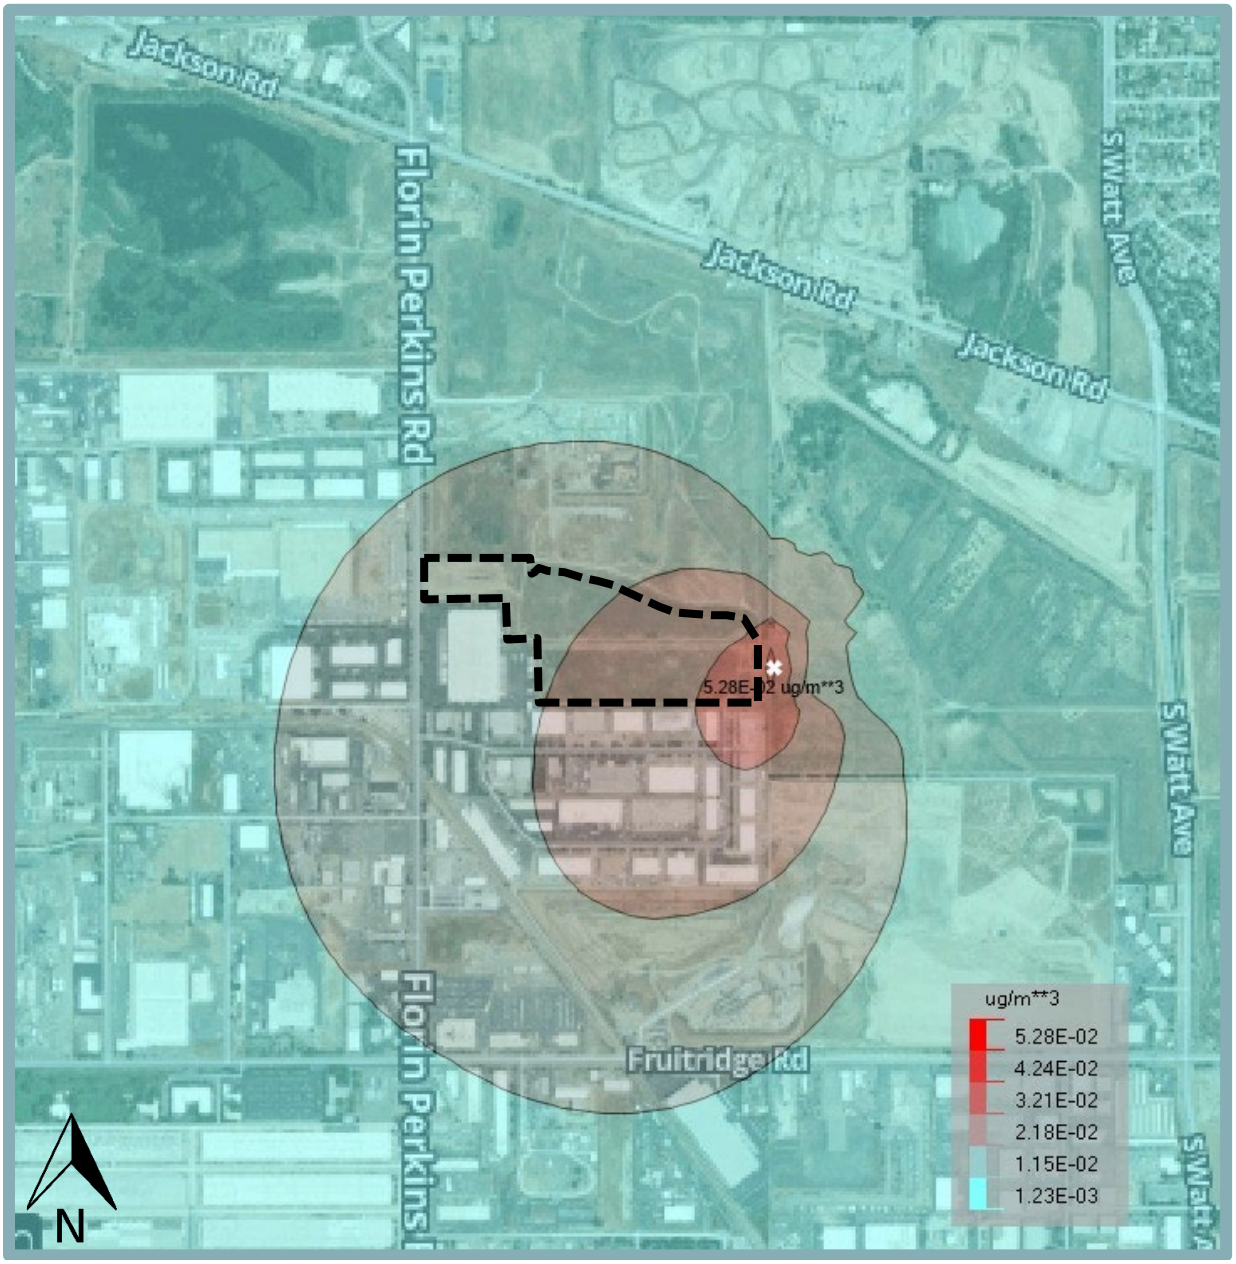
[12] U.S. Environmental Protection Agency. *User's Guide for the AMS/EPA Regulatory Model (AERMOD)*. December 2016.

Figure 12
AERMOD Results



Source: AERMOD, June 2026.

As shown in Table 4, operation of heavy-duty diesel-powered trucks on roadways and within the project site would result in cancer risk and hazard index at the maximally exposed receptor below the applicable SMAQMD thresholds of significance.

In addition, the proposed project would involve the use of emergency generators in the event of an emergency. However, the emergency generators were assumed to operate for a maximum of 200 hours per year. Thus, the emergency generators are not assumed to substantially generate pollutant emissions, given the short-term and infrequent use of the emergency generator.

Consequently, operation of the proposed project would not expose sensitive receptors to excess concentrations of TAC emissions.

Criteria Pollutants

Recent rulings from the California Supreme Court (including the *Sierra Club v. County of Fresno* (2018) 6 Cal. 5th 502 case regarding the proposed Friant Ranch Project) have underscored the need for the analysis of potential health impacts resulting from the emission of criteria pollutants during operations of proposed projects. Although analysis of project-level health risks related to the emission of CO and TACs has long been practiced under CEQA, the analysis of health impacts due to individual projects resulting from emissions of criteria pollutants is a relatively new field.

In October of 2020, SMAQMD released the *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District* (Guidance) for the analysis of criteria emissions in areas within the SMAQMD's jurisdiction. The Guidance represents SMAQMD's effort to develop a methodology that provides a consistent, reliable, and meaningful analysis in response to the Supreme Court's direction on correlating health impacts to a project's emissions. The Guidance was prepared by conducting regional photochemical modeling, and relies on the USEPA's Benefits Mapping and Analysis Program (BenMAP) to assess health impacts from ozone and $PM_{2.5}$. SMAQMD has prepared two tools that are intended for use in analyzing health risks from criteria pollutants. Small projects with criteria pollutant emissions close to or below SMAQMD's adopted thresholds of significance may use the *Minor Project Health Effect Screening Tool*, while larger projects with emissions between two and eight times greater than SMAQMD's adopted thresholds may use the *Strategic Area Project Health Screening Tool*.[13] Considering the proposed project would not result in emissions which exceed the SMAQMD's thresholds of significance, the project would qualify for the *Minor Project Health Effects Screening Tool*. It is important to note, however, that the *Minor Project Health Effects Screening Tool* applies the assumption that all small projects result in emissions of criteria pollutants equal to the SMAQMD thresholds of significance.

As shown in Table 3, the proposed project would result in operational emissions well below the SMAQMD thresholds of significance and, thus, the health impacts calculated for the proposed project using the *Minor Project Health Effects Screening Tool* are highly conservative. The project's actual health impacts associated with criteria pollutant emissions would be expected to be much less than what is presented herein based on the aforementioned SMAQMD tool. Results from the *Minor Project Health Effects Screening Tool* are shown in Table 5 below.

[13] Sacramento Metropolitan Air Quality Management District. *Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District*. June 2020.

Table 6
Estimated Health Effects from Proposed Project

Health Endpoint	Age Range[1]	Incidences Across the 5-Air-District Region Resulting from Project Emissions (per year)[2] (Mean)	Percent of Background Health Incidences Across the 5-Air-District Region[3] (%)	Total Number of Health Incidences Across the 5-Air-District Region (per year)[4]

Mortality Ozone				
Mortality, Non-Accidental	0-99	0.043	0.00014	30,386

1 Affected age ranges are shown. Other age ranges are available, but the endpoints and age ranges shown here are the ones used by the USEPA in their health assessments. The age ranges are consistent with the epidemiological study that is the basis of the health function.

2 Health effects are shown in terms of incidences of each health endpoint and how it compares to the base (2035 base year health effect incidences, or "background health incidence") values. Health effects are shown for the Reduced Sacramento 4-km Modeling Domain and the 5-Air-District Region.

3 The percent of background health incidence uses the mean incidence. The background health incidence is an estimate of the average number of people that are affected by the health endpoint in a given population over a given period of time. In this case, the background incidence rates cover the 5-Air-District Region (estimated 2035 population of 3,271,451 persons). Health incidence rates and other health data are typically collected by the government as well as the World Health Organization. The background incidence rates used here are obtained from BenMAP.

4 The total number of health incidences across the 5-Air-District Region is calculated based on the modeling data. The information is presented to assist in providing overall health context.

5 The technical specifications and map for the Reduced Sacramento 4-km Modeling Domain are included in Appendix A, Table A-1 and Appendix B, Figure B-2 of the Guidance to Address the Friant Ranch Ruling for CEQA Projects in the Sac Metro Air District.

Source: Sac Metro Air District Minor Project Health Effects Screening Tool, Version 2. Published June 2020

As shown in the table, according to the *Minor Project Health Effects Screening Tool*, which is based on the highly conservative assumption that the proposed project would emit criteria pollutants at levels equal to the SMAQMD thresholds of significance, the proposed project could result in approximately 2.1 premature deaths per year due to the project's $PM_{2.5}$ impacts, and could result in approximately 0.043 premature deaths per year due to the project's ozone impacts. Such numbers represent a very small increase over the background incidence of premature deaths due to $PM_{2.5}$ and ozone concentrations (0.0047 percent and 0.00014 percent, respectively). $PM_{2.5}$ emissions from the proposed project could result in approximately 1.0 asthma-related emergency room visits, and ozone emissions from the proposed project could result in approximately 0.89 asthma-related emergency room visits. Such numbers represent a minute increase over the background level of asthma-related emergency room visits (0.006 percent and 0.0048 percent, respectively).

As noted above, because the proposed project's emissions would be substantially below the SMAQMD thresholds of significance, the project's actual health impacts associated with criteria pollutant emissions would be much lower than what is presented above.

Conclusion

Based on the above discussion, the proposed project would not expose any sensitive receptors to substantial concentrations of localized CO, TACs, or criteria pollutants from construction or operations. Therefore, the proposed project would result in a ***less-than-significant*** impact related to the exposure of sensitive receptors to substantial pollutant concentrations.

d. Pollutants of principal concern include emissions leading to odors, emission of dust, or emissions considered to constitute air pollutants. Air pollutants have been discussed in sections "a" through "c" above. Therefore, the following discussion focuses on emissions of odors and dust.

Odors

While offensive odors rarely cause physical harm, they can be unpleasant, leading to considerable annoyance and distress among the public and can generate citizen complaints to local governments and air districts. Due to the subjective nature of odor impacts, the number of variables that can influence the potential for an odor impact, and the variety of odor sources, quantitatively determining the presence of a significant odor impact is difficult. Typical odor-generating land uses include, but are not limited to, wastewater treatment plants, landfills, and composting facilities. The proposed project would not introduce any such land uses to the project area.

Construction activities often include diesel fueled equipment and heavy-duty trucks, which could create odors associated with diesel fumes that may be considered objectionable.

However, as discussed above, construction activities would be temporary, and operation of construction equipment adjacent to existing residential and school uses would be restricted to the hours of 7:00 AM to 6:00 PM Monday through Saturday, and 9:00 AM to 6:00 PM Sundays and holidays, pursuant to Sacramento Municipal Code Section 8.60.060. Project construction would also be required to comply with all applicable SMAQMD rules and regulations, particularly associated with permitting of air pollutant sources. Project construction would also be required to comply with all applicable

SMAQMD rules and regulations, particularly SMAQMD Rule 402 (Nuisance), which prohibits the emission of air contaminants that cause detriment, nuisance, or annoyance to a considerable number of persons or the public. Rule 402 is enforced based on complaints. If complaints are received, SMAQMD is required to investigate and ensure a solution for the source of the complaint, which could include operational modifications. Thus, although not anticipated, if odor complaints are made after the proposed project is approved, the SMAQMD would ensure that such odors are addressed, and any potential odor effects reduced to less than significant. The aforementioned regulations would help to minimize air pollutant emissions as well as any associated odors. Accordingly, substantial objectionable odors would not be expected to occur during construction activities.

Dust

As noted previously, construction of the proposed project is required to comply with all applicable SMAQMD rules and regulations, including, but not limited to, Rule 403 (Fugitive Dust) and Rule 404 (Particulate Matter). Furthermore, all projects within Sacramento County are required to implement the SMAQMD's Basic Construction Emission Control Practices (BCECP). Compliance with SMAQMD rules and regulations and BCECP would help to ensure that dust is minimized during project construction. Following project construction, vehicles operating within the project site would be limited to paved areas of the site, which would not have the potential to create substantial dust emissions. Thus, project operations would not include sources of dust that could adversely affect a substantial number of people.

Conclusion

For the reasons discussed above, construction and operation of the proposed project would not result in emissions, such as those leading to odors and/or dust, that would adversely affect a substantial number of people, and a ***less-than-significant*** impact would occur.

IV. BIOLOGICAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Wildlife or U.S. Fish and Wildlife Service?	☐	✖	☐	☐
b. Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, and regulations or by the California Department of Fish and Wildlife or US Fish and Wildlife Service?	☐	✖	☐	☐
c. Have a substantial adverse effect on state or federally protected wetlands (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	☐	✖	☐	☐
d. Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites?	☐	☐	✖	☐
e. Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	☐	✖	☐	☐
f. Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or state habitat conservation plan?	☐	☐	☐	✖

Discussion

a. The following discussion is based primarily on the findings of a Biological Resources Assessment (BRA) prepared for the proposed project by Salix Consulting, Inc. (Salix) (see Appendix B)[14]. In addition, Salix prepared a Reevaluation Memo on June 18, 2026 to determine if any changes have been made to the property to alter the previous evaluations and if any new information is known since preparation of the previous BRA and Aquatic Resource Delineation (ARD) (see Appendix C).[15] The Reevaluation Memo concluded that the project footprint remains the same, notable changes have not occurred, and the BRA and ARD remain current.

The BRA Study Area included in the BRA analysis consists of 61-acres in the southern portion of the project site, including the Development Area, the trailer storage area, and areas immediately to the north of the Development Area on the overall project site (see Figure 13). Currently, the majority of the BRA Study Area consists of undeveloped land dominated by grasslands with a small number of trees associated with landscape screening adjacent to Florin Perkins Road and the eastern project border. The GreenWaste Florin Perkins Resource Recovery Facility currently operates and will continue to operate a facility in the central portion of the project site.

[15] Salix Consulting, Inc. *Reevaluation of site and review of recent Biological and Aquatic Resources reports for the ±61-acre Davis Family Warehouses Study Area.* June 18, 2026.

Figure 13
BRA Study Area Map

The project site is relatively flat with the exception of an elevated mound of dirt in the western portion of the project site and a slope along the northern border of the project site. According to the BRA and described further below, the project site includes an expansive weedy grassland area and a small amount of riparian and wetland vegetation associated with a detention basin constructed in the northwest portion of the project site.

Special-status species include those plant and wildlife species that have been formally listed, are proposed as endangered or threatened, or are candidates for such listing under the federal and State Endangered Species Acts. Both acts afford protection to listed and proposed species. In addition, California Department of Fish and Wildlife (CDFW) Species of Special Concern, which are species that face extirpation in California if current population and habitat trends continue, CDFW Fully Protected Species, U.S. Fish and Wildlife Service (USFWS) Birds of Conservation Concern, sensitive species included in USFWS Recovery Plans, and CDFW special-status invertebrates are all considered special-status species. Special-status species include the following:

- Plant and wildlife species that have been listed as threatened or endangered under the federal Endangered Species Act (including candidates and species proposed for listing);
- Plant and wildlife species that have been listed as threatened or endangered under the California Endangered Species Act (CESA) (including candidates and species proposed for listing);
- Plant and wildlife species that have been designated as rare, protected, or fully protected pursuant to the California Fish and Game Code (CFGC);
- Plant and wildlife species that have been designated as a Species of Concern by the CDFW;
- Plant and wildlife species that are defined as rare or endangered under Section 15380 of CEQA; and
- Plant and wildlife species that are designated as Ranks 1, 2, or 3 on lists maintained by the California Native Plant Society (CNPS).

Although CDFW Species of Special Concern generally do not have special legal status, they are given special consideration under CEQA. In addition to regulations for special-status species, most birds in the U.S., including non-status species, are protected by the Migratory Bird Treaty Act (MBTA) of 1918. Under the MBTA, destroying active nests, eggs, and young is illegal. In addition, plant species on CNPS Lists 1 and 2 are considered special-status plant species and are protected under CEQA.

As part of the BRA, a search of published records was conducted for special-status plant and wildlife species known to occur within the five-quadrangle region surrounding the project site, including Sacramento East, Carmichael, Florin, Elk Grove, and Sacramento West, using the California Natural Diversity Data Base (CNDDB) Rarefind 5 application. In addition, Salix also reviewed the USFWS Information for Planning and Consultation (IPaC) database and the CNPS Rare Plant Inventory. The intent of the database review was to identify documented occurrences of special-status species in the vicinity of the project area, to determine their locations relative to the project site, and to identify habitats suitable for special-status species within the site. In addition, Salix conducted field assessments of the project site on October 20, 2023 and February 10, 2024, to characterize existing conditions, map land cover types, and assess the probability of occurrence of special-status species.

According to the BRA, the BRA Study Area is undeveloped and mostly flat with an elevation range of approximately 45 to 50 feet. In the northwestern portion of the BRA Study Area, the site drops off into an old surface mining pit where elevations are as low as sea level, and a small amount of fill rises approximately 10 feet above the site. The BRA Study Area is dominated by grasslands with a small number of trees associated with landscape screening adjacent to Florin Perkins Road and to the eastern border of the BRA Study Area. In addition, reclaimed agricultural land is located on the eastern border of the BRA Study Area.

Salix identified five land cover types in the BRA Study Area, including approximately 56 acres of Valley Grassland (Ruderal), 0.7-acre of Mixed Riparian Scrub, 0.5-acre of Seasonal Wetland, 0.6 -acre of Landscaped land cover, and 3.2 acres of Disturbed land cover. The 56 acres of Valley Grassland (Ruderal) covers a majority of the BRA Study Area, and is a disturbed area that has been disked and used for outdoor material storage. Common herbaceous species in the valley grassland (ruderal) land cover include wild oat (*Avena fatua*), ripgut grass (*Bromus diandrus*), ryegrass (*Festuca perennis*), tarweed (*Holocarpha virgata*), prickly lettuce (*Lactuca seriola*), yellow starthistle (*Centaurea solstitialis*), Spanish clover (*Acmispon americanus*), soft chess (*Bromus hordeaceus*), medusahead (*Elymus caput-medusae*), and wall barley (*Hordeum murinum*). The 0.7-acre of Mixed Riparian Scrub includes a detention basin in the northwestern portion of the BRA Study Area, which is mapped as an aquatic resource and contains riparian vegetation including Fremont cottonwood (*Populus fremontii*), narrow-leaved willow (*Salix exigua*), and red willow (*Salix laevigata*). The 0.5-acre of Seasonal Wetland includes an area adjacent to the detention basin and contains several wetland herbaceous species, including tall flatsedge (*Cyperus eragrostis*), western goldenrod (*Euthamia occidentalis*), toad rush (*Juncus bufonius*), and bird's foot trefoil (*Lotus corniculatus*). Stinkwork (*Dittrichia graveolens*) and summer cottonseed (*Epilobium brachycarpum*) are common in both the upland and wetland areas of the detention basin. The 0.6-acre of Landscaped land cover consists of a narrow strip of land on the western edge of the BRA Study Area adjacent to Florin Perkins Road, and contains coyote bush (*Baccharis pilularis*), Himalayan blackberry (*Rubus armeniacus*), Peruvian pepper tree (*Schinus molle*), valley oak (*Quercus lobata*), olive (*Olea Europa*), and Chinese tallowtree (*Triadica sebifera*). The 3.2 acres of Disturbed land cover includes unpaved roads that are mostly bare earth with scattered herbaceous weeds.

The results of the BRA's database review and field assessments are discussed in further detail below.

Special-Status Plants

Special-status plants generally occur in relatively undisturbed areas within vegetation communities, including, but not limited to, vernal pools, marshes and swamps, seasonal wetlands, riparian scrub, chaparral, dunes, and areas with unusual soil characteristics.

Based on the results of the CNDDB and CNPS searches, a total of 14 special-status plant species have been recorded within the project region. Three species were identified as occurring within a five-mile radius of the project site, including Boggs Lake hedge-hyssop (*Gratiola heterosepala*), legenere (*Legenere limosa*), and Sanford's arrowhead (*Sagittaria sanfordii*).

However, the BRA determined that none of the documented special-status plant species are likely to be present within the BRA Study Area. Many of the region's sensitive plants

are associated with vernal pool habitat, which is not present within the BRA Study Area. Sanford's arrowhead is found nearby in a concrete drainage channel known as the Pacific Gas and Electric Company's (PG&E) Ditch; however, Sanford's arrowhead would not be present within the BRA Study Area due to a lack of sufficient habitat and late-season water to support the species. Sanford's arrowhead is typically found in lake/pond margins, sloughs, ditches, or slow-moving streams with silty or muddy substrates. Therefore, special-status plant species are not anticipated to occur within the project site, and implementation of the proposed project would not result in adverse effects to special-status plant species.

Special-Status Wildlife

Based on the results of the CNDDB search, a total of 26 special-status wildlife species have previously been documented within the project region. Of the 26 special-status wildlife species, 16 species were identified as occurring within a five-mile radius of the project site, including American badger (*Haliaeetus leucocephalus*), bank swallow (*Riparia riparia*), burrowing owl (*Athene cunicularia*), golden eagle (*Aquila chrysaetos*), northwestern pond turtle (*Actinemys marmorata*), purple martin (*Progne subis*), song sparrow – Modesto population (*Melospiza melodia mailliardi*), steelhead – central California coast Distinct Population Segment (DPS) (*Oncorhynchus mykiss irideus*), Swainson's hawk (*Buteo swainsoni*), tricolored blackbird (*Agelaius tricolor*), valley elderberry longhorn beetle (VELB) (*Desmocerus californicus dimorphus*), vernal pool fairy shrimp (*Branchinecta lynchi*), vernal pool tadpole shrimp (*Lepidurus packardi*), western spadefoot (*Spea hammondii*), western yellow-billed cuckoo (*Coccyzus americanus occidentalis*), and white-tailed kite (*Elanus leucurus*).

However, according to the BRA conducted for the proposed project, most of the species are unlikely or do not have the potential to occur on-site, as the project site has been subject to significant indirect effects from fragmentation, activities on surrounding land uses, and a lack of connectivity to suitable nesting and foraging areas, which substantially limits the site's ability to contain habitat necessary for accommodating special-status wildlife species. In addition, the project site does not provide suitable habitat to support many of the special-status wildlife species, including vernal pools, elderberry shrubs, larger areas of mature riparian habitat, perennial freshwater marshes, and perennial streams. Furthermore, watercourses with sufficient hydroperiods to support northwestern pond turtles, such as rivers, canals, streams, and irrigation ditches, are not located on-site.

According to the BRA, of the 16 species identified as occurring within five miles of the project site, the only species with potential to occur on the project site include the American badger, burrowing owl, and white-tailed kite. In addition, while the project site does not contain suitable habitat for a nesting colony of tricolored blackbird, the site could be used as foraging habitat. Furthermore, the nesting potential for raptors is limited to the small Mixed Riparian Scrub habitat in the northwest portion of the project site. According to the BRA, the possibility also exists that the project site could be used for foraging habitat by raptors including the golden eagle and Swainson's hawk.

The proposed project's potential to result in adverse effects to such special-status wildlife species, as well as any nesting raptors and migratory birds protected by the MBTA, is discussed in further detail below.

American Badger

The CDFW has designated American badger as a Species of Special Concern. According to the BRA, the species typically inhabits drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. The American badger will frequently reuse old burrows, although some may dig a new den each night, especially in summer. The American badger needs habitat with sufficient food, and open, uncultivated ground.

The nearest reported CNDDB occurrence of the American badger is an undated observation in the general area of 21st Avenue at Power Inn Road. The boundary of the generalized area is immediately west of the BRA Study Area. A second occurrence reported in 1991 is located approximately 2.5 miles east of the BRA Study Area in an area comprised of annual grassland with vernal pools. However, due to the minimal or marginal quality habitat in the BRA Study Area, the BRA concluded that American badger would be unlikely to occur on-site. If American badger were located within the project site during project construction, a potentially significant could occur related to adverse effects to the species.

Burrowing Owl

Burrowing owl has been designated as a Species of Special Concern by the CDFW and is a candidate for listing under CESA. According to the BRA, the species typically inhabits dry open grasslands, deserts, agricultural areas, and rangeland throughout the Central Valley. The burrowing owl often occur where numerous burrowing mammals are present and frequently occupy California ground squirrel (*Otospermophilus beecheyi*) burrows, but may also use man-made structures including debris piles, culverts, and cement piles for cover. Burrowing owl breeding season extends from March to late August and incubation lasts between 28 to 30 days. Young are fledged at approximately 44 days but remain near the burrow and join the adults to forage at dusk.

The nearest recorded CNDDB occurrence is a 2003 observation located approximately one mile southwest of the BRA Study Area, in which multiple active burrows were observed in a field of annual grassland surrounded by railroad tracks, industrial land uses, and landscaping. While burrowing owl was not observed on the project site during the field assessments conducted by Salix, based on the proximity of the closest CNDDB occurrence and the presence of habitat in the BRA Study Area that could support both nesting and foraging, the BRA concluded that burrowing owls have potential to occur on-site. If burrowing owls were located within the project site during project construction, a potentially significant could occur related to adverse effects to the species.

White-Tailed Kite

White-tailed kite is a Fully Protected species under the CFGC. The white-tailed kite is commonly associated with certain types of agricultural areas. White-tailed kites are primarily located in low-elevation grassland, wetland, oak woodland, low shrub, open woodlands, or savannah habitats. The species also uses fence rows and irrigation ditches (with residual vegetation). Riparian areas adjacent to open space areas are typically used for nesting, where kites prefer dense, broad leafed deciduous trees for nesting and night roosting. The small amount of nesting tree habitat within the Mixed Riparian Scrub habitat on the project site could support white-tailed kite.

The nearest reported CNDDB occurrence of a nesting white-tailed kite is from 1990, located approximately two miles southeast of the project site, south of Tokay Lane and

east of Hedge Avenue, in which a pair of white-tailed kites were observed nesting within an olive tree in an old orchard. The BRA concluded that white-tailed kite would be unlikely to occur on-site. However, the trees within and adjacent to the project site could provide suitable nesting habitat for nesting raptors, including white-tailed kites. In the event that white-tailed kites occur on-site during the breeding season, project construction could result in an adverse effect to the species, and impacts could be potentially significant.

Swainson's Hawk

The Swainson's hawk is a migratory hawk listed by the State of California as a Threatened species. Swainson's hawks typically nest in tall trees associated with riparian corridors, and forage in grasslands, irrigated pastures, and cropland with high densities of rodents. The species primarily occurs in the Central Valley during their breeding season, which occurs in late spring through early summer. Following the breeding season, the Central Valley populations of Swainson's hawks migrate to Central and South America for the winter.

The nearest recorded CNDDB occurrence of Swainson's hawk included a 2006 occurrence of a Swainson's hawk nest within the American River Parkway located approximately 1.8 miles north by northwest of the project site. The occurrence has not been updated since July of 2006. Two additional occurrences were reported nearly three miles to the east of the project site in 2013. Swainson's hawks were not observed on-site during the field assessment conducted by Salix. However, the project site may be considered foraging habitat for the Swainson's hawk. In the event that Swainson's hawk occurs on-site during the breeding season, project construction could result in an adverse effect to the species, and impacts could be potentially significant.

Nesting Raptors and Migratory Birds

Trees along the project site boundaries and in the project vicinity have the potential to provide nesting habitat for migratory birds and raptors protected under CFGC Section 3503 and the federal MBTA of 1918 (Title 16 of U.S.C. Sections 703-711). Both the CFGC and MBTA prohibit the intentional killing, collecting, or trapping of covered species, including their active nests (those with eggs or young). Therefore, in the event that project construction activities occur during the nesting season, the proposed project could potentially cause nest abandonment due to associated construction noise, and a potentially significant impact could occur.

As previously discussed, the project site has been subject to significant indirect effects from fragmentation, activities on surrounding land uses, and a lack of connectivity to suitable nesting and foraging areas, which substantially limits the site's ability to contain habitat necessary for accommodating special-status wildlife species. According to the BRA, while the BRA Study Area could be used for foraging by golden eagle, the species would not occur in the BRA Study Area due to the lack of suitable nesting trees. However, due to the existing on-site and adjacent trees, other raptors and migratory birds protected by the MBTA could use the project site as potential foraging and/or nesting habitat.

Vegetation removal and site disturbance during construction activities could adversely affect the nesting success of raptors and migratory birds (i.e., lead to the abandonment of active nests) or result in mortality of individual birds, which would constitute a violation of State and federal laws. Thus, in the event that such species occur on the project site

during the breeding season, project construction activities could result in a substantial adverse effect to species protected under the MBTA.

Conclusion

Based on the above, because the project site contains potentially suitable habitat for special-status plant and wildlife species, construction activities associated with the proposed project could have an adverse effect, either directly or through habitat modifications, on species identified as special-status species in local or regional plans, policies, or regulations, or by the CDFW or the USFWS, and a ***potentially significant*** impact could result.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

American Badger

IV-1. *Within 14 days prior to ground disturbing activities, a preconstruction survey for American badger shall be conducted by a qualified biologist. A report summarizing the results of the preconstruction survey shall be submitted for review and approval to the City of Sacramento Community Development Department Environmental Planning Services Division. If American badger or burrows with American badger are found on-site during the preconstruction survey, consultation with CDFW shall occur prior to the initiation of any construction activities, to determine an appropriate burrow excavation and/or relocation method. If American badger is not found, further mitigation shall not be required.*

Burrowing Owl

IV-2. *A preconstruction survey for burrowing owls should be conducted according to the California Department of Fish and Wildlife (CDFW) 2012 Staff Report on Burrowing Owl Mitigation, and shall include all potential burrowing owl habitat within 500 feet of the project. Portions of the survey area located on private land shall be surveyed from all publicly accessible areas. A written summary of the survey results shall be submitted to the City of Sacramento Community Development Department Environmental Planning Services Division before any construction permits are issued. If burrowing owl are not detected during pre-construction surveys, further mitigation is not required. If active burrowing owl burrows are found, the following measures consistent with recommendations in the CDFW Staff Report on Burrowing Owl Mitigation shall be implemented at the project site:*

- *During the non-breeding season (September 1 through January 31), the biologist shall establish a 160-foot environmental sensitive area (ESA) around the burrow. During the breeding season (February 1 through August 31), the biologist shall establish a 300-foot ESA around the burrow in consultation with CDFW.*
- *The size of the ESA may be reduced if the biologist monitors the construction activities and determines that disturbance to the burrowing owl is not occurring. Reduction of ESA size depends on*

the location of the burrow relative to the proposed disturbance area, project activities during the time the burrow is active, and other project-specific factors.

- *If the burrow is located within the construction zone and it is during the non-breeding season, the burrowing owl shall be passively excluded from the burrow using one-way doors, as described in the Exclusion Plan of Appendix E of the CDFW's 2012 Staff Report on Burrowing Owl Mitigation.*
- *If the burrow is located within the construction zone and it is during the breeding season, the burrowing owl shall only be passively excluded if it has been confirmed that the owl has not begun egg laying and incubation, the clutch was unsuccessful, or juveniles from the occupied burrows are foraging independently and are capable of independent survival.*

If nesting burrowing owls are found, during the preconstruction survey that cannot be avoided or adequately protected with a no-disturbance buffer, an Incidental Take Permit (ITP) shall be obtained from CDFW in order to evict owls from the burrow(s). The ITP process shall include the preparation of an application which shall include, but not be limited to: a description of the project activity, an analysis of potential take of burrowing owl, an analysis of the impact of the proposed take on burrowing owl, an analysis of if the issuance of an ITP would jeopardize the continued existence of the species, proposed mitigation measures, and a monitoring plan to assess the effectiveness of the mitigation measures. Burrowing owls shall not be excluded from occupied burrows until the ITP is approved by CDFW.

If burrowing owls are evicted from burrows or occupied burrows are destroyed by project activities, the project proponent shall mitigate for the permanent loss of nesting and foraging habitat (defined as all areas of suitable habitat within 300 feet of the active burrow at a ratio of 3:1. The project proponent shall provide mitigation in the form of purchasing suitable mitigation credits from a CDFW-approved conservation bank, habitat restoration/enhancement on-site or off-site partnership with other agencies or non-profit groups on suitable restoration projects or other biologically suitable mechanisms pre-approved by CDFW.

In addition, if burrowing owls are evicted from burrows or occupied burrows are destroyed by project activities, the project proponent shall mitigate for all temporary impacts (may include, but not limited to, temporary ground disturbance and vegetation removal before, or during construction) to burrowing owls and their habitats at a ratio of 0.5:1 to reduce project impacts to a less than significant level. The project proponent shall provide mitigation in the form of purchasing suitable mitigation credits from a CDFW-approved conservation bank, habitat restoration/enhancement onsite or offsite, partnership with other agencies or non-profit groups on suitable restoration projects, or other biologically suitable mechanisms pre-approved by CDFW.

White-Tailed Kite and Swainson's Hawk

IV-3. *If construction activities commence between February 15 and September 1, a pre-construction survey for nesting Swainson's hawks and white-tailed kite within 0.25-mile of the project site shall be conducted by a qualified biologist within 14 days of project construction. If nesting Swainson's hawks or white-tailed kite are not found, then further mitigation measures are not necessary. If active nests are found within 0.25-mile of the project site, construction shall cease within 0.25-mile of the active nest until a qualified biologist determines that the young have fledged or that the nesting attempt has failed. If an active Swainson's hawk or white-tailed kite nest is found within an on-site tree proposed for removal, then the project applicant shall obtain any required permits from CDFW and shall further implement additional mitigation as recommended by a qualified biologist based on CDFW guidelines. The results of the pre-construction survey shall be submitted to the City of Sacramento Community Development Director, or designee thereof, as applicable.*

Nesting Birds and Raptors

IV-4. *If construction activities on the project site are to begin during the nesting season for raptors or other protected bird species in the region (generally February 15-September 15), a qualified biologist shall be retained by the project applicant to conduct pre-construction surveys in areas of suitable nesting habitat for common raptors and other bird species protected by the MBTA or California Fish and Game Code located within 500 feet of project activity, as accessible. Surveys shall be conducted no more than 10 days before ground disturbance is expected to occur. The pre-construction surveys shall be submitted to the City's Community Development Department Environmental Planning Services Division. If active nests are not found, further mitigation is not required. If active nests are found, the construction contractor shall avoid impacts on such nests by establishing a no-disturbance buffer around the nest. The appropriate buffer size for all nesting birds shall be determined by a qualified biologist, but shall extend at least 50 feet from the nest. Buffer size will vary depending on site-specific conditions, the species of nesting bird, nature of the project activity, the extent of existing disturbance in the area, visibility of the disturbance from the nest site, and other relevant circumstances.*

Construction activity shall not occur within the buffer area of an active nest until a qualified biologist confirms that the chicks have fledged and are no longer dependent on the nest, or the nesting cycle has otherwise completed. Monitoring of the nest by a qualified biologist during construction activities shall be required if the activity has the potential to adversely affect the nest. The qualified biologist shall determine the status of the nest at least weekly during the nesting season. If construction activities cause the nesting bird to vocalize, make defensive flights at intruders, get up from a brooding position, or fly off the nest, then the no-disturbance buffer shall be increased until the agitated behavior ceases.

b,c. Waters of the U.S., including wetlands, are defined under 33 Code of Federal Regulations (CFR) 328 to include navigable waterways, their tributaries, and adjacent wetlands.

Wetlands are vegetated areas that meet specific vegetation, soil, and hydrologic criteria defined by the U.S. Army Corp of Engineers (USACE). Natural drainage channels and adjacent wetlands throughout the State may be considered waters of the U.S. or jurisdictional waters subject to the jurisdiction of USACE. Adjacent wetlands must have a continuous surface connection with a jurisdictional water of the U.S. such that the wetland is indistinguishable from the adjacent water. Geographically and hydrologically isolated wetlands are outside federal jurisdiction, but are regulated by Regional Water Quality Control Board (RWQCB).

An ARD was prepared for the proposed project by Salix (see Appendix D).[16] The delineation included aerial photos of the BRA Study Area and was conducted according to the 1987 USACE Manual (Environmental Laboratory 1987) as amended by the Arid West Regional Supplement.[17] The results of the ARD were included as part of the BRA prepared for the proposed project. The ARD identified two aquatic resources in the BRA Study Area. A detention basin is located at the bottom of the reclaiming mining pit in the northwestern portion of the BRA Study Area. Two wetlands are found in the basin, a 0.7-acre Mixed Riparian Scrub and a 0.5-acre Seasonal Wetland. Figure 14 shows the aquatic resource delineation map of the identified aquatic resources. According to the ARD, rainfall and stormwater flow into the detention basin and, due to the topographic setting, the detention basin retains water and does not have outflow to other water bodies. The detention basin is seasonally saturated with shallow water and supports hydrophytic plants. The presence of surface water in the detention basin ends shortly after the end of the rainy season in late spring.

The BRA prepared for the proposed project evaluated the potential impact to the identified on-site aquatic resources. Development associated with the proposed project would not occur within the aquatic resources and, as such, the proposed project would avoid direct impacts to the aquatic resources.

The BRA determined that the wetlands are not likely to be under federal jurisdiction. However, if infrastructure improvements associated with the proposed project are constructed within the boundaries of the aquatic resources, coordination with the USACE would be required in order to determine if the wetlands are under federal jurisdiction. If the USACE does not claim jurisdiction over the on-site aquatic resources, the acquisition of a Waste Discharge Requirement Permit from the Central Valley RWQCB would likely be necessary. In addition, the Mixed-Riparian Scrub located on-site may be under the jurisdiction of the CDFW.

According to the BRA, if project improvements to the area cannot be avoided, consultation with the CDFW in order to determine if a Lake or Streambed Alteration Agreement (LSAA) would be necessary.

Based on the above, without compliance with the USACE, Central Valley RWQCB, and CDFW, the proposed project could have a substantial adverse effect on federally protected wetlands, and a ***potentially significant*** impact could occur.

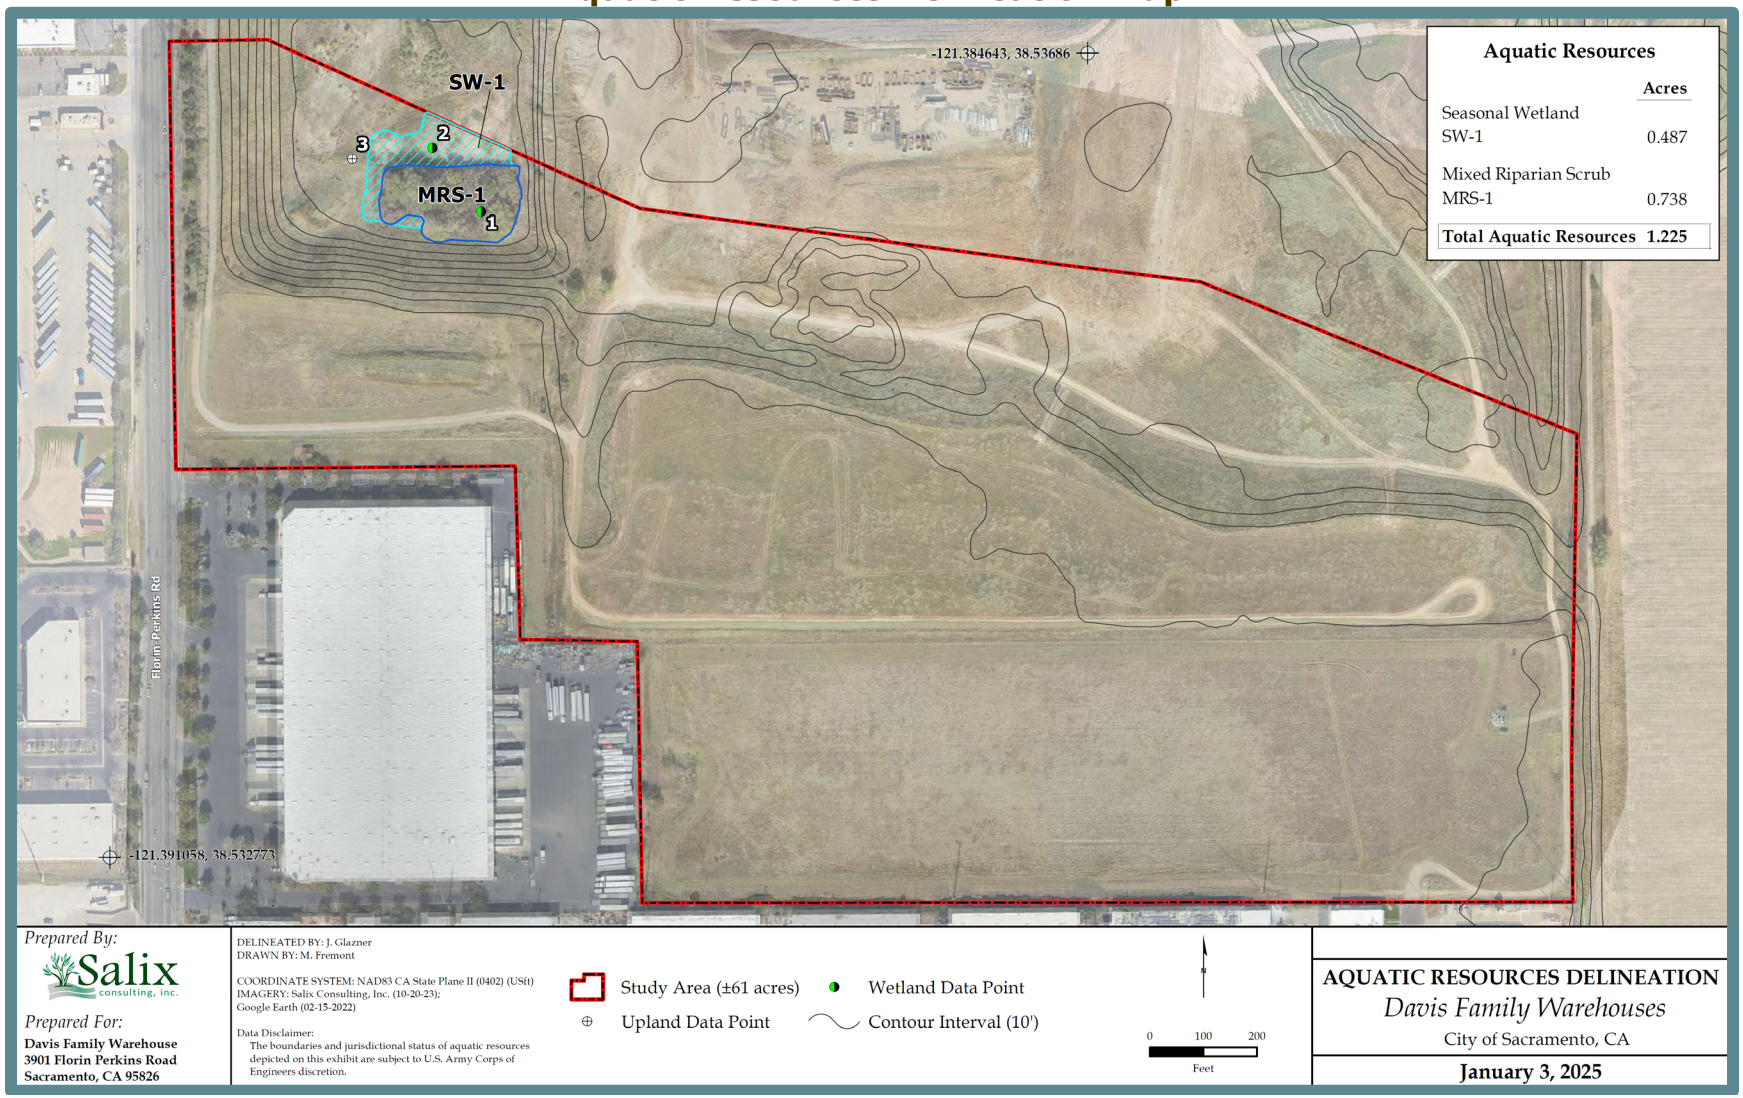
Figure 14
Aquatic Resources Delineation Map



Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

IV-5. *Prior to commencement of project construction activities, the applicant shall request either a Preliminary or an Approved Jurisdictional Determination from USACE. If the USACE determines that the wetlands within the project site are jurisdictional under Section 404 of the Clean Water Act, the Project Applicant shall apply for a Department of the Army permit for impacts to waters of the U.S. (waters). Waters that will be impacted shall be replaced or rehabilitated on a "no-net-loss" basis. Habitat restoration, rehabilitation, and/or replacement shall be at a location and by methods acceptable to the USACE. Proof of compliance shall be submitted to the City of Sacramento Community Development Department Environmental Planning Services Division.*

IV-6. *Prior to commencement of project construction activities, the applicant shall apply for a Section 401 Water Quality Certification from the RWQCB, and adhere to the certification conditions. If the USACE does not assert jurisdiction over the wetlands, the applicant shall prepare a Report of Waste Discharge Requirement, as aquatic resources present would be considered Waters of the State, and shall mitigate to ensure there is "no-net-loss" of wetlands as a result of the proposed project. Proof of compliance, either in the form of the Section 401 Water Quality Certification or the Report of Waste Discharge Requirement, shall be submitted to the City of Sacramento Community Development Department Environmental Planning Services Division.*

IV-7. *Prior to initiation of any ground disturbing activities affecting the Mixed-Riparian Scrub, a Notification pursuant to CDFW's Section 1602 shall be submitted to the CDFW. If required, the developer shall enter into a Lake or Streambed Alteration Agreement (LSAA) with CDFW in developing appropriate mitigation, and shall abide by the conditions of the LSAA, including appropriate BMPs to prevent construction-related impacts. A copy of the fully executed LSAA shall be submitted to the City of Sacramento Community Development Department Environmental Planning Services Division.*

d. Movement corridors or landscape linkages are defined as areas that allow for the movement of species from one area of suitable habitat to another. A linkage can vary from a narrow strip of habitat that only functions as a conduit for movement (i.e., a corridor) or a large area of intact habitat that is used for movement, dispersal, and other life functions such as foraging and breeding. Many wildlife linkages are broad areas of regional movement corridors for wildlife that generally includes a wide swath of land used for movement between two or more core areas for multiple regional species.

The project site is surrounded by existing commercial and industrial development to the north, south, and west, which would provide a significant barrier to dispersal of native wildlife travelling to and from the site. While numerous large open space areas are located in the project vicinity, the open space areas have been reclaimed from prior surface mining operations, including the Granite Regional Park. In addition, the significant amount of

vehicular traffic associated with Florin Perkins Road and SR 16, located on the project site's western and northern borders, respectively, would limit wildlife movements on the project site. Most current animal movements on the project site would likely be local movements within the site and its immediate vicinity rather than regional movements. As such, the project would not interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors, or impede the use of wildlife nursery sites. Thus, a ***less-than-significant*** impact would occur.

e. Sacramento City Code, Chapter 12.56, establishes guidelines for the conservation, protection, removal, and replacement of both City trees and private protected trees. Pursuant to Section 12.56.020, a private protected tree meets at least one of the following criteria:

- A tree that is designated by City Council resolution to have special historical value, special environmental value, or significant community benefit, and is located on private property;
- Any native Valley Oak (*Quercus lobata*), Blue Oak (*Quercus douglasii*), Interior Live Oak (*Quercus wislizenii*), Coast Live Oak (*Quercus agrifolia*), California Buckeye (*Aesculus californica*), or California Sycamore (*Platanus racemosa*), that has a diameter at standard height (DSH) of 12 inches or more, and is located on private property;
- A tree that has a DSH of 24 inches or more located on private property that:
    - Is an undeveloped lot; or
    - Does not include any single unit or duplex dwellings; or
- A tree that has a DSH of 32 inches or more located on private property that includes any single unit or duplex dwellings.

When circumstances do not allow for retention of trees, permits are required to remove City trees or private protected trees that are within the City's jurisdiction. In addition, City Code Section 12.56.050, Tree Permits, states that no person shall perform regulated work without a tree permit. The Tree Permit application requires a statement detailing the nature and necessity for the proposed regulated work and the location of the proposed work for evaluation and approval by the City Council.

According to the BRA conducted for the proposed project, tree and other woody vegetation cover on the project site is minimal. However, Salix identified several tree species located on the project site during the site assessments, which include a valley oak tree located in the landscaped land cover on the western boundary of the project site. Further analysis would be required to confirm if the on-site trees meet the definition of a Private Protected Tree, as established by Sacramento City Code Section 12.56.020.

Construction activities associated with the proposed project could adversely impact existing private protected trees. The City requires a Tree Permit to perform any activity, not including routine maintenance, that could adversely impact the health of a private protected tree. To address the potential impact, the proposed project would be required to obtain a Tree Permit in accordance with the requirements set forth in Sacramento City Code Chapter 12.56, pay all applicable fees, and comply with the provisions set forth therein by said permit.

Based on the above, without compliance with requirements set forth by Sacramento City Code Chapter 12.56, development of the proposed project could conflict with a local policy or ordinance protecting biological resources, such as a tree preservation policy or ordinance, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

IV-8. *Prior to the issuance of any grading permit and commencement of ground-disturbing activities, the project applicant shall hire a qualified arborist to evaluate all trees within areas proposed for disturbance to confirm if the trees meet the definition of a Private Protected Tree, as set forth by Sacramento City Code Section 12.56.020. Results of the tree survey shall be submitted for review and approval to the City of Sacramento Department of Public Works' Urban Forestry section. Should any on-site tree that would be potentially impacted by the proposed project be found to qualify as a Private Protected Tree, the project applicant shall obtain a Tree Permit from the City of Sacramento Community Development Department Environmental Planning Services Division and comply with the permit requirements in effect at the time of project grading for removal, pruning, or soil disturbance within the canopy dripline of a Private Protected Tree.*

f. The project site is not located within an area that is subject to an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or State habitat conservation plan. Therefore, the proposed project would have ***no impact*** related to a conflict with the provisions of an adopted Habitat Conservation Plan, Natural Conservation Community Plan, or other approved local, regional, or State habitat conservation plan.

V. CULTURAL RESOURCES. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Cause a substantial adverse change in the significance of a historical resource pursuant to Section 15064.5?	☐	✖	☐	☐
b. Cause a substantial adverse change in the significance of a unique archaeological resource pursuant to Section 15064.5?	☐	✖	☐	☐
c. Disturb any human remains, including those interred outside of dedicated cemeteries.	☐	✖	☐	☐

Discussion

a-c. Historical resources are features that are associated with the lives of historically important persons and/or historically significant events, that embody the distinctive characteristics of a type, period, region or method of construction, or that have yielded, or may be likely to yield, information important to the pre-history or history of the local area, California, or the nation. Examples of typical historical resources include, but are not limited to, buildings, farmsteads, rail lines, bridges, and trash scatters containing objects such as colored glass and ceramics. According to the Master EIR, the majority of the historic resources and landmarks in the City are located within the Central City grid, near the confluence of the Sacramento and American rivers. Specifically, the City has identified over 800 individually landmarked historic and cultural resources in the grid area. However, the project site is located outside of the City of Sacramento's Central City grid area.

On July 8, 2025, the North Central Information Center (NCIC) performed a records search of the California Historic Resources Information System (CHRIS) for cultural resource site records and survey reports within the proposed project area. The CHRIS search concluded that the project site does not contain any recorded archaeological resources, historic buildings or structures included in any lists of historic resources, nor does the project site contain Native American resources. However, given the extent of known cultural resources and patterns of local history, the CHRIS search concluded that a moderate potential exists for unrecorded historic-period cultural resources to be located within the project area. In addition, a moderate potential exists for unrecorded Native American resources to be located within the project area, as the project site is located in the Sacramento Valley, approximately 1.6 miles south of the American River and approximately 0.9-mile north of Morrison Creek. On July 9, 2025, the Native American Heritage Commission (NAHC) conducted a records search of the Sacred Lands File (SLF) which returned positive results, indicating that sacred lands may occur within the project area.

Based on the above, cultural resources have the potential to be uncovered during ground-disturbing construction activities at the site. If previously unknown resources are encountered during construction activities, the proposed project could cause a substantial adverse change in the significance of a historical resource or unique archaeological resource pursuant to CEQA Guidelines Section 15064.5 and/or disturb human remains, including those interred outside of dedicated cemeteries. Therefore, impacts could be considered ***potentially significant***.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

V-1. ***Avoidance and Preservation Procedures in the Event of the Inadvertent Discovery of Cultural Resources***

If cultural resources (such as structural features, unusual amounts of bone or shell, artifacts, or human remains) are encountered at the project site during construction, work shall be suspended within 100 feet of the find (based on the apparent distribution of cultural materials), and the construction contractor shall immediately notify the project's City representative. Avoidance and preservation in place is the preferred manner of mitigating impacts to cultural resources. This will be accomplished, if feasible, by several alternative means, including:

- *Planning construction to avoid archaeological sites and/or other cultural resources; incorporating cultural resources within parks, green-space or other open space; covering archaeological resources; deeding a cultural resource to a permanent conservation easement; or other preservation and protection methods agreeable to consulting parties and regulatory authorities with jurisdiction over the activity.*
- *Recommendations for avoidance of cultural resources will be reviewed by the City representative and other appropriate agencies, in light of factors such as costs, logistics, feasibility, design, technology and social, cultural and environmental considerations, and the extent to which avoidance is consistent with project objectives. Avoidance and design alternatives may include realignment within the project site to avoid cultural resources, modification of the design to eliminate or reduce impacts to cultural resources or modification or realignment to avoid highly significant features within a cultural resource.*
- *If the discovered cultural resource can be avoided, the construction contractor(s), will install protective fencing outside the site boundary, including a 100-foot buffer area, before construction restarts. Use of temporary and permanent forms of protective fencing will be determined in consultation with Native American representatives from interested culturally affiliated Native American tribes.*
- *The construction contractor(s) will maintain the protective fencing throughout construction to avoid the site during all remaining phases of construction. The area will be demarcated as an "Environmentally Sensitive Area".*

If a cultural resource cannot be avoided, the following performance standard shall be met prior to continuance of construction and associated activities that may result in damage to or destruction of cultural resources:

- *Each resource will be evaluated for California Register of Historical Resources- (CRHR) eligibility through application of established eligibility criteria (California Code of Regulations 15064.636), in consultation with consulting Native American Tribes, as applicable.*

- *If a cultural resource is determined to be eligible for listing in the CRHR, the City will avoid damaging effects to the resource in accordance with California PRC Section 21084.3, if feasible. The City shall coordinate the investigation of the find with a qualified archaeologist (meeting the Secretary of the Interior's Professional Qualifications Standards for Archeology) approved by the City. As part of the site investigation and resource assessment, the City and the archaeologist shall assess the significance of the find, make recommendations for further evaluation and treatment as necessary and provide proper management recommendations should potential impacts to the resources be determined by the City to be significant. A written report detailing the site assessment, coordination activities, and management recommendations shall be provided to the City representative by the qualified archaeologist. These recommendations will be documented in the project record.*

V-2. ***Implement Procedures in the Event of the Inadvertent Discovery of Human Remains.***

If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met prior to implementing or continuing actions such as construction, which may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the City shall immediately halt potentially damaging excavation in the area of the remains and notify the Sacramento County Coroner and a professional archaeologist to determine the nature of the remains. The Coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or State lands (HSC Section 7050.5[b]).

If the human remains are of historic age and are determined to be not of Native American origin, the City will follow the provisions of the HSC Section 7000 (et seq.) regarding the disinterment and removal of non-Native American human remains.

If the Coroner determines that the remains are those of a Native American, he or she must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the Coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant (MLD), in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the City for acting upon notification of a discovery of Native American human remains are identified in California PRC Section 5097.9 et seq.

VI. ENERGY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation?	☐	☐	✖	☐
b. Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?	☐	☐	✖	☐

Discussion

a,b. A description of the currently adopted 2025 California Green Building Standards Code and the Building Energy Efficiency Standards, as well as discussions regarding the proposed project's potential effects related to energy demand during construction and operations are provided below.

California Green Building Standards Code

The 2025 California Green Building Standards Code, otherwise known as the CALGreen Code (CCR Title 24, Part 11) is a portion of the California Building Standards Code (CBSC) (CCR Title 24), which became effective on January 1, 2026. The purpose of the CALGreen Code is to improve public health, safety, and general welfare by enhancing the design and construction of buildings through the use of building concepts having a reduced negative impact or positive environmental impact and encouraging sustainable construction practices. The CALGreen Code standards regulate the method of use, properties, performance, types of materials used in construction, alteration repair, improvement, and rehabilitation of a structure or improvement to property. The provisions of the code apply to the planning, design, operation, construction, use, and occupancy of every newly constructed building or structure throughout California. Requirements of the CALGreen Code include, but are not limited to, the following measures:

- Compliance with relevant regulations related to future installation of electric vehicle charging infrastructure in residential and non-residential structures;
- Reduction of indoor water use consumption through the establishment of maximum fixture water use rates;
- Outdoor landscaping compliance with the California Department of Water Resources' Model Water Efficient Landscape Ordinance (MWELO), or a local ordinance, whichever is more stringent, to reduce outdoor water use;
- Diversion of 65 percent of construction and demolition waste from landfills; and
- Mandatory use of low-pollutant emitting interior finish materials, such as paints, carpet, vinyl flooring, and particle board.

Building Energy Efficiency Standards

The 2025 Building Energy Efficiency Standards is a portion of the CBSC, which expands upon energy-efficiency measures from the 2022 Building Energy Efficiency Standards, and went into effect starting January 1, 2026. The 2025 standards provide for additional efficiency improvements beyond the 2022 standards. The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code and Building Energy Efficiency Standards would ensure that the proposed structures would consume energy efficiently.

Construction Energy Use

Construction of the proposed project would involve on-site energy demand and consumption related to use of oil in the form of gasoline and diesel fuel for construction worker vehicle trips, hauling and materials delivery truck trips, and operation of off-road construction equipment. In addition, diesel-fueled portable generators may be necessary to provide additional electricity demands for temporary on-site lighting, welding, and for supplying energy to areas of the site where energy supply cannot be met through a hookup to the existing electricity grid. Project construction would not involve the use of natural gas appliances or equipment.

All construction equipment and operation thereof would be regulated pursuant to the CARB In-Use Off-Road Diesel Vehicle Regulation, which is intended to reduce emissions from in-use, off-road, heavy-duty diesel vehicles in California by imposing limits on idling, requiring all vehicles to be reported to CARB, restricting the addition of older vehicles into fleets, and requiring fleets to reduce emissions by retiring, replacing, or repowering older engines, or installing exhaust retrofits. The In-Use Off-Road Diesel Vehicle Regulation would subsequently help to improve fuel efficiency and reduce GHG emissions. Technological innovations and more stringent standards are being researched, such as multi-function equipment, hybrid equipment, or other design changes, which could help to further reduce demand on oil and limit emissions associated with construction.

Based on the above, the temporary increase in energy use occurring during construction of the proposed project would not result in a significant increase in peak or base demands or require additional capacity from local or regional energy supplies. In addition, the proposed project would be required to comply with all applicable regulations related to energy conservation and fuel efficiency, which would help to reduce the temporary increase in demand.

Operational Energy Use

Following implementation of the proposed project, Sacramento Municipal Utility District (SMUD) would provide electricity to the project site. In addition, as discussed previously, natural gas infrastructure would be installed on-site to allow for the use of natural gas during manufacturing processes within the proposed buildings. Natural gas would be provided to the project site by PG&E. Energy use associated with operation of the proposed project would be typical of warehouse uses, requiring electricity and natural gas for interior and exterior building lighting, heating, ventilation, and air conditioning (HVAC), electronic equipment, security systems, and more. Maintenance activities during operations, such as landscape maintenance, would involve the use of electric equipment. In addition to on-site energy use, the proposed project would result in transportation energy use associated with vehicle trips generated by employee commutes and the movement of goods.

The proposed project would be subject to all relevant provisions of the most recent update of the CBSC, including the Building Energy Efficiency Standards. Adherence to the most recent CALGreen Code, Building Energy Efficiency Standards, and all applicable regulations included in the City's Climate Adaptation and Action Plan (CAAP) would ensure that the proposed structures would consume energy efficiently through the incorporation of such features as efficient water heating systems and high performance walls, and high efficiency lighting. Required compliance with the CBSC would ensure that the building energy use associated with the proposed project would not be wasteful,

inefficient, or unnecessary. In addition, electricity supplied to the project site by SMUD would comply with the State's Renewable Portfolio Standard (RPS), which requires investor-owned utilities, electric service providers, and community choice aggregators to increase procurement from eligible renewable energy resources to 60 percent by 2030 and ultimately, mandate all electricity produced in the state be renewably sourced by the year 2045. As a result, a portion of the electricity consumed during project operation would be generated from renewable sources. With regard to transportation energy use, the proposed project would comply with all applicable regulations associated with vehicle efficiency and fuel economy. In addition, as discussed in Section XVII, Transportation, of this IS/MND, the proposed project is not anticipated to substantially increase vehicle miles traveled (VMT).

Conclusion

Based on the above, construction and operation of the proposed project would not result in wasteful, inefficient, or unnecessary consumption of energy resources or conflict with or obstruct a State or local plan for renewable energy or energy efficiency. Thus, a ***less-than-significant*** impact would occur.

VII. GEOLOGY AND SOILS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i. Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	☐	☐	✖	☐
ii. Strong seismic ground shaking?	☐	☐	✖	☐
iii. Seismic-related ground failure, including liquefaction?	☐	✖	☐	☐
iv. Landslides?	☐	✖	☐	☐
b. Result in substantial soil erosion or the loss of topsoil?	☐	☐	✖	☐
c. Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	☐	✖	☐	☐
d. Be located on expansive soil, as defined in Table 18-1B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property?	☐	✖	☐	☐
e. Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?	☐	☐	☐	✖
f. Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	☐	✖	☐	☐

Discussion

ai-ii. According to the California Geological Survey, the project site is not located within an Alquist-Priolo Earthquake Fault Zone.[18] However, Sacramento is located in a moderately seismically active region. The Master EIR indicates that ground shaking occurs periodically in Sacramento as a result of distant earthquakes. Although the project site is not located near any active or potentially active faults, strong ground shaking could occur at the project site during a major earthquake on any of the major regional faults.

The proposed building would be properly engineered in accordance with the CBSC, which includes engineering standards appropriate for the seismic area in which the project site is located. Structures built consistent with the CBSC should be able to: (1) resist minor earthquakes without damage, (2) resist moderate earthquakes without structural damage but with some nonstructural damage, and (3) resist major earthquakes without collapse but with some structural as well as nonstructural damage. Although conformance with the CBSC does not guarantee that substantial structural damage would not occur in the event of a maximum magnitude earthquake, conformance with the CBSC can reasonably be assumed to ensure structures would be survivable, allowing occupants to safely evacuate in the event of a major earthquake. The proposed project would require heavy construction, and individual components used in the construction of the project would be

[18] California Geological Survey. *Earthquake Zones of Required Investigation.* Available at: https://maps.conservation.ca.gov/cgs/EQZApp/app/. Accessed June 2026.

constructed to industry-standard design specifications and requirements, including American Society for Testing and Materials (ASTM) standards.

Additionally, Chapter 15.20 of the Sacramento City Code adopts Title 24 of the Uniform Building Code (UBC) and mandates compliance; therefore, all new construction and modifications to existing structures within the City are subject to the requirements of the UBC. The UBC contains standards to ensure that all structures and infrastructure are constructed to minimize the impacts from seismic activity, to the extent feasible, including exposure of people or structures to substantial, adverse effects as a result of strong groundshaking, seismic-related ground failure, liquefaction, lateral spreading, landslides, or lurch cracking. As a result, seismic activity in the area of the proposed development would not expose people or structures to substantial, adverse effects as a result of strong groundshaking and seismic-related ground failure. Therefore, a ***less-than-significant*** impact would occur related to seismic surface rupture and strong seismic ground shaking.

aiii,aiv, c,d. The proposed project's potential effects related to liquefaction, landslides, lateral spreading, subsidence/settlement, and expansive soils are discussed in detail below.

Liquefaction and Subsidence/Settlement

Soil liquefaction results from loss of strength during cyclic loading, such as imposed by earthquakes. Soils most susceptible to liquefaction are clean, loose, saturated, uniformly graded fine sands below the groundwater table. Empirical evidence indicates that loose silty sands are also potentially liquefiable. When seismic ground shaking occurs, the soil is subjected to cyclic shear stresses that could cause excess hydrostatic pressures to develop. If excess hydrostatic pressures exceed the effective confining stress from the overlying soil, the sand may undergo deformation. If the sand undergoes virtually unlimited deformation without developing significant resistance, the sand is said to have liquefied, and if the sand consolidates or vents to the surface during and following liquefaction, ground settlement and surface deformation may occur.

An evaluation of earthquake induced settlement associated with liquefaction was conducted by Universal Engineering Sciences (UES) as part of the Geotechnical Engineering Report prepared for the proposed project (see Appendix E).[19] Based on the results of the known site geologic, seismologic, groundwater, and soil conditions research, and the subsurface exploration including 13 soil borings and 14 test pits to depths ranging from approximately 2.5- to 21.5-feet below the ground surface, a double-ring infiltrometer test, and laboratory testing of selected soil samples, UES determined that the potential for liquefaction occurring at the project site is very low. Therefore, given that on-site soils are unlikely to be susceptible to liquefaction, liquefaction induced settlement would not occur.

Landslides

Seismically-induced landslides are triggered by earthquake ground shaking. The risk of landslide hazard is greatest in areas with steep, unstable slopes. The project site and surrounding area is generally flat. While a slope exists in the northern portion of the project site, the northern portion would remain undeveloped under the proposed project. Thus, the proposed project would not be subject to landslide risks.

[19] Universal Engineering Sciences. *Geotechnical Engineering Report Davis Family Warehouses, Sacramento, California*. June 9, 2023.

Lateral Spreading

Lateral spreading is horizontal/lateral ground movement of relatively flat-lying soil deposits towards a free face such as an excavation, channel, or open body of water; typically, lateral spreading is associated with liquefaction of one or more subsurface layers near the bottom of the exposed slope. The project site, which is generally flat, is not located near any open faces that would be considered susceptible to lateral spreading. Therefore, the potential for lateral spreading to pose a risk to the proposed development is low.

Expansive Soils

Expansive soils shrink and swell as a result of moisture changes, which can cause heaving and cracking of slabs-on-grade, pavements, and structures founded on shallow foundations. Building damage due to moisture changes in expansive soils can be reduced by appropriate grading practices and using post-tensioned slab foundations or similarly stiffened foundation systems, which are designed to resist the deflections associated with soil expansion. The Geotechnical Engineering Report prepared for the proposed project conducted laboratory tests on the near surface clay samples taken from the subsurface exploration, which determined that the on-site soil consists of clay with very low to high expansion potential.

In addition, a Supplemental Pavement Recommendations document was prepared for the proposed trailer storage area by UES (see Appendix F).[20] UES conducted laboratory testing on near-surface subgrade soils obtained at three hand sample locations on the trailer storage area. The laboratory testing indicates that the near-surface soils are relatively poor quality materials for support of pavements and would require relatively thick structural sections to compensate for the low support strength of the subgrade soils. Therefore, UES recommends that the upper six inches of the final pavement subgrade be compacted to at least 95 percent of the ASTM D1557 maximum dry density. In addition, UES recommends the pavement section to consist of at least 12 inches of Class 2 Aggregate Base that is moisture conditioned. The use of geogrid reinforcement would also provide a more stable surface to place the aggregate base for on-site pavements.

The proposed project would be required to comply with all applicable CBSC standards to ensure the structural integrity of the proposed structures. However, if the proposed project is not built in accordance with the recommendations included in the Geotechnical Engineering Report and Supplement Pavement Recommendations prepared by UES, including foundation embedment of at least 24 inches and at least 12 inches of imported, compactable, very-low expansive soils and/or chemical treatment, the proposed project could result in potential hazard or risks related to expansive soils.

Conclusion

From a geotechnical standpoint, provided that the recommendations included in the Geotechnical Engineering Report and Supplemental Pavement Recommendations prepared for the proposed project are implemented into the project design and specifications, the geological and soil conditions on the site would be adequate to support development of the proposed project. However, conformance with such recommendations cannot be ensured, and, as a result, a ***potentially significant*** impact could occur related to expansive soils.

[20] Universal Engineering Sciences. *Supplemental Pavement Recommendations, Davis Family Warehouses, Sacramento, California*. July 26, 2023.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

VII-1. *Prior to issuance of grading permits, the grading plans shall incorporate the geotechnical recommendations specified in the Geotechnical Engineering Report and Supplemental Pavement Recommendations prepared for the proposed project, including, but not limited to, foundation recommendations, fill requirements, drainage recommendations, design review, and construction monitoring. All grading and foundation plans for the development shall be designed by a Civil and Structural Engineer and reviewed and approved by the Director of Public Works/City Engineer, Chief Building Official, and a qualified Geotechnical Engineer prior to issuance of grading and building permits to ensure that all geotechnical recommendations specified in the Geotechnical Engineering Report are properly incorporated and utilized in the project design. The design-level Geotechnical Engineering Report shall be submitted to the City of Sacramento Community Development Department Environmental Planning Services Division.*

b. During construction activities, topsoil would be exposed following site grading and prior to constructing building foundations. As a result, the potential for topsoil erosion would exist. Following development of the site, all exposed soils would be covered with impervious surfaces or landscaping and, thus, the potential for erosion to occur would not exist long-term.

As discussed further under in Section X, Hydrology and Water Quality, of this IS/MND, the City's National Pollutant Discharge Elimination System (NPDES) permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires any project that would disturb more than one acre of land to prepare a Storm Water Pollution Prevention Plan (SWPPP). A SWPPP describes BMPs to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project. Additionally, in accordance with Sacramento City Code Section 15.88.250, City of Sacramento staff would require preparation of an Erosion and Sediment Control Plan that demonstrates how the proposed project would control surface runoff and erosion and retain sediment on the project site during project construction. The erosion control measures included in both the SWPPP and the Erosion and Sediment Control Plan would ensure that the proposed project would not result in substantial erosion or the loss of topsoil. Therefore, the proposed project would not result in substantial soil erosion or the loss of topsoil, and a ***less-than-significant*** impact would occur.

e. The proposed project would include the extension of the eight-inch public sewer main in Warehouse Way to the northern boundary of the project site. New six-inch sewer lines would extend from Buildings 1 through 5 and connect to the extension of the eight-inch public sewer main in Warehouse Way on the northern boundary of the site, and new six-inch sewer lines would extend from Buildings 6 and 7 and connect to the existing sanitary sewer manhole located within Florin Perkins Road. The construction or operation of septic tanks or other alternative wastewater disposal systems is not included as part of the

proposed project. Therefore, ***no impact*** regarding the capability of soil to adequately support the use of septic tanks or alternative wastewater disposal systems would occur.

f. Paleontological resources include fossil remains, as well as fossil localities and formations, which have produced fossil material in other nearby areas. According to the Master EIR, quaternary sediments of the Great Valley sequence, the geologic formation underlying the Sacramento Planning Area, include gravels and other alluvial sediments laid down by large river systems, which contain well-preserved vertebrate and plant fossils. Although discoveries of such resources have been made within the City in the past, the City is not considered sensitive for the presence of paleontological resources.

The project site does not contain any unique geologic features. However, based on past discoveries within the City's Planning Area, unknown paleontological resources could exist within the project area. Should previously unknown paleontological resources exist within the project area, ground-disturbing activity, associated with implementation of the proposed project would have the potential to disturb or destroy such features. Therefore, the proposed project could result in the direct or indirect destruction of a unique paleontological resource, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

VII-2. *In the event that a paleontological resource is inadvertently discovered during project-related work, regardless of the depth of excavation or location, work shall be halted within 50 feet (15 meters) of the find and a qualified paleontologist (Society of Vertebrate Paleontology [SVP] 2010) and the City of Sacramento Community Development Department Environmental Planning Services Division shall be notified. The resources shall be examined by the qualified paleontologist at the developer's expense, for the purpose of recording, protecting, or curating the discovery as appropriate. Construction activities could continue in other areas.*

If the find is determined to be significant under SVP criteria, the find shall be left in place without further disturbance, or if avoidance is not feasible, then additional work, such as fossil recovery excavation (salvage) and curation at a certified repository, such as the University of California Museum of Paleontology (UCMP), may be warranted and would be discussed in consultation with the City of Sacramento Community Development Department, and any other relevant regulatory agency, as appropriate. The qualified paleontologist shall submit to the City of Sacramento Community Development Department Environmental Planning Services Division for review and approval a report of the findings and method of curation or protection of the resources.

VIII. GREENHOUSE GAS EMISSIONS. *Would the project:*	Potentially Significant Impact	Less Than Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?	☐	☐	✖	☐
b. Conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of greenhouse gasses?	☐	☐	✖	☐

Discussion

a,b. Emissions of GHGs contributing to global climate change are attributable in large part to human activities associated with the industrial/manufacturing, utility, transportation, residential, and agricultural sectors. Therefore, the cumulative global emissions of GHGs contributing to global climate change can be attributed to every nation, region, and city, and virtually every individual on Earth. An individual project's GHG emissions are at a micro-scale level relative to global emissions and effects to global climate change; however, an individual project could result in a cumulatively considerable incremental contribution to a significant cumulative macro-scale impact. As such, impacts related to emissions of GHG are inherently considered cumulative impacts.

Implementation of the proposed project would cumulatively contribute to increases of GHG emissions. Estimated GHG emissions attributable to future development would be primarily associated with increases of carbon dioxide (CO_2) and, to a lesser extent, other GHG pollutants, such as methane (CH_4) and nitrous oxide (N_2O) associated with area sources, mobile sources or vehicles, utilities (electricity and natural gas), water usage, wastewater generation, and the generation of solid waste. The primary source of GHG emissions for the project would be mobile source emissions. The common unit of measurement for GHG is expressed in terms of annual metric tons of CO_2 equivalents ($MTCO_2e$/yr).

Recognizing the global scale of climate change, California has enacted several pieces of legislation in an attempt to address GHG emissions. Specifically, AB 32, and more recently Senate Bill (SB) 32, have established statewide GHG emissions reduction targets. Accordingly, the CARB has prepared the Climate Change Scoping Plan for California (Scoping Plan), which was approved in 2008, and updated in 2017 and 2022. The Scoping Plan provides the outline for actions to reduce California's GHG emissions and achieve the emissions reductions targets required by AB 32. In concert with statewide efforts to reduce GHG emissions, air districts, Counties, and local jurisdictions throughout the State have implemented their own policies and plans to achieve reductions in line with the Scoping Plan and emissions reductions targets, including AB 32 and SB 32.

In addition, SMAQMD has adopted thresholds of significance for GHG emissions during construction and operation of projects. However, the City of Sacramento has integrated a CAAP into the City's 2040 General Plan, and thus, potential impacts related to climate change associated with operation of the proposed project are assessed based on the project's compliance with the City's newly adopted CAAP reduction measures.

GHG emissions resulting from construction and operations of the proposed project were modeled using the CalEEMod emissions model under the same assumptions as

discussed in Section III, Air Quality, of this IS/MND. All modeling results are included as Appendix A.

Construction GHG Emissions

For construction-related GHG emissions, SMAQMD has adopted a threshold of significance of 1,100 $MTCO_2e$/yr. If construction of the proposed project would result in emissions that exceed 1,100 $MTCO_2e$/yr, then construction of the project could be considered to result in a potentially significant impact and mitigation measures would be required. The estimated unmitigated maximum construction-related emissions associated with the proposed project are presented in Table 6.

Table 7
Maximum Unmitigated On-Site Construction GHG Emissions ($MTCO_2e$/yr)

GHG Emissions	Threshold of Significance	Exceeds Threshold?
739.53	1,100	**NO**

Source: CalEEMod, July 2026 (see Appendix A).

Based on the modeling conducted for the proposed project, construction of the project was estimated to generate maximum unmitigated GHG emissions of 739.53 $MTCO_2e$/yr. As shown in the table, maximum emissions related to construction of the proposed project would not exceed the applicable threshold of significance. Therefore, project construction would not result in a cumulatively considerable contribution to global climate change.

Operational GHG Emissions

SMAQMD has adopted qualitative thresholds of significance for GHG emissions during operations of projects. However, SMAQMD's CEQA Guidelines note that, where local jurisdictions have adopted thresholds or guidance for analyzing GHG emissions, the local thresholds should be used for the project analysis. The City of Sacramento has adopted a CAAP, which provides a jurisdiction-wide approach to the analysis of GHG emissions. The City's CAAP includes Citywide measures intended to reduce emissions from existing sources, as well as measures aimed at reducing emissions from future sources related to development within the City. Thus, the analysis provided herein is focused on the proposed project's consistency with the City's CAAP. Nonetheless, the estimated unmitigated maximum annual operational emissions from the proposed project were modeled for informational purposes. According to the CalEEMod calculations, the proposed project would generate maximum unmitigated GHG emissions of 3,755.11 $MTCO_2e$/yr during operations.

Consistency with City of Sacramento CAAP

The City of Sacramento has integrated a CAAP into the City's 2040 General Plan. Potential impacts related to climate change from development within the City are assessed based on the project's compliance with the City's newly adopted CAAP reduction measures. The majority of the reduction measures set forth in the CAAP are citywide efforts in support of reducing overall citywide emissions of GHG and are not applicable to individual development projects. However, various measures related to new development within the City would directly apply to the proposed project. The project's general consistency with the applicable CAAP measures is discussed below.

As discussed above, natural gas infrastructure would be installed on-site to allow for the use of natural gas during manufacturing processes within the proposed buildings. Measure E-2 of the CAAP is intended to eliminate natural gas in new construction through the adoption of new regulations that mandate all-electric construction in new buildings within the City. While the City of Sacramento adopted an all-electric reach code on June 1, 2021, the all-electric reach code was repealed on November 18, 2025, following lawsuits throughout the State which were pushing back on the all-electric requirements. Thus, the City does not currently have any regulations that mandate all-electric construction in new buildings within the City, and due to the repeal of the all-electric reach code, Measure E-2 of the CAAP is not applicable to the proposed project.

In addition, all internal roadways and pedestrian connections would be constructed in conformance with City standards. As such, the proposed project would generally comply with Action TR-1.2 of the CAAP. Further, landscaping improvements would be provided throughout the sites and would comply with the City's WELO, as established by Chapter 15.92 of the City Code, consistent with Action WW-1.3 of the CAAP.

The CAAP also includes Action WW-1.4, related to the use of low impact development (LID) strategies for new construction and development. As discussed in Section X, Hydrology and Water Quality, of this IS/MND, the proposed project would be required to implement the applicable BMPs provided in the City's SQIP and the Sacramento Region Stormwater Quality Design Manual, as well as implement applicable LID measures and prepare a Post-Construction Erosion and Sediment Control Plan. Development of the proposed project would include an on-site stormwater drainage system to capture and treat runoff from the new impervious surfaces, including two bioretention basins on-site. Thus, the proposed project would generally comply with Action WW-1.4 of the CAAP.

Additionally, while, as discussed above, several measures and actions included in the CAAP are intended for Citywide implementation, and are, therefore, not directly applicable to the proposed project, the proposed project would be designed in general conformance with the goals of such measures and actions. For example, generally consistent with the goal of Measure E-5, the proposed project would be located on a site partially surrounded by existing development and as discussed in Section XVII, Transportation, would result in a less-than-significant impact related to VMT. In addition, the nearest Route 161 bus stop is located approximately 0.2-mile to the north of the project site on Florin Perkins Road. Finally, consistent with the goal of Action W-1.5, the proposed project would be required to subscribe to organics recycling collection service through the City's franchised commercial haulers in accordance with Section 13.24.510 of the City Code.

The General Plan Master EIR concluded that buildout of the City's General Plan, including the project site, would not result in a conflict with applicable plans, policies, or regulations adopted for the purpose of reducing GHG emissions. The proposed project would be consistent with the City's EMU General Plan land use designation for the Development Area, which allows for light industrial uses, as well as the CAAP policies discussed above that are intended to reduce GHG emissions from buildout of the City's General Plan. Thus, GHG emissions from operation of the proposed project would be consistent with what was previously analyzed in the General Plan Master EIR, and would be consistent with the CAAP.

Conclusion

Based on the above, the project would be consistent with the City's CAAP and policies intended to reduce GHG emissions. Therefore, the proposed project would not generate GHG emissions, either directly or indirectly, that may have a significant impact on the environment, or could conflict with an applicable plan, policy or regulation adopted for the purpose of reducing the emissions of GHGs. Thus, a ***less-than-significant*** impact would occur.

IX. HAZARDS AND HAZARDOUS MATERIALS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	☐	☐	✖	☐
b. Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment?	☐	✖	☐	☐
c. Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	☐	☐	☐	✖
d. Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	☐	✖	☐	☐
e. For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard or excessive noise for people residing or working in the project area?	☐	☐	✖	☐
f. Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
g. Expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires?	☐	☐	✖	☐

Discussion

a. The proposed project would include a total of approximately 339,827 sf of industrial uses within the project site. While the future tenants of the proposed industrial buildings are not currently known, the proposed project would be consistent with the site's EMU General Plan land use designation, which allows for light industrial operations. Operations associated with the proposed project would be typical of other warehouses in the City, and would be governed by the uses permitted for the site pursuant to the City's Municipal Code and 2040 General Plan.

While not currently anticipated, in the event that future operations associated with the proposed warehouses involve the routine use, transport, or disposal of hazardous materials, such materials would be safely managed in accordance with applicable regulations and would be subject to City review depending on the type or quantity of chemicals proposed for use. Chapter 8.64 of the City's Municipal Code requires that any use of hazardous materials be disclosed to the City's fire department. In addition, Chapter 8.60 of the City's Municipal Code includes regulations regarding hazardous materials cleanup, in the event that any hazardous substance or waste is unlawfully released, discharged, deposited, or abandoned upon or into any property, water, or facilities within the City.

Maintenance and operation of the proposed uses may use common cleaning products, fertilizers, and herbicides on-site, any of which could contain potentially hazardous chemicals; however, such products would be expected to be used in accordance with label instructions. Due to the regulations governing use of such products and the amount

anticipated to be used on the site, routine use of such products would not represent a substantial risk to public health or the environment.

Therefore, the project would not create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials, and a ***less-than-significant*** impact would occur.

b. The following discussion provides an analysis of potential hazards and hazardous materials associated with upset or accident conditions related to the proposed construction activities and existing on-site conditions.

Construction Activities

Construction activities associated with the proposed project would involve the use of heavy equipment, which would contain fuels and oils, and various other products such as concrete, paints, and adhesives. Small quantities of potentially toxic substances (e.g., petroleum and other chemicals used to operate and maintain construction equipment) would be used at the project site and transported to and from the site during construction. However, the project contractor would be required to comply with all California Health and Safety Codes and local City ordinances regulating the handling, storage, and transportation of hazardous and toxic materials. Pursuant to California Health and Safety Code Section 25510(a), except as provided in subdivision (b), the handler or an employee, authorized representative, agent, or designee of a handler, shall, upon discovery, immediately report any release or threatened release of a hazardous material to the unified program agency (in the case of the proposed project, the Sacramento County Environmental Management Department) in accordance with the regulations adopted pursuant to this section. The handler or an employee, authorized representative, agent, or designee of the handler shall provide all state, city, or county fire or public health or safety personnel and emergency response personnel with access to the handler's facilities. In the case of the proposed project, the contractor is required to notify the Sacramento County Environmental Management Department in the event of an accidental release of a hazardous material, who would then monitor the conditions and recommend appropriate remediation measures. Compliance with such regulations would ensure that a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions during construction would not occur.

Existing On-Site Hazardous Materials

A development project could create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment should a site contain potential Recognized Environmental Conditions (RECs) that are not properly addressed prior to project implementation. A REC indicates the presence or likely presence of any hazardous substances in, on, or at a property due to any release into the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment.[21]

A Phase I Environmental Site Assessment (ESA) was prepared for the proposed project by BSK Associates (BSK) for the purpose of identifying potential RECs, controlled RECs (CRECs), and/or historical RECs (HRECs) associated with the project site (see Appendix

[21] ASTM International. *ASTM E1527, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* 2013.

G).[22] The Phase I ESA included a comprehensive review of available private and regulatory agency database records, aerial photographs, historic maps, and various other documentation, interviews of persons familiar with the history of the project site, and site reconnaissance conducted on August 6, 2025 and October 2, 2025. BSK reviewed historical aerial photographs of the project site from 1937 to 2022. The 1937 aerial photograph shows agricultural use and structures visible on the project site. Gravel pits and associated ponds can be seen on the project site in aerial photographs from 1947 to 1998. The 1998 aerial photograph shows a landfill operating to the north of the Development Area of the proposed project. The agricultural use and associated structures are not visible in the 2006 aerial photograph, and the project site remained vacant from 2006 to 2022 with the exception of the landfill and associated pipes and gas vents.

The GreenWaste Florin Perkins Resource Recovery Facility is located within the undeveloped land in the central portion of the overall project site. According to the Phase I ESA, the 13-acre South Fill Area associated with the landfill that operated from 1993 to 1995 is located on a portion of the project site that is proposed for development. Pursuant to the 2024 Second Semi-Annual Groundwater and Landfill Gas Monitoring Report prepared for the landfill, six groundwater monitoring wells, seven gas probes, two vapor probes, eight gas vents, a production well, and a blower station with treatment and connected landfill gas pipelines are located on the project site. The report identified groundwater contamination and detected Volatile Organic Compounds (VOCs) and/or methane landfill gases in the on-site vapor probes and gas vents in 2024.

The site reconnaissance conducted by BSK included observations of the project site, the site's exterior periphery, and immediately adjacent properties. During the site reconnaissance, BSK observed aboveground storage tanks (ASTs), a landfill gas blower system, landfill gas venting, vapor probes, soil gas vents, burned or buried debris, stained pavement and soil in the blower system area, drainage ditches, piping leading from the South Fill Area to the landfill gas blower system and gas vents, groundwater monitoring wells and associated drums, soil piles, a pit associated with the former on-site pond, stormwater culverts and drainages, and overhead power utilities. The Phase I ESA identified evidence of several RECs in connection with the project site and the adjacent properties, as discussed further below.

In addition, a Limited Phase II ESA was prepared for the proposed project by BSK on June 24, 2026 (see Appendix H), in order to further investigate selected areas identified in the Phase I ESA.[23] The Limited Phase II ESA included the collection of surface and subsurface soil samples from eight boring locations around the former structures on the site, surface soil samples from 20 boring locations to evaluate for residual agricultural chemicals, additional subsurface soil samples from eight of the boring locations to evaluate for residual hazardous materials related to the former landfill, and one soil sample from each of the soil stockpiles on the project site. The results of soil testing conducted as a part of the Limited Phase II ESA are discussed below. Furthermore, BSK prepared a Letter of Clarification on July 29, 2026 (see Appendix I) in order to address the RECs

[22] BSK Associates. *Phase I Environmental Site Assessment Sacramento County Assessor Parcel Numbers 061-0150-049-0000, 061-0150-045-0000, & a Portion of 061-0150-042-0000 & 061-0150-054-000 Sacramento, California (A Portion of the Florin Perkins Landfill Site).* October 22, 2025.

[23] BSK Associates. *Limited Phase II Environmental Site Assessment Report Sacramento County Assessor Parcel Numbers 061-0150-049-0000, 061-0150-045-0000, & a Portion of 061-0150-042-0000 & 061-0150-054-000 Sacramento, California (A Portion of the Florin Perkins Landfill Site).* June 24, 2026.

identified in the Phase I ESA that were not evaluated in the Limited Phase II ESA, as detailed below.[24]

Termiticide and Lead-Based Paint

According to the review of historical topographic maps conducted by BSK, two buildings are visible within the southwestern boundary of the project site in 1949 and 1950. Due to the age of the structures, the possibility of the presence of termiticide and lead-based paint (LBP) exists. During demolition and ground-disturbing activities associated with the proposed project, construction workers could come into contact with, and be exposed to, termiticide or LBP materials present on-site in the vicinity of the former structures. Additionally, workers could potentially be exposed to elevated concentrations of lead in the soil in the former vicinity of the structures. Collection and disposal of termiticide or lead materials, including LBP, by untrained personnel could cause termiticide-containing materials and lead dust emissions to be transported off-site, resulting in the release of hazardous material into the environment. Thus, the Phase I ESA identified the former on-site structures as RECs.

The Limited Phase II ESA included surface and subsurface soil samples from eight boring locations around the former structures on the site. The results of the chemical analysis of the soil samples determined that the soil around the former structures contains low to medium concentrations of lead. However, the detected lead concentrations were determined to be appropriate for commercial and industrial use. The Limited Phase II ESA includes recommendations to keep soil moist during construction activities to reduce dust. As noted previously, construction of the proposed project is required to comply with all applicable SMAQMD rules and regulations, including, but not limited to, Rule 403 (Fugitive Dust), which includes requirements to keep soils moist during earth-moving activities. Furthermore, all projects within Sacramento County are required to implement the SMAQMD's BCECP. Compliance with SMAQMD rules and regulations and BCECP would help to ensure that dust is minimized during project construction. In addition, while the chemical analysis detected some organochlorine pesticides (OCPs) in very low concentrations, the concentrations do not classify the soil as hazardous waste. Based on the above, a less-than-significant impact would occur related to the former on-site structures.

Soil Piles

During the site reconnaissance conducted as part of the Phase I ESA, two small soil piles were observed in the northwestern portion of the project site. According to the Phase I ESA, the soil piles are associated with a potential hazardous material and/or petroleum product release. Thus, the Phase I ESA identified the soil piles as RECs, and a significant impact could occur related to a potential hazardous material release associated with the two on-site soil piles.

The Limited Phase II ESA included one, four-point composite soil sample from each of the soil stockpiles on the project site. The results of the chemical analysis of the soil samples obtained from the soil stockpiles determined that the soil contains low to medium concentrations of some metals. While the majority of the concentrations are appropriate for commercial and industrial use, the concentrations of arsenic exceed the construction work environmental screening level (ESL). However, according to the Limited Phase II

[24] BSK Associates. *Letter of Clarification Limited Phase II Environmental Site Assessment, A Portion of 3901 Florin Perkins Road Sacramento, California 95826.* July 29, 2026.

ESA, although the soil samples collected exceeded the applicable ESLs for arsenic, arsenic and most metals are naturally occurring in many rock assemblages and their subsequent soils in California. The concentrations detected in the soil samples are typical to California. The Limited Phase II ESA recommends that soil is kept moist to reduce dust from construction activities. As noted previously, construction of the proposed project is required to comply with all applicable SMAQMD rules and regulations, including, but not limited to, Rule 403 (Fugitive Dust), which includes requirements to keep soils moist during earth-moving activities. Furthermore, all projects within Sacramento County are required to implement the SMAQMD's BCECP. Compliance with SMAQMD rules and regulations and BCECP would help to ensure that dust is minimized during project construction. In addition, some chlordanes, polynuclear aromatic hydrocarbons (PAHs) (semi-volatile organics), perfluorododecanoic acid (PFDoA), perfluorooctane sulfonate (PFOS), total petroleum hydrocarbons – diesel (TPH-D), and total petroleum hydrocarbons – motor oil (TPH-MO) were detected in the samples, but the samples contained concentrations below the applicable ESLs and would not classify the soil as a hazardous waste. While the per- and polyflyoroalkyl substances (PFAS) compounds perfluorooctanoic acid (PFOA) and perfluorodecanoic acid (PFDA) were detected exceeding one or more of the ESLs, neither the federal government or State currently have hazardous waste concentrations set for PFOA or PFDA. The Limited Phase II ESA recommends that the soil stockpiles be either properly disposed of off-site or not be removed from the site due to the elevated concentrations of PFOA and PFDA. As such, without compliance with the recommendation included in the Phase II ESA, a significant impact could occur related to the on-site soil piles.

Past Agricultural Use

Currently, the project site consists of undeveloped land with an elevated mound of dirt and a dirt access road with the southern portion. Historical aerial photographs reviewed as part of the Phase I ESA indicate that the project site and surrounding area appear to be agricultural from 1937 to 1998. As agricultural properties commonly apply pesticides and/or herbicides, the Phase I ESA determined that the project site's and surrounding area's past agricultural use represents an on- and off-site REC.

The Limited Phase II ESA included surface soil samples from 20 boring locations to evaluate for residual agricultural chemicals. Chemical analysis of the soil samples associated with former agricultural use did not contain any detectable concentrations of OCPs. Thus, a less-than-significant impact would occur related to the past on-site agricultural use.

Potential Contaminants Associated with Landfill Operations

According to the Phase I ESA, a portion of the project site is located on the former South Fill Area of the Florin-Perkins Landfill. The area associated with the Florin-Perkins Landfill is documented as having groundwater contamination, soil contamination, and landfill gas contamination, and qualifies as an on- and off-site REC and a vapor encroachment concern (VEC).

The Limited Phase II ESA included additional subsurface soil samples from eight of the boring locations to evaluate for residual hazardous materials related to the former landfill. The chemical analysis of the soil samples determined that the samples contained low to medium concentrations of some metals. However, while the concentrations of some of the metals exceed the construction work ESL, the Limited Phase II ESA concluded that the

concentrations detected are appropriate for commercial and industrial use. The Limited Phase II ESA includes recommendations to keep soil moist during construction activities to reduce dust. As noted previously, construction of the proposed project is required to comply with all applicable SMAQMD rules and regulations, including, but not limited to, Rule 403 (Fugitive Dust), which includes requirements to keep soils moist during earth-moving activities. Furthermore, all projects within Sacramento County are required to implement the SMAQMD's BCECP. Compliance with SMAQMD rules and regulations and BCECP would help to ensure that dust is minimized during project construction. In addition, some PAHs (semi-volatile organics) were detected in the samples, which may be the result of asphalts, fire debris, plastics, or a byproduct of incomplete combustion, and low concentrations of TPH-D and TPH-MO were detected in some of the samples. Nonetheless, the concentrations detected would not classify the soil as a hazardous waste. In addition, all proposed structures located within 1,000 feet of the South Fill Area associated with the Florin Perkins Landfill would be required to comply with the construction requirements included in Title 27, Section 21190(g) of the CCR in order to prevent landfill gas migration into the buildings. Based on the above, a less-than-significant impact would occur related to the former landfill.

Groundwater Monitoring Well Drums

During the site reconnaissance conducted as part of the Phase I ESA, groundwater monitoring well drums were observed next to wells MW-H(D), MW-G(D), and MW-G(S) on the project site. BSK could not ascertain the contents of the drums; however, given the locations of the drums, the drums likely contain purgewater related to the monitoring wells. The Phase I ESA determined that the groundwater monitoring well drums qualify as RECs due to the contamination of groundwater on the project site associated with the former Florin-Perkins Landfill. According to the Letter of Clarification prepared by BSK, the groundwater monitoring well drums would be required to be properly removed and disposed of in accordance with regulatory requirements prior to construction activities associated with the proposed project. Without removal of the groundwater monitoring well drums prior to construction activities, a significant impact could occur.

Other Potential On-Site RECs

According to the review of historical topographic maps and aerial photographs conducted for the proposed project, gravel pits can be seen approximately 0.25-mile to the north and south of the project site beginning in 1949. By 1967, the gravel pit to the north of the project site expanded further south and onto a small portion of the northern portion of the project site. According to the Phase I ESA, the gravel pit represents a REC. In addition, a pond is visible on the northern boundary of the project site in the 1967 historical topographic maps. Due to the potential for the pond to accumulate hazardous materials from the gravel pit, the pond also represents a REC. According to the Letter of Clarification prepared by BSK, the gravel pit and pond areas contain an engineered cap, thereby preventing BSK from boring through the cap to perform sampling. However, neither the gravel pit nor the pond are located in the Development Area of the proposed project and, thus, would not be disturbed. As such, a less-than-significant impact would occur related to the gravel pit and pond.

In addition, the Phase I ESA identified stained pavement and soil associated with the blower system area on the project site. The Phase I ESA concluded that the staining represents a REC. According to the Letter of Clarification prepared by BSK, the stained pavement and soil associated with the blower system area would be required to be

properly removed and disposed of in accordance with regulatory requirements prior to construction activities associated with the proposed project. Without removal of the stained soil prior to construction activities, a significant impact could occur.

Potential Nearby Recognized Environmental Conditions

The Phase I ESA prepared for the proposed project identified several RECs and CRECs occurring in the project vicinity. As a portion of the Florin-Perkins Landfill South Fill Area is located in the Development Area of the proposed project, the landfill qualifies as an on-site and off-site REC due to the documented groundwater, soil, and landfill gas contamination. However, the soil samples and chemical analysis conducted for the Limited Phase II ESA determined that a less-than-significant impact would occur related to the landfill operations. In addition, Grocery Outlet/Swift Transportation/Safeway/Transco Distribution/Crystal Creamery located 382 feet northwest of the project site, Clarklift West Inc./Circo System Balance located 837 feet northwest of the project site, Old Libbey Cannery/Libby McNeill & Libby Inc./Belvedere Avenue Property/Florin Perkins #2 located 1,216 feet northwest of the project site, Markel Bros. Plumbing/Universal Service Recycling Inc. located 1,703 feet west/southwest of the project site, and Dolan's Lumber Company located 2,066 feet west/southwest of the project site are documented as having leaking underground storage tanks (LUSTs) and qualify as off-site CRECs. Additionally, the L&D Landfill Company located 1,912 feet south of the project site is documented as a solid waste landfill, and qualifies as an off-site REC. Furthermore, the Sacramento Army Depot located 2,831 feet south of the project site is documented as having soil and groundwater contamination, and qualifies as an off-site REC. However, the regulatory agencies with jurisdiction over the contaminated sites require that the responsible party investigate and remediate the off-site contamination, and the proposed project would not be subject to off-site cleanup requirements. Due to the distance to the nearby RECs and the industrial nature of the proposed project, impacts related to the off-site RECs would be less than significant.

Updated Final Closure and Post-Closure Maintenance Plan

As discussed in the Phase I ESA, the Central Valley RWQCB Discharge Order #R5-2013-0042 (Order) was issued for the Florin Perkins Landfill. The Waste Discharge Requirements (WDRs) include many requirements for the Development Area related to the landfill, including Item 62, which states that the discharger submit a Final Closure and Post-Closure Maintence Plan that reflects the requirements of the WDRs any other planned changes in the closure plan for the landfill not requiring revision of the Order. Therefore, the Phase I ESA includes recommendation that the project applicant should consult with the Central Valley RWQCB and determine if a Revised Final Closure and Post-Closure Maintence Plan or any requirements are needed prior to development.

According to the Updated Final Closure and Post-Closure Maintenance Plan dated June 2018 prepared for the Florin Perkins Landfill, land development within 1,000 feet of the waste footprint shall not occur without RWQCB approval of a revision of the post-closure monitoring and maintenance plan identifying the proposed development. The revision would be required to be submitted to the Local Enforcement Agency (LEA) (in this case the Sacramento County Environmental Management Department), SMAQMD, and the City of Sacramento Community Development Department for review and approval, pursuant to Title 27, Section 21190(c) of the CCR. The LEA's regulatory oversight of the proposed project extends only to the proposed trailer storage area that would be located on the South Fill Area associated with the Florin Perkins Landfill. In addition, pursuant to

Title 27, Section 21190(c) of the CCR, the LEA shall review and approve proposed post-closure land uses if the project involves structures within 1,000 feet of the disposal area, structures on top of the waste, modification of low permeability, or irrigation over waste. Therefore, because the proposed project would include the development of structures within 1,000 feet of the disposal area, the proposed project would be required to receive approval from the Central Valley RWQCB, Sacramento County Environmental Management Department, SMAQMD, and the City of Sacramento Community Development Department. Without such approval, a significant impact could occur.

Conclusion

Based on the findings of the Phase I ESA, the proposed project could create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the likely release of hazardous materials into the environment, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

IX-1. *If the proposed project would not disturb the two small soil piles observed in the northwestern portion of the project site, the soil piles may be retained in place and mitigation is not necessary. If the proposed project would involve disturbance in the area containing the on-site soil piles, or for any future development that contemplates removal or relocation of the soil piles, the soil piles shall be excavated prior to any grading activities in the vicinity and properly disposed of off-site by a licensed professional at a permitted landfill facility to the satisfaction of the City of Sacramento Community Development Department Environmental Planning Services Division and the Sacramento County Environmental Management Department.*

IX-2. *Prior to commencement of construction activities, the project applicant shall properly remove the on-site groundwater monitoring well drums and the stained concrete and soil in the blower system area in accordance with all regulatory requirements. The well drums and stained concrete and soil shall be disposed of off-site at a licensed landfill facility. Verification of removal shall be submitted for review and approval of the City of Sacramento Community Development Department Environmental Planning Services Division and the Sacramento County Environmental Management Department.*

IX-3. *Prior to improvement plan approval, the project applicant shall submit a revision of the Updated Final Closure and Post-Closure Maintenance Plan dated June 2018, identifying the proposed development to the Central Valley Region Water Quality Control Board (CVRWQCB), Sacramento County Environmental Management Department, SMAQMD, and City of Sacramento Community Development Department Environmental Planning Services Division for review and approval, pursuant to Title 27, Section 21190(c) of the California Code of Regulations. All requirements*

from the regulatory agencies shall be noted on project improvement plans and be implemented as part of the proposed project.

c. The project site is not located within a quarter mile of any existing or proposed schools. The nearest school to the Development Area of the project site is Cristo Rey High School, located approximately 0.62-mile to the north of the Development Area. Therefore, the proposed project would result in ***no impact*** related to hazardous emissions or the handling of hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school.

d. The California Environmental Protection Agency (Cal EPA) has compiled a list of data resources that provide information regarding the facilities or sites identified as meeting the "Cortese List" requirements, pursuant to Government Code 65962.5. The components of the Cortese List include the Department of Toxic Substances Control (DTSC) Hazardous Waste and Substances Site List,[25] the list of LUST sites from the State Water Resources Control Board's (SWRCB's) GeoTracker database,[26] the list of solid waste disposal sites identified by the SWRCB, and the list of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO) from the SWRCB.[27]

The Phase I ESA included searching applicable online databases for records related to significant hazards within the project site and adjacent properties. Relevant material related to obtained documents is included in Appendix A to the Phase I ESA (see Appendix G of this IS/MND). According to the Phase I ESA, the project site is listed on the DTSC Envirostor and the SWRCB GeoTracker database due to hazardous waste associated with the Florin Perkins Landfill. The Limited Phase II ESA prepared for the proposed project included subsurface soil samples to evaluate for residual hazardous materials related to the former landfill and determined that the sampled soil would not be classified as hazardous waste. However, as described above, according to the Phase I ESA and Updated Final Closure and Post-Closure Maintenance Plan dated June 2018 prepared for the Florin Perkins Landfill, land development within 1,000 feet of the waste footprint shall not occur without RWQCB approval of a revision of the post-closure monitoring and maintenance plan identifying the proposed development. The revision would be required to be submitted to the LEA, SMAQMD, and the local planning department and review and approval. Therefore, the proposed project would be required to receive approval from the RWQCB, LEA, SMAQMD, and the City of Sacramento Community Development Department.

Based on the above, without approval of the proposed project from the applicable regulatory agencies, the proposed project could create a significant hazard to the public or the environment related to being located on a site which is included on a list of hazardous materials compiled pursuant to Government Code Section 65962.5, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

IX-4. Implement Mitigation Measure IX-3.

e. The nearest public airport to the project site is the Sacramento Mather Airport, located approximately 4.97 miles to the northeast. According to the Mather Airport Land Use Compatibility Plan, the project site is not located within the Airport Influence Area.[28] As such, a ***less-than-significant*** impact could occur related to a safety hazard for people residing or working in the project area associated with the project being located within an airport land use plan or within two miles of a public airport or public use airport.

f. The City participates in the multijurisdictional Sacramento County Local Hazard Mitigation Plan (LHMP), last updated in 2021.[29] The purpose of the LHMP is to guide hazard mitigation planning to better protect the people and property of the County from the effects of hazard events. The Sacramento LHMP includes policies and programs for participating jurisdictions to implement that reduce the risk of hazards and protect public health, safety, and welfare.

As discussed in Section XVII, Transportation, of this IS/MND, the proposed project would comply with Sacramento 2040 General Plan policies and design standards, and, as a result, would not impair any emergency response or evacuation plans. The proposed project would not alter the existing roadway configuration in the project vicinity. Thus, the proposed project would not physically interfere with the LHMP, particularly with identified emergency routes. Therefore, the proposed project would not interfere with an emergency evacuation or response plan, and a ***less-than-significant*** impact would occur.

g. Issues related to wildfire hazards are discussed in further detail in Section XX, Wildfire, of this IS/MND. According to the California Department of Forestry and Fire Protection (CAL FIRE) Fire and Resource Assessment Program, the project site is not located within a Very High Fire Hazard Severity Zone nor a State Responsibility Area.[30] Therefore, the proposed project would not expose people or structures, either directly or indirectly, to the risk of loss, injury or death involving wildland fires, and a ***less-than-significant*** impact would occur.

X. HYDROLOGY AND WATER QUALITY. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Violate any water quality standards or waste discharge requirements or otherwise substantially degrade surface or ground water quality?	☐	✖	☐	☐
b. Substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the project may impede sustainable groundwater management of the basin?	☐	☐	✖	☐
c. Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river or through the addition of impervious surfaces, in a manner which would:				
i. Result in substantial erosion or siltation on- or off-site;	☐	✖	☐	☐
ii. Substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or offsite;	☐	✖	☐	☐
iii. Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff; or	☐	✖	☐	☐
iv. Impede or redirect flood flows?	☐	✖	☐	☐
d. In flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?	☐	☐	☐	✖
e. Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?	☐	☐	✖	☐

Discussion

a, ci-ciii. The following discussion provides a summary of the proposed project's potential to violate water quality standards/waste discharge requirements, alter the drainage pattern of the site resulting in erosion or siltation, increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or otherwise degrade water quality during construction and operation.

Construction

During the early stages of construction activities, topsoil would be exposed due to grading and excavation of the site. After grading and prior to overlaying the ground with impervious surfaces and structures, the potential exists for wind and water to discharge sediment and/or urban pollutants into stormwater runoff, which could adversely affect water quality.

The City of Sacramento's Grading Ordinance requires that development projects comply with the requirements of the City's Stormwater Quality Improvement Plan (SQIP). The SQIP outlines the priorities, key elements, strategies, and evaluation methods of the City's Stormwater Management Program. The City's Stormwater Management Program is based on the NPDES Municipal Stormwater Discharge Permit. The comprehensive Stormwater Management Program includes pollution-reduction activities for construction sites, industrial sites, illegal discharges and illicit connections, new development, and municipal operations.

The SWRCB regulates stormwater discharges associated with construction activities where clearing, grading, or excavation results in land disturbance of one or more acres. The City's NPDES permit requires applicants to show proof of coverage under the State's General Construction Permit prior to receipt of any construction permits. The State's General Construction Permit requires any project that would disturb more than one acre of land to prepare a SWPPP. A SWPPP describes BMPs to control or minimize pollutants from entering stormwater and must address both grading/erosion impacts and non-point source pollution impacts of the development project.

With implementation of the required SWPPP and BMPs included therein, construction of the proposed project would not result in a violation of water quality standards and/or degradation of water quality. Final BMPs for the proposed project construction would be chosen in consultation with the applicable California Stormwater Quality Association Stormwater BMP Handbooks and Section 11 of the City's Development Standards, and implemented by the project contractor. Because the proposed project would disturb greater than one acre of land, the proposed project would be subject to the requirements of the State's General Construction Permit. Should the proposed project not include preparation and compliance with a SWPPP, a significant impact may occur.

Additionally, in accordance with Sacramento City Code Section 15.88.250, City of Sacramento staff would require preparation of an Erosion and Sediment Control Plan that demonstrates how the proposed project would control surface runoff and erosion and retain sediment on the project site during project construction. The Erosion and Sediment Control Plan would be required to be submitted concurrently with the final grading plan prepared for the proposed project.

Operations

Following project buildout, the surface of the site would be covered with either impervious surfaces or pervious surfaces, and topsoil would no longer be exposed. As such, the potential for erosion and associated impacts to water quality would be reduced. However, the addition of impervious surfaces on the site would result in the generation of urban runoff during project operations, which could contain pollutants if the runoff comes into contact with vehicle fluids on parking surfaces and/or landscape fertilizers and herbicides. During the dry season, vehicles and other urban activities may release contaminants onto the impervious surfaces, where they would accumulate until the first storm event. During the initial storm event, or first flush, the concentrated pollutants would be transported by way of stormwater runoff from the site to the stormwater drainage system and eventually a downstream waterway. Typical urban pollutants that would likely be associated with the proposed project include sediment, pesticides, oil and grease, nutrients, metals, bacteria, and trash. In addition, stormwater runoff could cause soil erosion if not properly addressed, which would provide a more lucrative means of transport for pollutants to enter the waterways.

Following project construction, the Development Area, which is currently undeveloped, would be developed to include approximately 30.67 acres of new impervious surfaces. Consistent with Chapter 13.16.120 of the Municipal Code, the post-development stormwater flows from the site would be required to be equal to or less than pre-development conditions. The proposed project would comply with Section 13.08.145, Mitigation of drainage impacts; design and procedures manual for water, sanitary sewer, storm drainage, and water quality facilities, of the Municipal Code, which requires the following:

> "When property that contributes drainage to the storm drain system or combined sewer system is improved or developed, all stormwater and surface runoff drainage impacts resulting from the improvement or development shall be fully mitigated to ensure that the improvement or development does not affect the function of the storm drain system or combined sewer system, and that there is no increase in flooding or in water surface elevation that adversely affects individuals, streets, structures, infrastructure, or property."

As such, a Post Construction Stormwater Management (PCSM) report was prepared for the proposed project by TLA Engineering and Planning (TLA) (see Appendix J).[31] As discussed within the PCSM report, the proposed project would include approximately 30.66 acres of new impervious surfaces as part of the development of the buildings and associated parking lot. The Development Area would include two DMAs. Stormwater runoff from the new impervious surfaces within the DMAs would be directed to new drain inlets and manholes located throughout the boundaries of the Development Area, which would convey flows to new 12-to 36-inch storm drain lines.

On-site stormwater drainage from DMA 1, which would consist of 32.11 acres, 18.29 of which would be impervious, would be transported by a network of new 12- to 36-inch storm drain pipes into the proposed 22,000-sf WQ Basin 1 located to the northeast of the proposed Building 6, or to the proposed WQ Swale 1 located to the north of Building 1. Runoff from the trailer storage area on the landfill cap would be discharged into the proposed WQ Swale 2 located to the north of the trailer storage area before being discharged into WQ Basin 1. On-site stormwater drainage from DMA 2, which would consist of 13.44 acres, 12.37 of which would be impervious, would be transported through the new network of 12- to 36-inch storm drain lines into the proposed 16,600-sf WQ Basin 2 located to the north of the proposed Building 7. The project site would be built up slightly above exiting ground to provide adequate cover for storm drain infrastructure and to provide positive drainage away from the proposed buildings. The on-site water quality basins would treat all the proposed impervious areas for the on-site drainage. All excess runoff would discharge into the existing detention/retention basin located north of Buildings 6 and 7.

Measures that reduce or eliminate post-construction-related water quality problems range from source controls, such as reduced surface disturbance, to treatment of polluted runoff, such as detention or retention basins. The City's SQIP and the Stormwater Quality Design Manual for the Sacramento Region include BMPs to be implemented to mitigate impacts from new development and redevelopment projects. Additionally, the City's DOU recommends implementation of LID measures. According to the PCSM report prepared for the proposed project, the on-site stormwater infrastructure has been designed to treat and manage the runoff generated by the two-year average design storm in accordance with the Sacramento Region Stormwater Quality Design Manual. All excess runoff from the project site would discharge into the existing wetland detention/retention basin located to the north of Buildings 6 and 7. The proposed project would require on-site retention in the existing wetland basin to accommodate 1.5 times the average yearly rainfall volume plus one foot of freeboard, which would be confirmed by the City during the construction documents phase of the proposed project.

The PCSM prepared peak flow calculations in order to properly size on-site drainage infrastructure. The 10-year peak flows entering WQ Basin 1 and WQ Basin 2 would be

[31] TLA Engineering and Planning. *Post Construction Stormwater Management*. June 2026.

43.6 cubic feet (cf) and 26.6 cf, respectively. On-site runoff can be managed by storm drain lines sized 36 inches and smaller, of which the proposed project would provide. The post-development 10-year peak flows entering the existing retention basin would be 70.2 cf, and WQ Basin 1 and WQ Basin 2 would implement overflow weirs for flows exceeding the 10-year event. Overall, the PCSM report concluded that the proposed development would not adversely impact the existing drainage facilities in the project area.

Proposed source control measures included as part of the proposed project would be designed consistent with the standards set forth in the Sacramento Region Stormwater Quality Design Manual. Source control measures are typical for industrial projects, including routine maintenance of the parking lots, spill control measures, allowed legal use of pesticides in the landscape, City-standard trash enclosures, collection of condensates, and professional grounds maintenance. Runoff reduction measures would include the planting of new trees on the project site and disconnected roof drains where feasible. The proposed project is not proposing the use of disconnected or porous pavement. The project applicant would implement the runoff reduction measures, where feasible, in order to reduce the size of the water quality basins. Trash control would consist of the multi-benefit trash treatment system of the bioretention basin and the screened outlets. Allowances would be made for emergency overflow in the event the screens become blocked. Finally, as established by Sacramento City Code Section 15.88.260, the proposed project would be required to prepare a Post-Construction Erosion and Sediment Control Plan, which would detail how the project would control surface runoff and retain sediment on-site after all proposed improvements and structures have been installed on-site. The Post-Construction Erosion and Sediment Control Plan would be required to be submitted to the City concurrently with the final grading plan prepared for the proposed project.

Based on the above, the proposed project is not anticipated to have a negative impact on the properties adjacent to the project site and would not adversely affect surface water quality.

Conclusion

Based on the above, impacts related to water quality would not occur during project operations. However, because a SWPPP has not yet been prepared for the proposed project, proper compliance with the aforementioned regulations cannot be ensured at this time, and the proposed project's construction activities could violate water quality standards or waste discharge requirements or otherwise degrade water quality. Thus, the proposed project could violate water quality standards/waste discharge requirements, alter the drainage pattern of the site resulting in erosion or siltation, increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site, contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems, or otherwise degrade water quality during construction, and a ***potentially significant*** impact could occur.

Mitigation Measure(s)

Implementation of the following mitigation measure would reduce the above potential impact to a *less-than-significant* level.

X-1. *Prior to issuance of any grading permits, the contractor shall prepare a Stormwater Pollution Prevention Plan (SWPPP) for review and approval by the Central Valley Regional Water Quality Control Board (RWQCB). The*

contractor shall file the Notice of Intent (NOI) and associated fee to the State Water Resources Control Board (SWRCB). The SWPPP shall serve as the framework for identification, assignment, and implementation of BMPs. The contractor shall implement BMPs to reduce pollutants in stormwater discharges to the maximum extent practicable. Construction (temporary) BMPs for the project may include, but are not limited to: fiber rolls, straw bale barrier, straw wattles, storm drain inlet protection, velocity dissipation devices, silt fences, wind erosion control, stabilized construction entrance, hydroseeding, revegetation techniques, and dust control measures. The SWPPP shall be submitted to both the City Director of Public Works, and the City Engineer for review and approval and shall remain on the project site during all phases of construction. Following implementation of the SWPPP, the contractor shall subsequently demonstrate the SWPPP's effectiveness and provide for necessary and appropriate revisions, modifications, and improvements to reduce pollutants in stormwater discharges to the maximum extent practicable.

b,e. The City would be responsible for providing water to the project site. The City's water infrastructure network consists of two surface water treatment facilities, two pressure zones, and a supporting system of groundwater wells, pumping facilities, storage tanks, and distribution/transmission pipelines. According to the Master EIR, the City supplies domestic water from a combination of surface water and groundwater sources. The City is permitted to 326,800 acre-feet per year (AFY) of surface water diverted from the Sacramento and American rivers in 2030, while the City's average groundwater deliveries from 2006 to 2017 were approximately 17,932 AFY. The City's 2025 Urban Water Management Plan (UWMP)[32] includes a water service reliability assessment of the City's projected supplies and demands during normal, single dry, and five consecutive dry years. Under the various water year types, the total annual water supply sources available are compared to the total annual projected water use for the City's water service area from 2030 to 2050 in five-year increments. The City is projected to have a surplus of water supplies in all water year types through 2050. The proposed project would be consistent with the Development Area's General Plan land use designation and would not generate an increase in water demand beyond what has already been anticipated in the Master EIR. As such, adequate capacity is expected to be available to serve the proposed project's water demands. Therefore, while a portion of the water supplied to the project site by the City would be obtained through groundwater resources, such groundwater usage has been anticipated and would not substantially deplete groundwater supplies within the project area.

The proposed project would result in an increase in on-site impervious surfaces, which would reduce the infiltration of groundwater as compared to existing conditions. However, according to the PCSM prepared for the proposed project, the soils underlying the project site are mostly (60 percent) poor draining San Joaquin-Urban land complex with a light vegetative cover, with the remaining soils as Xerarents-San Joaquin complex type C soil. Overall, the PCSM determined that the existing soils underlying the project site are poorly drained. Nonetheless, approximately 14.89 acres, or approximately 33 percent of the site, would remain as pervious surfaces, which would allow for the natural percolation of stormwater in those areas, which would continue to contribute to groundwater recharge similar to existing conditions. Furthermore, the proposed project would include the

[32] City of Sacramento. *2025 Urban Water Management Plan.* May 14, 2026.

development of two on-site WQ swales and two WQ basins, which would allow for the on-site infiltration of surface water to continue, and contribute to groundwater recharge. Therefore, the proposed project would not interfere substantially with groundwater recharge. Furthermore, the groundwater subbasin within which the project site is located is not currently in a state of overdraft.

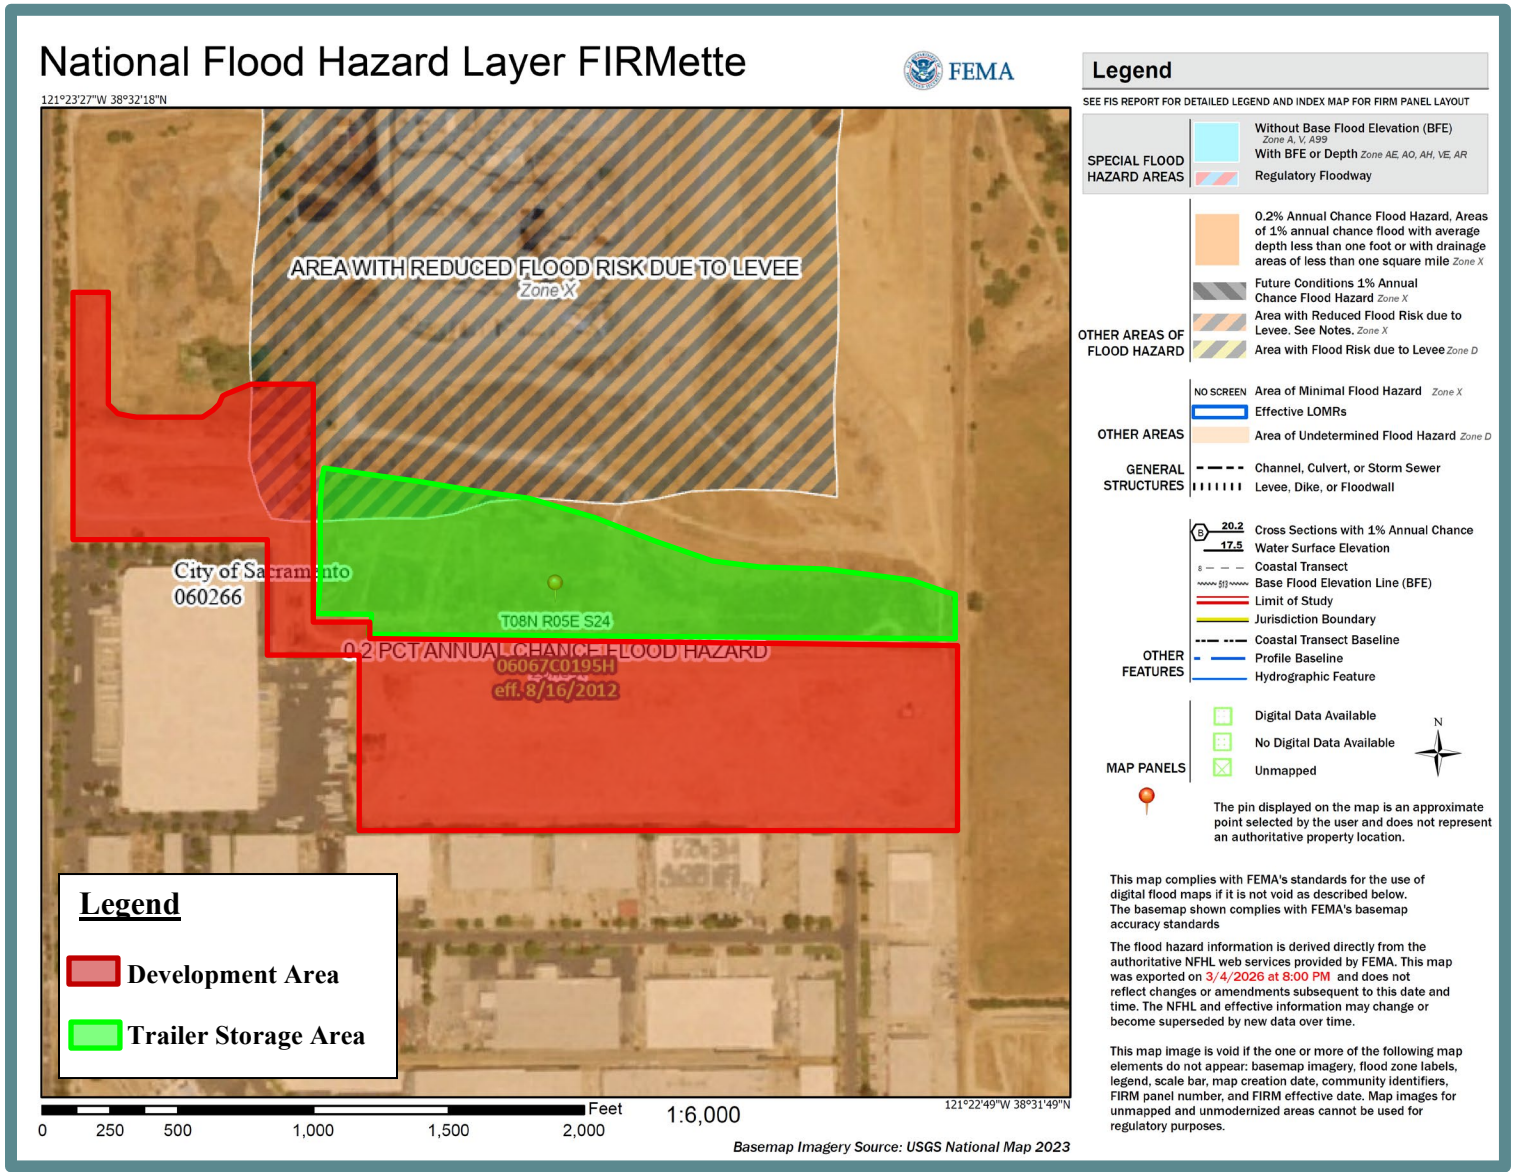
Based on the above, the proposed project would result in a ***less-than-significant*** impact with respect to substantially decreasing groundwater supplies or interfering substantially with groundwater recharge such that the project would impede sustainable groundwater management.

civ. According to the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 06067C0195H, effective August 16, 2012, the project site is located in an Area With Reduced Flood Risk due to Levee (Zone X) and in a 0.2 Percent Annual Chance Flood Hazard (Zone X), which is defined by FEMA as an area within a 500-year floodplain (see Figure 15).[33] Zone X is described by FEMA as an area of moderate to low flood risk, usually between the 100-year to 500-year flood levels. FEMA does not have building regulations for development in areas designated Zone X and would not require mandatory flood insurance for structures in Zone X. As such, the proposed project would not substantially impede or redirect flood flows, and a ***less-than-significant*** impact would occur.

d. Tsunamis are defined as sea waves created by undersea fault movement, whereas a seiche is a long-wavelength, large-scale wave action set up in a closed body of water such as a lake or reservoir. The project area is located approximately 88 miles from the Pacific Ocean and tsunamis typically affect coastlines and areas up to one-quarter mile inland. Due to the project's distance from the coast, the project site would not be exposed to flooding risks associated with tsunamis. Seiches do not pose a risk to the proposed project, as the project site is not located adjacent to a large, closed body of water. Furthermore, as noted above, the proposed project would not include development of any habitable structures within a Flood Hazard Zone. Based on the above, the proposed project would not pose a risk related to the release of pollutants due to project inundation due to flooding, tsunami, or seiche, and ***no impact*** would occur.

[33] Federal Emergency Management Agency. *Flood Insurance Rate Map 06067C0195H.* Available at: https://msc.fema.gov/portal/search. Accessed June 2026.

Figure 15
FEMA Flood Hazard FIRMette 06067C0195H



XI. LAND USE AND PLANNING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Physically divide an established community?	☐	☐	✖	☐
b. Cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect?	☐	☐	✖	☐

Discussion

a. A project risks dividing an established community if the project would introduce infrastructure or alter land use so as to change the land use conditions in the surrounding community, or isolate an existing land use. Land uses surrounding the Development Area include the GreenWaste Florin Perkins Resource Recovery Facility within the central portion of the overall project site; industrial uses to the north, across Jackson Road; undeveloped land to the east, which is planned for residential development as part of the Aspen 1 Project; light industrial/commercial uses to the south; and light industrial/commercial uses to the immediate west and a distribution center further west, across Florin Perkins Road. The proposed project would result in the development of seven warehouse/office buildings and a trailer storage area. The proposed project would be consistent with the Development Area's EMU General Plan land use designation, which allows for light industrial uses, and would develop land uses similar to what is currently within the project vicinity. As such, the proposed project would not physically divide an established community, alter general development trends, or isolate an existing land use and a ***less-than-significant*** impact would occur.

b. According to the 2040 General Plan, the site is designated as EMU and N, with the Development Area of the proposed project designated as EMU. The site is zoned M-1S-3-SWR. The EMU designation allows for a range of light industrial, high technology uses, service commercial uses, accessory office uses, retail and service uses, compatible residential uses, care facilities, assembly facilities, and compatible public and quasi-public uses. Furthermore, pursuant to Section 17.220.210 of the Sacramento Municipal Code, permitted uses in the M-1S-SWR zone include, but are not limited to, residential uses, commercial and institutional uses (including office uses), and industrial and agricultural uses. As such, the proposed project would not change the intended use of the project site, as the proposed project is consistent with the site's current General Plan land use designation and would be consistent with existing development in the project vicinity.

As discussed throughout this IS/MND, the proposed project would not conflict with City policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect, including, but not limited to, the Sacramento City Code Chapter 12.56, Tree Planting, Maintenance, and Conservation, and the City's noise standards. The proposed project would also comply with all applicable SWRCB regulations relayed to stormwater. This IS/MND includes mitigation to reduce any identified environmental impacts to less-than-significant levels. Therefore, the proposed project would not conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental impact and a ***less-than-significant*** impact would occur.

XII. MINERAL RESOURCES. *Would the project:*		Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a.	Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	☐	☐	✖	☐
b.	Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	☐	☐	✖	☐

Discussion

a,b. According to the City of Sacramento Master EIR, areas identified for new development, other than areas between SR 99 and SR 16 in the southeastern portion of the planning area and a narrow area east of the Sacramento Executive Airport, do not contain known mineral resources that would be of value to the region or residents of the State.[34] The project is located between SR 99 and SR 16, and portions of the site are included within Mineral Resource Zone (MRZ)-2. The MRZ-2 designation is used to describe areas where geologic information indicates the presence of significant concrete aggregate resources.[35] Furthermore, according to the Geotechnical Engineering Report prepared for the proposed project, the site is underlain by the Riverbank Formation (Qr_2), which generally consists of sand with gravel and some interbedded fine sand and silt. Such materials are suitable for use as aggregate in the production of concrete cement.

The area to be developed as part of the proposed project represents a small fraction of available mineral resources located within the Greater Sacramento Area Production-Consumption Region. In addition, development of the proposed buildings would not preclude future mining activities or availability of mineral resources. As such, the proposed project would not result in a significant loss of availability of a known mineral resource that would be of value to the region and the residents of the State. Furthermore, while the project site contains concrete aggregate resources, the project site has not been involved in any previous mining activities. Therefore, a ***less-than-significant*** impact to mineral resources would occur as a result of development of the proposed project.

[35] California Department of Conservation, California Geological Survey. *Mineral Land Classification Map of Concrete Aggregate in the Greater Sacramento Area Production-Consumption Region*. 2018.

XIII. NOISE. *Would the project result in:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	☐	☐	✖	☐
b. Generation of excessive groundborne vibration or groundborne noise levels?	☐	☐	✖	☐
c. For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	☐	☐	☐	✖

Discussion

The following sections are based on the Environmental Noise and Vibration Assessment (Noise Assessment) prepared for the proposed project by Bollard Acoustical Consultants, Inc. (BAC) (see Appendix K).[36]

a. The discussion below presents information regarding sensitive noise receptors in proximity to the project site, applicable noise standards, the existing noise environment, and the potential for the proposed project to result in noise impacts during project construction and operation. The following terms are referenced in the sections below:

- Decibel (dB): A unit of sound energy intensity. An A-weighted decibel (dBA) is a decibel corrected for the variation in frequency response to the typical human ear at commonly encountered noise levels. All references to dB in this report will be A-weighted unless noted otherwise.
- Day-Night Average Level (L_{dn}): The average sound level over a 24-hour day, with a +10 decibel weighing applied to noise occurring during nighttime (10:00 PM to 7:00 AM) hours.
- Equivalent Sound Level (L_{eq}): The average sound level over a given time-period.
- Maximum Sound Level (L_{max}): The maximum sound level over a given time-period.
- Median Sound Level (L_{50}): The sound level exceeded 50 percent of the time over a given time-period.

Significance Criteria

Pursuant to City of Sacramento Municipal Code, Section 8.68.060, the proposed project, which shall be considered to be a "Stationary" noise source, shall not be permitted to generate noise levels exceeding 55 dBA L_{50} or 75 dBA L_{max} during daytime (7:00 AM to 10:00 PM) hours and 50 dBA L_{50} or 70 dBA L_{max} during nighttime (10:00 PM to 7:00 AM) hours at the adjacent noise sensitive receptors.

The City has not adopted any formal standard for evaluating temporary construction noise which occurs within allowable hours. Therefore, for short-term noise associated with

[36] Bollard Acoustical Consultants, Inc. *Environmental Noise and Vibration Assessment, Davis Family Warehouse, City of Sacramento, California.* May 14, 2026.

project construction, the Noise Assessment used the Federal Transit Administration's (FTA's) *Transit Noise and Vibration Impact Assessment Manual* guidance as reasonable criteria for assessment of construction noise. Pursuant to the FTA, construction noise impact criteria include maximum levels of 90 dBA L_{eq} and 80 dBA L_{eq} at residential land uses during daytime and nighttime hours, respectively.

The Federal Interagency Committee on Noise (FICON) has also developed guidance for determining increases in project-related traffic noise. The criteria shown in Table 9 was developed by FICON as a means of developing thresholds for impact identification for project-related traffic noise level increases. FICON's significance thresholds are used to identify the significance of an incremental increase in noise levels.

Table 8
FICON Noise Exposure Increases for Determining Level of Significance

Noise Exposure without Project	Potential Significant Impact
< 60 dB CNEL	+5 dB or more
60-65 dB CNEL	+3 dB or more
>65 dB CNEL	+1.5 dB or more

Source: FICON, 2000.

The use of the FICON standards is considered conservative relative to thresholds used by other agencies in the State. For example, the California Energy Commission (CEC) considers project-related noise level increases between five to 10 dB significant, depending on local factors. Therefore, the use of the FICON standards, which set the threshold for finding significant noise impacts as low as 1.5 dB, provides a conservative approach to the impact assessment for the proposed project and are used as the applicable noise increase threshold to analyze project-generated operational traffic noise, as discussed in further detail below.

In addition, in terms of determining the noise increase due to project on-site operations at existing sensitive land uses, an impact would occur if such activities would noticeably increase ambient noise levels above background levels at the existing sensitive land uses. The threshold of perception of the human ear is approximately three to five dB – a five dB change is considered to be clearly noticeable. For the analysis of the on-site operational noise level increases at existing sensitive land uses, a noticeable increase in ambient noise levels is assumed to occur where project activities would result in an increase by five dB or more over existing ambient noise levels.

Sensitive Noise Receptors

Some land uses are considered more sensitive to noise than others, and, thus, are referred to as sensitive noise receptors. Land uses often associated with sensitive noise receptors generally include residences, schools, libraries, hospitals, and passive recreational areas. Noise sensitive land uses are typically given special attention in order to achieve protection from excessive noise. In the vicinity of the project site, the nearest existing noise sensitive land use is a single-family residence, located approximately 0.5-mile to the north of the project site at 8550 Jackson Road.

Existing Noise Environment

The existing ambient noise environment at the project site is primarily defined by traffic noise emanating from Florin Perkins Road to the west of the project site, operations at the Greenwaste Florin Perkins Resource Facility to the north of the project site, and by intermittent activities associated with Mather Airport.

To generally quantify existing ambient noise environment within the project vicinity, BAC conducted long-term (continuous) ambient noise level surveys from March 6 through 10 and 13 through 15, 2026, at the two locations shown below in Figure 16.

Larson Davis Laboratories (LDL) precision (Type 1) integrating sound level meters were used to complete the noise level measurements. The meters were calibrated immediately before use with an LDL Model CA200 acoustical calibrator to ensure the accuracy of the measurements. The equipment used meets all specifications of the American National Standards Institute requirements for Type 1 sound level meters (ANSI S1.4). The results of the noise surveys are summarized below in Table 10.

Table 9
Existing Background Noise Levels (dBA)

Site	Date	L_{dn}	Average Measured Hourly Noise Levels			
			Daytime (7:00 AM to 10:00 PM)		Nighttime (10:00 PM to 7:00 AM)	
			L_{50}	L_{max}	L_{50}	L_{max}
Site 1: Northwest project area near Florin Perkins Road	3/6/26	71	66	77	58	76
	3/7/26	67	62	76	52	75
	3/8/26	65	58	76	52	74
	3/9/26	71	64	76	58	74
	3/10/26	74	63	77	58	74
Site 2: Northeast project area along property line	3/13/26	59	50	64	49	62
	3/14/26	58	46	61	48	66
	3/15/26	53	45	58	46	56

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 10, measured existing day-night average noise levels (DNLs) were highest on weekdays. Table 10 also shows that average measured hourly noise levels (L50 and L_{max}) were generally consistent during the monitoring period (i.e., relatively small range of measured values).

Project Construction Noise

During the construction of the proposed project, heavy equipment would be used for site grading, paving, and building construction, which would increase ambient noise levels in the project area when in use. Standard construction equipment, such as graders, backhoes, loaders, and trucks, would be used on-site. Noise levels would vary depending on the type of equipment used, how the equipment is operated, and how well the equipment is maintained. In addition, noise exposure at any single point outside the project site would vary depending on the proximity of construction activities to that point.

Figure 16
Noise Measurement Sites

The noise increase during construction would be of short duration and would likely occur primarily during daytime hours. The City of Sacramento's Noise Ordinance (Section 8.60.060 of the Municipal Code) exempts construction activities from the City's noise standards, provided that construction takes place between the hours of 7:00 AM and 6:00 PM Monday through Saturday and 9:00 AM and 6:00 PM Sundays and holidays. The City of Sacramento has not adopted a formal standard for evaluating temporary construction noise which occurs within allowable hours. However, as discussed above, the FTA's construction noise impact criteria include maximum levels of 90 dBA L_{eq} and 80 dBA L_{eq} at residential land uses during daytime and nighttime hours, respectively.

The maximum noise level for various types of construction equipment at a distance of 50 feet is presented in Table 11.

Table 10
Construction Equipment Noise

Type of Equipment	Maximum Level, dB at 50 feet
Air Compressor	80
Backhoe	80

Source: Federal Transit Administration, Noise and Vibration Impact Assessment Manual, Table 7-1, 2018.

As shown in Table 11, activities involved in construction would generate maximum noise levels ranging from 76 to 90 dB at a distance of 50 feet. The closest existing noise-sensitive receptor to the proposed project is the single-family residence located approximately 2,800 feet to the north. In addition, the closest future noise-sensitive receptors to the proposed project would be the approved Aspen 1 Residential Mixed-Use development, located approximately 750 feet to the east. The distances from the existing

and future noise-sensitive receptor locations to the most significant sources of on-site construction would vary depending on the phase of construction. For a general assessment of potential construction noise impacts, the FTA recommends using the noise emission levels shown in Table 11, adjusting those levels for the percentage of the hour the equipment would be operating, correcting for distance by assuming mobile equipment operates at the center of the project, and considering ground effects where appropriate. BAC conservatively assumed distances of 2,900 feet (single-family residence at 8550 Jackson Road) and 850 feet (Aspen 1 Residential Mixed Use) for the construction noise evaluation. Project construction noise was calculated using the Federal Highway Administration's Roadway Construction Noise Model (RCNM) to be approximately 49 dBA L_{eq}/L_{50} at a distance of 2,900 feet (single-family residence at 8550 Jackson Road) and 60 L_{eq}/L_{50} at a distance of 850 feet (Aspen 1 Residential Mixed Use). The RCNM analysis conservatively assumes concurrent, combined operations of a dozer, front loader, compactor, backhoe, and grader at the receiver distances.

As described above, the FTA establishes noise level limits of 90 dB L_{eq} during daytime hours and 80 dB L_{eq} during nighttime hours for residential uses affected by construction projects. The estimated construction noise levels of 49 dBA L_{eq}/L_{50} and 60 dBA L_{eq}/L_{50} at the closest identified existing and future noise-sensitive receptors would be well below FTA noise standards during both daytime and nighttime hours. Therefore, on-site construction activities associated with the proposed project would not result in an adverse impact at the closest existing or future noise-sensitive receptors. Furthermore, compliance with the allowed hours as detailed in the City of Sacramento Municipal Code Section 8.68.060 and the temporary noise control recommendations included in the Noise Assessment, such as noise barriers and muffed construction equipment, would be required by the City of Sacramento as conditions of approval (COAs) for the proposed project. Thus, a less-than-significant impact related to project construction noise would occur.

Project Operational Noise

Noise generated during operations of the proposed project would consist of on-site heavy truck circulation, mechanical equipment, and traffic noise, as discussed in further detail below.

Traffic Noise at Existing Noise-Sensitive Receptors

To assess noise impacts due to project-related traffic increases on Florin Perkins Road and the 23rd Avenue/Warehouse Way cul-de-sac, BAC used trip generation forecasts provided in the project-specific Trip Generation Memo[37] with the Federal Highway Administration Highway Traffic Noise Prediction Model (FHWA-RD-77-108). The FHWA Model was used in conjunction with the California Vehicle Noise Emission Levels (CALVENO) reference noise emission curves, and accounts for vehicle volume and speed, roadway configuration, distance to the receiver, and the acoustical characteristics of the project vicinity, and is generally considered to be accurate within 1.5 dB.

Based on the daily trip generation estimates and posted vehicle speeds, project-generated traffic noise level exposure is predicted to be approximately 65 dB DNL at a distance of 50 feet from the centerline of Florin Perkins Road, and approximately 64 dB DNL at a distance of 50 feet from the centerline of 23rd Avenue.

[37] Kittelson & Associates. *3901 Florin Perkins Road Traffic Impact Study – Trip Generation Memorandum DRAFT*. February 2, 2026.

Based on existing (2026) traffic count data provided by the City of Sacramento and posted vehicle speeds, existing day-night average noise level exposure computes to approximately 74 dB DNL at a distance of 50 feet from the centerline of Florin Perkins Road. In addition, existing day-night average noise level exposure computes to approximately 64 dB DNL at a distance of 50 feet from the centerline of 23rd Avenue.

Based on the FICON criteria shown in Table 9, a 5 dB DNL increase in noise levels due to a project is required for a finding of significant noise impact where ambient noise levels without the project are less than 60 dB DNL. Where pre-project ambient conditions are between 60 dB DNL and 65 dB DNL, a 3 dB DNL increase is applied as the standard of significance. In areas already exposed to higher noise levels, specifically pre-project noise levels in excess of 65 dB DNL, a 1.5 dB DNL increase is considered by FICON as the threshold of significance. A significant impact would only be identified where the project-generated traffic noise level increase would exceed the applicable FICON significance thresholds for each specific roadway segment and where sensitive land uses are present along the roadway segment.

Given the existing traffic noise level of approximately 74 dB DNL along Florin Perkins Road, and a predicted project-generated off-site traffic noise level of approximately 65 dB DNL, the project-related increase in traffic noise levels along Florin Perkins Road is calculated to be 0.5 dB DNL at 50 feet from the centerline of the roadway. In addition, given the existing traffic noise level of approximately 64 dB DNL along 23rd Avenue, and a predicted project-generated off-site traffic noise level of approximately 64 dB DNL, the project-related increase in traffic noise levels along 23rd Avenue is calculated to be 2.9 dB DNL at 50 feet from the centerline of the roadway. Therefore, the project-related increases in traffic noise levels of 0.5 dB DNL to 2.9 dB DNL for each respective roadway segment would satisfy the applicable FICON criteria. In addition, existing noise-sensitive uses are not located within 50 feet from the centerline of either Florin Perkins Road or 23rd Avenue within the project vicinity. Therefore, the increase in traffic noise levels at existing sensitive receptors due to the proposed project would be considered less than significant.

On-Site Operational Noise

Primary noise sources associated with activities within the project site would consist of on-site truck circulation noise, heavy truck backing into the loading bays/docks, and trailer coupling/decoupling noise. However, once the trucks are docked at the loading bays, the trucks would be loaded and unloaded from within the on-site buildings. As such, outside loading/unloading activities would not occur, and noise generated by such activities would be contained within the on-site buildings. Other primary noise sources associated with the proposed project include on-site passenger vehicle circulation noise and heating, ventilation, and air conditioning (HVAC) noise. According to the Noise Assessment, HVAC equipment would either be housed in equipment rooms or located on the roof and shielded by screen walls (parapets), thereby reducing noise. Even so, the noise generated by the aforementioned components could result in impacts to existing noise-sensitive receptors in the project vicinity. The closest existing noise-sensitive use to the project area is a single-family residence located approximately 2,800 feet to the north. However, given the large setback, on-site operational noise levels are expected to be well below the City of Sacramento noise level limits for residential land uses at the single-family residence. As a result, the Noise Assessment analyzed noise levels at the future adjacent noise-sensitive land uses within the Aspen 1 – New Brighton development located approximately 750 feet to the east. Each of the foregoing noise sources is discussed in further detail below.

On-Site Truck Circulation Noise

Heavy truck arrivals and departures, and on-site truck circulation, would occur at low speeds. To quantify the noise generation of slow moving trucks, BAC used single-event passby noise test results for slow-moving heavy trucks conducted at the West El Camino truck stop in Sacramento, California. During the truck passbys, Larson-Davis Laboratories Model 820 and 2900 sound level meters and frequency analyzers were used to quantify noise levels and event frequency content for each event. The results of the heavy truck measurements in terms of Sound Exposure Level (SEL) ranged from 77 dB SEL to 85 dB SEL, with a mean of 83 dB SEL. Because on-site heavy truck circulation could occur throughout the course of an hour (i.e., in excess of 30 minutes), the applicable noise level descriptor for on-site truck circulation would be the median noise level metric (L_{50}).

According to the project-specific Trip Generation Memo, the proposed project would generate 109 total weekday daily truck trips, with 10 weekday AM peak hour trips and 17 weekday PM peak hours trips. BAC conservatively assumed that the project could generate 17 truck trips during a given worst-case busy weekday daytime or nighttime hour. Given 17 truck trips per hour, and an SEL of 83 dB per passby (conservatively assuming they would all be heavy trucks), the hourly average noise level generated by on-site truck circulation computes to 60 dB L_{eq} at a reference distance of 50 feet from the truck route.

Based on the truck trip generation data and worst case busy hour assumptions above, BAC calculated project on-site truck circulation noise exposure at the closest residential land use designation areas of the future Aspen 1 Residential Mixed Use development, the results of which are included in Table 12 below.

Table 11
Predicted On-Site Truck Circulation Noise at Future Aspen 1 Residential Mixed-Use Development (dBA)

Land Use	Distance (feet)[1]	Predicted Noise Level, L_{50}	City Noise Standard, L_{50}	
			Daytime	Nighttime
Residential Mixed-Use	1,000	40	55	50
Low-Density Residential	1,150	39		

[1] Distance scaled from closest on-site truck circulation lane/route to closest residentially designated areas of Aspen 1 Residential Mixed-Use Development.

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 12, worst-case project on-site truck circulation noise levels would satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas within the future Aspen 1 Residential Mixed Use development.

Heavy Truck Backing and Trailer Coupling/Decoupling Noise

In addition to noise generated by on-site truck circulation, noise would also be generated during brief periods of trucks backing into loading bays (backup beepers) and trailer coupling/decoupling at the proposed warehouse buildings. The Noise Assessment

assumed that heavy trucks would not be permitted to idle while on-site, and that refrigerator trucks (if applicable) would be plugged into loading bay power.

To quantify the noise generated by backup warning devices and trailer coupling/decoupling, BAC conducted noise level measurements of a similar warehouse/distribution facility over a 46-hour period. The noise level results from the similar facility indicate that average measured hourly noise levels for the entire monitoring period were 54 dB L_{eq} at a distance of 100 feet from the effective noise center of the truck backing, coupling and decoupling area. Because on-site heavy truck backing and coupling could occur throughout the course of an hour (i.e., in excess of 30 minutes), the applicable noise level descriptor for on-site truck backing and coupling would be the median noise level metric (L_{50}).

Based on the above, BAC calculated project on-site truck circulation noise exposure at the closest residential land use designation areas of the future Aspen 1 Residential Mixed Use development, the results of which are included in Table 13 below.

Table 12
Predicted Truck Backing and Trailer Coupling/Decoupling Noise at Aspen 1 Residential Mixed-Use Development (dBA)

Land Use	Distance (feet)[1]	Predicted Noise Level, L_{50}	City Noise Standard, L_{50}	
			Daytime	Nighttime
Residential Mixed-Use	885	35	55	50
Low-Density Residential	1,100	33		

[1] Distance scaled from the effective noise center of the closest proposed loading docks (Building 1) to closest residentially designated areas of Aspen 1 Residential Mixed-Use Development.

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 13, worst-case project truck loading dock activity noise levels would satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas within the future Aspen 1 Residential Mixed Use development.

On-Site Passenger Vehicle Circulation Noise

As described above, to quantify project on-site passenger vehicle circulation noise exposure, BAC used the FHWA Traffic Noise Prediction Model (FHWA-RD-77-108) with trip generation forecasts contained in the project-specific Trip Generation Memo. According to the Trip Generation Memo, the project is estimated to generate 1,198 total weekday daily passenger vehicle trips, including 214 weekday AM peak hour trips and 218 weekday PM peak hours trips. BAC conservatively assumed that the project could generate 218 vehicle trips during a given worst-case busy weekday daytime or nighttime hour. BAC further conservatively assumed that all the hourly vehicle trips could occur in the closest on-site vehicle circulation route/lane to a sensitive receiver location. However, the vehicle trips are more likely to be evenly distributed within the project area.

Based on the vehicle trip generation data and worst case busy hour assumptions above, BAC calculated project on-site passenger vehicle circulation noise exposure at the closest residential land use designation areas of the future Aspen 1 Residential Mixed Use development, the results of which are included in Table 14 below.

Table 13
Predicted On-Site Passenger Vehicle Noise at Aspen 1 Residential Mixed-Use Development (dBA)

Land Use	Distance (feet)[1]	Predicted Noise Level, L_{50}	City Noise Standard, L_{50}	
			Daytime	Nighttime
Residential Mixed-Use	730	29	55	50
Low-Density Residential	950	27		

[1] Distance scaled from closest on-site passenger vehicle circulation lane/route to closest residentially designated areas of Aspen 1 Residential Mixed-Use Development.

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 14, worst-case project on-site passenger vehicle circulation noise levels would satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas within the future Aspen 1 Residential Mixed Use development.

Rooftop Mechanical Equipment (HVAC) Noise

In order to determine potential noise exposure due to rooftop mechanical equipment, BAC utilized reference file data collected for previous studies. BAC reference file data for HVAC systems indicate that a 12.5-ton packaged unit can be expected to generate an A-weighted sound power level of 85 dB. Using the sound power data, BAC calculated project HVAC equipment noise level exposure at the closest residential land use designation areas of the future Aspen 1 Residential Mixed Use development was calculated, the results of which are included in Table 15 below.

Table 14
Predicted Rooftop Mechanical Equipment Noise at Aspen 1 Residential Mixed-Use Development (dBA)

Land Use	Distance (feet)[1]	Predicted Noise Level, L_{50}	City Noise Standard, L_{50}	
			Daytime	Nighttime
Residential Mixed-Use	800	27	55	50
Low-Density Residential	1,050	25		

[1] Distance scaled from exterior façade of closest proposed building (Building 1) to closest residentially designated areas of Aspen 1 Residential Mixed-Use Development.

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 15, worst-case project HVAC equipment noise levels would satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas within the future Aspen 1 Residential Mixed Use development.

Combined On-Site Operational Noise

Calculated combined noise levels from analyzed on-site operations at the closest residential land use designation areas of the future Aspen 1 Residential Mixed Use development are presented in Table 16.

Table 15
Combined On-Site Operational Noise at Aspen 1 Residential Mixed-Use Development (dBA)

Land Use	Predicted On-Site Operational Noise Level, L_{50}					City Noise Standard, L_{50}	
	Vehicle Circ.	Truck Circ.	Loading Docks	HVAC	Combined, L_{50}	Daytime	Nighttime
Residential Mixed-Use	29	40	35	27	42	55	50
Low-Density Residential	27	39	33	25	41		

Source: Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 16, combined project on-site operations noise levels would satisfy the Sacramento Municipal Code daytime and nighttime L_{50} noise level standards at the closest residential land use designation areas within the future Aspen 1 Residential Mixed Use development.

With respect to project-related increases in ambient noise levels at existing sensitive receptors, given the large setback between the Development Area and the closest existing noise-sensitive use (single-family residence located approximately 0.5-mile to the north at 8550 Jackson Road), noise levels from combined on-site operations are expected to be below existing ambient noise conditions. As a result, project-generated increases in ambient noise levels are expected to be below five dB at the closest identified existing noise-sensitive land uses. Overall, a less-than-significant impact would occur related to operational noise.

Conclusion

Based on the above, operation of the proposed project would not result in the generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the City's Municipal Code or applicable standards of other agencies. Therefore, a ***less-than-significant*** impact would occur.

b. During project construction, heavy equipment would be used for grading, excavation, paving, and building construction, which would generate localized vibration in the immediate vicinity of the construction. Policy ERC-10.5 of the Sacramento 2040 General Plan requires all construction projects that are anticipated to generate significant vibration levels to use appropriate methods (i.e., type of equipment, low-impact tools, modifying

operations, increasing setback distance, vibration monitoring) to ensure acceptable interior vibration levels at nearby residential and commercial uses based on the current City or FTA criteria. The FTA criteria applicable to damage from vibration typically associated with construction activities are included in Table 17.

Table 16
FTA Criteria for Assessing Vibration Damage to Structures

Building Category	Level (vibration decibels [VdB])
I. Reinforced-concrete, steel, or timber (no plaster)	102
II. Engineered concrete and masonry (no plaster)	98
III. Non-engineered timber and masonry buildings	94
IV. Buildings extremely susceptible to vibration damage	90

Source: Federal Transit Administration, Noise and Vibration Impact Assessment Manual, Table 12-3, 2018.

The closest existing off-site structures to the project area are the industrial warehouse buildings located to the south and west. Although the construction-related vibration criteria contained in General Plan Policy ERC-10.5 do not pertain to industrial uses (i.e., residential and commercial uses only), an analysis of project construction vibration levels at the nearby warehouse buildings was nonetheless conducted by BAC. Table 18 includes the range of vibration levels for equipment commonly used in general residential construction projects at 25 feet. Table 18 also includes projected construction equipment vibration levels at the nearest existing off-site structures to the project area located approximately 50 feet away (industrial warehouse buildings to the south and west).

Table 17
Reference and Projected Vibration Source Amplitudes for Construction Equipment

Equipment	Reference Maximum Vibration Level at 25 feet, VdB (root-mean-square [rms])	Projected Maximum Vibration Level, VdB (rms) at Closest Off-Site Industrial Warehouse Building (50 feet)
Vibratory Roller	94	84
Hoe Ram	87	76
Large Bulldozer	87	76
Caisson Drilling	87	76
Loaded Trucks	86	74
Jackhammer	79	64
Small Bulldozer	58	57

Sources: Federal Transit Administration, Noise and Vibration Impact Assessment Manual, 2018. Bollard Acoustical Consultants, Inc., 2026.

As shown in Table 18, vibration levels generated from project on-site construction activities are predicted to be well below the FTA threshold for damage to engineered structures (98 vibration decibels [VdB]) at 25 feet from construction activities. Additionally, based on the projected vibration levels presented in Table 18, and given the large setbacks to the closest identified existing and future sensitive uses (single-family residence at 8550 Jackson Road and future Aspen 1 Residential Mixed Use development), project construction vibration levels would be well below the threshold of human perception (65 VdB).

In addition, the proposed project includes industrial/warehouse land uses. Vibration produced by traffic/trucks traveling on roadways rarely generates vibration amplitudes high enough to cause structural or cosmetic damage. Further, vibration levels generated by project on-site traffic/truck passbys would be at low speed and are expected to dissipate rapidly with distance. Based on the information above, project on-site operations are not expected to generate appreciable vibration.

Based on the above, construction and operation of the proposed project would not result in the generation of excessive groundborne vibration or groundborne noise levels. As such, a ***less-than-significant*** impact would occur.

c. The nearest airport to the site is the Sacramento Mather Airport, located approximately 3.6 miles to the northeast of the project site. Given that the project site is not located within two miles of a public or private airport, the proposed project would not expose people residing or working in the project area to excessive noise levels associated with airports. Thus, ***no impact*** would occur.

XIV. POPULATION AND HOUSING. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (e.g., through projects in an undeveloped area or extension of major infrastructure)?	☐	☐	✖	☐
b. Displace substantial numbers of existing people or housing, necessitating the construction of replacement housing elsewhere?	☐	☐	✖	☐

Discussion

a,b. The proposed project would include the development of seven warehouse/office buildings and a trailer storage area, and would not include the extension of major infrastructure associated with water, sanitary sewer, storm drainage, or energy services. Employees to be hired as part of the proposed project would likely be existing residents of Sacramento. Thus, the proposed project would not result in additional residents within the City and substantial growth would not occur. In addition, the proposed project would not include the construction of new housing or demolition of existing housing. Furthermore, because the proposed project would be consistent with the land use designation of the Development Area, impacts associated with buildout of the site were generally evaluated in the Master EIR, including any impacts associated with indirect population growth. Thus, any minor increase in population resulting from implementation of the proposed project has been previously anticipated by the City.

Based on the above, the proposed project would not induce substantial unplanned population growth in the project area, either directly or indirectly, or displace substantial numbers of existing people or housing. Therefore, the project would result in a ***less-than-significant*** impact.

XV. PUBLIC SERVICES.

Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Fire protection?	☐	☐	✖	☐
b. Police protection?	☐	☐	✖	☐
c. Schools?	☐	☐	✖	☐
d. Parks?	☐	☐	✖	☐
e. Other Public Facilities?	☐	☐	✖	☐

Discussion

a. The Sacramento Fire Department (SFD) provides fire protection services to the entire City and some small areas just outside the City boundaries within the County limits. The SFD serves a population of over 738,000 in a 358-square-mile service area. SFD Station 60, located at 3301 Julliard Drive., approximately 0.9-mile to the north, is the closest station to the project site. The SFD maintains a goal to have its first responding company, which provides for fire suppression and paramedic services, arrive within four minutes. Considering the proximity of the project site to Station 60, the SFD is reasonably assumed to be able to meet the four-minute response time goal.

As established by General Plan Policy PFS-1.15, the City of Sacramento requires new development projects to contribute fees for the provision of adequate fire and police protection services and facilities. The proposed project would be subject to all applicable development impact fees. Revenues generated through impact fees on new development would pay for any new fire facilities deemed necessary by the City, all of which would be required to be designed in compliance with applicable regulations and standards, and if necessary, undergo analysis of all potential environmental impacts under CEQA. Furthermore, the Development Area of the proposed project would be consistent with the Development Area's EMU General Plan designation and has therefore been considered in the Master EIR analysis.

Considering the project site's proximity to Station 60 and the project's payment of applicable development impact fees, the proposed project would not result in the need for new or altered services related to fire protection. Therefore, the proposed project would have a ***less-than-significant*** impact related to the need for new or physically altered fire protection facilities, the construction of which could cause significant environmental impacts.

b. The Sacramento Police Department (SPD) provides police protection services within the City boundaries. The SPD uses a variety of data that includes Geographic Information System (GIS) data, call and crime frequency information, and available personnel to rebalance the deployment of resources on an annual basis to meet the changing demands of the City. According to the Master EIR, as buildout of the 2040 General Plan occurs, the SPD would need new facilities that would be required to accommodate growth and service demands. Although General Plan Policy PFS-1.14 establishes the City's commitment to ensuring the SPD achieves and maintains optimal response times for all call priority levels,

the Sacramento General Plan does not establish a specific response time standard for emergency calls for the SPD.

Due to the industrial nature of the proposed project, the proposed project would not increase City population and, therefore, would not be anticipated to create a substantial increase in demand for police services within the project area. In addition, Policy PFS-1.15 requires development projects to contribute fees for police facilities. The proposed project would be subject to all applicable development impact fees. Revenues generated through impact fees on new development would pay for any new police facilities deemed necessary by the City, all of which would be required to be designed in compliance with applicable regulations and standards, and if necessary, undergo analysis of all potential environmental impacts under CEQA. Furthermore, the proposed project would be consistent with the Development Area's EMU General Plan designation and has therefore been considered in the Master EIR analysis. For the above-stated reasons, the project would have a ***less-than-significant*** impact related to the need for new or physically altered police protection facilities, the construction of which could cause significant environmental impacts.

c-e. The proposed project would not include any residential development and, thus, would not result in any direct population growth such that demand for schools, parks, or other public facilities would increase substantially. In addition, the project would be subject to payment of School Impact Mitigation Development Fees to fund local school services. Proposition 1A/SB 50 prohibits local agencies from using the inadequacy of school facilities as a basis for denying or conditioning approvals of any "[…] legislative or adjudicative act…involving …the planning, use, or development of real property" (Government Code 65996(b)). Satisfaction of the Proposition 1A/SB 50 statutory requirements by a developer is deemed to be "full and complete mitigation." Furthermore, the project would be subject to Sacramento Municipal Code Section 18.56.220, which requires the payment of park impact fees for non-residential developments, as well as Section 18.56, which requires the payment of transportation development impact funds for transportation infrastructure.

Because the project applicant would be required to pay appropriate development fees, and development of the project would not increase the demand for schools, parks, or other public facilities, the proposed project would have a ***less-than-significant*** impact related to the need for new or physically altered schools, parks, or other public facilities, the construction of which could cause significant environmental impacts.

XVI. RECREATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	☐	☐	✖	☐
b. Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	☐	☐	✖	☐

Discussion

a,b. The Sacramento Department of Youth, Parks, and Community Enrichment (YPCE) maintains and manages 242 parks providing approximately 4,500 acres of recreation space and green space within the City. YPCE classifies parks according to five distinct types: 1) neighborhood parks; 2) community parks; 3) regional parks, 4) parkways; and 5) open space parks. Neighborhood parks typically range from one to eight acres in size and are intended to be used primarily by neighbors within walking or biking distance. Community parks are generally 10 to 40 acres in size and serve a portion of the City or several neighborhoods within driving distance. Regional parks are large parks that protect unique natural or cultural features, include additional improvements not usually found in local neighborhood and community parks, and/or provide major recreation facilities that attract visitors from across the entire City and beyond. Parkways are linear parks designed primarily for trail use and secondarily for passive recreation, open space, wildlife habitat, and food control. YPCE manages several open space areas to provide river access, ensure access to other natural features, or protect habitat, conserve natural resources, and promote urban greening and ecological functions.

Residential and non-residential projects built in the City of Sacramento are required to pay a park development impact fee pursuant to Section 18.56.220 of the Sacramento City Code. The fees collected pursuant to Section 18.56.220 are primarily used to finance the construction of neighborhood and community park facilities. The proposed project would be subject to these fees to finance the design, construction, installation, improvement, and acquisition of park facilities.

The proposed project would include the development of warehouse buildings and a trailer storage area on a site designated for employment use. Because the proposed project would not include residential uses, and the employees to be hired would likely be existing residents of Sacramento, the proposed project would not result in additional residents within the City. As such, the proposed project would not result in population growth that could result in increased demand for existing recreational facilities or cause the construction or expansion of recreational facilities. Thus, a ***less-than-significant*** impact would occur.

XVII. TRANSPORTATION. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, roadway, bicycle, and pedestrian facilities?	☐	☐	✖	☐
b. Conflict or be inconsistent with CEQA Guidelines section 15064.3, subdivision (b)?	☐	☐	✖	☐
c. Substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	☐	☐	✖	☐
d. Result in inadequate emergency access?	☐	☐	✖	☐

Discussion

a. The law has changed with respect to how transportation-related impacts may be addressed under CEQA. Traditionally, lead agencies used level of service (LOS) to assess the significance of such impacts, with greater levels of congestion considered to be more significant than lesser levels. Enacted as part of SB 743 (2013), PRC Section 21099, subdivision (b)(1), directed the Governor's Office Land Use and Climate Innovation (LCI) (formerly the Office of Planning and Research [OPR]) to prepare, develop, and transmit to the Secretary of the Natural Resources Agency for certification and adoption proposed CEQA Guidelines addressing "criteria for determining the significance of transportation impacts of projects within transit priority areas. Those criteria shall promote the reduction of GHG emissions, the development of multimodal transportation networks, and a diversity of land uses."

Pursuant to SB 743, the Natural Resources Agency promulgated CEQA Guidelines Section 15064.3 in late 2018. It became effective in early 2019. Subdivision (a) of that section provides that "[g]enerally, vehicle miles traveled is the most appropriate measure of transportation impacts. For the purposes of this section, 'vehicle miles traveled' refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in subdivision (b)(2) below (regarding roadway capacity), a project's effect on automobile delay shall not constitute a significant environmental impact."

Please refer to Question 'b' for a discussion of VMT.

Project Trip Generation

According to the Trip Generation Memorandum prepared for the proposed project by Kittelson & Associates (see Appendix L),[38] the proposed project would be estimated to generate 214 vehicle trips (162 inbound and 52 outbound) during the weekday AM peak hour and 218 vehicle trips (85 inbound and 133 outbound) during the weekday PM peak hour. Of the 1,198 daily total trips that would be generated on a weekday, nine percent (109 trips) would be truck trips. It should be noted that the Trip Generation Memorandum was prepared for a prior project design, and the square footage of the warehouse buildings have since been reduced. Therefore, the Trip Generation Memorandum represents a conservative analysis.

[38] Kittelson & Associates Inc. *3901 Florin Perkins Road Traffic Impact Study – Trip Generation Memorandum DRAFT*. February 2, 2026.

The proposed project would be consistent with the land use designation for the Development Area in the 2040 General Plan. As such, the Master EIR included an analysis of the increase in traffic associated with buildout of the project site. The proposed project would not increase traffic volumes beyond what has been anticipated in the 2040 General Plan Master EIR.

Pedestrian and Bicycle Facilities

Existing pedestrian facilities in the vicinity of the project site include sidewalks located on Florin Perkins Road directly adjacent to the project site to the west, although the sidewalks are not continuous. According to the City of Sacramento Active Transportation Plan,[39] while the project site's western boundary with Florin Perkins Road does not contain a sidewalk, a sidewalk is provided directly to the south, starting along the existing light industrial/commercial uses to the south of the project site. In addition, the Active Transportation Plan shows that a bike lane is located along the project site's boundary with Florin Perkins Road.

According to the City of Sacramento Active Transportation Plan, a proposed Separated Bikeway is located along Florin Perkins Road to the south of the project site.[40] However, the proposed Separated Bikeway would not be located along the project site's boundary with Florin Perkins Road. Thus, the proposed project would not result in substantial modification or the removal of any existing or planned bicycle or pedestrian facilities or preclude the implementation of any proposed or existing off-street trails in the project vicinity. In addition, the proposed project is consistent with the project site's EMU General Plan designation and has therefore been considered generally in the Master EIR analysis. As such, the proposed project would not conflict with a program, plan, ordinance, or policy addressing roadway, bicycle, and pedestrian facilities beyond what has been determined in the Master EIR, and a less-than-significant impact would occur.

Transit Facilities and Service

Public transit service in the greater project vicinity is provided through Sacramento Regional Transit (SacRT) Route 161. Route 161 provides service from College Greens to the Belvedere Avenue and Florin Perkins Road intersection. The nearest Route 161 bus stop is located approximately 0.2-mile to the north of the project site on Florin Perkins Road. Route 161 operates Monday through Friday.

The proposed project would not result in substantial increases in transit demand, and any demand added to the transit system could be adequately accommodated by the existing/planned transit system. The proposed project would not result in substantial modification or the removal of any existing or planned transit facilities or preclude the implementation of any proposed or existing facilities in the project vicinity. In addition, the proposed project would be consistent with the Development Area's EMU General Plan designation and has therefore been considered generally in the Master EIR analysis. As such, the proposed project would not conflict with a program, plan, ordinance, or policy addressing transit facilities beyond what has been determined in the Master EIR, and a less-than-significant impact would occur.

---

39 City of Sacramento. *Streets for People: Sacramento's Active Transportation Plan.* August 2025.
40 *Ibid.*

Conclusion

Based on the above information, the proposed project would not conflict with a program, plan, ordinance, or policy addressing the circulation system, including transit, bicycle, and pedestrian facilities, and a ***less-than-significant*** impact would occur.

b. Section 15064.3 of the CEQA Guidelines provides specific considerations for evaluating a project's transportation impacts. Pursuant to Section 15064.3, analysis of VMT attributable to a project is the most appropriate measure of transportation impacts. Pursuant to the Governor's LCI, certain projects are presumed to have a less-than-significant effect on VMT due to project size, project location, or project type.[41]

The Master EIR determined that implementation of the 2040 General Plan would result in a less-than-significant impact related to VMT. Specifically, implementation of the 2040 General Plan would result in a 17.2 percent reduction in passenger vehicle VMT per capita compared to the City baseline, which exceeds the 16.8 percent reduction established as the City's VMT impact threshold. Pursuant to Section 2.10.2 of the Master EIR, projects consistent with the General Plan land use designation and development intensities may not be required to evaluate VMT based on LCI guidance. Because the proposed project would be consistent with the Development Area's 2040 General Plan land use designation of EMU, the proposed project would not be anticipated to result in VMT greater than what was previously anticipated for the project site and further analysis would not be required.

Based on the above, the proposed project would not conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b), and a ***less-than-significant*** impact would occur.

c,d. The proposed project would not include any new sharp curves or dangerous intersections and would not be located in the vicinity of any such roadway features. The proposed project would include two driveways and 404 surface parking spaces, with drive aisles large enough to accommodate heavy trucks. All proposed driveways would comply with applicable City design standards. In addition, the design of the on-site circulation system would not involve any features that would increase traffic hazards at the site. The project driveways would be free and clear of any obstructions to provide adequate sight distance, thereby ensuring that exiting vehicles can see pedestrians on the sidewalk and vehicles and bicycles traveling on Florin Perkins Road and Warehouse Way. Any landscaping and signage would be located in such a way to ensure an unobstructed view for drivers exiting the site.

The proposed project would be required to comply with all building, fire, and safety codes and specific development plans would be subject to review and approval by the City's Public Works Department and the SFD. Required review by the aforementioned departments would ensure that the proposed circulation system for the project site would provide adequate emergency access. In addition, Sacramento City Code Section 12.20.030 requires that a Construction Traffic Control Plan be prepared and approved prior to the commencement of project construction, to the satisfaction of the City Traffic Engineer and subject to review by all affected agencies. All work performed during construction would be required to conform to the conditions and requirements of the approved plan. The plan would

[41] Governor's Office of Planning and Research. *Technical Advisory on Evaluating Transportation Impacts In CEQA*. December 2018.

ensure that safe and efficient movement of traffic through the construction work zone(s) is maintained. At a minimum, the plan must include the following:

- Time and day of street closures;
- Proper advance warning and posted signage regarding street closures;
- Provision of driveway access plan to ensure safe vehicular, pedestrian, and bicycle movements;
- Safe and efficient access routes for emergency vehicles;
- Provisions for pedestrian safety;
- Use of manual traffic control when necessary;
- Number of anticipated truck trips, and time of day of arrival and departure of trucks;
- Provision of a truck circulation pattern and staging area with a limitation on the number of trucks that can be waiting and any limitations on the size and type of trucks appropriate for the surrounding transportation network; and
- The plan must be available at the site for inspection by the City representative during all work.

Based on the above, the proposed project would not substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment), and would not result in inadequate emergency access. Therefore, a ***less-than-significant*** impact would occur.

XVIII. TRIBAL CULTURAL RESOURCES. *Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American Tribe, and that is:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1(k).	☐	✖	☐	☐
b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.	☐	✖	☐	☐

Discussion

a,b. In compliance with AB 52 (PRC Section 21080.3.1), project notification letters were distributed to UAIC, Wilton Rancheria, Shingle Springs Band of Mi-Wok Indians, and Buena Vista Rancheria of Me-Wuk Indians on May 5, 2025. A response was not received from the UAIC, Shingle Springs Band of Mi-Wok Indians, or Buena Vista Rancheria of Me-Wuk Indians within 30 calendar days of the request for formal invitation under AB 52. A response was received from the Wilton Rancheria noting that while the project site is located within the ancestral territory of the Wilton Ranchera, the Tribe did not have any comments and did not wish to open consultation. Additional responses were not received within the consultation period. Additional responses were not received within the consultation period.

As discussed in Section V, Cultural Resources, of this IS/MND, the CHRIS search results indicated that the project site does not contain Native American resources. However, the CHRIS results concluded that a moderate potential exists for unrecorded Native American resources to be located within the project area, as the project site is located in the Sacramento Valley, approximately 1.6 miles south of the American River and approximately 0.9-mile north of Morrison Creek. In addition, the NAHC SLF produced positive results, indicating that sacred lands may occur within the project area and that surface tribal cultural resources have the potential to be present on the project site. Furthermore, due to the predominant historic theme of the region as a whole, which includes thousands of years of occupation by Native American groups prior to non-Native people settling in the region, the possibility exists that unknown resources could be encountered during grading and excavation activities associated with the proposed project. Thus, the project could have a potentially significant impact related to damage or destruction of prehistoric cultural resources, which could include tribal cultural resources.

Based on the above, known Tribal Cultural Resources do not exist within the proposed project site. Nevertheless, the possibility exists that construction of the proposed project could result in a substantial adverse change in the significance of a Tribal Cultural Resource if previously unknown resources are uncovered during grading or other ground-

disturbing activities. Thus, a ***potentially significant*** impact to Tribal Cultural Resources could occur.

Mitigation Measure(s)

Implementation of the following mitigation measures would reduce the above potential impact to a *less-than-significant* level.

XVIII-1. ***In the Event that Tribal Cultural Resources are Discovered During Construction, Implement Procedures to Evaluate Tribal Cultural Resources and Implement Avoidance and Minimization Measures to Avoid Significant Impact.***

If archaeological resources, or tribal cultural resources, are encountered in the project area during construction, the following performance standards shall be met prior to continuance of construction and associated activities that may result in damage to or destruction of tribal cultural resources:

- *Each resource shall be evaluated for California Register of Historical Resources eligibility through application of established eligibility criteria (California Code of Regulations Section 15064.636), in consultation with consulting Native American tribes.*

If a tribal cultural resource is determined to be eligible for listing on the California Register of Historical Resources, the City shall avoid damaging effects to the resource in accordance with PRC Section 21084.3, if feasible. If the City determines that the project may cause a significant impact to a tribal cultural resource, and measures are not otherwise identified in the consultation process, the following are examples of mitigation capable of avoiding or substantially lessening potential significant impacts to a tribal cultural resource or alternatives that would avoid significant impacts to the resource. These measures may be considered to avoid or minimize significant adverse impacts and constitute the standard by which an impact conclusion of less than significant may be reached:

- *Avoid and preserve resources in place, including, but not limited to, planning construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.*
- *Treat the resource with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:*
    - *Protect the cultural character and integrity of the resource.*
    - *Protect the traditional use of the resource.*
    - *Protect the confidentiality of the resource.*
    - *Establish permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or using the resources or places.*

- *Rebury the resource in place.*
- *Protect the resource.*

XVIII-2. ***Implement Procedures in the Event of the Inadvertent Discovery of Native American Human Remains.***

If an inadvertent discovery of human remains is made at any time during project-related construction activities or project planning, the following performance standards shall be met prior to implementing or continuing actions such as construction, which may result in damage to or destruction of human remains. In accordance with the California Health and Safety Code (HSC), if human remains are encountered during ground-disturbing activities, the City shall immediately halt potentially damaging excavation in the area of the remains and notify the Sacramento County Coroner and a professional archaeologist to determine the nature of the remains. The Coroner is required to examine all discoveries of human remains within 48 hours of receiving notice of a discovery on private or State lands (HSC Section 7050.5[b]).

If the human remains are of historic age and are determined to be not of Native American origin, the City will follow the provisions of the HSC Section 7000 (et seq.) regarding the disinterment and removal of non-Native American human remains.

If the Coroner determines that the remains are those of a Native American, he or she must contact the Native American Heritage Commission (NAHC) by phone within 24 hours of making that determination (HSC Section 7050[c]). After the Coroner's findings have been made, the archaeologist and the NAHC-designated Most Likely Descendant (MLD), in consultation with the landowner, shall determine the ultimate treatment and disposition of the remains. The responsibilities of the City for acting upon notification of a discovery of Native American human remains are identified in California PRC Section 5097.9 et seq

XIX. UTILITIES AND SERVICE SYSTEMS. *Would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects?	☐	☐	✖	☐
b. Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years?	☐	☐	✖	☐
c. Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	☐	☐	✖	☐
d. Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals?	☐	☐	✖	☐
e. Comply with federal, state, and local management and reduction statutes and regulations related to solid waste?	☐	☐	✖	☐

Discussion

a-c. Water supply, wastewater treatment, stormwater drainage, electric power, natural gas, and telecommunications facilities necessary to serve the proposed project are described in the following sections.

Water Supply

To meet the City's water demand, the City uses surface water from the Sacramento and American rivers, and groundwater pumped from the North American and South American Subbasins. According to the City's 2025 UWMP, the City is projected to have sufficient water supply to meet the projected demand through 2050 even after multiple dry years.[42] According to the DOU's 2025 Consumer Confidence Report, the City's drinking water meets or exceeds all federal and State drinking water standards.[43] The proposed project would be subject to Water System Development and Installation Fees payable to the City's DOU.

Existing water mains in the immediate project vicinity are located to the northwest of the Development Area along Florin Perkins Road and along Warehouse Way to the south of the Development Area. From the two points of connection at the existing water mains, fire water lines and two-inch domestic water lines would extend into the project site.

The City's 2025 UWMP included an analysis of the City's projected water supplies and water demands during a normal year, a single dry year, and multiple dry years. As determined therein, all scenarios indicate adequate water supplies that exceed anticipated

[42] City of Sacramento. *2025 Urban Water Management Plan*. May 14, 2026.
[43] City of Sacramento Department of Utilities. *2025 Consumer Confidence Report*. June 1, 2026.

demand. For example, during the fifth year of drought in 2030, the anticipated supply exceeds the anticipated demand by 207,050 acre-feet per year (AFY). According to the Wastewater Discharge Flow Rate and Water Usage Memo prepared for the proposed project, the water usage generated by operation of the proposed project would be approximately 7,925 gallons per day, or approximately 8.9 AFY.[44] Therefore, the City would have sufficient water supply to accommodate water demand increases associated with the proposed project. It should be noted that the Wastewater Discharge Flow Rate and Water Usage Memo was prepared for a previous design of the proposed project, and the square footage of the warehouse buildings have since been reduced. Thus, the analysis contained in the Wastewater Discharge Flow Rate and Water Usage Memo is conservative, and water usage would be reduced from the assumptions therein.

The 2040 General Plan designates the proposed project's Development Area as EMU. The proposed project is consistent with the land use designation and would not generate an increase in water demand beyond what has already been anticipated in the Master EIR. As such, adequate capacity is expected to be available to serve the proposed project's water demands. Nonetheless, pursuant to Section 13.2.3 of the City of Sacramento Design and Procedure Manual, a water study would be prepared for the proposed project by a licensed engineer in accordance with the City's Water Study Manual, which would demonstrate that the proposed water system is capable of meeting the needs of the proposed project, while meeting design criteria presented therein.

Based on the above, the proposed project would not require or result in the relocation or construction of new or expanded off-site water facilities, the construction or relocation of which could cause significant environmental effects, and sufficient water supplies would be available to serve the proposed project and reasonably foreseeable future development during normal, dry, and multiple dry years.

Wastewater Conveyance and Treatment

Wastewater collection and treatment services for the proposed project would be provided by SacSewer. Wastewater generated from the project area is collected in the CSS through a series of sewer pipes and flows into the SacSewer interceptor system, where the sewage is conveyed to the EchoWater Facility, located near Elk Grove. The EchoWater Facility is owned and operated by SacSewer and provides sewage treatment for the entire City. The proposed project would be subject to Wastewater System Development Fees payable to the City's DOU.

The proposed project would connect to existing sanitary sewer lines located within Florin Perkins Road and Warehouse Way by way of new six-inch sewer lines. A Sanitary Sewer Shed Shift Justification Technical Memo was prepared for the proposed project by TLA to request a sanitary sewer shed shift to place the eastern portion of the project site into SacSewer's SEA shed (see Appendix M).[45] Based on the response to the sanitary sewer shed shift request, SacSewer conditionally approved the request dependent on the required extension of the eight-inch public sewer main in Warehouse Way to the northern boundary of the project site, and the maintenance of a 20-foot public sewer easement through the parcel (APN 061-0150-042). As shown on the proposed project's utility plans,

[44] Turley & Associates, Inc. *Davis Family Warehouse – Wastewater Discharge Flow Rate and Water Usage.* December 9, 2025.

[45] TLA Engineering and Planning. *Davis Family Warehouse Project and Tentative Parcel Map Sanitary Sewer Shed Shift Justification Technical Memo.* July 22, 2025.

the proposed project includes the extension of and connection to the eight-inch public sewer main in Warehouse Way. In addition, a public sewer easement is proposed between Building 1 and Building 2 on the project site. Therefore, the proposed project would comply with the necessary on-site sanitary sewer requirements from SacSewer.

In addition, according to the Sewer Study prepared for the proposed project by TLA (see Appendix N),[46] the proposed project's contribution to the sewer system would not have a significant impact on existing flow and pipe sizes downstream and the sewer trunk main can be extended on Florin Perkins Road to accommodate the existing parcels to the north of the project site. Pursuant to the Sewer Study, Buildings 1 through 5 would have a combined 121 equivalent single dwellings (esd) and a peak wet weather flow (PWWF) of 0.1060 million gallons per day (mgd), and would connect to an existing sewer manhole located in Warehouse Way. Buildings 6 and 7 would have a combined 46 esd and a PWWF of 0.0412 mgd, and would connect to an existing sewer manhole in Florin Perkins Road. Pursuant to the conditions set forth by SacSewer, sewer improvements to extend sewer access north from Florin Perkins Road would be required at a minimum slope of 0.2 percent for the 12-inch sewer line. In total, the proposed project would add approximately 0.1472 mgd to the SacSewer SEA shed and an additional 0.2890 mgd at full buildout of the parcels to the north of the project site (0.4362 mgd in total). In addition, the Sewer Study determined that the portion of the on-site sewer servicing Buildings 2 through 5 would be required to be placed at a minimum slope of 0.7 percent to achieve a design PWWF velocity of two feet per second (ft/s) minimum.

According to the City's Master EIR, the EchoWater Facility treats wastewater for the entire Planning Area and has a total capacity of 400 mgd. The EchoWater Facility currently receives an average of 165 mgd of wastewater during dry weather conditions and 200 mgd during wet weather conditions. The Master EIR determined that the increase in the volume or amount of flows associated with future development under the 2040 General Plan would not exceed the remaining capacity of the EchoWater Facility. Due to the substantial remaining wastewater capacity of the EchoWater Facility and the increase of wastewater flows that the proposed project would produce, the EchoWater Facility would have capacity to treat wastewater flows produced by the proposed project.

The proposed project's consistency with the General Plan land use designation would ensure that the demand for wastewater service would not exceed the amount anticipated for buildout of the Planning Area evaluated in the Master EIR. In addition, buildout capacity of the entire SacSewer service area was anticipated in the 2025 Sewer System Management Plan (SSMP).[47] Therefore, SacSewer has anticipated the need for wastewater services in the project area and requires development impact fees to support buildout demand of their service area (including the project site). Additionally, SacSewer would require payment of sewer impact fees. All applicable impact fees would be required to be paid prior to issuance of a building permit.

Given the required payment of applicable impact fees, the EchoWater Facility would be able to provide sufficient wastewater services and conveyance to serve full buildout of the City, including the project site. Therefore, adequate capacity exists to serve the project site's demands.

---

46 TLA Engineering and Planning. *Preliminary Sewer Study, Davis Family Warehouse, City of Sacramento, CA*. June 3, 2026.

47 Sacramento Area Sewer District. *Sewer System Management Plan*. April 23, 2025.

Stormwater Drainage

The project site is currently undeveloped. Completion of the proposed project would increase the amount of impervious surfaces on the site. As discussed in further detail in Section X, Hydrology and Water Quality, of this IS/MND, the proposed project would include on-site stormwater detention facilities sized to exceed the minimum volume requirement necessary to adequately manage all runoff from the proposed impervious surfaces. Thus, the project would not require new or expanded off-site stormwater infrastructure. Because the proposed detention facilities would be designed with adequate capacity to capture and treat runoff from proposed impervious surfaces, the proposed project would not generate runoff in excess of the City's existing stormwater system's capacity.

Electric Power, Natural Gas, and Telecommunications

The proposed project would include new connections to existing electric power and telecommunications facilities located in the project vicinity. In addition, as discussed previously, natural gas infrastructure would be installed on-site to allow for the use of natural gas during manufacturing processes within the proposed buildings. Natural gas would be provided to the project site by PG&E. Substantial expansion of off-site utilities would not be required to serve the proposed development, and associated environmental effects would not occur.

Conclusion

Based on the above, the proposed project would not require or result in the relocation or construction of new or expanded water, wastewater treatment, or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects. In addition, sufficient water supplies would be available to serve the project and reasonably foreseeable future development during normal, dry, and multiple dry years, and adequate wastewater treatment capacity is available to serve the project's projected demand in addition to the provider's existing commitments. Thus, a ***less-than-significant*** impact would occur.

d,e. Solid waste generated by commercial uses in the area is collected by private haulers and currently disposed of at the Kiefer Landfill. Kiefer Landfill, located at 12701 Kiefer Boulevard in Sloughhouse, California, is the primary location for the disposal of waste by the City. According to the Master EIR, the landfill is permitted to accept up to 10,815 tons per day and the current peak and average daily disposal is substantially lower than the permitted amount. The landfill is anticipated to be capable of adequately serving the area, including the anticipated population growth, to between 2052 and 2085. The Master EIR concluded that adequate capacity at local landfills exists for full buildout of the General Plan. The proposed project is consistent with the General Plan land use designation of the Development Area, and the associated increase in solid waste disposal needs associated with development of the site was generally considered in the Master EIR analysis. The proposed project would not generate an increase in solid waste from what has been anticipated in the Master EIR. As such, adequate capacity would be expected to be available to serve the proposed project's solid waste disposal needs. Therefore, a ***less-than-significant*** impact related to solid waste would occur as a result of the proposed project.

XX. WILDFIRE. *If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:*	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Substantially impair an adopted emergency response plan or emergency evacuation plan?	☐	☐	✖	☐
b. Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to, pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?	☐	☐	✖	☐
c. Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?	☐	☐	✖	☐
d. Expose people or structures to significant risks, including downslope or downstream flooding or landslides, as a result of runoff, post-fire slope instability, or drainage changes?	☐	☐	✖	☐

Discussion

a-d. According to the Master EIR, the City is not located within a wildland urban interface (WUI) area. Additionally, the Master EIR identifies areas along the American and Sacramento rivers as fairly susceptible to urban wildfires. The project site is not located within the vicinity of such areas. According to the CAL FIRE Fire and Resource Assessment Program, the project site is not located within a Very High Fire Hazard Severity Zone nor a State Responsibility Area. The nearest Very High FHSZ is located approximately 19 miles east of the project site.[48] The proposed project would be required to comply with all applicable requirements of the California Fire Code (CFC), as adopted by Chapter 15.36 of the City's Municipal Code, including installation of fire sprinkler systems. In addition, the CBSC includes requirements related to fire hazards for new buildings. Such features would help to reduce the spread of fire.

As noted in Section IX, implementation of the proposed project would not interfere with potential evacuation or response routes used by emergency response teams. The project would not conflict with the Sacramento County LHMP.[49] In addition, the proposed project would not include any development on, or at the base of, a substantial slope. Thus, implementation of the proposed project would not exacerbate any existing conditions or hazards related to downslope flooding or landslides, slope instability, or drainage changes. Therefore, the project area does not include any existing features that would substantially increase fire risk.

Given that the project site is located within a developed urban area and is situated adjacent to existing roads, water lines, and other utilities, the proposed project would not require the development of additional infrastructure. Thus, the proposed project would not result in substantial fire risks related to installation or maintenance of such infrastructure. Therefore, the proposed project would not be subject to substantial risks related to wildfires, and a ***less-than-significant*** impact would occur.

[48] California Department of Forestry and Fire Protection. *Fire Hazard Severity Zone Viewer*. Available at: https://experience.arcgis.com/experience/03beab8511814e79a0e4eabf0d3e7247/. Accessed July 2026.

XXI. MANDATORY FINDINGS OF SIGNIFICANCE.	Potentially Significant Impact	Less-Than-Significant with Mitigation Incorporated	Less-Than-Significant Impact	No Impact
a. Does the project have the potential to substantially degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, substantially reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	☐	✖	☐	☐
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	☐	✖	☐	☐
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	☐	✖	☐	☐

Discussion

a. As discussed in Section IV, Biological Resources, of this IS/MND, implementation of the proposed project would have the potential to result in adverse effects to special-status wildlife species. In addition, while unlikely, the project could result in impacts related to eliminating important examples of major periods of California history or prehistory associated with undiscovered archeological and/or paleontological resources during project construction. However, the proposed project would be required to comply with applicable City of Sacramento 2040 General Plan and Municipal Code policies related to biological and cultural resources, and this IS/MND includes mitigation measures that would reduce any related potential impacts to less-than-significant levels. With implementation of the mitigation measures required by this IS/MND, as well as compliance with General Plan policies and all applicable sections of the Municipal Code, development of the proposed project would reduce any potential impacts associated with the following: 1) degradation of the quality of the environment; 2) substantial reduction of or impact to the habitat of fish or wildlife species; 3) causing fish or wildlife populations to drop below self-sustaining levels; 4) threatening to eliminate a plant or animal community; 5) reduction of the number or restrict the range of a rare or endangered plant or animal; or 6) elimination of important examples of the major periods of California history or prehistory. Therefore, with implementation of the mitigation measures required herein, a ***less-than-significant*** impact would occur.

b. The proposed project, in conjunction with other development within the City of Sacramento, could incrementally contribute to cumulative impacts in the area. However, as demonstrated in this IS/MND, all potential environmental impacts that could occur as a result of project implementation would be reduced to a less-than-significant level through compliance with the mitigation measures included in this IS/MND, as well as applicable General Plan policies, Municipal Code standards, and other applicable local and State regulations. Therefore, when viewed in conjunction with other closely related past, present, or reasonably foreseeable future projects, development of the proposed project would not result in a cumulatively considerable contribution to cumulative impacts in the

City of Sacramento, and the project's incremental contribution to any cumulative impacts would be ***less than significant.***

c. As described in this IS/MND, the proposed project would comply with all applicable General Plan policies, Municipal Code standards, other applicable local and State regulations, and mitigation measures included herein. The foregoing provisions have been established to ensure substantial adverse effects from proposed development projects, including those impacting human health, are prevented and/or reduced to a less-than-significant level. For example, as discussed in Section III, Air Quality, Section IX, Hazards and Hazardous Materials, and Section XIII, Noise, of this IS/MND, the proposed project would not cause substantial effects to human beings, including effects related to exposure to air pollutants, hazardous materials, and noise. Therefore, the proposed project's impact would be ***less than significant***.

5.14.1. Unmitigated

Land Use	Equipment Type	Refrigerant	GWP	Quantity (kg)	Operations Leak Rate	Service Leak Rate	Times Serviced
Industrial Park	Other commercial A/C and heat pumps	R-410A	2,088.00	0.30000	4.00000	4.00000	18.0000

5.15. Operational Off-Road Equipment

5.15.1. Unmitigated

Equipment Type	Fuel Type	Engine Tier	Number per Day	Hours Per Day	Horsepower	Load Factor
Forklifts	Diesel	Average	7.00000	8.00000	82.0000	0.20000

5.16. Stationary Sources

5.16.1. Emergency Generators and Fire Pumps

Equipment Type	Fuel Type	Number per Day	Hours per Day	Hours per Year	Horsepower	Load Factor
Emergency Generator	Diesel	7.00000	4.00000	200.000	150.000	0.73000

5.16.2. Process Boilers

5.17. User Defined

5.18. Vegetation

5.18.1. Land Use Change

5.18.1.1. Unmitigated

Vegetation Land Use Type	Vegetation Soil Type	Initial Acres	Final Acres

5.18.1. Biomass Cover Type

5.18.1.1. Unmitigated

Biomass Cover Type	Initial Acres	Final Acres

5.18.2. Sequestration

5.18.2.1. Unmitigated

Tree Type	Number	Electricity Saved (kWh/year)	Natural Gas Saved (btu/year)

8. User Changes to Default Data

8.1. Justifications

Screen	Justification
Land Use	Lot acreage adjusted to represent overall acreage of the project site.
Construction: Construction Phases	Based on typical construction practices, architectural coating assumed to start two weeks after the start of building construction and last for the same number of days. Phase timing is based on the project-specific construction schedule provided by the applicant. Demolition not required for the proposed project.
Operations: Vehicle Data	Trip rates adjusted to be consistent with Traffic Impact Study prepared for the proposed project by Kittelson & Associates.

8.3. Land Use

Model Parameter	Units	Default Value	New Value
Lot Area	acre	8.66814	15.5930
Landscape Area	sq. ft	—	125,000

Model Parameter	Units	Default Value	New Value
Lot Area	acre	3.63600	5.59000
Landscape Area	sq. ft	—	0.00000

8.4. Construction

8.4.1. Construction Phases

Phase Type	Phase Name	Model Parameter	Default Value	New Value
Site Preparation	Site Preparation	Start Date	7/14/2026	6/1/2026
Site Preparation	Site Preparation	End Date	8/11/2026	6/26/2026
Grading	Grading	Start Date	8/12/2026	6/29/2026
Grading	Grading	End Date	10/14/2026	10/16/2026
Grading	Grading	Work Days per Phase	45.0000	80.0000
Building Construction	Building Construction	Start Date	10/15/2026	10/27/2026
Building Construction	Building Construction	End Date	6/22/2028	8/28/2028
Building Construction	Building Construction	Work Days per Phase	440.000	480.000
Paving	Paving	Start Date	6/23/2028	10/19/2026
Paving	Paving	End Date	8/11/2028	10/26/2026
Paving	Paving	Work Days per Phase	35.0000	6.00000
Architectural Coating	Architectural Coating	Start Date	8/12/2028	11/10/2026
Architectural Coating	Architectural Coating	End Date	9/30/2028	9/11/2028
Architectural Coating	Architectural Coating	Work Days per Phase	35.0000	480.000

8.5. Operations

8.5.1. Mobile Sources

8.5.1.1. Vehicle Data

Land Use	Model Parameter	Units	Default Value	New Value
Industrial Park	Weekday Trip Rate	size/day	3.37000	2.86091
Industrial Park	Saturday Trip Rate	size/day	2.54000	2.86091
Industrial Park	Sunday Trip Rate	size/day	1.24000	2.86091

Biological Resources Assessment
for the
±61-Acre Davis Family Warehouses Study Area

INTRODUCTION

Project Location

Salix Consulting, Inc. (Salix) conducted a Biological Resources Assessment for the ±61-acre Davis Family Warehouses Study Area in the City of Sacramento near the Florin Perkins Public Disposal Site and Resource Recovery Facility (Study Area). The Study Area is situated in Section 24, Township 8 North and Range 5 East on the Sacramento East, California 7.5-minute USGS topographic quadrangle (Figure 1). The approximate coordinates for the center of study area are 38°31'59.61"N and 121°23'09.52"W. The address of the Study Area is 3901 Florin Perkins Road and is located east of Florin Perkins Road south of State Route 16 (Figure 2). The Study Area is in the jurisdiction of the City of Sacramento.

Setting

The undeveloped Study Area is mostly flat with an elevation range of approximately 45'-50' for most of the site. In the northwest portion of the Study Area, the site drops off into an old surface mining pit where elevations are as low as sea level. A small amount of fill rises about 10' above the site in the northwest portion of the Study Area.

The Study Area is dominated by grasslands with just a small number of trees associated with landscape screening adjacent to Florin Perkins Road and the eastern border. The Study Area is surrounded by light and heavy industrial land uses to the north, south and west. Reclaimed agricultural land is on the eastern border. The land uses to the north include the Florin Perkins Resource Recovery Facility that emphasizes construction and demolition debris, landscape materials and residential household items. The adjacent parcel immediately to the north is the closed Florin Perkins Landfill. The land use and zoning designations allow for light industrial uses with specific requirements that address the concentration of solid waste facilities in the area.

Objectives of Biological Resources Assessment

- Identify and describe the biological communities present in the Study Area
- Record plant and animal species observed in the Study Area
- Evaluate and identify sensitive resources and special-status plant and animal species that could be affected by project activities
- Provide conclusions and recommendations

METHODS

Literature Review

Salix biologists reviewed recent and historic aerial photographs, USGS maps, preliminary engineering exhibits, floodplain maps and site plans for the Study Area. Standard publications were reviewed to provide information on life history, habitat requirements, and distribution of regionally occurring animal species. They include published books, peer-reviewed articles, field guides, and the California Wildlife Habitats Relationships Program. Publications utilized in this assessment are included in the References section of this document.

Special-Status Species Reports

Salix biologists queried the California Natural Diversity Data Base (CNDDB 2024) for location records for special-status species known to occur in the 5-quadrangle region surrounding the Study Area. Quadrangles included in the query were Sacramento East, Carmichael, Florin, Elk Grove, and Sacramento West. Salix biologists also reviewed the U.S. Fish and Wildlife Service (USFWS) Information for Planning and Consultation (IPaC) database (USFWS 2024) for occurrences of special-status fish, wildlife, and plant species in the region surrounding the Study Area. An official species list was generated through the USFWS query. Lastly, the California Native Plant Society Rare Plant Inventory (CNPS 2024) was queried for special-status plants occurring in the same 5-quad area.

For the purposes of this report, special-status species are those that fall into one or more of the following categories, including those:

- listed as endangered or threatened under the federal Endangered Species Act (including candidates and species proposed for listing),
- listed as endangered or threatened under the California Endangered Species Act (including candidates and species proposed for listing),
- designated as rare, protected, or fully protected pursuant to the California Fish and Game Code,
- designated a Species of Concern by the California Department of Fish and Wildlife (CDFW),
- defined as rare or endangered under Section 15380 of the California Environmental Quality Act (CEQA), or
- designated as Ranks 1, 2, or 3 on lists maintained by the California Native Plant Society.

Field Assessments

A field assessment was conducted on October 20, 2023, and February 10, 2024, by Jeff Glazner to characterize existing conditions, map land cover types and assess the probability of occurrence of special status plant and animal species. A UAV was used to capture aerial imagery on October 20, 2023, and February 10, 2024.

Plants observed were recorded and are presented in Appendix A. Wildlife observed are listed in the ***Wildlife Occurrence and Use*** section below.

SURVEY AND LITERATURE SEARCH RESULTS

Soils

The Study Area has four mapped soil types, 1) San Joaquin-Urban land complex, 0 to 2 percent slopes (219), 2) Urban Land (227), 3) Xerarents-San Joaquin complex, 0 to 1 percent slopes (238) and 4) Pits (190).

San Joaquin-Urban land complex, 0 to 2 percent slopes (219)

The San Joaquin component makes up 50 percent of the map unit with the Urban Land soil type comprising 15 percent. Slopes are 0 to 2 percent. The San Joaquin component is found on terraces. The parent material consists of alluvium derived from granite. The depth to a duripan restrictive layer is 28-to 54 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is moderate. Nonirrigated land capability classification is 6e. Irrigated land capability classification is 6e. This soil does not meet hydric criteria.

Urban Land (227)

This soil type represents areas with 90 percent or more of the land consisting of impervious surfaces.

Xerarents-San Joaquin complex, 0 to 1 percent slopes (238)

This soil complex is comprised of xerarents and similar soils (65 percent) and San Joaquin and similar soils (20 percent) with other minor components (15 percent). These soils are formed in remnants of dry alluvial fans and terraces. The parent material is derived from granite. They are found on flat properties with 0 to 1 percent slopes. They are moderately well drained to well drained. The depth to a restrictive feature is more than 80 inches and a duripan may be present at a depth of 35-60 inches. The depth to the water table is also more than 80 inches. These soils do not flood or pond.

Pits (190)

The soil type Pits represents areas that were mined for gravelly alluvium.

Hydrology

The site is located in the Upper Morrison Creek – HUC12 (180201630402) watershed which is part of the Lower Sacramento HUC8 (18020109) watershed. The hydrology of the region is highly modified due to urban storm drain development and surface mining activities. Water in the study area generally drains to the large pits in the northwest area of the site. Water along the southern edge of the property drains to the industrial park and its storm drain system to the south. There are no major surface drainages in or adjacent to the Study Area.

SOILS MAP

Davis Family Warehouses

City of Sacramento, CA

Climate

The warmest month of the year is July with an average high of 93 degrees. The coolest month of the year is January with a high of 54 degrees and a low of 38 degrees. Total annual precipitation is 17 inches with the month of January receiving the most rainfall (3.6 inches). Summer months are typically dry with little, or no rainfall recorded between June and September (Western Regional Climate Center, 2024).

Biological Communities

The Study Area is an expansive weedy grassland area. A small amount of riparian and wetland vegetation is associated with a detention basin constructed in the northwest portion of the Study Area.

Five land cover types have been mapped: Valley Grassland (ruderal), Mixed Riparian Scrub, Seasonal Wetland and Disturbed (mostly dirt roads). These communities are summarized in Table 1 below and illustrated in Figure 4. A description of each of the land cover types is included below. Representative aerial and site photos are presented in Figures 5a through 5f. A list of plants observed is included in Appendix A.

Table 1.
Biological Communities/Land Cover Types
Within the Davis Family Warehouses Study Area

Biological Community	Acreage (±)
Valley Grassland (ruderal)	56.0
Mixed Riparian Scrub	0.7
Seasonal Wetland	0.5
Landscaped	0.6
Disturbed	3.2
Total	**±61**

Valley Grassland (Ruderal)

The majority of the Study Area is comprised of the Valley Grassland land cover (~95 percent). This is a disturbed area that has been disked and used for outdoor material storage and consequently the grassland is ruderal in character (i.e., vegetation growing where the natural ground cover has been disturbed by human activities). Common herbaceous species in this area include, wild oat (*Avena fatua*), ripgut grass *(Bromus diandrus*), ryegrass (*Festuca perennis*), tarweed (*Holocarpha virgata*), prickly lettuce (*Lactuca seriola*), yellow starthistle (*Centaurea solstitialis*), Spanish clover (*Acmispon americanus*), soft chess *(Bromus hordeaceus*), medusahead (*Elymus caput-medusae*), and wall barley (*Hordeum murinum*) (Figure 5d).

Mixed Riparian Scrub

A detention basin in the northwest portion of the Study Area includes a dense canopy of riparian vegetation including Fremont cottonwood (*Populus fremontii*), narrow-leaved willow (*Salix exigua*) and red willow (*Salix laevigata*) are the primary species (0.7 acre).

This basin is rectangular in shape and excavated about two-three feet below the adjacent grade. The canopy is very dense and herbaceous species on the basin bottom is minimal. This area is mapped as an aquatic resource.

Seasonal Wetland

An area on the higher terrace adjacent to the rectangular excavation is mapped as a seasonal wetland (0.5 acre). This area includes several wetland herbaceous species including tall flatsedge (*Cyperus eragrostis*), western goldenrod (*Euthamia occidentalis*), toad rush (*Juncus bufonius*), and bird's foot trefoil (*Lotus corniculatus*) (Figure 5e). Stinkwort (*Dittrichia graveolens*) and summer cottonseed (*Epilobium brachycarpum*) are common in both the upland and wetland areas of the basin.

Landscaped

The Landscaped land cover (0.6 acre) is a narrow strip of land between the edge of the mining pit perimeter road to the east and Florin Perkins Road to the west. The landscaping appears to have been established to screen the surface mining and reclamation activities as it is an unkept dense screen between the road and the mining operation. Ornamental and native plants found in this corridor include coyote bush (*Baccharis pilularis*), Himalayan blackberry (*Rubus armeniacus*), Peruvian pepper tree (*Schinus molle*), valley oak (*Quercus lobata*), olive (*Olea Europa*), and Chinese tallowtree *(Triadica sebifera)* (Figure 5f).

Disturbed

Approximately 3.2 acres of the Study Area is mapped as Disturbed. These areas are mostly unpaved roads that are mostly bare earth with scattered herbaceous weeds.

Wildlife Occurrence and Use

The site is largely open but located in an area highly influenced by industrial uses. There are numerous large open space areas in the surrounding areas that have been reclaimed from prior surface mining operations (e.g., Granite Regional Park). A significant amount of vehicular traffic is present with Florin Perkins Road serving as a major north-south arterial for the region.

Tree and other woody vegetation cover is minimal which limits utilization by non-ground dwelling species, and water availability is low which would prevent high animal activity. Adjacent industrial lands that were reclaimed provide higher quality habitat which makes this property an adjacent fringe to those areas. Foraging habitat for avian species is high as the open ground of this area would attract larger birds of prey. The site provides quality foraging and denning by transient species such as coyote and fox.

The Study Area also provides foraging habitat for many resident and migratory songbirds, and small to mid-sized mammals. The small number of Fremont cottonwood and willow trees in the detention basin provide suitable nesting and roosting habitat for common species. Mid-sized mammals such as opossum and striped skunk may utilize the site to forage and prey on the small mammals. The small amount of riparian habitat

and the seasonal wetland may provide food, water and cover for these same species during the winter and spring months where water is available. Species observed during the field evaluations included Anna's hummingbird, western meadowlark, California towhee, spotted towhee, dark-eyed junco, house sparrow, white-crowned sparrow, northern flicker, western scrub-jay, mourning dove, turkey vulture, red-tailed hawk and barn owl.

Special-Status Species

To determine potentially-occurring special-status species, the standard databases from the CDFW (CNDDB 2024), CNPS (2024), and USFWS Information for Planning and Consultation (2024) were queried and reviewed as described above. These searches provided a list of regionally-occurring special-status plant and animal species and were used to determine which species had at least some potential to occur within or near the study area. Appendix B lists potentially-occurring special-status plants and their likelihood to occur, and Appendix C lists special-status animals compiled from these queries. The site assessments and the best professional judgment of Salix biologists were used to further refine Appendix B and C.

The approximate locations of reported occurrences of special-status plants within a 5-mile radius of the Study Area is shown in Figure 6a, and for animals, in Figure 6b.

Special-Status Plants

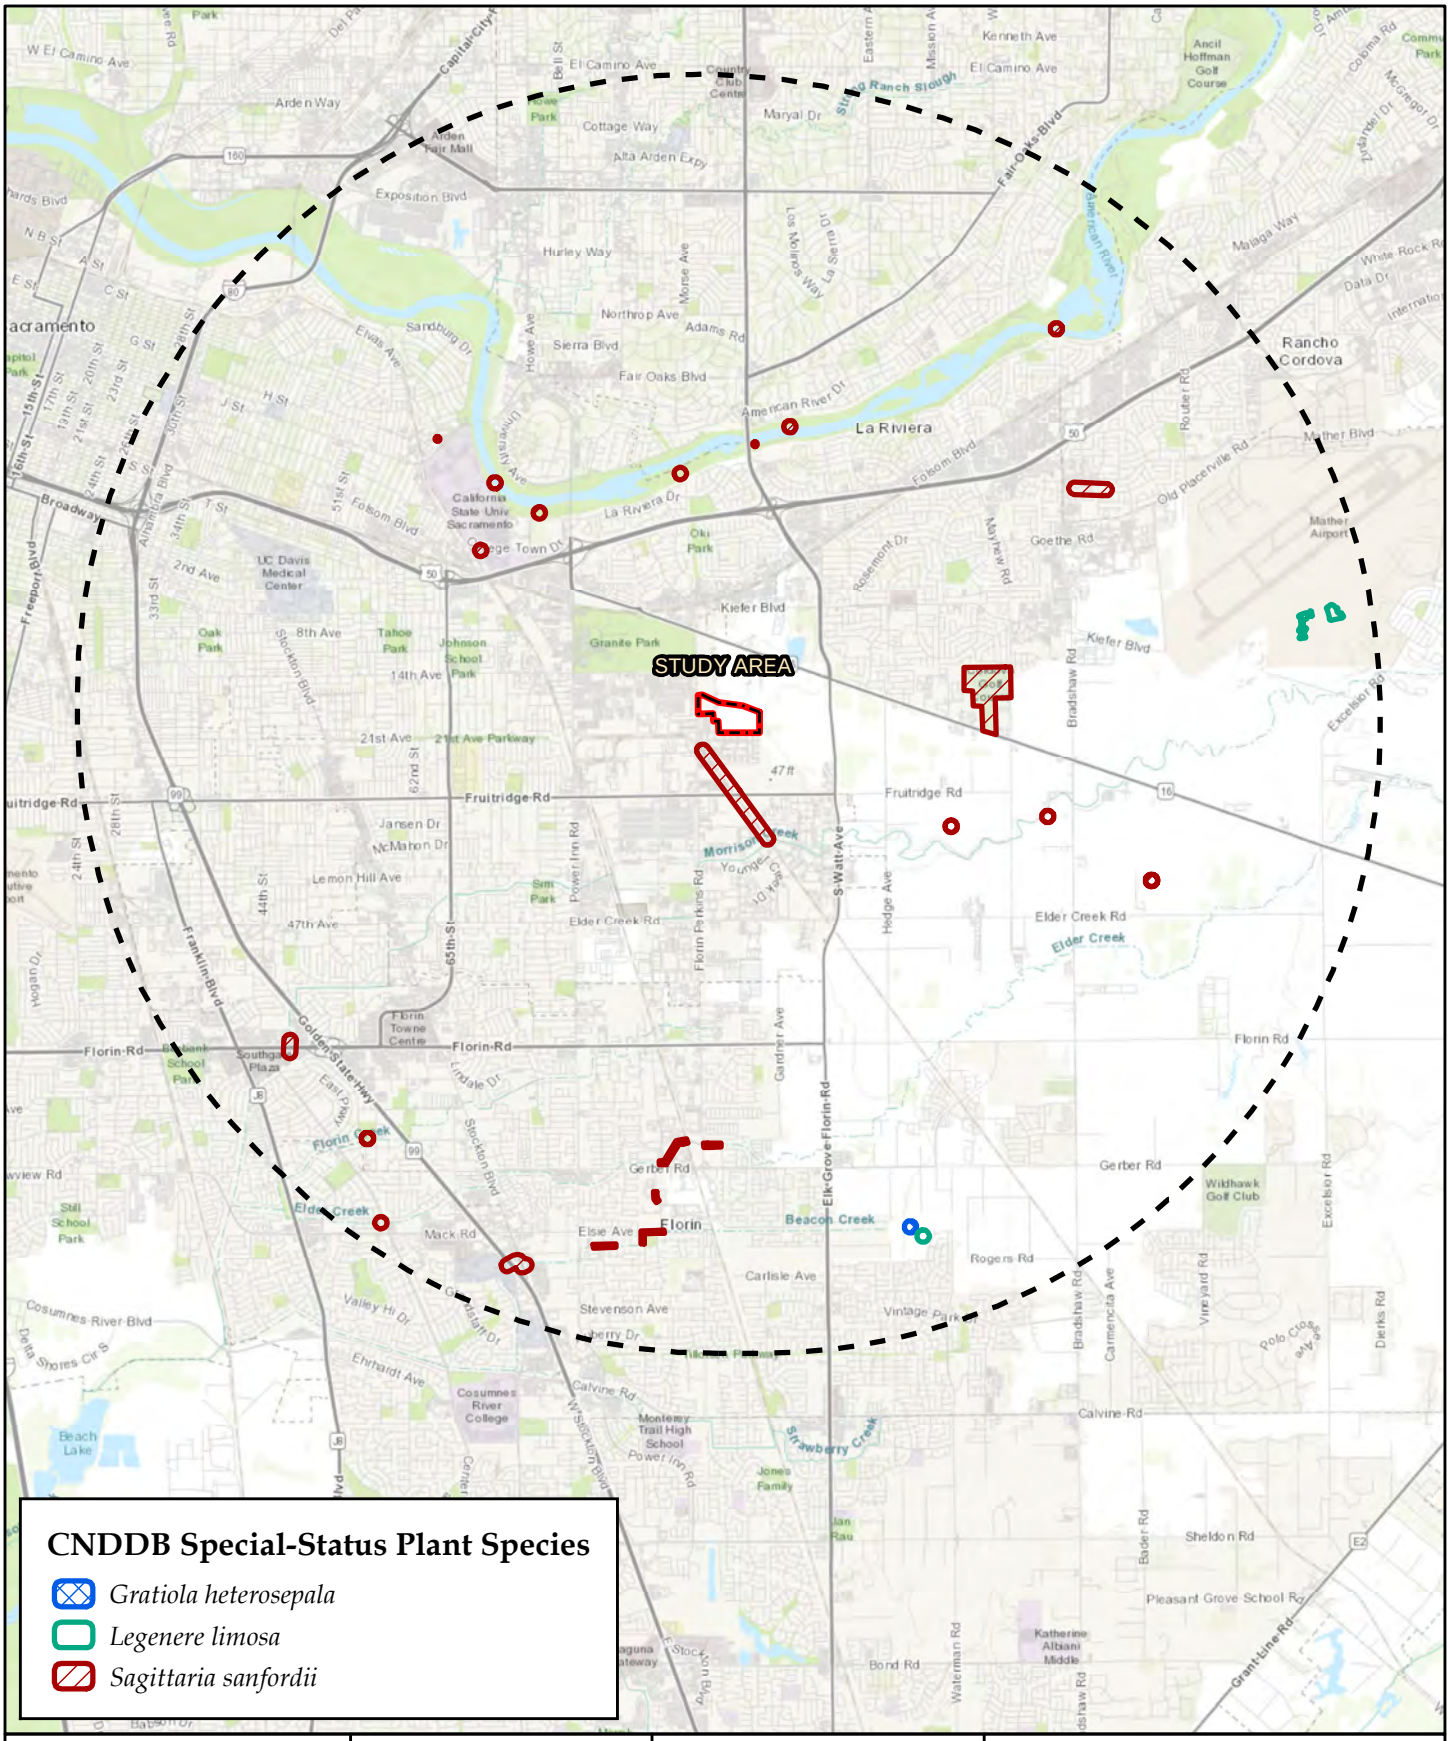
The query results of the rare plant databases referenced above are included in Appendix B. The results of these queries include 14 potentially-occurring plant species listed on the CNDDB, the same 14 plants on the CNPS Rare Plant Inventory and no plants on the USFWS species list.

Three plants were identified as occurring within the surrounding region (within a 5-mile radius of the Study Area). These plants include:

- Boggs Lake hedge-hyssop (*Gratiola heterosepala*)
- Legenere *(Legenere limosa*)
- Sanford's arrowhead (*Sagittaria sanfordii*)

Five additional plants were identified through the queries that have a CNPS Rare Plant Inventory Rare Plant Ranking of 4.2 or 4.3. CNPS Rank 4 species are of limited distribution or infrequent throughout a broader area in California and would not typically meet the CEQA Guidelines §15380 as either "endangered" "threatened" or "rare". Consequently, CNPS Rank 4 plant species are not considered further in the document.

None of the plants found within the region or identified in the CNPS and CNDDB queries are likely to be present within the Study Area. Many of the region's sensitive plants are associated with vernal pool habitat which is not present. The Sanford's arrowhead is found nearby in a concrete drainage channel known as the PG&E Ditch but would not be present within the Study Area due to a lack of sufficient habitat and late-season water to support the species. Sanford's arrowhead is typically found in lake/pond margins, sloughs, ditches or slow-moving streams with silty or muddy substrates.



Salix consulting, inc.

Figure 6a

CNDDB OCCURRENCES MAP

Davis Family Warehouses

City of Sacramento, CA

Special-Status Animals

Queries of the special status species databases resulted in 26 regionally occurring special status animal species. Of the 26 potentially occurring animal species listed in Appendix C, 16 species were identified as occurring within the surrounding region (generally within a 5-mile radius of the Study Area) (Figure 6b). These 16 species include the following:

- American badger (*Haliaeetus leucocephalus*)
- Bank swallow (*Riparia riparia*)
- Burrowing owl (*Athene cunicularia*)
- Golden eagle (*Aquila chrysaetos*)
- Northwestern pond turtle (*Actinemys marmorata*)
- Purple martin (*Progne subis*)
- Song sparrow (Modesto population) (*Melospiza melodia* pop. 1)
- Steelhead (Central Valley DPS) (*Oncorhynchus mykiss irideus* pop. 11)
- Swainson's hawk (*Buteo swainsoni)*
- Tricolored blackbird (*Agelaius tricolor*)
- Valley elderberry longhorn beetle (*Desmocerus californicus dimorphus*)
- Vernal pool fairy shrimp (*Branchinecta lynchi*)
- Vernal pool tadpole shrimp (*Lepidurus packardi*)
- Western spadefoot (*Spea hammondii*)
- Western yellow-billed cuckoo (*Coccyzus americanus occidentalis*)
- White-tailed kite (*Elanus leucurus*)

Three of the sixteen species that were identified within five miles of the Study Area have some likelihood of occurring onsite. These three animals include the American badger, burrowing owl, and white-tailed kite. These animals are further described in Table 2 below. Additionally, it is possible that the Study Area could be used for foraging by raptors including the golden eagle and Swainson's hawk which both occur within a 5-mile radius of the Study Area.

The Study Area does not have suitable habitat for a nesting colony of tricolored blackbird but the site could be used as foraging habitat. Tri-colored blackbirds were not observed during site visits. The nearest CNDDB records include a nesting colony 3 miles to the southeast of the Study Area adjacent to Elder Creek and another colony 2 miles east of the Study Area in a reclaimed mining area east of the Cordova Golf Course. The distance from potential nesting habitat and the lack of water make the Study Area marginal foraging habitat.

Lastly, the nesting potential for raptors is limited to the small Mixed Riparian Scrub habitat in the northwest portion of the Study Area. The nesting survey recommended below will ensure that there are no impacts to any potential nesting raptors prior to construction.

For the other 13 species the Study Area lacks suitable habitat to support these species including the absence of vernal pools, elderberry shrubs, larger areas of mature riparian habitat, perennial freshwater marshes and perennial streams. The site is also subject to significant indirect effects from fragmentation, activities on surrounding land uses, and a lack of connectivity to suitable nesting and foraging areas. Additional details on habitat and the probability for a species to occur on site is provided for each of the 26 species in Appendix C.

Table 2.
Special Status Animal Species Determined to Have Some Potential to Occur Within the Davis Family Warehouses Study Area

Species	Status* Federal	Status* State	Habitat	Potential for Occurrence Within Study Area*
American badger (*Taxidea taxus*)	-	SSC	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Needs sufficient food, and open, uncultivated ground.	Unlikely
Burrowing owl *Athene cunicularlia**	-	CCE/SSC	Found in annual grasslands. Nests in burrows dug by small mammals, primarily ground squirrels.	Potential
White-tailed kite *Elanus leucurus**	-	CFP	Found in lower foothills and valley margins with scattered oaks and along river bottomlands or marshes adjacent to oak woodlands. Nests in trees with dense tops.	Unlikely

Status Codes:
State
CCE California Candidate Endangered
SSC California Species of Concern
CFP California Fully Protected

*Definitions for the Potential to Occur:
Unlikely: Minimal or marginal quality habitat in the study area.
Potential Habitat is present that could support both nesting and foraging

American badger (*Taxidea taxus*) a California Species of Special Concern, occurs in in drier open stages of most shrub, forest, and herbaceous habitats, with friable soils. Badgers dig burrows in friable soil for cover. The badger will frequently reuse old burrows, although some may dig a new den each night, especially in summer.

The CNDDB documents the nearest reported occurrence of the American badger as an undated observation in the general area of 21st Avenue at Power Inn Road. The boundary of the generalized area is immediately west of the Study Area. A second occurrence reported in 1991 is located 2.5 miles east of the Study Area between Kiefer Boulevard, Bradshaw Road, Jackson Road and Excelsior Road. This occurrence was in an area comprised of annual grassland with vernal pools.

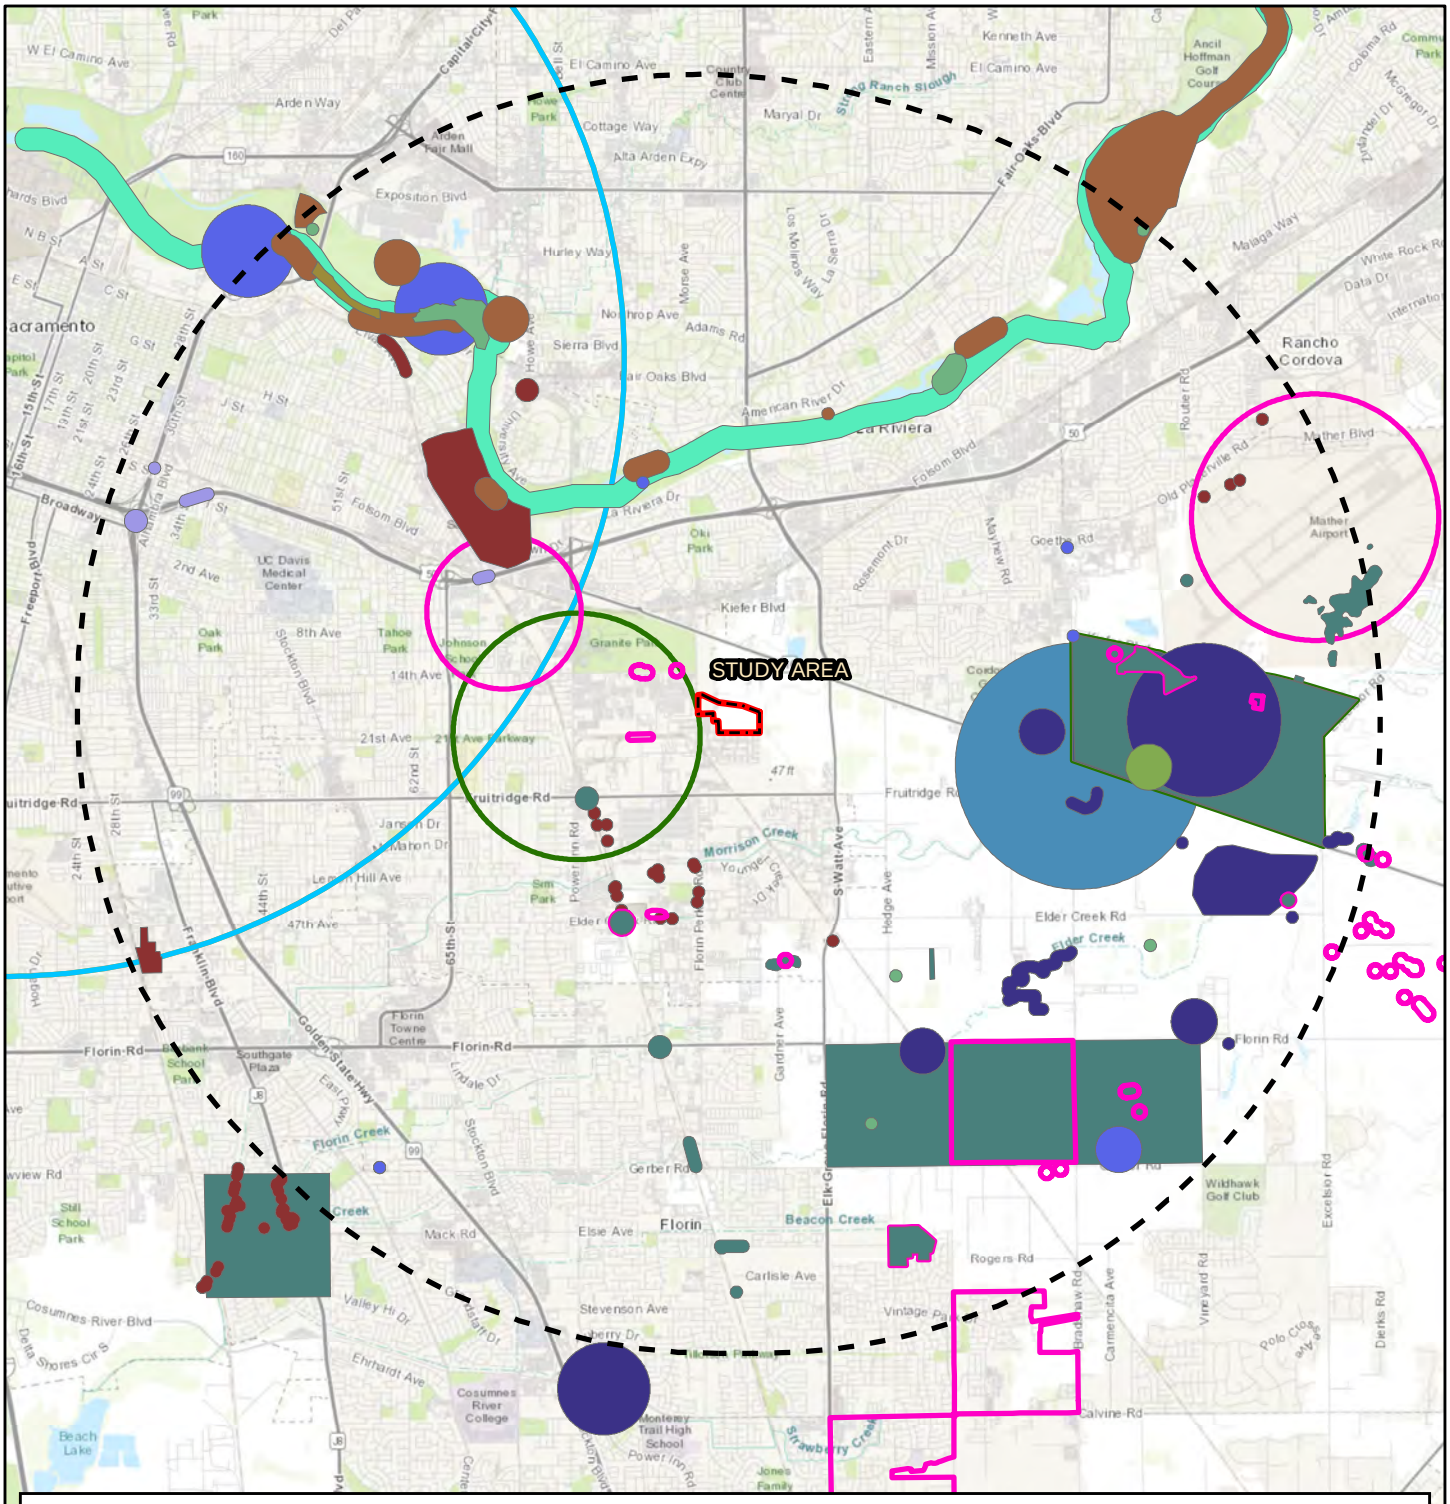
Burrowing owl (*Athene cunicularia*), a California Species of Special Concern, occurs in association with open, dry grasslands, deserts, agricultural areas, and rangeland throughout the Central Valley. They often occur where numerous burrowing mammals

are present and frequently occupy California ground squirrel burrows (Shuford and Gardali 2008). Burrowing owls may also use man-made structures such as debris piles, culverts, and cement piles for cover. Circumstantial evidence of burrowing owl occurrence typically consists of the presence of molted feathers, cast pellets, prey remains, or excrement near a burrow entrance. Breeding of burrowing owls occurs from March to late August and incubation lasts between 28 to 30 days. Young are fledged at about 44 days but remain near the burrow and join the adults to forage at dusk.

The CNDDB documents the nearest reported occurrence of burrowing owls as a 2003 observation, 1 mile southwest of the Study Area, immediately south of Fruitridge Road and adjacent to Power Inn Road. Multiple active burrows were observed in a field of annual grassland surrounded by railroad tracks, industrial land uses and landscaping. Burrowing owl was not observed in the Study Area during our field evaluations.

White-tailed kite (*Elanus leucurus*). The white-tailed kite is a California Fully Protected species under California Fish and Game Code Sections 3511, 4700, 5050 and 5515. The white-tailed kite is commonly associated with certain types of agriculture areas. It also generally occurs in low-elevation grassland, wetland, oak woodland, low shrub, open woodlands, or savannah habitats. This species also uses fence rows and irrigation ditches (with residual vegetation). Riparian areas adjacent to open space areas are typically used for nesting, where kites prefer dense, broad leafed deciduous trees for nesting and night roosting. The small amount of nesting tree habitat within the Mixed Riparian Scrub habitat could support the kite.

The nearest reported occurrence of a nesting white-tailed kite is south of Tokay Lane and east of Hedge Avenue, 2 miles southeast of the Study Area. In 1990, a pair of white-tailed kites were observed nesting within an olive tree in an old orchard.



CNDDB Special-Status Wildlife Species

- American badger
- Bank swallow
- Burrowing owl
- Golden eagle
- Purple martin
- Song sparrow ("Modesto" population)
- Steelhead - Central Valley DPS
- Swainson's hawk
- Tricolored blackbird
- Valley elderberry longhorn beetle
- Vernal pool fairy shrimp
- Vernal pool tadpole shrimp
- Western pond turtle
- Western spadefoot
- Western yellow-billed cuckoo
- White-tailed kite

RECOMMENDATIONS

Aquatic Resources

Two aquatic resources are found on the site, a Mixed Riparian Scrub and a Seasonal Wetland. Both of these aquatic resources are associated with the detention basin in the northwest portion of the Study Area. The current site plan shows that direct impacts to these aquatic resources are avoided. If infrastructure improvements are constructed within the boundary of these aquatic resources, it will require coordination with the Corps of Engineers to determine if the wetlands are under federal jurisdiction. In this case, they are likely not to be. If the Corps does not claim jurisdiction over these aquatic resources, it will likely be necessary to obtain a Waste Discharge Requirement Permit from the Central Valley Regional Water Quality Control Board.

Streams, Pond, and Riparian Habitat

The site contains no streams or ponds. The detention basin in the northwest portion of the Study Area is dry for most of the year but does contain an aquatic resource that holds water for a prolonged period in the wet season. A portion of the wetland is mapped as Mixed Riparian Scrub and may be under the jurisdiction of the California Department of Fish and Wildlife. It is recommended that project modifications to this area be avoided, but if that is infeasible, consultation with CDFW should occur to determine if a Lake and Streambed Alteration Agreement (Section 1602 of the State Fish and Game Code) would be needed.

Special-Status Plants

The Study Area is within a region of the state that supports vernal pool grassland habitat and several rare species of flora and fauna that are found within this habitat. These grasslands and the vernal pool habitat specifically, support several rare plants that are native to California with some species being endemic to California. These plants include dwarf downingia (*Downingia pusilla*), Boggs Lake hedge-hyssop (*Gratiola heterosepala*), Ahart's dwarf rush (*Juncus leiospermus* var. *ahartii*), slender Orcutt grass (*Orcuttia tenuis*) and Sacramento Orcutt grass (*Orcuttia viscida*). Another rare plant known to occur within the region, Sanford's arrowhead (*Sagittaria sanfordii*) is found in ditches, streams or lake margins within the water or very moist areas. Locally, the Sanford's arrowhead has been found within the PG&E Ditch drainage canal located 1,000 feet southwest of the Study Area.

The Study Area is a ruderal grassland dominated by weedy annual species and does not have the necessary vernal pool habitat to support the sensitive vernal pool plants listed above. Consequently, the presence of rare plants endemic to vernal pool grasslands can be excluded due to the absence of vernal pool habitat onsite. The Study Area also does not have habitat (e.g., ditches, streams, lake margins or similar areas). Therefore, a rare plant survey is not recommended for the spring of 2025.

Special-Status Animals

Three special-status animals were identified through the database queries as potentially occurring within the Study Area including the American badger, burrowing owl and white-tailed kite. The nesting bird survey recommended below will address the potential for the white-tailed kite. A pre-construction survey for the American badger and burrowing owl is recommended.

The American badger pre-construction survey should occur no more than 14 days prior to the beginning of ground disturbance related to construction, or any other project activity likely to impact the American badger (such as staging, mowing, vegetation clearing), to determine if there are any American badger dens on the project site

The burrowing owl pre-construction survey needs to be consistent with the CDFW Burrowing Owl Survey Protocol and Mitigation Guidelines (California Burrowing Owl Consortium 1993) or as otherwise directed by CDFW.

The Study Area may be considered foraging habitat for the Swainson's hawk. CDFW considers the loss of foraging habitat an impact under the California Environmental Quality Act (CEQA). The applicant should consult with the City of Sacramento as the CEQA lead agency about the potential for an impact to occur and whether compensatory mitigation is required. The nearest CNDDB occurrence was reported in 2006 at a nest site within the American River Parkway 1.81 miles north by northwest (NNW) of the Study Area. The nest was located within a Fremont cottonwood tree within a small stand of cottonwoods on a mid-channel island in the American River (left bank). The occurrence has not been updated since July of 2006. Two additional occurrences were reported nearly 3 miles east of the Study Area in 2013. Swainson's hawks were not observed in the area during the site visits.

Nesting Birds

Generally, the Study Area has minimal bird nesting potential. Most nesting birds are protected by the Migratory Bird Treaty Act (16 U.S.C. 703-712; MBTA) administered by the U.S. Fish and Wildlife Service (Division of Migratory Bird Management). The MBTA makes it unlawful, unless expressly authorized by permit pursuant to federal regulations, to "pursue, hunt, take, capture, kill, attempt to take, capture or kill, offer for sale, sell, offer to purchase, purchase, deliver for shipment, ship, cause to be shipped, deliver for transportation, transport, cause to be transported, carry, or cause to be carried by any means whatever, receive for shipment, transportation or carriage, or export at any time, or in any manner, any migratory bird, or any part, nest, or egg of any such bird."

The California Fish and Game Code (CFGC) §3503 prohibits the take, possession, or needless destruction of the nest or eggs of any bird; §3503.5 prohibits the take, possession, or needless destruction of any nests, eggs or birds in the orders Falconiformes (new world vultures, hawks, eagles, ospreys and falcons, among others) or Strigiformes (owls); §3511 prohibits the take or possession of fully protected birds; and §3513 prohibits the take or possession of any migratory

nongame bird or part thereof as designated in the MBTA. Most birds are protected under the MBTA and CFGC except for several nonnative species.

If ground disturbance activities take place during the breeding/nesting season (February through August), disturbance of nesting activities could occur. Thus, a pre-construction survey should be conducted by a qualified biologist no more than 15 days prior to initiation of proposed activities. If active nests are found on or immediately adjacent to the site, a nest avoidance plan shall be implemented with approval from the City of Sacramento if the City requests, CDFW. The avoidance plan shall include appropriate buffers to the nest(s), and a qualified biologist should monitor the nest(s) and project activities to ensure no harm or agitation affects the nestlings. Once the birds have fledged, there is no longer a need for the buffer, and project activities could then proceed. If no nesting is found to occur, necessary tree and shrub removal could then proceed.

Appendix A.
Plant Species Observed Within the Davis Family Warehouses Study Area

Appendix A

Davis Family Warehouses - Plants Observed October 2023 and February 2024

Angiosperms - Dicots

Anacardiaceae - Cashew or Sumac Family

**Schinus molle*	Peruvian pepper tree

Apiaceae (Umbelliferae) - Carrot Family

**Foeniculum vulgare*	Sweet fennel

Apocynaceae - Dogbane/Milkweed Family

Asclepias fascicularis	Narrow-leaf milkweed

Asteraceae (Compositae) - Sunflower Family

Achyrachaena mollis	Blow-wives
Baccharis pilularis	Coyote brush
**Carduus pycnocephalus*	Italian thistle
**Centaurea solstitialis*	Yellow starthistle
Centromadia fitchii	Fitch's spikeweed
**Cichorium intybus*	Chicory
**Dittrichia graveolens*	Stinkwort
Euthamia occidentalis	Western goldenrod
**Helminthotheca echioides*	Bristly ox-tongue
Heterotheca grandiflora	Telegraph weed
Holocarpha virgata subsp. virgata	Virgate tarweed
**Hypochaeris glabra*	Smooth cat's-ear
**Lactuca serriola*	Prickly lettuce
**Leontodon saxatilis*	Long-beaked hawkbit
**Logfia gallica*	Narrowleaf cottonrose
**Senecio vulgaris*	Common groundsel
**Silybum marianum*	Milk thistle
**Sonchus asper subsp. asper*	Prickly sow-thistle
**Sonchus oleraceus*	Common sow-thistle

Boraginaceae - Borage Family

Amsinckia menziesii	Rancher's fireweed
Plagiobothrys nothofulvus	Rusty popcornflower

Brassicaceae (Cruciferae) - Mustard Family

**Brassica nigra*	Black mustard
**Hirschfeldia incana*	Short-podded mustard
**Lepidium latifolium*	Broadleaf pepperweed
Lepidium strictum	Peppergrass
**Raphanus sativus*	Wild radish
**Sisymbrium irio*	London rocket

Caryophyllaceae - Pink Family

**Silene gallica*	Windmill-pink
**Spergularia rubra*	Ruby sand-spurrey
**Stellaria media*	Common chickweed

Chenopodiaceae - Goosefoot Family

**Chenopodium album*	White pigweed
**Salsola tragus*	Russian-thistle

Euphorbiaceae - Spurge Family

Croton setiger	Turkey mullein
**Triadica sebifera*	Chinese tallow tree

Fabaceae (Leguminosae) - Legume Family

Acmispon americanus	Spanish lotus
**Lotus corniculatus*	Bird's-foot trefoil
Lupinus bicolor	Miniature lupine
**Medicago polymorpha*	California burclover
**Melilotus officinalis*	Yellow sweetclover
**Trifolium dubium*	Little hop clover
**Trifolium hirtum*	Rose clover
**Vicia villosa*	Winter vetch

Fagaceae - Oak Family

Quercus lobata	Valley oak
Quercus wislizeni	Interior live oak

Geraniaceae - Geranium Family

**Erodium botrys*	Broad-leaf filaree
**Erodium cicutarium*	Red-stem filaree
**Geranium dissectum*	Cut-leaf geranium
**Geranium molle*	Dove's-foot geranium

Hypericaceae - St. John's Wort Family

**Hypericum perforatum subsp. perforatum*	Klamathweed

Lamiaceae (Labiatae) - Mint Family

**Lamium amplexicaule*	Deadnettle
**Marrubium vulgare*	White horehound
Trichostema lanceolatum	Vinegar weed

Lythraceae - Loosestrife Family

**Lythrum hyssopifolia*	Hyssop loosestrife
**Punica granatum*	Pomegranate

Malvaceae - Mallow Family

**Malva parviflora*	Cheeseweed

Montiaceae - Miner's Lettuce Family

Calandrinia menziesii	Red maids

Moraceae - Mulberry Family

**Ficus carica*	Common fig

Myrsinaceae - Myrsine Family

**Lysimachia arvensis*	Scarlet pimpernel

Oleaceae - Olive Family

**Olea europaea*	Olive

Onagraceae - Evening Primrose Family

Epilobium brachycarpum	Summer cottonweed

Orobanchaceae - Broomrape Family

Castilleja attenuata	Valley tassels

Triphysaria eriantha	Butter-and-eggs

Papaveraceae - Poppy Family

Eschscholzia californica	California poppy

Plantaginaceae - Plantain Family

**Plantago lanceolata*	English plantain

Platanaceae - Plane Tree Family

Platanus acerfolia	Common cudonia

Polygonaceae - Buckwheat Family

**Polygonum aviculare*	Common knotweed
**Rumex acetosella*	Sheep sorrel
**Rumex crispus*	Curly dock

Rosaceae - Rose Family

**Rubus armeniacus*	Himalayan blackberry

Salicaceae - Willow Family

Populus fremontii	Fremont cottonwood
Salix exigua	Narrow-leaved willow
Salix laevigata	Red willow

Scrophulariaceae - Figwort Family

**Verbascum thapsus*	Woolly mullein

Ulmaceae - Elm Family

**Ulmus americana*	American elm

Angiosperms -Monocots

Cyperaceae - Sedge Family

Cyperus eragrostis	Tall flatsedge

Juncaceae - Rush Family

Juncus bufonius	Toad rush

Poaceae (Gramineae) - Grass Family

**Aira caryophyllea*	Silver European hairgrass
**Avena fatua*	Wild oat
**Bromus diandrus*	Ripgut grass
**Bromus hordeaceus*	Soft chess
**Cynodon dactylon*	Bermudagrass
**Elymus caput-medusae*	Medusahead
**Festuca myuros*	Rattail sixweeks grass
**Festuca perennis*	Italian ryegrass
**Hordeum marinum subsp. gussoneanum*	Mediterranean barley
**Hordeum murinum*	Wall barley
**Paspalum dilatatum*	Dallis grass
**Phalaris aquatica*	Harding grass
**Poa annua*	Annual bluegrass

Themidaceae - Brodiaea Family

Triteleia hyacinthina	White triteleia

* Indicates a non-native species

Appendix B
Potentially-Occurring Special-Status Plants Within the Davis Family Warehouses Study Area

Appendix B

Davis Family Warehouses - Potentially-occurring Special Status Plants

Family Taxon Common Name	Status*	Flowering Period	Habitat	Probability on Project Site
Alismataceae				
Sagittaria sanfordii Sanford's arrowhead	Fed: - State: - CNPS: Rank 1B.2	May-October	Marshes and shallow slow moving water.	None. The site does not contain summer or fall water to support this species.
Asteraceae (Compositae)				
Lasthenia chrysantha Alkali-sink goldfields	Fed: - State: - CNPS: Rank 1B.1	February-June	Vernal pools, wet saline flats	None. The site does not contain vernal pool or alkaline areas.
Symphyotrichum lentum Suisun Marsh aster	Fed: - State: - CNPS: Rank 1B.2	August-November	Marshes and swamps (brackish and fresh water)	None. The site does not contain marsh habitat.
Brassicaceae (Cruciferae)				
Lepidium latipes heckardii Heckard's peppergrass	Fed: - State: - CNPS: Rank 1B.2	April-May	Valley and foothill grassland (alkaline flats).	None. The site does not contain alkaline soils.
Campanulaceae				
Downingia pusilla Dwarf downingia	Fed: - State: - CNPS: Rank 2B.2	March-May	Vernal pools and seasonal wetlands.	None. The site does not contain vernal pools or seasonal wetlands.
Legenere limosa Legenere	Fed: - State: - CNPS: Rank 1B.1	April-June	Vernal pools and seasonal wetlands.	The site does not contain vernal pools or seasonal wetlands.

Appendix B

Davis Family Warehouses - Potentially-occurring Special Status Plants

Family Taxon Common Name	Status*	Flowering Period	Habitat	Probability on Project Site
Convolvulaceae				
Cuscuta obtusiflora glandulosa Peruvian dodder	Fed: - State: - CNPS: Rank 2B.2	July-October	Marshes and swamps	None. The site does not contain marsh habitat.
Fabaceae (Leguminosae)				
Astragalus tener ferrisiae Ferris' milkvetch	Fed: - State: - CNPS: Rank 1B.1	April-May	Meadows (vernally mesic); valley and foothill grassland (subalkaline flats).	None. The site does not contain alkaline soils.
Trifolium hydrophilum Saline clover	Fed: - State: - CNPS: Rank 1B.2	April-June	Marshes and swamps; valley and foothill grassland (mesic, alkaline); vernal pools. 0-300 m.	None. The site does not contain alkaline soils.
Juncaceae				
Juncus leiospermus ahartii Ahart's dwarf rush	Fed: - State: - CNPS: Rank 1B.2	March-May	Vernal pools.	Non.e The site does not contain vernal pools.
Malvaceae				
Hibiscus lasiocarpos occidentalis Wooly rose-mallow	Fed: - State: - CNPS: Rank 1B.2	June-September	Marshes and swamps (freshwater).	None. The site does not contain marsh habitat.
Plantaginaceae				
Gratiola heterosepala Bogg's Lake hedge-hyssop	Fed: - State: CE CNPS: Rank 1B.2	April-August	Vernal pools.	None. The site does not contain vernal pools.

Appendix C.
Potentially-Occurring Special-Status Animals Within the Davis Family Warehouses Study Area

Appendix C

Davis Family Warehouses - Potentially-occurring Special Status Animals

	Status*	Habitat	Probability on Project Site
Invertebrates			
Vernal pool fairy shrimp *Branchinecta lynchi*	Fed: FT State: - Other: -	Vernal pools and other temporary bodies of water in southern and Central Valley of California. Most common in smaller grass or mud bottomed swales or basalt flow depression pools in unplowed grasslands.	None. They Study Area does not have vernal pool habitat.
Vernal pool tadpole shrimp *Lepidurus packardi*	Fed: FE State: - Other: -	Found in vernal pools in the Central Valley of California and in the San Francisco Bay area. Inhabits vernal pools with clear to highly turbid water.	None. They Study Area does not have vernal pool habitat.
Insects			
Valley elderberry longhorn beetle *Desmocerus californicus dimorphus*	Fed: FT State: - Other: *	Requires host plant, elderberry (Sambucus nigra) for its life cycle. Shrubs must have live stem diameters at ground level of 1.0 inch or greater. Occurs in Great Valley and lower foothills.	None. The Study Area does not have elderberry shrubs.
Fish			
Green sturgeon *Acipenser medirostris*	Fed: FC State: CSC Other:	Found in rivers, estuaries, and marine waters. Spawns in the Sacramento River and Klamath River. Prefers lower reaches of large rivers for spawning. Needs swift currents and large cobble.	None. Requires marine waters, bays or brackish esuaries for its life cycle. These habitats are absent from the Study Area.
Steelhead - Central California Coast ESU *Oncorhynchus mykiss irideus*	Fed: FT State: - Other: -	Central coastal basins from the Russian River, south to Soquel Creek, including San Francisco and San Pablo Bay basins, but excludes the Sacramento-San Joaquin River basins.	None. Requires perennial streams and rivers which are absent in the Study Area.
Chinook salmon - Central Valley spring-run ES *Oncorhynchus tshawytscha*	Fed: FT State: CT Other: *	Occurs in water bodies with cool, fast-flowing water and gravel suitable for spawning. Found primarily in 4 tributaries of the Sacramento River: Butte Creek, Big Chico Creek, Deer Creek, and Mill Creek.	None. No perenial streams or rivers are present within the Study Area.
Chinook salmon - Sacramento winter run ESU *Oncorhynchus tshawytscha*	Fed: FE State: CE Other: -	One of 4 runs that spawns in upper Sacramento River and Battle Creek. They return to the upper Sacramento River in the winter but delay spawning until the spring and summer.	None. No perennial streams or rivers are present within the Study Area.

Appendix C

Davis Family Warehouses - Potentially-occurring Special Status Animals

	Status*	Habitat	Probability on Project Site
Longfin smelt *Spirinichus thaleichthys*	Fed: FC State: CT Other:	Endemic to the lower reaches of the Sacramento-San Joaquin River system. Inhabits open waters in the Delta and Suisun Bay. After spawning, larvae are carried downstream to brackish nursery areas.	None. The smelt is historically found in the San Francisco Estuary and the Sacramento/San Joaquin Delta (Bay-Delta), and uses nearshore waters, estuaries and lower portions of freshwater streams. These habitats are absent from the Study Area.
Sacramento splittail *Pogonichthys macrolepidotus*	Fed: - State: CSC Other:	Found in: (1) the Delta, (2) Suisun Bay, (3) Suisun Marsh, (4) Napa River, (5) Petaluma River, and (6) other parts of the Sacramento-San Joaquin Estuary. Requires flooded vegetation for spawning and rearing.	None. The splittail requires brackish-water rearing habitats in the San Francisco Estuary and on floodplain and river-edge spawning habitats immediately above the estuary. These areas are absent in the Study Area.
Sacramento perch *Archoplites interruptus*	Fed: - State: CSC Other:	Historically found in slow-moving rivers, sloughs, and ponds in the Central Valley.	None. Sacramento perch is found in lakes and reservoirs which are absent from the Study Area.
Amphibians			
California tiger salamander *Ambystoma californiense*	Fed: FE State: CT Other: -	Occurs in annual grassland habitat (<1500 feet) and occasionally in grassy understory of valley-foothill hardwood habitats where lowland aquatic sites are available for breeding. Breeds primarily in vernal pools.	None. The Study Area contains only one aquatic feature - a detention basin with dense willow cover which is not suitable habitat for the salamander.
Western spadefoot *Spea hammondii*	Fed: - State: CSC Other: -	Found primarily in grassland habitats, but may occur in valley and foothill woodlands. Requires vernal pools, seasonal wetlands, or stock ponds for breeding and egg laying. Prefers more turbid pools for predator avoidance.	None.The Study Area contains only one aquatic feature - a detention basin with dense willow cover which is not suitable habitat for the spadefoot.
Reptiles			
Western pond turtle *Actinemys marmorata*	Fed: - State: - Other: SSC	Inhabits ponds, marshes, rivers, streams, and irrigation ditches with aquatic vegetation. Needs suitable basking sites and upland habitat for egg laying.	None. The Study Area does not contain permanent or nearly permanent water including ponds and slow-moving streams.
Giant garter snake *Thamnophis gigas*	Fed: FT State: CT Other: -	Primarily associated with marshes and sloughs, less with slow-moving creeks, and absent from larger rivers. Nocturnal retreats include mammal burrows and crevices. During the day, basks on emergent vegetation such as cattails and tules.	None. The Study Area lacks suitable aquatic features that support breeding and foraging such as marshes, sloughs and irrigation ditches.

Appendix C

Davis Family Warehouses - Potentially-occurring Special Status Animals

	Status*	Habitat	Probability on Project Site
Birds			
White-tailed kite *Elanus leucurus*	Fed: - State: - Other: CFP	Found in lower foothills and valley margins with scattered oaks and along river bottomlands or marshes adjacent to oak woodlands. Nests in trees with dense tops.	Possible. Tall trees found in the Study Area provide suitable nesting habitat for the kite.
Swainson's hawk *Buteo swainsoni*	Fed: - State: CT Other: *	Breeds in open areas with scattered trees; prefers riparian and sparse oak woodland habitats. Requires nearby grasslands, grain fields, or alfalfa for foraging. Rare breeding species in Central Valley.	Unlikely for nesting. A few tall trees on or near the Study Area could provide suitable nesting habitat. The Study Area provides suitable foraging habitat.
Golden eagle *Aquila chrysaetos*	Fed: - State: CFP Other: -	Found in rolling foothill grassland with scattered trees. Nests on cliffs and in large trees in open areas.	None. The Study Area lack suitable nest trees.
California black rail *Laterallus jamaicensis coturniculus*	Fed: - State: CT Other: CFP	Inhabits salt, fresh, and brackish water marshes with little daily and/or annual water fluctuations. In freshwater habitats, preference is for dense bulrush and cattails. Several scattered populations documented from Butte Co. to southern Nevada Co.	None. The Study Area lacks marsh habitat.
Western yellow-billed cuckoo *Coccyzus americanus occidentalis*	Fed: FT State: CE Other: -	Inhabits riparian forests along the broad, lower floodplains of larger rivers. Nests in thickets of willows and cottonwoods with an understory of blackberry, nettle, or wild grape.	None. The Study Area lacks extensive riparian thickets or forests with dense, low-level or understory foliage which abut slow-moving watercourses, backwaters or seeps.
Burrowing owl *Athene cunicularia*	Fed: - State: - Other: SSC	Found in annual grasslands. Nests in burrows dug by small mammals, primarily ground squirrels.	Possible. The Study Area provides suitable breeding and foraging habitat.
Least Bell's vireo *Vireo bellii pusillus*	Fed: FE State: CE Other:	Rare, local summer resident below 2000 ft in low, dense foothill riparian habitat. Inhabits low, dense growth along water. Typically associated with willows, cottonwoods, and blackberry thickets.	None. The Study Area lacks low, dense riparian growth along water or along dry parts of intermittent streams. The vireo is typically associated with willow, cottonwood, *Baccharis* sp., or wild blackberry,
Purple martin *Progne subis*	Fed: - State: CSC Other: *	Breeds in riparian woodland, oak woodland, open coniferous forests. Secondary cavity nester. Requires nest sites close to open foraging areas of water or land.	None. The Study Area lacks old- growth, multi-layered, open forest and woodland with snags in the breeding season.

Appendix C

Davis Family Warehouses - Potentially-occurring Special Status Animals

	Status*	Habitat	Probability on Project Site
Bank swallow *Riparia riparia*	Fed: - State: CT Other: *	Colonial nester near riparian and other lowland habitats. Requires vertical banks or cliffs with fine-textured, sandy soils near streams, rivers, and lakes.	None. The Study Area lacks fine-textured or sandy banks or cliffs near water for burrows.
Song Sparrow - Modesto population *Melospiza melodia*	Fed: State: CSC Other: -	Occurs in expansive freshwater wetlands and early stage riparian thickets of Sacramento Valley. Prefers emergent freshwater marshes dominated by tules, cattails, and willow thickets.	None. The Study Area lacks expansive freshwater marsh habitat.
Tricolored blackbird *Agelaius tricolor*	Fed: - State: CT Other: SSC	Colonial nester in dense cattails, tules, brambles or other dense vegetation. Requires open water, dense vegetation, and open grassy areas for foraging.	None. The Study Area lacks suitable nesting habitat. If an active colony is in the region, the site may provide foraging habitat.
Yellow-headed blackbird *Xanthocephalus xanthocephalus*	Fed: - State: SSC Other: *	Typically found in fresh and saltwater marshland with emergent vegetation.	None. The Study Area lacks suitable nesting habitat including dense emergent wetlands of cattails, tules, other plants. Nesting colonies are often along the border of lakes or ponds.
Mammals			
American badger *Taxidea taxus*	Fed: - State: - Other: SSC	Occurs in dry, open soils in herbaceous, shrub, and forest habitats. Needs friable, uncultivated soil. Preys on rodents.	Possible. The Study area provides suitable habitat for burrows which are characterized by dry, often sandy soil, usually in areas with sparse overstory cover.

Reevaluation of the Biological Resources Assessment and Aquatic Resources Delineation

June 18, 2026

Davis Family
c/o Gary Graves
Sierra View General Contractors
4202 Douglas Blvd, Suite 100
Granite Bay, CA 95746

Subject: **Reevaluation of site and review of recent Biological and Aquatic Resources reports for the ±61-acre Davis Family Warehouses Study Area**
City of Sacramento, Sacramento County, California

Dear Gary:

At your request, I have reviewed our recent work on the proposed Davis Family Warehouses project located at 3901 Florin Perkins Road in the City of Sacramento. The two reports are:

- Biological Resources Assessment for the ±61-acre Davis Family Warehouses Study Area
- Aquatic Resource Delineation for the ±61-acre Davis Family Warehouses Study Area

Both of these reports were published in January 2025. Fieldwork for both reports was conducted in October 2023 and February 2024.

The purpose of this evaluation is to determine if any changes have been made to the property that may alter the biological or aquatic evaluations and if any new information is known since these reports were written.

For this evaluation, the following information was gathered:

- Discussions with the project team to determine if any notable changes have been made to the project footprint or if the site has been altered in the past year in any way;
- Query of the California Natural Diversity Database to determine if any new species occurrences have been added to the project site or nearby area;
- An examination of more recent aerial photography.

Findings

The project is moving through the CEQA process and minor refinements are being made to the project but generally, the project footprint remains the same. The property has been managed for weed abatement as it has been for years, primarily through mowing and periodic disking, and establishing fire breaks at the perimeter. No large scale grading has occurred. The site is largely the same as it has been for several years.

No new CNDDB occurrences were detected from the query. Special status species known from the area are primarily aquatic species occurring in vernal pools or waterways. The habitat throughout the property is ruderal grassland and has a very low probability of supporting rare species. The site is good foraging habitat for birds of prey and suitable burrowing owl habitat is present. No notable changes have occurred and the two reports are still current.

Recommendations

Pre construction bird nesting surveys should be conducted just prior to project mobilization. Although there are few trees in the study area (outside of the detention basin), the site could support burrowing owls.

If any additional information is needed, please call me anytime at (530) 888-0130.

Sincerely,

Jeff Glazner
Principal Biologist

AQUATIC RESOURCE DELINEATION
FOR THE
±61-ACRE DAVIS FAMILY WAREHOUSES STUDY AREA

INTRODUCTION

Project Location

Salix Consulting, Inc. (Salix) conducted a Biological Resources Assessment for the 61-acre Davis Family Warehouses Study Area in the City of Sacramento near the Florin Perkins Public Disposal Site and Resource Recovery Facility (Study Area). The Study Area is situated in Section 24, Township 8 North and Range 5 East on the Sacramento East, California 7.5-minute USGS topographic quadrangle (Figure 1). The approximate coordinates for the center of study area are 38°31'59.61"N and 121°23'09.52"W. The address of the Study Area is 3901 Florin Perkins Road and is located east of Florin Perkins Road south of State Route 16 (Figure 2). The Study Area is in the jurisdiction of the City of Sacramento.

Setting

The undeveloped Study Area is mostly flat with an elevation range of approximately 45'-50' for most of the site. In the northwest portion of the Study Area, the site drops off into an old surface mining pit where elevations are as low as sea level. A small amount of fill rises 7'-8' above the site in the northwest portion of the Study Area.

The Study Area is dominated by grasslands with just a small number of trees associated with landscape screening adjacent to Florin Perkins Road and the eastern border. The Study Area is surrounded by light and heavy industrial land uses to the north, south and west. Reclaimed agricultural land is on the eastern border. The land uses to the north include the Florin Perkins Resource Recovery Facility that emphasizes construction and demolition debris, landscape materials and residential household items. The adjacent parcel immediately to the north is the closed Florin Perkins Landfill. The land use and zoning designations allow for light industrial uses with specific requirements that address the concentration of solid waste facilities in the area.

AERIAL MAP

Davis Family Warehouses

City of Sacramento, CA

METHODOLOGY

Aquatic resources were evaluated and mapped during October 20, 2023 and February 10, 2024 site visits. An aerial photo was captured by a UAV on October 20 and again on February 10, 2024. These aerial photos were used for the preparation of this report. The delineation was conducted according to the 1987 U.S. Army Corps of Engineers Manual (Environmental Laboratory 1987) as amended by the Arid West Regional Supplement (USACE 2008). Representative ground photographs were taken throughout the Study Area. Three-parameter data sheets were filled out at six locations as indicated on the Aquatic Resources Delineation Map and are presented in Appendix A.

Information on soils was obtained from the U.S. Department of Agriculture – National Resource Conservation Service's online Web Soil Survey (NRCS 2024). In the field, a Munsell Color chart was used to determine moist soil colors. Plants observed during the field evaluations were recorded and are presented in Appendix B, along with the scientific name and aquatic resource status of each plant species. Where an observed plant species has an aquatic resource indicator status (not UPL), plant nomenclature follows U.S. Army Corps of Engineers (USACE 2022). Otherwise, species names are aligned with the *The Jepson Manual* (Baldwin et.al. 2012).

Aquatic resource mapping was recorded using a Trimble Catalyst DA2 submeter GPS and processed using Arc GIS software to create an Aquatic Resources Delineation Map. The U.S. Army Corps of Engineers Operations and Maintenance Business Information Link (OMBIL) Regulatory Module (ORM) aquatic resources spreadsheet is included in Appendix C.

FINDINGS

Soils

The Study Area has four soil types, 1) San Joaquin-Urban land complex, 0 to 2 percent slopes (219), 2) Urban Land (227), 3) Xerarents-San Joaquin complex, 0 to 1 percent slopes (238) and 4) Pits (190).

San Joaquin-Urban land complex, 0 to 2 percent slopes (219)

The San Joaquin component makes up 50 percent of the map unit with the Urban Land soil type comprising 15 percent. Slopes are 0 to 2 percent. The San Joaquin component is found on terraces. The parent material consists of alluvium derived from granite. The depth to a duripan restrictive layer is 28-to 54 inches. The natural drainage class is moderately well drained. Water movement in the most restrictive layer is very low. Available water to a depth of 60 inches (or restricted depth) is moderate. Nonirrigated land capability classification is 6e. Irrigated land capability classification is 6e. This soil does not meet hydric criteria.

Urban Land (227)

This soil type represents areas with 90 percent or more of impervious surfaces.

Xerarents-San Joaquin complex, 0 to 1 percent slopes (238)

This soil complex is comprised of xerarents and similar soils (65 percent) and San Joaquin and similar soils (20 percent) with other minor components (15 percent). These soils are formed in remnants of dry alluvial fans and terraces. The parent material is derived from granite. They are found on flat properties with 0 to 1 percent slopes. They are moderately well drained to well drained. The depth to a restrictive feature is more than 80 inches and a duripan may be present at a depth of 35-60 inches. The depth to the water table is also more than 80 inches. These soils do not flood or pond.

Pits (190)

The soil type Pits represents areas that were mined for gravelly alluvium.

Climate

The Study Area has a Mediterranean climate with cool, wet winters and hot, dry summers. The annual average high temperature is about 71°, with the hottest months being July and August, averaging 93° and 91°, respectively. The low temperatures for July and August average 58°. The coolest months are December and January, averaging a high temperature of 55° and a low temperature of 33° each month. Annual precipitation averages about 38 inches, nearly all of which occurs as rainfall between October and May. The wettest months are December, January, and February, each averaging more than 6 inches of rainfall (Western Regional Climate Center).

Hydrology

The site is located in the Upper Morrison Creek – HUC12 (180201630402) watershed which is part of the Lower Sacramento HUC8 (18020109) watershed. The hydrology of the region is highly modified due to urban storm drain development and surface mining activities. Water in the Study Area generally drains to the large pits in the northwest area of the site. Water along the southern edge of the property drains to the industrial park and its storm drain system to the south. There are no major surface drainages in or adjacent to the Study Area.

SOILS MAP

Davis Family Warehouses

City of Sacramento, CA

Biological Communities

The Study Area is an expansive weedy grassland area. A small amount of riparian and wetland vegetation is associated with a detention basin constructed in the northwest portion of the Study Area.

Five land cover types have been mapped: Valley Grassland (ruderal), Mixed Riparian Scrub, Seasonal Wetland and Disturbed (mostly dirt roads). These communities are summarized in Table 1 below. A description of each of the land cover types is included below. Representative aerial and ground photos are presented in Figures 4a through 4e. A list of plants observed is included in Appendix B.

Table 1.
Biological Communities/Land Cover Types
Within the Davis Family Warehouses Study Area

Biological Community	Acreage (±)
Valley Grassland (ruderal)	56.0
Mixed Riparian Scrub	0.7
Seasonal Wetland	0.5
Landscaped	0.6
Disturbed	3.2
Total	**±61**

Valley Grassland (Ruderal)

Mos of the Study Area is comprised of the Valley Grassland land cover. This is a disturbed area that has been disked and used for outdoor material storage and consequently the grassland is ruderal in character (i.e., vegetation growing where the natural ground cover has been disturbed by human activities). Common herbaceous species in this area include, wild oat (*Avena fatua*), ripgut grass *(Bromus diandrus*), ryegrass (*Festuca perennis*), tarweed (*Holocarpha virgata*), prickly lettuce (*Lactuca seriola*), yellow starthistle (*Centaurea solstitialis*), Spanish clover (*Acmispon americanus*), soft chess (*Bromus hordeaceus*), medusahead (*Elymus caput-medusae*), and wall barley (*Hordeum murinum*).

Mixed Riparian Scrub and Seasonal Wetland

Two aquatic resource types occur on the property A detention basin in the northwest portion of the Study Area and an adjacent seasonal wetland in the same location. The riparian portion of the wetland is a lower terrace that collects water and holds it for many months a year. Fremont cottonwood (*Populus fremontii*), narrow-leaved willow (*Salix exigua*) and red willow (*Salix laevigata*) are the primary species. The lower surface/basin bottom is rectangular in shape and excavated about two-three feet below the adjacent grade. The canopy is very dense and herbaceous species on the basin bottom is minimal.

An area on the higher terrace adjacent to the rectangular excavation is mapped as a seasonal wetland. It includes several wetland herbaceous species including tall flatsedge

(*Cyperus eragrostis*), western goldenrod (*Euthamia occidentalis*), toad rush (*Juncus bufonius*), and bird's foot trefoil (*Lotus corniculatus*).

Landscaped

The Landscaped land cover (0.6 acre) is a narrow strip of land between the edge of the mining pit perimeter road to the east and Florin Perkins Road to the west. The landscaping appears to have been established to screen the surface mining and reclamation activities as it is an unkept dense screen between the road and the mining operation. Ornamental and native plants found in this corridor include coyote bush (*Baccharis pilularis*), Himalayan blackberry (*Rubus armeniacus*), Peruvian pepper tree (*Schinus molle*), valley oak (*Quercus lobata*), olive (*Olea europa*), and Chinese tallowtree *(Triadica sebifera)*.

Disturbed

Approximately 3.2 acres of the Study Area is mapped as Disturbed. These areas are mostly unpaved roads that are mostly bare earth with scattered herbaceous weeds.

Aquatic Resources

A detention basin is located at the bottom of the reclaimed mining pit in the northwest portion of the Study Area. Rainfall and stormwater flow into this basin. Due to its topographic setting, this detention area is an endorheic basin in that it retains water and has no outflow to other water bodies. The detention basin is seasonally saturated with shallow water and the duration of saturation has established conditions that support hydrophytic plants. The presence of surface water ends shortly after the end of the rainy season in late spring.

Two wetlands are found in this basin, a Mixed Riparian Scrub (MRS-1) and a Seasonal Wetland (SW-1). No other aquatic resources are found within the Study Area. Figure 5 is the aquatic resource delineation map of these two aquatic resources.

Mixed Riparian Scrub (MRS-1)

MRS-1 is 0.738 acre in area. This aquatic resource has a dense woody component with minimal herbaceous species. The woody component is almost entirely willow and cottonwood

Seasonal Wetland (SW-1)

An adjacent portion of the same detention basin is not vegetated with riparian species and is mapped as a Seasonal Wetland (0.487 acre). This area includes several herbaceous species commonly associated with wetlands (see list above).

Oblique aerial photos of the property are presented in Figures 4a and 4b and ground photos are presented in Figures 4c through 4e. A list of plants observed with their wetland status is included in Appendix B.

Depth (inches)	Matrix Color (moist)	Matrix %	Redox Features Color (moist)	Redox Features %	Redox Features Type[1]	Redox Features Loc[2]	Texture	Remarks
0-2	7.5YR4/4	100					Silty loam	
2-10	10YR5/3	100					Sandy loa	

[1]Type: C=Concentration, D=Depletion, RM=Reduced Matrix, CS=Covered or Coated Sand Grains. [2]Location: PL=Pore Lining, M=Matrix.

Hydric Soil Indicators: (Applicable to all LRRs, unless otherwise noted.)

- ___ Histosol (A1)
- ___ Histic Epipedon (A2)
- ___ Black Histic (A3)
- ___ Hydrogen Sulfide (A4)
- ___ Stratified Layers (A5) (**LRR C**)
- ___ 1 cm Muck (A9) (**LRR D**)
- ___ Depleted Below Dark Surface (A11)
- ___ Thick Dark Surface (A12)
- ___ Sandy Mucky Mineral (S1)
- ___ Sandy Gleyed Matrix (S4)
- ___ Sandy Redox (S5)
- ___ Stripped Matrix (S6)
- ___ Loamy Mucky Mineral (F1)
- ___ Loamy Gleyed Matrix (F2)
- ___ Depleted Matrix (F3)
- ___ Redox Dark Surface (F6)
- ___ Depleted Dark Surface (F7)
- ___ Redox Depressions (F8)
- ___ Vernal Pools (F9)

Indicators for Problematic Hydric Soils[3]:

- ___ 1 cm Muck (A9) (**LRR C**)
- ___ 2 cm Muck (A10) (**LRR B**)
- ___ Reduced Vertic (F18)
- ___ Red Parent Material (TF2)
- ✔ Other (Explain in Remarks)

[3]Indicators of hydrophytic vegetation and wetland hydrology must be present, unless disturbed or problematic.

Restrictive Layer (if present):

Type: _____

Depth (inches): _____

Hydric Soil Present? Yes ✔ No ___

Remarks:

Standing water- no soil data taken

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1) (**Nonriverine**)
- ___ Sediment Deposits (B2) (**Nonriverine**)
- ___ Drift Deposits (B3) (**Nonriverine**)
- ___ Surface Soil Cracks (B6)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Water-Stained Leaves (B9)
- ___ Salt Crust (B11)
- ___ Biotic Crust (B12)
- ___ Aquatic Invertebrates (B13)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres along Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (2 or more required)

- ___ Water Marks (B1) (**Riverine**)
- ___ Sediment Deposits (B2) (**Riverine**)
- ___ Drift Deposits (B3) (**Riverine**)
- ___ Drainage Patterns (B10)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Shallow Aquitard (D3)
- ___ FAC-Neutral Test (D5)

Field Observations:

Surface Water Present? Yes ✔ No ___ Depth (inches): 6

Water Table Present? Yes ___ No ___ Depth (inches): ___

Saturation Present? (includes capillary fringe) Yes ✔ No ___ Depth (inches): ___

Wetland Hydrology Present? Yes ✔ No ___

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

Lowest landform in basin and collection area for water entering the larger basin.

WETLAND DETERMINATION DATA FORM – Arid West Region

Project/Site: Davis Family Warehouses City/County: Sacramento/Sacramento Sampling Date: 2/10/24

Applicant/Owner: Davis Family State: CA Sampling Point: 02

Investigator(s): J. Glazner Section, Township, Range: S24 T08N R09E

Landform (hillslope, terrace, etc.): Terrace Local relief (concave, convex, none): None Slope (%): 0

Subregion (LRR): LRRC Lat: 38.536095 Long: -121.388757 Datum:

Soil Map Unit Name: San Joaquin-Urban land complex, 0 to 2 percent slopes NWI classification:

Are climatic / hydrologic conditions on the site typical for this time of year? Yes ✔ No _____ (If no, explain in Remarks.)

Are Vegetation _____, Soil _____, or Hydrology _____ significantly disturbed? Are "Normal Circumstances" present? Yes ✔ No _____

Are Vegetation _____, Soil _____, or Hydrology _____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ✔	No _____	**Is the Sampled Area within a Wetland?** Yes ✔ No _____
Hydric Soil Present?	Yes ✔	No _____	
Wetland Hydrology Present?	Yes ✔	No _____	

Remarks:

Seasonal wetland adjacent to deeper basin that supports dense riparian vegetation.

VEGETATION – Use scientific names of plants.

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

On basin bottom but lacks evidence of prolonged ponding. Adjacent to deeper excavation that holds water and is an aquatic resource.

Appendix B.
Plant Species Observed

Appendix B: Davis Family Warehouses - Plants Observed 10/23 and 2/24

Taxon	Common Name	Wetland Status
Achyrachaena mollis	Blow-wives	FAC
Acmispon americanus	Spanish lotus	UPL
Aira caryophyllea	Silver European hairgrass	FACU
Amsinckia menziesii	Rancher's fireweed	UPL
Asclepias fascicularis	Narrow-leaf milkweed	FAC
Avena fatua	Wild oat	UPL
Baccharis pilularis	Coyote brush	UPL
Brassica nigra	Black mustard	UPL
Bromus diandrus	Ripgut grass	UPL
Bromus hordeaceus	Soft chess	FACU
Calandrinia menziesii	Red maids	FACU
Carduus pycnocephalus	Italian thistle	UPL
Castilleja attenuata	Valley tassels	UPL
Centaurea solstitialis	Yellow starthistle	UPL
Centromadia fitchii	Fitch's spikeweed	FACU
Chenopodium album	White pigweed	FACU
Cichorium intybus	Chicory	FACU
Croton setiger	Turkey mullein	UPL
Cynodon dactylon	Bermudagrass	FACU
Cyperus eragrostis	Tall flatsedge	FACW
Dittrichia graveolens	Stinkwort	UPL
Elymus caput-medusae	Medusahead	UPL
Epilobium brachycarpum	Summer cottonweed	UPL
Erodium botrys	Broad-leaf filaree	FACU
Erodium cicutarium	Red-stem filaree	UPL
Eschscholzia californica	California poppy	UPL
Euthamia occidentalis	Western goldenrod	FACW
Festuca myuros	Rattail sixweeks grass	FACU
Festuca perennis	Italian ryegrass	FAC
Ficus carica	Common fig	FACU
Foeniculum vulgare	Sweet fennel	UPL
Geranium dissectum	Cut-leaf geranium	UPL
Geranium molle	Dove's-foot geranium	UPL
Helminthotheca echioides	Bristly ox-tongue	FAC
Heterotheca grandiflora	Telegraph weed	UPL
Hirschfeldia incana	Short-podded mustard	UPL
Holocarpha virgata subsp. virgata	Virgate tarweed	UPL
Hordeum marinum subsp. gussoneanum	Mediterranean barley	FAC

Taxon	Common Name	Wetland Status
Hordeum murinum	Wall barley	FACU
Hypericum perforatum subsp. perforatum	Klamathweed	FACU
Hypochaeris glabra	Smooth cat's-ear	UPL
Juncus bufonius	Toad rush	FACW
Lactuca serriola	Prickly lettuce	FACU
Lamium amplexicaule	Deadnettle	UPL
Leontodon saxatilis	Long-beaked hawkbit	FACU
Lepidium latifolium	Broadleaf pepperweed	FAC
Lepidium strictum	Peppergrass	UPL
Logfia gallica	Narrowleaf cottonrose	UPL
Lotus corniculatus	Bird's-foot trefoil	FAC
Lupinus bicolor	Miniature lupine	UPL
Lysimachia arvensis	Scarlet pimpernel	FAC
Lythrum hyssopifolia	Hyssop loosestrife	OBL
Malva parviflora	Cheeseweed	UPL
Marrubium vulgare	White horehound	FACU
Medicago polymorpha	California burclover	FACU
Melilotus officinalis	Yellow sweetclover	FACU
Olea europaea	Olive	UPL
Paspalum dilatatum	Dallis grass	FAC
Phalaris aquatica	Harding grass	FACU
Plagiobothrys nothofulvus	Rusty popcornflower	FAC
Plantago lanceolata	English plantain	FAC
Platanus acerfolia	Common cudonia	UPL
Poa annua	Annual bluegrass	FAC
Polygonum aviculare	Common knotweed	FAC
Populus fremontii	Fremont cottonwood	FAC
Punica granatum	Pomegranate	UPL
Quercus lobata	Valley oak	FACU
Quercus wislizeni	Interior live oak	UPL
Raphanus sativus	Wild radish	UPL
Rubus armeniacus	Himalayan blackberry	FAC
Rumex acetosella	Sheep sorrel	FACU
Rumex crispus	Curly dock	FAC
Salix exigua	Narrow-leaved willow	FACW
Salix laevigata	Red willow	FACW
Salsola tragus	Russian-thistle	FACU
Schinus molle	Peruvian pepper tree	-
Senecio vulgaris	Common groundsel	FACU
Silene gallica	Windmill-pink	UPL

Taxon	Common Name	Wetland Status
Silybum marianum	Milk thistle	UPL
Sisymbrium irio	London rocket	UPL
Sonchus asper subsp. asper	Prickly sow-thistle	FAC
Sonchus oleraceus	Common sow-thistle	UPL
Spergularia rubra	Ruby sand-spurrey	FAC
Stellaria media	Common chickweed	FACU
Triadica sebifera	Chinese tallow tree	FAC
Trichostema lanceolatum	Vinegar weed	FACU
Trifolium dubium	Little hop clover	UPL
Trifolium hirtum	Rose clover	UPL
Triphysaria eriantha	Butter-and-eggs	UPL
Triteleia hyacinthina	White triteleia	FAC
Ulmus americana	American elm	FAC
Verbascum thapsus	Woolly mullein	FACU
Vicia villosa	Winter vetch	UPL

1.0 INTRODUCTION

We have completed a geotechnical engineering study for the proposed warehouse buildings to be constructed northeast of Florin Perkins Road and 23rd Avenue in Sacramento, California. The purposes of our work have been to explore the existing site, soil and groundwater conditions, and to provide geotechnical engineering conclusions and recommendations for the design and construction of the proposed construction and associated improvements.

1.1 Scope of Work

Our scope of work included the following tasks:

1. a site reconnaissance;
2. review of previous geotechnical reports prepared by our firm in the vicinity of the project area;
3. review of United States Geological Survey (USGS) topographic map, historical aerials, and available groundwater information relevant to the site;
4. subsurface exploration, including 13 soil borings and 14 test pits to depths ranging from approximately 2½ to 21½ feet below the ground surface;
5. performance of a double-ring infiltrometer test;
6. laboratory testing of selected soil samples;
7. engineering analyses; and,
8. preparation of this report.

1.2 Project Description

We understand the project will consist of the design and construction of several single-story, slab-on-grade warehouse buildings ranging from approximate 90,000 to 200,000 square feet in building area. Associated improvements are anticipated to consist of exterior concrete flatwork, asphalt concrete and/or concrete pavements, pervious asphalt concrete and /or concrete pavements, and underground utilities. A yard and/or additional trailer storage is being considered at the site, just north and east of the warehouse buildings and will be covered in a separate cover.

1.3 Figures and Attachments

This report contains a Vicinity Map as Figure 1, a Site Plan showing the approximate boring, test pit, and infiltration test locations as Figure 2, the Logs of Soil Borings as Figures 3 through 15, and the Logs of Test Pits as Figures 16 through 29. An explanation of the symbols and classification system used on the logs is contained in Figure 30. Appendix A contains information of a general nature regarding project concepts, exploratory methods used during the field exploration phase of our investigation, and laboratory test results.

2.0 FINDINGS

2.1 Site Description

The subject property is located northeast of Florin Perkins Road and 23rd Avenue in Sacramento, California (Figure 1). The property encompasses two parcels identified as Sacramento County Assessor Parcel Numbers 061-0150-049-0000 and 061-0150-045-0000 and portions of parcel number 061-0150-042-0000. The site is bounded to the north by the existing Florin Perkins Public Disposal Site; to the south by existing commercial development, to the west by Florin Perkins Road, beyond which is also commercial development; and to the east by vacant undeveloped land.

At the time of our field explorations on April 19 and 20, 2023, the site was mostly undeveloped and covered in a light to moderate growth of vegetation. A soil stockpile was observed on the western end of the site while a water pump station was observed on the eastern end. The southern portion of the site was bordered by chain fencing. Several monitoring wells and overhead utilities were observed along the southern perimeter of the site.

Surface elevations across the site is approximately +45 feet in reference to the North American Vertical Datum of 1988 (NAVD88), based on the United States Geologic Survey (USGS) topographic data shown on the *7.5-Minute Map of the Sacramento East Quadrangle, California*, dated 2018.

2.2 Historical Aerial Photograph Review

We reviewed historical aerial photographs of the site from Google Earth Pro website and the website HistoricalAerials.com. Photographs were available from the years 1947, 1957, 1964, 1966, 1984, 1993,

1998, 1999, 2002, 2005, 2009, 2010, 2012, 2014, 2016, and every year from 2018 through 2022. Our historical aerial review indicates the site has been used for agricultural purposes since at least 1947. Several structures are observed near the southwestern end of the property in the photograph taken of 1947. The structures are no longer visible in a photograph taken in 1998. Construction of the Southern Fill Area appears to have begun between 2016 and 2018. Since 2018 until the time of our field explorations, the site has essentially remained the same beside seasonal changes in vegetation.

2.3 Site Geology

The subject site is located within the Great Valley geomorphic province of California. The Great Valley geomorphic province is typified by thick sequences of sedimentary materials deposited in an elongate trough located between the Sierra Nevada and Coast Ranges geomorphic provinces.

Based on a review of the *Preliminary Geologic Map of the Sacramento 30' x 60' Quadrangle*, *California* dated 2011, prepared by the California Geological Survey, reveals the site to be underlain by the Riverbank Formation (Qr_2) which generally consists of sand with gravel and some interbedded fine sand and silt. This is generally consistent with the soil conditions observed during our field exploration.

2.4 Soil Conditions

On April 19 and 20, 2023, 13 exploratory borings (D1 through D13) and 14 test pits (TP1 through TP14) were performed at the project site. An infiltrometer test was also performed on April 20, 2023. The approximate locations are shown in the attached Site Plan (Figure 2).

The near-surface soils encountered at the soil boring and test pit locations indicate the site is generally consist of sandy lean to fat clays and/or silty sands underlain by interbedded layers of variably cemented silty sands and/or sandy silts to the explored depth of 21½ feet below ground surface (bgs). At locations D1, D5, D7, and TP4, we encountered sandy and clayey fill material with miscellaneous debris ranging from about three to 18 feet bgs.

The fill material contains debris such as rebar, asphalt, and concrete fragments. Although debris was encountered within the fill, based on the relatively dense nature of the fill materials, the existing fill was likely placed as engineered fill. However, further evaluation of the fill may be required during construction to verify the existing fill is suitable for support of the proposed improvements.

For soil conditions at a particular location, refer to the attached Logs of Test Pits and Soil Borings shown in Figures 3 through 29.

2.5 Groundwater

Groundwater was not encountered within the test pits or borings performed on April 19 and 20, 2023 to the explored depths of about 2½ to 21½ feet bgs.

To supplement our study, we reviewed available groundwater elevation data obtained from a California Department of Water Resources (DWR) monitoring well as identified as State Well Number 07N05E10M001M, located about 1½-mile southeast of the site. The ground surface elevation at the well is +52 NAVD88, which is about seven feet higher than the subject site. Groundwater measurements obtained from the well indicate a "high" groundwater elevation of -10 feet NAVD88 (about 62 feet bgs at the well) occurred in March 26, 1969, and a "low" groundwater elevation of approximately -37 feet (about 89 feet below bgs at the well) occurred in October 9, 1991.

Based on our experience in the area, permanent groundwater is anticipated to be at least 50 feet below the existing ground surface.

2.6 Infiltration Test Results

On April 20, 2023, representatives from our office performed a double-ring infiltrometer test (I1) at the location shown on Figure 2. The double-ring infiltrometer test was performed in general accordance with American Society of Testing and Materials (ASTM) D3385 to determine the infiltration rate of the near-surface subgrade soils. The test was performed at about 1 foot below existing grade and the testing rings were pushed about six inches into the exposed soils. The rings were then filled with clean, potable water. The soils within the rings were saturated for up to approximately four hours. Water level measurements were obtained from both rings at 30-minute intervals.

TABLE 1: INFILTRATION TEST I1

Elapsed Time (min)	Inner Ring		Outer Ring	
	Reading (inch)	Flow (inch/hour)	Reading (inch)	Flow (inch/hour)
0	13.25	--	12.88	--
30	13.13	0.24	12.50	0.76

TABLE 1: INFILTRATION TEST I1				
Elapsed Time (min)	Inner Ring		Outer Ring	
	Reading (inch)	Flow (inch/hour)	Reading (inch)	Flow (inch/hour)
60	12.88	0.50	12.13	0.74
90	12.50	0.76	12.00	0.26
120	12.38	0.24	11.88	0.24
150	12.25	0.26	11.63	0.50
180	12.00	0.50	11.50	0.26
210	11.88	0.24	11.25	0.50
240	11.75	0.26	11.13	0.24

The near-surface soils encountered at the infiltration test location generally consists of sandy lean clay. Infiltration rates of about ¼- to ¾ -inch per hour were obtained during the tests.

Based on the infiltration testing, our experience, and the soil conditions encountered at the infiltration test locations and the vicinity, we recommend the proposed near-surface subgrade soils be considered relatively impervious for designs using infiltration rates.

3.0 CONCLUSIONS

3.1 2022 CBC and ASCE 7-16 Seismic Design Parameters

The 2022 *California Building Code* (CBC) references the American Society of Civil Engineers (ASCE) Standard 7-16 for seismic design. The site is mapped as being underlain by the Riverbank Formation. The shear wave velocity attributable to the Riverbank Formation by Wills, et al (2000)[1] indicates it can be characterized as Site Class C in the Sacramento area. Based on the site geology and our experience in the local area, in our opinion the site can be designated as Site Class C in determining seismic design forces for this project.

[1] Wills, C.J., Petersen, M., and six others, 2000, A Site-Conditions Map for California Based on Geology and Shear-Wave Velocity, Bulletin of the Seismological Society of America, 90, pp. S187-S208.

The seismic design parameters provided in Table 1 were based on the latitude and longitude for the central portion of the site using the web interface developed by the *Structural Engineers Association of California* (SEAOC) and *California Department of Health Care Access and Information* (HCAi).

3.2 Liquefaction Potential

Based upon the results of our subsurface exploration, the known site geologic, seismologic, groundwater and soil conditions, it is our opinion that the potential for liquefaction occurring at this site is very low.

3.3 Soil Expansion Potential

Laboratory tests performed on representative near surface clay samples revealed moderate to high plasticity when tested in accordance with the ASTM International D4318 test method (see Figure A2). Additional laboratory testing of soils collected at the test pit locations revealed the near-surface clay soils possesses “very low” to “high” expansion potential when testing in accordance with ASTM D4829 test method (see Figures A3 and A6).

Based on these test results, the surface and near-surface clay soils are considered capable of exerting significant expansion pressures on concrete foundations, exterior flatwork, and pavements. Therefore, foundation embedment of at least 24 inches and at least 12 inches of imported, compactable, very low-expansive soils and/or chemical treatment will be required to reduce the impact of expansive soil on foundations and exterior concrete slabs-on-grade, including sidewalks. Additional recommendations regarding subgrade preparation to resist soil expansion pressures on the proposed improvements are provided in this report.

3.4 Bearing Capacity and Building Support

In our opinion, the native soils are capable of supporting the proposed warehouse buildings and associated improvements. Our experience in the area also indicates that engineered fills composed of native soils or approved import soils that are placed and compacted in accordance with general engineering practices will be suitable for support of the proposed improvements.

Existing fill soils were encountered at several borings and test pits across the site. Based on the relatively dense nature of the fill materials, in our opinion the existing fill was likely placed as engineered fill. However, further evaluation of the fill may be required during construction to verify the existing fill is suitable for support of the proposed improvements. Where encountered, unsuitable existing fill should be removed and replaced with engineered fill in accordance with the recommendations of this report.

3.5 Pavement Subgrade Quality

Laboratory tests results indicate the surface and near-surface soil possesses Resistance ("R") values of five to 16 when tested in accordance with California Test 301 (Figures A7 and A8). Based on the laboratory test results and our experience on nearby projects with similar soil types we have selected an

R-value of five for our design. Based on our experience with similar soil conditions in the vicinity of the site, we anticipate lime-treatment of the clay soil can improve its support quality and reduce the required base material thickness for pavement sections. Recommendations regarding lime-treatment of the pavement subgrade soils are provided below and in the Pavement Design section of this report.

Lime-Treatment of Soil

Lime-treatment of soil can be a very effective and economical method to increase the subgrade quality of clayey soils to support pavements; reduce the moisture content of near-saturated soils, enabling construction to proceed during or shortly after the rainy season; and, to reduce the expansive characteristics of clayey soils.

Based on the soil expansion potential and the relatively poor pavement subgrade quality of the on-site near-surface clayey soils, we anticipate lime-treatment of the clayey soils can significantly improve the pavement support quality of the soils and reduce the required thickness of the aggregate base materials for new pavements. Based upon laboratory testing and our experience with clay soil in the vicinity of the site, it is our opinion that pavements supported on native clay soils treated with at least four percent (by dry weight of soil) of lime can be designed using an improved R-value of at least 50.

3.6 Groundwater Conditions and Seasonal Water

Available data indicates the permanent groundwater table is located at a depth of at least 50 feet below the existing ground surface. Therefore, we do not anticipate a permanent groundwater table will be a significant factor in the development of this site. However, saturation of near-surface soils may be encountered from rainfall, surface run-off, irrigation, or seepage from perched groundwater sources. In general, standard sump pit and pumping procedures should be adequate to control localized seepage for shallow excavations, if encountered.

Due to the relatively shallow hardpan soils encountered across the site, grading operations will likely be hampered by high soil moisture contents. In addition, soils excavated during utility trench construction and soils at the bottom of the utility trenches are anticipated to have moisture contents significantly above optimum moisture content. Subgrade soils and excavated soils with high moisture contents will require considerable aeration to reach a moisture content that will permit the specified degree of compaction to be achieved.

3.7 Excavation Conditions

The surface and near-surface soils at the site should be readily excavatable with conventional trenching equipment. However, variably cemented soil (locally referred to as "hardpan") was encountered as shallow as about 2½ feet bgs at the boring and test pit locations. Our experience has shown that larger drill rigs, excavators, and contractors with experience in the area are capable of excavating the soil at the site.

Based on the explorations performed at the site, excavations associated with building foundations, shallow trenches for utilities, and other excavations less than five feet deep associated with the planned construction, should stand vertically for short periods of time (i.e., less than one to two days) required for construction. However saturated, cohesionless, or disturbed soils, if encountered may result in caving or sloughing; therefore, the contractor should be prepared to brace or shore the excavations, if necessary.

Excavations or trenches exceeding five feet in depth that will be entered by workers should be sloped, braced or shored to conform to current California Occupational Safety and Health Administration (Cal/OSHA) requirements. The contractor must provide an adequately constructed and braced shoring system in accordance with federal, state, and local safety regulations for individuals working in an excavation that may expose them to the danger of moving ground.

Temporarily sloped excavations less than 10 feet in depth should be constructed no steeper than two horizontal to one vertical (2H:1V) inclination. Temporary slopes likely will stand at this inclination for the short-term duration of construction, provided significant pockets of loose and/or saturated granular soils are not encountered. Flatter slopes would be required if these conditions are encountered.

Excavated materials should not be stockpiled directly adjacent to an open excavation to prevent surcharge loading of the excavation sidewalls. Excessive truck and equipment traffic should be avoided near excavations. If material is stored or heavy equipment is stationed and/or operated near an excavation, a shoring system must be designed to resist the additional pressure due to the superimposed loads.

3.8 Material Suitability for Engineered Fill Construction

The existing on-site native soils encountered at the boring and test pit locations are considered suitable for use as engineered fill construction, provided these materials do not contain significant quantities of organics, rubble and deleterious debris, and are at a proper moisture content capable of achieving the desired degree of compaction. However, near-surface clays should not be used within the upper 12 inches of the final subgrade within interior and exterior slab-on-grade improvements unless those soils are lime treated as recommended herein. Imported materials, if necessary, should be granular and approved by our office prior to importing the materials to the site.

Existing fill material that contains significantly large quantities of debris and/or organics will be deemed unsuitable for use as engineered fill and should be removed from the site or screened to remove the unsuitable materials.

3.9 Preliminary Soil Corrosion Potential

Three samples of near-surface soil was submitted to Sunland Analytical of Rancho Cordova, California, for testing to determine pH, chloride and sulfate concentrations, and minimum resistivity to help evaluate the potential for corrosive attack upon buried concrete. The results of the corrosivity testing are summarized below in Table 3. Copies of the test reports are presented in Figures A9 through A11.

TABLE 3: SOIL CORROSIVITY TESTING

Analyte	Test Method	Sample Identification		
		TP3 (1.5'-3')	TP5 (0-3')	TP8 (0-2.5')
pH	CA DOT 643 Modified*	6.26	6.41	6.31
Minimum Resistivity	CA DOT 643 Modified*	3,220 Ω-cm	4,020 Ω-cm	1,310 Ω-cm
Chloride	CA DOT 422	2.5 ppm	5.5 ppm	2.6 ppm
Sulfate	CA DOT 417	13.0 ppm	13.9 ppm	22.9 ppm

Notes: * = Small cell method; Ω-cm = Ohm-centimeters; ppm = Parts per million

The California Department of Transportation Corrosion and Structural Concrete Field Investigation Branch, Corrosion Guidelines (Version 3.2, dated May 2021), considers a site to be corrosive to foundation elements if one or more of the following conditions exists for the representative soil and/or water samples taken: has a chloride concentration greater than or equal to 500 ppm, sulfate concentration greater than or equal to 1500 ppm, or the pH is 5.5 or less. However, the soils are slightly acidic with pH values less than 7.

Based on this criterion, the on-site soils tested are not considered corrosive to steel reinforcement properly embedded within Portland cement concrete (PCC).

Table 19.3.1.1 – Exposure Categories and Classes, of American Concrete Institute (ACI) 318-19, Section 19.3 – Concrete Durability Requirements, as referenced in Section 1904.1 of the 2022 CBC, indicates the severity of sulfate exposure for the sample tested is Exposure Class S0 (water-soluble sulfate concentration in contact with concrete is low and injurious sulfate attack is not a concern). The project Structural Engineer should evaluate the requirements of ACI 318-19 and determine their applicability to the site.

Universal Engineering Sciences are not corrosion engineers. Therefore, if it is desired to further define the soil corrosion potential at the site, a Corrosion Engineer should be consulted.

4.0 RECOMMENDATIONS

4.1 General

The recommendations presented below are appropriate for typical construction in the late spring through fall months. The on-site soils likely will be saturated by rainfall in the winter and early spring months and will not be compactable without drying by aeration or chemical treatment to dry the soils. Should the construction schedule require work during wet conditions, additional recommendations can be provided, as conditions dictate.

Site preparation should be accomplished in accordance with the provisions of this report. The Geotechnical Engineer's representative should be present during site grading to evaluate compliance with the above recommendations. The Geotechnical Engineer of Record referenced herein should be

considered the Geotechnical Engineer that is retained to provide geotechnical engineering observation and testing services during construction.

4.2 Site Clearing

Initially, the site should be cleared of significant vegetation, debris, and other deleterious materials to expose undisturbed native soils and/or firm and stable existing fill. The deleterious material should be removed from the site. Following clearing operations, any remaining surface vegetation and organically contaminated topsoil should be removed by stripping. Strippings may be stockpiled for later use or disposed of off-site. Strippings should not be used in general fill construction, but may be used in non-structural areas, provided they are kept at least five feet from structural areas, moisture conditioned and compacted.

Discing of the organics into the surface soils may be a suitable alternate to stripping, depending on the condition and quantity of the organics at the time of grading. The decision to utilize discing in lieu of stripping should be made by the field representative of the Geotechnical Engineer at the time of earthwork construction. Discing operations, if approved, should be observed by the Geotechnical Engineer's representative and be continuous until the organics are adequately mixed into the surface soils to provide a compactable mixture of soil containing minor amounts of organic matter. Pockets or concentrations of organics will not be allowed.

Due to the relatively shallow hardpan soils encountered across the site, grading operations will likely be hampered by high soil moisture contents. In addition, soils excavated during utility trench construction and soils at the bottom of the utility trenches are anticipated to have moisture contents significantly above optimum moisture content. Subgrade soils and excavated soils with high moisture contents will require considerable aeration to reach a moisture content that will permit the specified degree of compaction to be achieved. Aeration may include deep ripping to the top of the hardpan, mixing wetter soils with drier soils onsite, and/or windrows to dry the existing subgrade soils to a compactable moisture content. The contractor should anticipate wet and unstable subgrade soils and the project schedule should allow for adequate drying of the subgrade to achieve compactable moisture contents.

Removal of trees, if any should include rootballs and roots larger than ½-inch in diameter. Adequate removal of debris and roots may require laborers and handpicking to clear the subgrade soils to the satisfaction of the Geotechnical Engineer's on-site representative.

Depressions resulting from clearing operations, as well as any loose, saturated, or organically contaminated soils, if any, as identified by the Geotechnical Engineer's representative, should be cleaned out to expose firm, undisturbed soils and widened, as necessary, to allow access for construction equipment. Depressions should be backfilled with engineered fill in accordance with the recommendations in this report.

4.3 Subgrade Preparation

Following the site clearing operations, surfaces to receive fill and at-grade areas to receive improvements should be scarified to a depth of at least six inches, moisture conditioned to at least the optimum moisture content, and compacted to at least 90 percent relative compaction. Relative compaction should be based on the maximum dry density as determined in accordance with the ASTM D1557 Test Method.

However, if relatively stiff/hard, cemented soils ("hardpan") are exposed, as determined by the Geotechnical Engineer's representative, scarification and recompacted as noted above will not be required.

Compaction of soil subgrades should be achieved using compaction equipment capable of achieving the desired degree of compaction and must be performed in the presence of the Geotechnical Engineer's representative who will evaluate the performance of the subgrade under the compaction loads and identify loose or unstable soil conditions that could require excavation. Difficulty in achieving subgrade compaction or unusual soil instability may be indications of loose soils. Should these conditions exist, the materials should be excavated to check for possible subsurface structures and the excavations backfilled with engineered fill.

The upper 12 inches of final subgrade supporting the building pad should consist of imported, compactable, non-expansive (Expansion Index less than 20) soils, or 12 inches of lime-treated soil as described in the Lime-Treatment Alternative compacted to at least 90 percent relative compaction. Chemical amendment of the clay soils (i.e., lime-treatment) could be considered to reduce the expansion potential of the on-site clays.

Final pavement subgrade processing and compaction should be performed after completion of underground utilities. Pavement subgrades must be stable under construction traffic prior to placement of engineered fill. The upper six inches of untreated or lime-treated pavement subgrade should be

moisture conditioned to at least two percent above optimum moisture content and compacted to at least 95 percent relative compaction regardless of whether final subgrade is achieved by excavation, filling or left at existing grade.

If loose, soft, or saturated soils are encountered during the subgrade preparation operations they should be properly remediated (i.e., scarified and compacted) or excavated to expose firm, undisturbed native materials. Any resulting excavations should be restored to grade with engineered fill meeting the requirements provided in the Engineered Fill section of this report.

Compaction should be performed using a heavy, self-propelled sheepsfoot compactor and must be performed in the presence of a representative of the Geotechnical Engineer who will evaluate the performance of the subgrade under compactive load and identify any loose or unstable soil conditions that could require additional excavation.

Undocumented Fill Removal and Replacement (If Required)

Although existing fill was encountered at the site, the fill appears to be relatively dense and was likely placed as engineered fill. However, undocumented fills may be encountered throughout the site due to previous site usage and/or development. If encountered, undocumented fills are not considered suitable for support of structural improvements and should be excavated to firm, undisturbed native soils, as determined by the Geotechnical Engineer's representative.

Fill depths are anticipated to vary across the site. Therefore, we recommend the contract documents include a unit price per cubic yard for the removal and replacement of undocumented fills.

Excavations and depressions from fill removal should be restored to grade with engineered fill placed in accordance with these recommendations.

4.4 Lime-Treatment Alternative

Based on the clayey near-surface soil conditions at the site, consideration may be given to chemically treating the proposed building pad, pavement, and concrete flatwork subgrade to provide a uniform bearing surface; to reduce the moisture content of near-saturated soils, enabling construction to proceed during or shortly after the rainy season; and, to reduce the expansive characteristics of the clayey soil subgrade.

Based on our experience in the local area, the clay soils encountered at the site are anticipated to react well with the addition of quicklime (high-calcium or dolomitic). If lime-treatment of on-site clay soils is selected for the final soil subgrade beneath concrete slabs and/or pavements, the final soil subgrade elevation should be mixed with lime at a minimum spread rate of at least 4½ pounds of quicklime per square foot of treated soil, at a depth sufficient to produce a compacted lime-treated layer 12 inches thick. Lime should be mixed into the soil, allowed to cure for a period of 12 to 72 hours, remixed, moisture conditioned and compacted. Please note that sandy soils, if encountered, will likely require blending with clayey soils before amendment with quicklime will be effective.

Lime-treatment of clay subgrade soils should be performed in general conformance with Section 24 of the *Caltrans Standard Specifications*, latest edition. Lime-treated soil beneath interior concrete floor slabs should be compacted to at least 90 percent relative compaction at no less than two percent over the optimum moisture content and maintained in that condition until covered by capillary break gravel or aggregate base. Lime-treated soil beneath pavements should be compacted to at least 95 percent relative compaction at no less than two percent above the optimum moisture content and maintained in that condition until aggregate base has been placed. The contractor must use equipment that will provide uniform and complete compaction of the entire lime-treated section.

If the near surface soils are to be lime-treated, the scarification and compaction procedures outlined in the Subgrade Preparation section of this report are not required within the upper 12 inches of the final subgrade, prior to lime-treatment.

4.5 Engineered Fill Construction

The on-site soils are considered suitable for use as engineered fill provided they do not contain significant amounts of deleterious material, rubble, and organic concentrations. Imported fill material ideally should be granular, compactable material with non-plastic fines or the material should be similar to the native soils. Import materials should not contain particles larger than three inches in maximum dimension. The contractor also should provide appropriate documentation for imported fill materials indicating the materials do not contain known contamination and have corrosion characteristics within acceptable limits. The Geotechnical Engineer should approve import material before being transported to the project site.

The fill comprised of native soils should be spread in level layers not exceeding six inches in loose thickness with each lift being thoroughly moisture conditioned to at least two percent above the optimum moisture content and uniformly compacted to at least 90 percent relative compaction.

However, due to potentially significant expansion potential, on-site clay soils should not be used in fills within the upper 12 inches of soil subgrade beneath the interior concrete floor slab, unless the clay soils are lime-treated as described in the Lime-Treatment Alternative section of this report. On-site clay soils also should not be used as backfill for any retaining structures, if any.

We recommend the Geotechnical Engineer's representative be present on a regular basis during all earthwork operations to observe and test the engineered fill and to verify compliance with the recommendations of this report and the project plans and specifications.

Permanent excavation and fill slopes should be constructed no steeper than two horizontal to one vertical (2:1) and should be vegetated as soon as practical following grading to minimize erosion. As a minimum, the following erosion control measures should be considered: placement of straw bale sediment barriers or construction of silt filter fences in areas where surface run-off may be concentrated. Slopes should be over-built and cutback to design grades and inclinations.

4.6 Utility Trench Backfill

Bedding and initial backfill for utility construction should conform with the pipe manufacturers recommendations and applicable sections of the governing agency standards. General trench backfill should consist of engineered fill backfilled in maximum 12-inch-thick loose lifts with each lift compacted to at least 90 percent of the maximum dry density.

Backfill for the upper 12 inches of trenches must match the adjacent materials. That is, if the upper 12 inches of subgrades for the building pad, exterior flatwork, and pavement consists of lime-treated soils, the upper 12 inches of trench backfill should consist of controlled density fill (CDF) or aggregate base.

Underground utility trenches, which are aligned nearly parallel with foundations, should be at least three feet from the outer edge of foundations. Trenches should not encroach into the zone extending outward at a 1H:1V inclination below the bottom of the foundations. Additionally, trenches near foundations should not remain open longer than 72 hours to prevent drying of the soils. The intent of

these recommendations is to prevent loss of both lateral and vertical support of foundations, resulting in possible settlement.

4.7 Foundation Design

The proposed warehouse buildings may be supported upon conventional continuous and/or isolated spread foundations extending at least 24 inches below lowest adjacent soil grade. Lowest adjacent soil grade is defined as the grade upon which the capillary break material is placed or exterior soil grade, whichever is lower. All continuous foundations should maintain a minimum width of 18 inches; isolated spread foundations should be at least 24 inches in plan dimension.

Foundations bearing on undisturbed native soils, engineered fill, or a combination of those materials may be sized for maximum allowable "net" soil bearing pressures of 4000 pounds per square foot (psf) for dead plus live loads, with a 1/3 increase for total loads including the short-term effects of wind or seismic forces. The weight of the foundation concrete extending below lowest adjacent soil grade may be disregarded in sizing computations.

We recommend that all foundations be adequately reinforced to provide structural continuity, mitigate cracking and permit spanning of local soil irregularities. The structural engineer or civil engineering consultant should determine final foundation reinforcing requirements.

Resistance to lateral foundation displacement may be computed using an allowable friction factor of 0.30, which may be multiplied by the effective vertical load on each foundation. Additional lateral resistance may be computed using an allowable passive lateral earth pressure against the vertical projection of foundations equal to an equivalent fluid pressure of 300 psf per foot of depth. These two modes of resistance should not be added unless the frictional component is reduced by 50 percent since full mobilization of these resistances may occur at different degrees of horizontal movement.

4.8 Interior Floor Slab Support

Interior concrete slab-on-grade floors can be supported upon the soil subgrade (either non-expansive imported materials and/or lime treated native soils) prepared in accordance with the recommendations in this report and maintained in a moist condition and are protected from disturbance. If this is not the case and the subgrade soils become dry and/or disturbed, the building pad will require additional scarification, moisture conditioning and compaction prior to construction of the interior floor slabs.

The slab designer should determine and detail the final floor slab thickness, concrete strength, reinforcing requirements (if necessary), control joints, and construction sequencing to support the anticipated floor loads and to resist stresses exerted from drying shrinkage of the concrete and thermal variations within the facility. However, under no circumstance should the floor slab be less than six inches thick. Floor loads exerted by equipment, forklifts, or other vehicles associated with the industrial facility, as well as storage racks, stored product, etc., should be considered in the design of the interior floor slabs.

Floor slab areas that will be subjected to any vehicle/forklift traffic, as well as floor slab areas to support palletized construction materials, cranes and/or any other relatively heavy construction equipment or machinery, should be supported by at least six inches of Class 2 aggregate base compacted to at least 95 percent relative compaction to provide increased support capacity. The aggregate base should be placed over the prepared subgrade (even if the pad is lime treated.

Floor slabs that will receive moisture sensitive floor coverings (e.g., vinyl covering, wood laminate, etc.) and not subject to vehicle traffic should be underlain by a layer of free-draining gravel/crushed rock, serving as a deterrent to migration of capillary moisture. The gravel/crushed rock layer should be at least four inches thick, but no more than six inches thick, and graded such that 100 percent passes a one-inch sieve and no appreciable amount passes a No. 4 sieve.

The deflection of the slab and long term loading on the slab can be evaluated using a soil Modulus of Subgrade Reaction of 150 pounds per square inch per inch (pci) if the subgrade is untreated and prepared in accordance with the recommendations of this report. If the floor slab is supported on 12 inches of lime-treated subgrade, a soil modulus of reaction (ks) of 200 pounds per cubic inch (pci) may be utilized for design of floor slabs subjected to vehicle/fork lift traffic or any other long term loading conditions anticipated.

4.9 Floor Slab Moisture Penetration Resistance

The soils beneath the interior slab-on-grade concrete will be moist at the time of construction and will remain so for the usable life of the building. For this reason, it is our opinion that all interior floor slabs that will be in contact with moisture sensitive flooring, sensitive building components, or stored materials require protection against moisture or moisture vapor penetration. In order to mitigate the migration of moisture through the slab, we recommend that at minimum, all interior floor slabs that will require protection against moisture or moisture vapor penetration are underlain by a Stego® wrap vapor

barrier (15 mils thick) (or equivalent vapor barrier). Stego® describes this specific product as possessing an extremely low permanence, preventing water vapor and resulting in superior defense against floor failures. This subject Stego® wrap vapor barrier is engineered to exceed ASTM E1745 Class A standards and provide long-term moisture vapor protection. The Stego® wrap vapor barrier should be placed between the interior concrete slab and the recommended six inch thick layer of Class 2 aggregate base or crushed rock layer and in strict conformance with the manufacturer's guidelines. We recommend that the installation of the vapor barrier is observed as recommended by a Stego® Industries, LLC representative.

We are recommending that the slab be constructed directly upon the Stego® wrap vapor barrier membrane. The slab designer should provide specifications for placement and curing of the slab concrete placed over an impermeable membrane.

Please note that we are not slab moisture proofing or moisture protection experts. If increased protection against moisture vapor penetration of the slab is desired, a concrete moisture protection specialist should be consulted.

4.10 Retaining Wall Design

Retaining walls capable of slight rotation about their base (unrestrained at the top or sides) should be capable of resisting an "active" lateral earth pressure equal to an equivalent fluid pressure of 45 psf per foot of wall backfill for horizontal granular backfill conditions. Retaining walls or basement walls that are fixed at the top should be capable of resisting an "at-rest" lateral earth pressure equal to an equivalent fluid pressure of 60 psf per foot for horizontal granular backfill conditions. For retaining walls with backfill sloped at a gradient no steeper than two horizontal to one vertical (2H:1V), add 20 psf per foot of depth to the values provided above. Retaining wall foundations should extend at least 24 inches below soil grade and may be designed in accordance with the appropriate parameters contained in the Foundation Design section of this report.

Retaining walls should be fully drained to prevent the build-up of hydrostatic pressure behind the wall. Retaining walls should be provided with a drainage blanket (Class 2 permeable material, Caltrans Specification Section 68-2.02F (3)) at least one foot wide extending from the base of wall to within one foot of the top of the wall. The top foot above the drainage layer should consist of compacted on-site materials. Weep holes or perforated rigid pipe should be provided near the base of the wall to allow drainage of accumulated water. Drainpipes, if used, should slope to discharge at no less than a one

percent fall to suitable drainage facilities. Open-graded ½- to ¾-inch diameter crushed rock may be used in lieu of the Class 2 permeable material, if the rock and drain pipe are completely enveloped in an approved non-woven geotextile filter fabric.

Structural backfill materials for retaining walls (other than the drainage layer) should consist of on-site or imported granular soils the does not contain rubbish, rubble, organics and rock over six inches in size. Structural backfill should be placed in lifts not exceeding 12 inches in compacted thickness and should be mechanically compacted to at least 90 percent relative compaction.

4.11 Sound Wall Systems

Perimeter sound walls may be supported upon conventional foundations or drilled, cast-in-place reinforced concrete piers (drilled piers).

Conventional Foundations

Conventional foundations for sound wall systems should bear on firm, undisturbed ground, engineered fill that is placed and compacted in accordance with the recommendations of this report, or a combination of these materials, as confirmed by the Geotechnical Engineer or his representative. Sound wall foundations should be at least 12 inches wide and extend at least 18 inches below the lowest adjacent soil grade. Sound wall foundations may be sized using a maximum allowable "net" soil bearing pressure of 3000 psf for dead plus live loads, with a 1/3 increase for wind or seismic forces. For conventional foundation construction near slopes, we recommend a minimum horizontal distance of five feet between the edge of the entire footing to the face of the soil slope. Lateral resistance may be computed using an equivalent fluid pressure of 300 psf per foot of depth with the understanding that the upper 12 inches should be disregarded.

Drilled, Cast-In-Place Concrete Piers

Drilled piers for support of sound walls should be at least 18 inches in diameter and extend at least three feet below lowest adjacent soil grade. Drilled piers may be sized utilizing a maximum allowable vertical bearing capacity of 4000 psf or an allowable skin friction of 300 psf for dead plus live loads, which may be applied over the surface of the pier. These values may be increased by one-third to include short-term wind or seismic forces. The weight of foundation concrete below grade may be disregarded in sizing computations.

Uplift resistance of drilled pier foundations may be computed using the following resisting forces, where applicable: 1) weight of the pier concrete (150 pounds per cubic foot) and, 2) the allowable skin friction of 300 psf applied over the shaft area of the drilled pier. Increased uplift resistance can be achieved by increasing the diameter of the drilled pier or increasing the depth.

The upper 12 inches of skin friction should be neglected unless the drilled pier is surrounded by slab concrete or pavements for a distance of at least three feet from the edge of the foundation.
Sizing of drilled piers to resist lateral loads can be evaluated using Section 1807.1 of the 2022 CBC. A value of 300 pcf for lateral bearing as defined in Table 1806.2 of the CBC may be used for the coefficients S_1 and S_3 for the non-constrained and constrained conditions, respectively. Per Table 1804.2 of the 2022 CBC, an increase of 1/3 is permitted when using the alternate load combinations in Section 1605.3.2 that include wind or earthquake loads. The upper 12 inches of the subgrade should be neglected for the non-constrained condition.

Reinforcement and concrete should be placed in the pier excavations as soon as possible after excavation is completed to minimize the chances of sidewall caving into the excavations. The bottom of the pier excavations should not contain loose or disturbed soils prior to placement of the concrete. Cleaning of the bearing surface should be verified by the Geotechnical Engineer prior to concrete placement.

4.12 Exterior Flatwork Construction (Non-Pavement)

The upper 12 inches of final soil subgrade for exterior concrete flatwork areas should consist of approved, imported, compactable, very low-expansive (Expansion Index ≤ 20) granular soils or lime-treated on-site clay soils placed and compacted in accordance with the Engineered Fill Construction recommendations included in this report. Exterior flatwork subgrade soils should be maintained in a moist condition and protected from disturbance.

Exterior flatwork should be underlain by at least four inches of Class 2 aggregate base compacted to at least 95 percent relative compaction. The aggregate base can be included in the 12 inches of very-low expansive granular soils (not lime-treated soils), or the very-low expansive layer can be completely composed off Class 2 aggregate base. If the upper 12 inches of final subgrade for exterior flatwork will consist of lime-treated clay soils, the four inches of aggregate base should be placed above the lime-treated soils.

Exterior flatwork concrete should be at least four inches thick. Consideration should be given to thickening the edges of the slabs at least twice the slab thickness where wheel traffic is expected over the slabs. Expansion joints should be provided to allow for minor vertical movement of the flatwork. Exterior flatwork should be constructed independent of other structural elements by the placement of a layer of felt material between the flatwork and the structural element. Doweling of new flatwork into existing improvements (i.e., adjacent buildings, existing flatwork, etc.) is not recommended. The slab designer should determine the final thickness, strength and joint spacing of exterior slab-on-grade concrete. The slab designer should also determine if slab reinforcement for crack control is required and determine final slab reinforcing requirements.

Areas adjacent to exterior flatwork should be landscaped to maintain more uniform soil moisture conditions adjacent to and under flatwork. We recommend final landscaping plans not allow fallow ground adjacent to exterior concrete flatwork.

Practices recommended by the Portland Cement Association (PCA) for proper placement, curing, joint depth and spacing, construction, and placement of concrete should be followed during exterior concrete flatwork construction.

4.13 Site Drainage

Final site grading should be accomplished to provide positive drainage of surface water away from structures and prevent ponding of water adjacent to the foundations. The grade adjacent to the relocated structures should be sloped away from foundations at a minimum two percent slope for a distance of at least five feet, where possible. Ponding of surface water should not be allowed adjacent to the structure or exterior concrete flatwork.

4.14 Pavement Design

We are providing several alternative flexible pavement designs based on the soil conditions encountered at the site, our experience, and using design Traffic Indices (TIs) considered appropriate for the proposed construction.

Based on laboratory test results for the surface and near-surface clay soils present at the site and our experience in the area, we used a Resistance (“R”) value of five for untreated pavement subgrades. An assumed R-value of 50 was used for lime-treated pavement subgrades. Pavement sections presented in

Table 4 have been calculated using the above R-values and traffic indices (TIs) assumed to be appropriate for this project. The procedures used for pavement design are in general conformance with Chapters 600 to 670 of the *California Highway Design Manual*, 7th Edition. The project civil engineer should determine the appropriate traffic index for pavements based on anticipated traffic conditions. If needed, we can provide additional pavement sections for different traffic indices.

TABLE 4: PAVEMENT DESIGN ALTERNATIVES

Traffic Index (TI)	Untreated Subgrades R-value = 5			Lime-Treated Subgrades Soils (a) R-value = 50		
	Type A Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)	Portland Cement Concrete (inches)	Asphalt Concrete (inches)	Class 2 Aggregate Base (inches)	Portland Cement Concrete (inches)

9.0	4	23	--	4	9	--
	5½*	21	--	5½*	7	--
	--	9	8	--	6	6

Notes: * = Asphalt concrete thickness contains the Caltrans safety factor.
(a) = Lime-treated subgrade should be at least 12 inches thick and possess a minimum R-value of 50 when testing in accordance with California Test 301.

We emphasize that the performance of pavement is critically dependent upon uniform and adequate compaction of the soil subgrade, as well as all engineered fill and utility trench backfill within the limits of the pavements. We recommend that final pavement subgrade preparation (i.e., scarification, moisture conditioning and compaction) be performed after underground utility construction is completed and just prior to aggregate base placement.

The upper six inches of untreated pavement subgrade soils and upper 12 inches of lime-treated subgrade soils should be compacted to at least 95 percent relative compaction at no less than the optimum moisture content, maintained in a moist condition and protected from disturbance. All aggregate base should be compacted to at least 95 relative compaction.

It has been our experience that pavement failures may occur where a non-uniform or disturbed subgrade soil condition is created. Subgrade disturbances can result if pavement subgrade preparation is performed prior to underground utility construction and/or if a significant time period passes between subgrade preparation and placement of aggregate base. Therefore, we recommend that final pavement subgrade preparation (i.e., scarification, moisture conditioning, and compaction) be performed just prior to aggregate base placement.

In the summer heat, high axle loads coupled with shear stresses induced by sharply turning tire movements can lead to failure in asphalt concrete pavements. Therefore, PCC pavements should be used in areas subjected to concentrated heavy wheel loading, such as entryways, in front of trash enclosures, and/or within loading areas. Alternate PCC pavement sections have been provided above in Table 4.

We suggest concrete slabs be constructed with thickened edges in accordance with American Concrete Institute (ACI) design standards, latest edition. Reinforcing for crack control, if desired, should be provided in accordance with ACI guidelines. At a minimum, we recommend No. 3 reinforcing bars at 18 inches on center for crack control. Reinforcement must be located at mid-slab depth to be effective. Joint spacing and details should conform to the current PCA or ACI guidelines. PCC should achieve a minimum compressive strength of 3,500 pounds per square inch at 28 days.

All pavement materials and construction methods of structural pavement sections should conform to the applicable provisions of the *Caltrans Standard Specifications*, latest edition.

Lime-treatment of Pavement Subgrade Soils

On-site clay soils are anticipated to react well with the addition of quicklime (high-calcium or dolomitic) and could enhance the support characteristics of the subgrade and allow for a reduction in the aggregate base section. If lime-treatment of subgrade soils is selected, the lime-treatment of subgrade soils should be performed in general conformance with Section 24 of the *Caltrans Standard Specifications*, latest edition.

For estimating purposes only, we recommend a minimum spread rate of at least 4½ pounds of high calcium or dolomitic quicklime per square foot of treated soil, at a depth sufficient to produce a compacted lime-treated layer 12 inches thick. After the materials have been thoroughly mixed and re-mixed, the soil-lime mixture should be compacted to at least 95 percent relative compaction at a moisture content at least two percent over optimum conditions. Compaction should be achieved using a heavy, self-propelled sheep's-foot compactor (Rex or equivalent).

The performance of lime-stabilized soils is critically dependent on uniform mixing of the lime into the subgrade soil and providing a proper curing period following amendment of the lime. An experienced lime-stabilization contractor coupled with a comprehensive quality control program is generally required to achieve the best possible stabilized subgrade.

The major disadvantage of lime-treated subgrades supporting pavements results from shrinkage of the treated material, similar to shrinkage of structural concrete. The shrinkage can produce reflective cracking through the asphalt concrete surface. Proper curing techniques can minimize this effect.

4.15 Drought Considerations

The State of California can experience extended periods of severe drought conditions in the future. The ability for landowners to use irrigation as a means for maintaining landscape vegetation and soil moisture likely will be inhibited for unpredictable periods of time. For this reason, landscape and hardscape systems for this development should be carefully planned to prevent the desiccation of soils under and near foundations and slabs. Trees with invasive shallow root systems should be avoided. No trees or large shrubs that could remove soil moisture during dry periods should be planted within five feet of any foundation or slab. Fallow ground adjacent to foundations must be avoided.

4.16 Geotechnical Engineering Construction Observation Services

Site preparation should be accomplished in accordance with the recommendations of this report. Representatives of the Geotechnical Engineer should be present during site preparation and all grading operations to observe and test the fill to verify compliance with our recommendations and the job specifications. Testing frequency will depend on how the site is graded and should be determined during the rough grading operations. These services are beyond the scope of work authorized for this investigation.

In the event that Universal Engineering Sciences is not retained to provide geotechnical engineering observation and testing services during construction, the Geotechnical Engineer retained to provide these services should indicate in writing that they agree with the recommendations of this report or prepare supplemental recommendations as necessary. A final report by the Geotechnical Engineer providing construction testing services should be prepared upon completion of the project.

4.17 Additional Services

Our firm should be retained to review the final plans and specifications to determine if the intent of our recommendations has been implemented in those documents. We would be pleased to submit a proposal to provide these services upon request.

5.0 LIMITATIONS

Our recommendations are based upon the information provided regarding the proposed project, combined with our analysis of site conditions revealed by the field exploration and laboratory testing programs. We have used our engineering judgment based upon the information provided and the data generated from our investigation. This report has been prepared in substantial compliance with generally accepted geotechnical engineering practices that exist in the area of the project at the time the report was prepared. No warranty, either express or implied, is provided.

If the proposed construction is modified or re-sited; or, if it is found during construction that subsurface conditions differ from those we encountered at the boring and test pit locations, we should be afforded the opportunity to review the new information or changed conditions to determine if our conclusions and recommendations must be modified.

We emphasize that this report is applicable only to the proposed construction and the investigated site, and should not be utilized for construction on any other site.

The conclusions and recommendations of this report are considered valid for a period of two years. If design is not completed and construction has not started within two years of the date of this report, the report must be reviewed and updated if necessary.

UNIFIED SOIL CLASSIFICATION SYSTEM (ASTM D2487)

MAJOR DIVISIONS		USCS[4]	CODE	CHARACTERISTICS
COARSE GRAINED SOILS (More than 50% of soil > no. 200 sieve size)	GRAVELS[1] (More than 50% of coarse fraction > no. 4 sieve size)	GW		Well-graded gravels or gravel - sand mixtures, trace or no fines
		GP		Poorly graded gravels or gravel - sand mixtures, trace or no fines
		GM		Silty gravels, gravel - sand - silt mixtures, containing little to some fines[2]
		GC		Clayey gravels, gravel - sand - clay mixtures, containing little to some fines[2]
	SANDS[1] (50% or more of coarse fraction < no. 4 sieve size)	SW		Well-graded sands or sand - gravel mixtures, trace or no fines
		SP		Poorly graded sands or sand - gravel mixtures, trace or no fines
		SM		Silty sands, sand - gravel - silt mixtures, containing little to some fines[2]
		SC		Clayey sands, sand - gravel - clay mixtures, containing little to some fines[2]
FINE GRAINED SOILS (50% or more of soil < no. 200 sieve size)	SILTS & CLAYS LL < 50	ML		Inorganic silts, gravely silts, and sandy silts that are non-plastic or with low plasticity
		CL		Inorganic lean clays, gravelly lean clays, sandy lean clays of low to medium plasticity[3]
		OL		Organic silts, organic lean clays, and organic silty clays
	SILTS & CLAYS LL ≥ 50	MH		Inorganic elastic silts, gravelly elastic silts, and sandy elastic silts
		CH		Inorganic fat clays, gravelly fat clays, sandy fat clays of medium to high plasticity
		OH		Organic fat clays, gravelly fat clays, sandy fat clays of medium to high plasticity
HIGHLY ORGANIC SOILS		PT		Peat
ROCK		RX		Rocks, weathered to fresh
FILL		FILL		Artificially placed fill material

OTHER SYMBOLS

- = Drive Sample: 2-1/2" O.D. Modified California sampler
- = Drive Sampler: no recovery
- = SPT Sampler
- = Initial Water Level
- = Final Water Level
- — — — = Estimated or gradational material change line
- ——— = Observed material change line

Laboratory Tests

CR = Corrosion
PI = Plasticity Index
EI = Expansion Index
UCC = Unconfined Compression Test (TSF)
TR = Triaxial Compression Test
GR = Gradational Analysis (Sieve/Hydro)
FC = Wash (Fines Content)
PP = Pocket Penetrometer Test (TSF)
PID = Photo Ionization Detector Test (PPM)
RV = Resistance ("R") Value

REF = Refusal (>50 blows in 6 inches)

GRAIN SIZE CLASSIFICATION

CLASSIFICATION	RANGE OF GRAIN SIZES	
	U.S. Standard Sieve Size	Grain Size in Millimeters
BOULDERS (b)	Above 12"	Above 300
COBBLES (c)	12" to 3"	300 to 75
GRAVEL (g)	3" to No. 4	75 to 4.75
coarse	3" to 3/4"	75 to 19
fine	3/4" to No. 4	19 to 4.75
SAND	No. 4 to No. 200	4.75 to 0.075
coarse	No. 4 to No. 10	4.75 to 2.00
medium	No. 10 to No. 40	2.00 to 0.425
fine	No. 40 to No. 200	0.425 to 0.075
SILT & CLAY	Below No. 200	Below 0.075

Trace - Less than 5 percent
Few - 5 to 10 percent
Little - 15 to 25 percent
Some - 35 to 45 percent
Mostly - 50 to 100 percent

* Percents as given in ASTM D2488

NOTES:

1. Coarse grained soils containing 5% to 12% fines, use dual classification symbol (ex. SP-SM).
2. If fines classify as CL-ML (4<PI<7), use dual symbol (ex. SC-SM).
3. Silty Clays, use dual symbol (CL-ML).
4. Borderline soils with uncertain classification list both classifications (ex. CL/ML).

APPENDIX A

A. GENERAL INFORMATION

The performance of a geotechnical engineering study for the proposed warehouse buildings and associated improvements to be located northeast of Florin Perkins Road and 23rd Avenue in Sacramento, California was authorized by Gary Graves with Sierra View General Contractor on February 8, 2023. Authorization was for a study as described in our proposal letter dated January 31, 2023 sent to Sierra View General Contractor whose mailing address 4202 Douglas Boulevard, Suite 100 in Granite Bay, California 95746.

B. FIELD EXPLORATIONS

As part of our study for the proposed improvements, our field exploration included drilling and sampling of 13 borings (D1 through D13), the excavation and sampling of 14 test pits (TP1 through TP 14), and performing an Infiltration Test (I1) at the approximate locations shown on Figure 2.

The soil borings were also performed on April 19 and 20, 2023 to depths ranging from about 11½ to 21½ feet below existing site grades utilizing a CME-75 truck-mounted drilling rig equipped with six-inch-diameter solid flight augers. At various intervals soil samples were recovered with a 2½-inch outside diameter (O.D.), 2-inch inside diameter (I.D.), modified California split-spoon sampler. The sampler was driven by an automatic 140-pound hammer freely falling 30 inches. The number of blows of the hammer required to drive the 18-inch long samplers each six-inch interval were recorded. The sum of the blows required to drive the sampler the lower 12-inch interval, or portion thereof, is designated the penetration resistance or "blow count" for that particular drive.

The modified California samples were retained in 2-inch diameter by 6-inch long, thin walled brass tubes contained within the sampler. After recovery, the field representative visually classified the soil recovered in the tubes. After the samples were classified, the ends of the tubes were sealed to preserve the natural moisture contents.

In addition to the driven samples, representative bulk samples of near-surface soils also were collected and retained in plastic bags. Driven and bulk samples were taken to our laboratory for additional soil classification and selection of samples for testing.

The test pits were performed on April 19 and 20, 2023, to depths of approximately 2½ to eight feet below existing site grades utilizing a Takeuchi mini excavator, provided by Ron Tilford Backhoe of Fair Oaks, California. At the test pit locations, bulk and quart-size bag samples of the near-surface soils were collected. The test pits were backfilled with soil spoils following completion.

Pocket penetrometer testing was performed during drilling operations on select cohesive soil samples obtained at the boring locations. In pocket penetrometer testing, the unconfined compressive strength of a cohesive soil sample is estimated by measuring the resistance of the sample to penetration of a relatively small, calibrated, spring-loaded cylinder. The maximum capacity of the penetrometer is 4.5 tons per square-foot (tsf). The unconfined compressive strength estimated from pocket penetrometer testing on the select cohesive soil samples is included on the boring logs at the depth the sample tested was obtained. The approximate undrained shear strength of the samples tested is one-half of the unconfined compressive strength.

An Infiltration Test was performed on April 20, 2023. The double-ring infiltrometer test was performed at about one foot below grade and in general accordance with American Society of Testing and Materials (ASTM) D3385 to determine the infiltration rate of the near-surface subgrade soils. The testing rings were carefully pushed about six inches into the exposed soils. The rings were then carefully filled with clean, potable water. The soils within the rings were saturated for up to approximately four hours before testing.

Descriptions of the soils encountered in the test pit and boring locations are presented on Figures 3 through 29. An explanation of the Unified Soil Classification System symbols used in the descriptions is presented on Figure 30.

C. LABORATORY TESTING

Selected soil samples were tested to determine dry unit weight (ASTM D2937) natural moisture content (ASTM D4643), and unconfined compressive strength (ASTM D2166). The results of these tests are included on the boring logs at the depth each sample was obtained.

A particle size distribution test (ASTM D6913) was performed on a select soil sample. The results are presented in Figure A1.

Three representative near-surface samples were subjected to Atterberg Limits tests (ASTM D4318). The results of this test are presented in Figure A2.

Four representative near-surface soil samples were tested for Expansion Index (ASTM D4829) with results presented in Figures A3 through A6.

Three representative samples of near-surface soil were subjected to Resistance-value ("R") testing in accordance with California Test 301. The results of the R-value tests are presented in Figures A7 and A8.

Three samples of the near-surface soil were submitted to Sunland Analytical to determine the soil pH, minimum resistivity (California Test 643), Sulfate concentration (California Test 417) and Chloride concentration (California Test 422). The results of these tests are presented on Figures A9 through A11.

Supplemental Pavement Recommendations

Universal Engineering Sciences
3050 Industrial Boulevard
West Sacramento, CA 95691
p. 916.372.1434 | teamues.com

July 26, 2023

Mr. Gary Graves
Sierra View General Contractor
4202 Douglas Boulevard, Suite 100
Granite Bay, California 95746

Supplemental Pavement Recommendations
DAVIS FAMILY WAREHOUSES
Sacramento, California
UES No. 4630.2300019.0000

As requested, we are providing supplemental pavement recommendations to be used in conjunction with the *Geotechnical Engineering Report* (UES No. 4630.2300019.0000; dated June 9, 2023) prepared for the subject project.

Since completion of the *Geotechnical Engineering Report*, we have completed the sampling and testing of the existing landfill soils at the proposed yard and/or additional trailer storage area. Our supplemental recommendations for pavements constructed at the site are provided herein.

Pavement Subgrade Quality

At the approximate locations indicated on Figure 1, hand sample locations HA1 through HA3 were performed within the proposed trailer and/or storage parking area. The hand samples extended about 1½ feet below the existing ground surface and bulk samples of the nears surface soils were obtained at each location. Following sampling activities, the excavations were restored in accordance with the Section F. Construction Specifications of the Florin Perkins Landfill Waste Discharge Requirements.

Laboratory testing performed on the near-surface subgrade soils obtained at the hand sample locations indicates the near-surface soils are relatively poor quality materials for support of pavements and would require relatively thick structural sections to compensate for the low support strength of the subgrade soils. Resistance values (R-values) of 18 and 14 were obtained at hand sample locations HA1 and HA3, respectively. Based on results of the laboratory testing, it is our opinion an R-value of 10 is appropriate for design of pavements at the site.

Supplemental Pavement Recommendations

Pavement subgrade should be prepared in accordance with the Site Clearing and Subgrade Preparation sections of the original report. Specifically, the upper six inches of the final pavement subgrade should be compacted to at least 95 percent of the American Society of Testing and Materials (ASTM) D1557 maximum dry density.

Based on the anticipated traffic conditions and use of the aggregate base pavements, we recommend a pavement section consisting of at least 12 inches of Class 2 Aggregate Base. The aggregate base should be moisture conditioned to at least the optimum moisture content and compacted to at least 95 percent relative compaction per ASTM D1557.

All aggregate base and construction methods of pavements should conform to the applicable provisions of the *Caltrans Standard Specifications*, latest edition.

To reduce the thickness of the aggregate base layer and provide a more stable surface to place the aggregate base, consideration may be given to placing a layer of geogrid reinforcement directly on the prepared subgrade prior to aggregate base placement. Geogrid reinforcement should consist of Tensar BX1100, Mirafi 5XT, or equivalent and be placed in accordance with the manufacturer's specifications. If geogrid is used, the aggregate base layer may be reduced to 10 inches thick within parking and storage areas.

It should be noted that without a protective hard course wear layer (asphalt concrete or concrete), surface water will readily infiltrate the aggregate base section thereby saturating the aggregate and subgrade soil potentially resulting in areas of local instability. Potholes or ruts will likely form during the rainy season requiring frequent maintenance of the aggregate base surface. The use of geogrid reinforcement will reduce the amount of maintenance required, but will not eliminate the need for maintenance.

Final pavement grading should be accomplished to provide positive drainage of surface water away from the pavement, prevent ponding of water adjacent to the pavement, and channel runoff water to appropriate drainage facilities.

Limitations

This letter is considered supplemental to our *Geotechnical Engineering Report* and is subject to the same limitations. The remainder of the conclusions and recommendations provided in the *Geotechnical Engineering Report*, unless otherwise noted, are considered valid.

If you have any questions regarding this letter, please contact us.

EXECUTIVE SUMMARY

BSK Associates (BSK) has performed a Phase I Environmental Site Assessment (ESA) for Sacramento County Assessor Parcel Numbers (APN): 061-0150-049-0000, 061-0150-045-0000, and a portion of 061-0150-042-0000 & 061-0150-054-000 in Sacramento, California (Subject Property, Figure 1). The Subject Property is approximately 45.25-acres and is zoned as "Light Industrial – Site Improvements/Solid Waste Restricted" (City of Sacramento, 2025). The Subject Property is a portion of the Florin Perkins Landfill. It is BSK's understanding that this Phase I ESA is being requested for part of a California Environmental Quality Act (CEQA) document and that the intended use of the Subject Property is distribution warehouses. The exact limits of the proposed project, as proposed in the CEQA documents, are currently unknown. However, the Subject Property as covered by this ESA is designated as the development on the plan set titled "Tentative Parcel Map – Davis Family Warehouses" by TLA Engineering and Planning dated September 26, 2025 (see Appendix K).

Phase I Environmental Site Assessment

This document has been prepared in general accordance with ASTM E1527-21 and as such, examines the Subject Property history and surrounding land uses. The purpose of this Phase I ESA was to examine historic land uses on and in the vicinity of the Subject Property in an effort to identify Recognized Environmental Conditions (RECs), Controlled RECs (CRECs), and Historic RECs (HRECs).

The Phase I study includes a comprehensive review of available private and regulatory records, Subject Property inspections, and interviews with those having specific knowledge of the Subject Property history. After conducting this review, BSK identified 9 RECs, 0 CREC, 0 HRECs, and 1 Vapor Encroachment Concern (VEC) in connection with the Subject Property. BSK identified 7 RECs, 6 CRECs, 0 HRECs, and 3 VECs in the vicinity of the Subject Property.

A detailed description of the Phase I process, property description, findings and recommendations for further investigation is included in the following report.

1. INTRODUCTION

BSK Associates (BSK) has performed a Phase I Environmental Site Assessment (ESA) for Sacramento County Assessor Parcel Numbers (APN): 061-0150-049-0000, 061-0150-045-0000, and a portion of 061-0150-042-0000 & 061-0150-054-000 in Sacramento, California (Subject Property, Figure 1). The Subject Property is approximately 45.25-acres and is zoned as "Light Industrial – Site Improvements/Solid Waste Restricted" (City of Sacramento, 2025). The Subject Property is a portion of the Florin Perkins Landfill. It is BSK's understanding that this Phase I ESA is being requested for part of a California Environmental Quality Act (CEQA) document and that the intended use of the Subject Property is distribution warehouses. The exact limits of the proposed project, as proposed in the CEQA documents, are currently unknown. However, the Subject Property as covered by this ESA is designated as the development on the plan set titled "Tentative Parcel Map – Davis Family Warehouses" by TLA Engineering and Planning dated September 26, 2025 (see Appendix K).

2. PHASE I ENVIRONMENTAL SITE ASSESSMENT

2.1 Purpose

The purpose of this Phase I ESA was to examine historic land uses on and in the vicinity of the Subject Property in an effort to identify RECs, CRECs and HRECs.

The term Recognized Environmental Condition (REC) is defined as "the presence of hazardous substances or petroleum products in , on, or at the Subject Property due to a release to the environment; the likely presence of hazardous substances or petroleum products in, on, or at the Subject Property due to a release or likely release to the environment; or the presence of hazardous substances or petroleum products in, on, or at the Subject Property under conditions that pose a material threat of a future release to the environment." (ASTM E 1527-21, pp. 1).

A Controlled REC Is defined as "a REC affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities with hazardous substances or petroleum products allowed to remain in place subject to implementation of required controls." (ASTM E 1527-21, pp. 4)

A Historic REC (HREC) is "a previous release of hazardous substances or petroleum products affecting the Subject Property that has been addressed to the satisfaction of the applicable regulatory authority or authorities and meeting unrestricted use criteria established by the applicable regulatory authority or authorities without subjecting the Subject Property to any controls." (ASTM E 1527-21, pp. 6)

2.2 Scope of Services

BSK conducted this ESA in accordance with the methods described in the American Society for Testing and Materials (ASTM) Standard E1527-21, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.* The scope of services provided for this ESA included:

- A general description of the property
- Review of the property's history using aerial photography, USGS topographic maps, directories, and other readily available information
- Review of the reasonably ascertainable regulatory information published by local, state, and federal agencies
- Subject Property reconnaissance
- Interviews with representatives of the current lessee of the property
- Preparation of this Report

2.3 Non-Scope Issues

Non-scope issues are those conditions and concerns that are beyond the scope of services of this ESA and include, but are not limited to: asbestos containing materials, radon, lead-based paint, lead in drinking water, wetland delineation or identification, geologic hazards, regulatory compliance, cultural concerns, industrial hygiene, ecological resources, endangered species, indoor air quality, and high voltage power lines. Sampling and analytical testing of soil, groundwater, air, for such analytes including but not limited to radon gas, radioactive materials, urea-formaldehyde, mold, pesticides, or polychlorinated biphenyls (PCBs), are also considered non-scope issues. These issues are therefore not covered in this Report. However, these issues are considered "business environmental risks" as defined in ASTM Standard E1527-21 (Sections 1, 1.4, and 3.2.11).

2.4 Significant Assumptions

No significant assumptions were made regarding this ESA.

2.5 Limitations

The findings presented in this Report were based upon field observations during a Subject Property reconnaissance conducted on August 6, 2025 and October 2, 2025, discussions with persons knowledgeable of the property, and review of historical data. Observations describe only the conditions present at the time of this investigation. The data reviewed, and observations made are limited to accessible areas and available records searched during the course of this investigation. BSK cannot guarantee the completeness or accuracy of the regulatory agency records reviewed. Unless BSK otherwise expressly agrees in writing, no other party is entitled to rely upon the observations, research information, or conclusions presented in this Report or in any other material obtained by BSK from the

sources identified in this Report. Additionally, in evaluating the property, BSK has relied in good faith upon information provided by the interview sources noted in the Report with respect to existing property conditions, and the historic uses of the property. It must also be understood that changing circumstances in the property usage, proposed property usage, property zoning, and changes in the environmental status of the other nearby properties can alter the validity of conclusions and information contained in this Report. Therefore, the data obtained are clear and accurate only to the degree implied by the sources and methods used.

This ESA Report provides neither certification nor guarantee that the property is free of hazardous-material and/or petroleum-product contamination or that there are no RECs associated with the property that potentially pose an environmental risk/liability or that the property is in compliance with current applicable federal, state, or local regulations.

Findings of this ESA may have a potential for negative impact on the value or suitability of the property for the purpose intended. BSK cannot assume liability for such negative impact. No warranties, expressed or implied, are made as to the findings or conclusions presented in this Report. Sampling and analytical testing of soil, groundwater, air, radon gas, biological agents, and/or construction/building materials are non-scope issues and were not part of the scope of services for this ESA. This assessment did not include non-scope issues identified in Section 2.3 of this Report.

2.6 Exceptions

BSK was not able to observe portions of the Subject Property due to heavy weed/grass growth and due to unsafe work conditions during a rain event. Additionally, BSK was unable to enter the abandoned wooden shed in the southwest corner of the Subject Property. No other significant exceptions or data gaps that would raise reasonable concerns regarding our opinions and conclusions in the Report were made or noted.

2.7 Special Terms and Conditions

There were no special terms or contractual conditions for this assessment.

2.8 User Reliance

This Report may be relied upon by Sierra View General Contractors and their client EPD & BBD Family Properties LP. Reliance on the information and conclusions in this Report by any other person or entity is not authorized without the expressed written consent of BSK.

3. SUBJECT PROPERTY AND VICINITY DESCRIPTION

3.1 Subject Property Setting and Characteristics

The following sections describe the Subject Property setting and characteristics.

Table 1 Subject Property Setting and Characteristics	
Subject Property Location/Address	3901 Florin Perkins Rd.
Assessor's Parcel Number	Sacramento County APNs 061-0150-049-0000, 061-0150-045-0000, and a portion of 061-0150-042-0000 & 061-0150-054-000
Latitude/Longitude	38.534490 / -121.3848230
Size	Approximately 45.25-acres
Subject Property Improvements	A portion of a capped landfill, landfill gas vents, landfill gas pipelines, gas probes, monitoring wells, blower station with treatment, and abandoned wooden shed.
Zoning	"Light Industrial – Site Improvements/Solid Waste Restricted" (Sacramento County, 2025)
Nearest Intersection	23rd Ave. and Florin Perkins Rd.
Nearest Major Highway	Highway 16 (Approx. 0.5 miles north)

3.2 Current Uses of Adjoining Properties

The following is based on observations by Messrs. Kevin Grove, Christopher Semilla, and Victor Trujillo of BSK Associates during the Subject Property and vicinity reconnaissance on August 6, 2025 and October 2, 2025. Table 2 summarizes the current use of properties immediately adjacent to the Subject Property.

Table 2 Observed Adjacent Property Uses	
Direction	**Adjoining Property Use**
North	Florin Perkins Landfill beyond which is Jackson Rd.
East	Vacant land and ponding basins, beyond which is S. Watt Ave.
West	Warehouse, beyond which is Florin Perkins Rd. and grocery outlet distribution center.
South	Industrial warehouses, beyond which is 23rd Avenue.

3.3 Physical Setting

The following sections describe the Geologic and Hydrologic conditions of the Subject Property. The topics summarized include General Geologic Conditions, Surface Soils and Hydrogeologic Conditions.

Table 3
Physical Setting

PHYSICAL SETTING INFORMATION FOR SUBJECT PROPERTY AND SURROUNDING AREA		SOURCE
Topography (Refer to Appendix A for an excerpt of the Topographic Map)		
Subject Property Elevation	Approximately 47 feet mean sea level (msl)	Environmental Data Resources (EDR)
Surface Runoff/ Topographic Gradient	Relatively flat, with a gentle downward slope from northeast to southwest.	
Closest Surface Water	Ponding basins approximately 0.3 miles northeast.	
Soil Characteristics		
Soil Type	San Joaquin-Urban land complex, 0 to 2 percent slopes Xerarents-San Joaquin complex, 0 to 1 percent slopes Pits Urban land	Environmental Data Resources (EDR)
Geology/Hydrogeology		
Description	The Subject Property lies within the Great Valley Geomorphic Province of California. The Great Valley of California is generally considered an elongated structural trough, approximately 450 miles long that averages 50 miles in width. The Great Valley (a.k.a. Central Valley) is bound by the bound by Modoc Plateau, Klamath Mountains and the Cascade Ranges to the north, the Transverse Ranges to the south, the Sierra Nevada Range to the east and Coast Ranges to the west. It is composed of the Sacramento Valley which is drained by the Sacramento River and its tributaries in the north, and the San Joaquin Valley, which is drained by the San Joaquin River and its tributaries in the south. The Subject Property lies within the San Joaquin Valley portion of the Great Valley Province. The Sacramento Valley has been filled with several thousand feet of sedimentary deposits. Sediments in the valley, derived from the erosion of the Sierra Nevada and Coast Ranges, have deposited sands with lesser silts, minor clays, and gravel by major to minor west-flowing drainages and their tributaries. The sedimentary deposits in the region form extensive coalescing alluvial fans with	California Geological Survey, 2010 Geological Map of California (http://www.quake.ca.gov/gmaps/GMC/stategeologicmap.html) and Geology of California, Robert M. Norris and Robert W. Webb, (1990)

Table 3 Physical Setting		
PHYSICAL SETTING INFORMATION FOR SUBJECT PROPERTY AND SURROUNDING AREA		**SOURCE**
	gradual slopes. Sediments at the Subject Property are mapped as Pleistocene-Holocene marine and nonmarine sedimentary deposits. Hydrogeology: The Subject Property lies within the Sacramento Valley-South American Subbasin (Basin # 5-021.65)	State of California Department of Water Resources (DWR), California's Groundwater Update 2020 (California's Groundwater, Update 2020 (Bulletin 118) – Dataset – California Natural Resources Agency Open Data)
Estimated Depth to First Occurrence of Ground water	Based on our review of the document on the GeoTracker website titled "2024 Second Semiannual Groundwater and Landfill Gas Monitoring Report" by Geo-Logic Associates dated January 23, 2025 for the Florin Perks Landfill, (https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/2639085054/L10005519750.PDF), groundwater on 12/18/2024 ranged from 56 to 60 feet bgs on the Subject Property.	State Water Resources Control Board GeoTracker database (https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/2639085054/L10005519750.PDF)

Hydrogeologic Gradient	Based on our review of the document on the GeoTracker website titled "2024 Second Semiannual Groundwater and Landfill Gas Monitoring Report" by Geo-Logic Associates dated January 23, 2025 for the Florin Perkins Landfill, (https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/2639085054/L10005519750.PDF), groundwater on 12/18/2024 flowed to the southeast	State Water Resources Control Board GeoTracker database (https://documents.geotracker.waterboards.ca.gov/esi/uploads/geo_report/2639085054/L10005519750.PDF)

3.4 Historical Topographic Maps

BSK reviewed available historical topographic maps obtained from EDR to gather information regarding the developmental history and land use of the Subject Property and immediate vicinity. Appendix A includes a copy of the Historical Topographic Map Report, dated July 28, 2025. Table 4 summarizes

information obtained from the review of historical topographic maps. Since the historical topographic maps do not provide detail of structures or other features, no specific description is provided of the Subject Property and adjacent properties.

Table 4
Review of Historical Topographic Maps

Year	Property and Adjoining Property Observations
1891	The Subject Property appears to be vacant. The Southern Pacific Placerville Branch rail line is visible approximately 1.0 miles northwest of the Subject Property in its present-day location. A second rail line, the Southern Pacific Niles and Sacramento Branch is visible approximately 1.0 miles west of the Subject Property. Morrison Creek is visible approximately 1.5 miles south of the Subject Property. Jackson Rd. is visible in its present-day location.
1892	No significant changes from the 1891 topographic map.
1893	No significant changes from the 1892 topographic map.
1902	Jackson Highway is labeled to the north of the Subject Property in its present-day location. No other significant changes from the 1893 topographic map.
1911	No significant changes from the 1902 topographic map.
1949/1950	Two buildings are visible within the southwest boundary of the Subject Property. Due to the age of the structures, it is common for termiticides and/or lead-based paint to be applied that qualify as an **on-Subject Property REC.** U.S. Route 50 is visible in its present-day location. Gravel pits are visible approximately 0.25 miles to the north and south. A private landing strip is visible approximately 0.75 miles to the southwest of the Subject Property. A second private landing strip is visible approximately 0.5 miles northwest of the Subject Property. The Central California Traction rail line is visible approximately 0.25 miles southwest of the Subject Property. This former railroad spur qualifies as an **off-Subject Property REC.** A U.S. Army Signal Depot is visible approximately 0.75 miles southwest of the Subject Property. No other significant changes from the 1911 topographic map.
1954	The gravel pits to the north have expanded towards the Subject Property and eight ponds are visible. Chemical tanks are visible approximately 0.75 miles southwest of the Subject Property. No other significant changes from the 1949/1950 topographic map.
1967	The gravel pits have expanded further south and onto a small portion of the northern portion of the Subject Property. This gravel pit qualifies as an **on-Subject Property REC** and an **off-Subject Property REC**. A pond is visible on the northern boundary of the Subject Property. Due to the potential for this pond to accumulate hazardous materials from the gravel pits, this pond qualifies as an **on-Subject Property REC and an off-Subject Property REC**. No other significant changes to the 1954 topographic map.
1975	Nineteen (19) large buildings are visible in their present-day locations in the area south of the Subject Property. No other significant changes from the 1967 topographic map.
1980	No significant changes from the 1975 topographic map.
1992	The pond and two buildings are no longer visible on the Subject Property. No other significant changes from the 1980 topographic map.
2012	No significant changes from the 1992 topographic map.
2015	No significant changes from the 2012 topographic map.
2018	No significant changes from the 2015 topographic map.
2021/2022	No significant changes from the 2018 topographic map.

3.5 Historical Aerial Photographs

BSK reviewed available historical aerial photographs obtained from EDR to gather information regarding the developmental history and land use of the Subject Property and vicinity. Appendix A includes a copy of EDR's Aerial Photo Decade Package, dated July 28, 2025. Table 5 summarizes information obtained from the review of the aerial photographs:

Table 5
Review of Historical Aerial Photographs

Year	Observed Property Use	Property and Adjoining Property Observations (*Scale: 1" = 500'*)
1937	Residence/ Agricultural	The Subject Property and surrounding area appear to be agricultural. It is common for agricultural properties to apply pesticides and/or herbicides. This use qualifies as an **on-Subject Property REC and an off-Subject Property REC**. An agricultural residence is visible with four (4) structures within the southwestern corner of the Subject Property. Two additional structures are visible within the northwestern corner of the Subject Property. The Central California Traction rail line is visible in its present-day location to the southwest. As stated previously, this rail line qualifies as an **off-Subject Property REC**.
1947	Residence/ Agricultural	Gravel pits are visible approximately 500' north of the Subject Property and approximately 1,000' south of the Subject Property. No other significant changes from the 1937 photograph.
1957	Residence/ Agricultural	The gravel pits have expanded in the area north of the Subject Property and border the Subject Property. Two additional structures are visible at the agricultural residence within the southwestern corner of the Subject Property. No other significant changes from the 1947 photograph.
1964	Residence, Gravel Pit, Agricultural	One of the buildings near the northwestern corner of the Subject Property is no longer visible. The northern gravel pits have expanded onto the Subject Property and water ponding is visible. As stated previously, this gravel pit and pond qualifies as individual **on-Subject Property RECs and off-Subject Property RECs**. The southern gravel pits have expanded north toward the Subject Property. Warehouses have been constructed in the area southwest of the Subject Property. No other significant changes from the 1957 photograph.
1966	Residence, Gravel Pit, Agricultural	No significant changes from the 1964 photograph.
1972	Residence, Gravel Pit, Agricultural	The gravel pits have expanded onto the Subject Property. As stated previously, these pits qualify as an **on-Subject Property REC.** No other significant changes from the 1966 photograph.
1984	Residence, Gravel Pit, Agricultural	The agricultural residence in the southwest corner of the Subject Property has only one building visible. Additional warehouses have been built in the areas south and west of the Subject Property. No other significant changes from the 1972 photograph.
1993	Residence, Gravel Pit, Agricultural	The gravel pit on the Subject Property appears deeper. Additional warehouses have been built in the areas south and west of the Subject Property. No other significant changes from the 1984 photograph.

Table 5
Review of Historical Aerial Photographs

Year	Observed Property Use	Property and Adjoining Property Observations (*Scale: 1" = 500'*)
1998	Residence, Gravel Pit, Agricultural	The pond is no longer visible on the Subject Property. The agricultural residence building near the southwestern corner of the Subject Property is no longer visible. The area north of the Subject Property appears to be operating as a landfill including the former pit that extended onto the Subject Property that is now filled. This use qualifies as an **on-Subject Property REC and off-Subject Property REC.** No other significant changes from the 1993 photograph.
2006	Vacant	No significant changes from the 1998 photograph.
2010	Vacant	No significant changes from the 2006 photograph.
2014	Vacant	No significant changes from the 2010 photograph.
2018	Vacant	The northern portion of the Subject Property appears to have been cleared related to the capping that portion of the landfill. A fenced area with tanks is visible within the eastern boundary of the Subject Property. Pipes are visible that lead from the landfill to this area. No other significant changes from the 2014 photograph.
2022	Vacant	Gas vents are visible on the Subject Property in the area of the capped landfill. No Significant changes from the 2018 photograph.

3.6 Historical Sanborn Fire Insurance Maps

According to EDR's Certified Sanborn® Map Report dated July 28, 2025. Fire insurance maps covering the Subject Property were not found in their Sanborn Library. A copy of the Certified Sanborn® Map Report is included in Appendix A.

3.7 Historical Directories

BSK reviewed several directory reports provided by EDR to obtain information regarding former property occupants and to provide an indication of the property's former use. The Subject Property was searched in the available directory years including: 1975, 1980, and 1999. The Subject Property was not included in the EDR City Directory Report, however, the address of the property around the Subject Property was included in the City Directory Image Report as a Brighton Auto Wreckers and Brownies Auto Sales in 1975. The EDR-City Directory Image Report is dated July 29, 2025 and is included in Appendix A.

3.8 User-Provided Information

As part of the All-Appropriate Inquiry (AAI) requirements required under ASTM E1527-21, Mr. Mark Caso, Manager of EPD & BBD Family Properties LP provided BSK with a completed user questionnaire dated July 29, 2025. Mr. Caso is aware that the current use of a portion of the Subject Property is a transfer station and historically, a portion of the Subject Property was a landfill, gravel mining, and farmland. Mr. Caso is aware of clean fill-in areas of the old landfill and the closure of three (3) landfill cells. Mr. Caso is unaware of any additional environmental conditions related to the Subject Property. A copy of the questionnaire by Mr. Caso is included in Appendix B.

4. RECORDS REVIEW

The purpose of the records review is to examine historic records concerning conditions on surrounding properties, including the Subject Property, which may represent a REC in relation to the Subject Property.

4.1 Standard Environmental Record Sources

Federal, State, and local regulatory agencies maintain databases of businesses and properties that handle, store, and dispose of hazardous materials and/or wastes, and locations known to have had unauthorized releases of hazardous substances to soil and/or groundwater. These databases are available for review at the various regulatory agencies, or the information may be obtained from commercial data collection services. BSK Associates retained Environmental Data Resources (EDR) to perform the regulatory agency database search. The record search meets the government records search requirements of ASTM E 1527-21. EDR's findings are documented in the EDR-Radius Map™ Report, dated July 29, 2025 which is included in Appendix A.

Listed below are the facility listings identified on federal and state/tribal databases within the ASTM-required search distances from the approximate Subject Property boundaries. Database definition, descriptions, and the database search report are included in Appendix A.

Table 6
Federal and State Database Search Results

Database	Description	Radius (Miles)	Listings
	Federal		
National Priorities List (NPL)	The NPL is the EPA's database of uncontrolled or abandoned hazardous waste facilities that have been listed for priority remedial actions under the Superfund Program.	1	1
NPL (Delisted)	The NPL (Delisted) refers to facilities that have been removed from the NPL.	1	0
Superfund Enterprise Management System (SEMS) (Previously known as CERCLIS)	The SEMS database tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States.	0.5	0
SEMS Archive	SEMS Archive refers to facilities that have been removed and archived from EPA's inventory of SEMS sites.	0.5	1
Resource Conservation and Recovery Act (RCRA) Corrective Action Report (CORRACTS)/ Treatment, Storage, Disposal (TSD)	The EPA maintains a database of RCRA facilities associated with treatment, storage, and disposal (TSD) of hazardous waste that are undergoing "corrective action." A "corrective action" order is issued when there has been a release of hazardous waste or constituents into the environment from a RCRA facility.	0.25	1
RCRA Non-CORRACTS/ TSD	The RCRA Non-CORRACTS/TSD Database is a compilation by the USEPA of facilities which report storage, transportation, treatment, or disposal of hazardous waste. Unlike the RCRA CORRACTS/TSD database, the RCRA Non-CORRACTS/TSD database does not include RCRA facilities where corrective action is required.	0.25	0
RCRA Generators	The RCRA Generators database, maintained by the EPA, lists facilities that generate hazardous waste as part of their normal business practices. Generators are listed as either large (LQG), small (SQG), or conditionally exempt (CESQG). LQG produce at least 1000 kg/month of non-acutely hazardous waste or 1 kg/month of acutely hazardous waste. SQG produce 100-1000 kg/month of non-acutely hazardous waste. CESQG are those that generate less than 100 kg/month of non-acutely hazardous waste.	Subject Property and adjoining properties	9
IC / EC	A listing of sites with institutional and/or engineering controls in place. IC include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls. EC include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.	0.5	0
ERNS	The Emergency Response Notification System (ERNS) is a listing compiled by the EPA on reported releases of petroleum and hazardous substances to the air, soil and/or water.	Subject Property	0

Table 6
Federal and State Database Search Results

Database	Description	Radius (Miles)	Listings
State/Tribal			
NPL	State-equivalent and/or Tribal-equivalent database of NPL sites	1	1
Envirostor	State-equivalent and/or Tribal-equivalent database of SEMS sites. These facilities may or may not already be listed on the federal SEMS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with facilities where cleanup will be paid for by potentially responsible parties.	1	4
Solid waste facility (SWF) / Landfill (LF)	State and/or Tribal database of solid waste facilities located within California. The database information may include the facility name, class, operation type, area, estimated operational life, and owner.	0.5	5
Leaking Underground Storage Tank (LUST)	State and/or Tribal database of leaking underground storage tanks in state of California	0.5	16
Underground Storage Tank (UST)/Above Ground Storage Tank (AST)	State and/or Tribal database of registered storage tanks in the State of California which may include the owner and location of the tanks.	0.25	6
Voluntary Cleanup Program (VCP)	State and/or Tribal facilities included as Voluntary Cleanup Program sites.	0.5	0
Brownfields	State and/or tribal listing of Brownfield properties addressed by Cooperative Agreement Recipients or Targeted Brownfields Assessments.	0.5	0

In addition to EDR, BSK reviewed the online databases for the following regulatory agencies to obtain reasonably ascertainable and practically reviewable documentation regarding RECs present at the property and adjacent facilities:

- State Water Resources Control Board (SWRCB), GeoTracker Website (http://geotracker.waterboards.ca.gov/)
- Department of Toxic Substances Control (DTSC), EnviroStor Website and Record Search (http://www.envirostor.dtsc.ca.gov/public/)
- California Environmental Protection Agency (CalEPA) Website (https://siteportal.calepa.ca.gov/nsite/map/help)
- California Geologic Energy Management Division (CalGEM) Database (https://www.conservation.ca.gov/calgem/Pages/WellFinder.aspx)
- U.S. Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Website (www.npms.phmsa.dot.gov)
- Sacramento County Environmental Management Public Records Request (https://saccounty.nextrequest.com/requests/new)
- City of Sacramento Record Library (https://records.cityofsacramento.org/)

The property that includes the Subject Property is identified on the DTSC Envirostor website as a public disposal site. The Subject Property is identified on the CalEPA website as a landfill, chemical storage facility, and hazardous waste facility. No oil and gas wells were visible on the Subject Property according to the CalGEM database. A natural gas pipeline is located northwest of the Subject Property along Florin Perkins Rd. The pipeline ID is 11562.

The Subject Property was identified in the SWRCB GeoTracker database. It is primarily regulated under the Central Valley Regional Water Quality Control Board's Waste Discharge Order # R5-2013-0042. The Waste Discharge Requirements (WDRs) details many requirements for the Subject Property related to the landfill. Amongst the many requirements, Item 62 states "Provision I.12 requires that the Discharger submit a revised Final Closure and Post-Closure Maintenance Plan that reflects the requirements under these WDRs (including MRP No. R5-2013-0042) and any other planned changes in the closure plan for the landfill not requiring revision of this Order." A copy of the WDR is included as Appendix E.

According to the Final Construction Quality Assurance Report for the South Fill Area dated December 13, 2017, the landfill was located on a former gravel quarry and began accepting waste in 1993. Landfill operations ceased in 2005. The landfill is comprised of three unlined cells that include the following:

1. South Fill Area – 13-acres that was active from approximately 1993-1995
2. North Fill Area – 14-acres that was active from approximately 1995-2003
3. East Fill Area – 12 acres that was active from approximately 2003-2005.

Please note, the South Fill Area is located on a portion of the Subject Property. This use qualifies as an **on-Subject Property REC and off-Subject Property REC.**

According to the Updated Final Closure and Post-Closure Maintenance Plan dated June 2018 and prepared by NV5, the South Fill Area which includes a portion of the Subject Property was required to have the following components:

- A one-foot thick foundation layer; and
- Two feet of compacted soil with laboratory permeability no greater than 1 x 10^{-5} cm/s.
- A ½ foot vegetative cover layer over a 1 ½ foot engineered soil layer
- The upper 2-foot layer required 90% relative compaction at +/- 1% of optimum moisture (ASTM D6938, ASTM D2937, ASTM D1556 – four field density tests shall be performed per 1,000 cubic yards of material placed, with 10% of the required density tests by ASTM D1556.)
- Minimum 33% passing the #200 sieve.
- Minimum of 12% passing 5 microns.
- Laboratory permeability no greater than 1x10^{-5} cm/s (as determined by test method ASTM D5084, or approved alternative.)

According to the report, "the proposed final cover profile is consistent with the WDR requirements and will provide an adequate barrier to infiltration of precipitation into the underlying wastes. The proposed final cover profile will protect water quality due to the minimization of leachate, which could transport waste constituents to groundwater, and the absence of water within the in-place wastes which will decrease the rate of landfill gas generation. The report describes that the South Fill Area on a portion of the Subject Property utilizes an active landfill gas extraction system with activated carbon filtration.

According to the report, the closed fill areas including the South Fill Area on a portion of the Subject Property will function as "vacant open space". Additionally, "land development will not occur within 1,000 feet of the waste footprint without Regional Water Quality Control Board approval of a revision of the post-closure monitoring and maintenance plan identifying the proposed development. The revision will also be submitted to the LEA, SMAQMD, and the local planning department as required by Section 21190(c) of Title 27. In additional, as required by Section 21990(c) of Title 27, the LEA shall review and approve proposed post-closure land uses if the project involves structures within 1,000 feet of the disposal area, structures on top of the waste, modification of the low permeability, or irrigation over waste." A copy of this report is included in Appendix F.

According to the 2024 Second Semi-Annual Groundwater and Landfill Gas Monitoring Report dated January 23, 2025, six (6) groundwater monitoring wells are on the Subject Property (MW-H(D), MW-H(S), MW-F, MW-G(D), MW-G(S), and MW-C). Additionally, seven (7) gas probes are mapped on the Subject Property (GP-1, GP-2, GP-3, GP-7, GP-8, GP-13, GP-15). Two (2) vapor probes are mapped on the Subject Property (VP-1 and VP-4) and eight (8) gas vents from 2013 and 2019 are on the Subject Property (GV-1, GV-2, GV-3, GV-4, GV-5, GV-11B, GV-15B, and GV-16B. A production well (Well-SE) is on the Subject Property as well as a blower Station with treatment and connected landfill gas pipelines. These features are shown on Figure 2.

According to this report, a release of VOC TCFM (Freon 11) was detected in MW-F on the Subject property in 2002. TCFM was also detected in MW-G(S), MW-F, MW-G(D), MW-H(S), MW-G(S), and MW-C in 2024. Lastly, dichlorodifluoromethane was detected in MW-G(S) on the Subject Property in 2024. This documented groundwater contamination qualifies as an **on-Subject Property REC.** Additionally, this report states that VOCs and/or methane were detected in VP-1, VP-4, GV-1, GV-2, GV-4, GV-5, GV-11, GV-15B, and GV-16B on the Subject Property in 2024. Additional gas vents and vapor probes in the landfill site also had detections in 2024. This landfill gas on the Subject Property and landfill site qualifies as an **on-Subject Property REC and off-Subject Property REC.** A copy of the 2024 Second Semi-Annual Groundwater and Landfill Gas Monitoring Report is included in Appendix G.

BSK submitted a Sacramento County Public Records request on July 28, 2025. The public record request was as follows:

"We are preparing a Phase I Environmental Site Assessment for Sacramento County APN 061-0150-042-0000 (3901 Florin Perkins Road, Sacramento, CA) and would like to formally request any documents

related to petroleum products and/or hazardous materials for the Site. We are interested in any records related to environmental closure reports, spill reports, cleanup reports, environmental assessments, remediation records, UST records, AST records, building department records, etc." Sacramento County responded to the request stating that some of the documents requested are "exempt from disclosure, pursuant to Government Code § 7927.700, Government Code § 7927.705, and Health and Safety Code § 25509(b). The available records were reviewed and are summarized below and attached as Appendix H.

According to an inspection report dated January 3, 2024, spilled oil was removed at the time of discovery using absorbent dry sweep. This release appears to be di minimis. According to an inspection report dated March 8, 2024, Mr. Mark Caso of Florin-Perkins Landfill, Inc. stated that the site owners are continuing to explore the possibility of adding multiple warehouses along the south perimeter of the property within 1,000 feet of the South Fill Area. The inspection report documents the notification requirements needed for this to occur. According to the inspection report dated May 31, 2024, the landfill gas extraction system was vandalized on November 7, 2023 and was repaired. According to a Corrective Action email dated January 2, 2022, the South Fill Area on the Subject Property required down chute entrances to be repaired. BSK's cursory review of the documents provided did not reveal additional relevant information that are not documented on the SWRCB GeoTracker website documents discussed above. A copy of the referenced public records are included in Appendix H.

The following table summarizes the Subject Property-specific information provided by the database and/or gathered by this office for identified facilities from the databases above. Facilities are listed in order of proximity to the Subject Property and evaluated for impacts to the Subject Property. Acronyms and terms used in this report are described in Appendix A– Radius Map Report.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Florin-Perkins Landfill / Floring-Perkins Chip/Grind / Florin Perkins Public Disposal Site – Green Waste / Brownies Auto Sales (4201 Florin Perkins Rd.)	Subject Property	SWF/LF, CERS, RGA LF, Sacramento Co. ML, E. MANIFEST, LDS, ENF, CERS Hazardous Tanks	The listing is for the Subject Property and the property adjacent north of the Subject Property. As stated previously, a portion of the Subject Property is located on the former South Fill Area of the Florin-Perkins Landfill. This area is documented as having groundwater contamination, soil contamination, and landfill gas contamination and qualifies as an **on-Subject Property REC and off-Subject Property REC** and a vapor encroachment concern (VEC) (see Section 4.5 below)**.** Additionally, the area north of the Subject Property is documented as a transfer/processing solid waste facility that receives industrial waste. This use qualifies as an **off-Subject Property REC.** The facility is documented as having aboveground petroleum storage and as a chemical storage facility. Lastly, the address associated with the Subject Property is documented as having Brownies Auto Sales operating in 1975. BSK did not see documentation of a release from this listing in the records reviewed and therefore, this listing does not qualify as a REC.
Alston Race Car Engineering / Network Office System (6291 Warehouse Wy.)	58 feet east, southeast / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML for having either hazardous materials, hazardous materials storage, underground storage tanks (USTs), or a waste generator. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7 Listed Facilities			
Facility Name and Location	**Estimated Distance/Direction/ Hydrogeological Gradient**	**Database Listings**	**Additional Information Regarding Property and Interpretation of Impact on Subject Property**
Pines Kearneys Commercial Vehicle Paint (6290 Warehouse Wy.)	58 feet east, southeast / down-to-cross-gradient	RCRA-SQG, Sacramento Co. ML	This facility is a documented small quantity generator of hazardous waste. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
DB Simas Woodworking (6250 Warehouse Wy.)	99 feet east, southeast / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Produce Express Inc. (4450 Florin Perkins Rd.)	109 feet west, northwest / up-gradient	CERS Hazardous Waste, HAZNET, Sacramento Co. ML, CERS	This facility is documented as a hazardous waste generator and chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Enterprise Printing (6201 Warehouse Wy.)	140 feet southeast / down-gradient	Sacramento Co. ML, HAZNET	This facility is documented on the Sacramento Co. ML. This facility is documented as recycling photochemicals/photo processing waste in 2006. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Mark's Floor Coverings / American Stripping Co of Sacramento, Inc. (6202 Warehouse Wy.)	148 feet east, southeast / down-to-cross-gradient	Sacramento Co. ML, Manifest	This facility is documented on the Sacramento Co. ML. This facility is documented as having hazardous waste removed from the facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Pacific Power Coating (8637 23rd Ave.)	227 feet south, southeast / down-to-cross-gradient	HAULERS, CERS Hazardous Waste, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML. This facility is documented as a hazardous waste generator and chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7 Listed Facilities			
Facility Name and Location	**Estimated Distance/Direction/ Hydrogeological Gradient**	**Database Listings**	**Additional Information Regarding Property and Interpretation of Impact on Subject Property**
Sigler (8615 23d Ave.)	29 feet south / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Krause's Sofa Factory (8581 23rd Ave.)	230 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
PPSP Recycling (8561 23rd Ave.)	232 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Shift Management, Inc. (6200 Warehouse Way)	241 feet southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
DX Manufacturing Inc. (8661 23rd Ave.)	243 feet south, southeast / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
National Restoration / All Clean Restoration (8601 23rd Ave.)	246 feet south, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Alpha Architectural (8565 23rd Ave.)	249 feet southwest/ cross-gradient	Sacramento Co. ML, HAZNET	This facility is documented on the Sacramento Co. ML and as having oxygenated solvents removed in 2006 and 2008. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7 Listed Facilities			
Facility Name and Location	**Estimated Distance/Direction/ Hydrogeological Gradient**	**Database Listings**	**Additional Information Regarding Property and Interpretation of Impact on Subject Property**
Applied Products / Pacific Adhesives Company (8670 23rd Ave.)	341 feet south, southeast / down-to-cross-gradient	Sacramento Co. ML, Manifest, CHMIRS, NPDES, CERS	This facility is documented on the Sacramento Co. ML. The facility is documented as having "various spills" of an undocumented product in 2019. Additionally, the facility is documented as disposing of glue mixed with water to the sewer system under County approval. This facility does not qualify as a REC.
Floor Service Supply / Golden West Distribution (8660 23rd Ave.)	341 feet south, southeast / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Golden Waste Distribution (8661 23rd Ave.)	243 feet south, southeast / down-to-cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
D-A Lubricant Co. (8640 23rd St.)	358 feet south, southeast / down-to-cross-gradient	AST, RCRA-SQG, CERS Hazardous Waste, CERS Tanks, MANIFEST, Sacramento Co. ML, CERS	This facility is documented as having 7 tanks at the facility that are active and 4 tanks that are closed at the facility. The total shell capacity of the facility is 163,425 gallons of petroleum. Additionally, the facility is documented as a hazardous waste generator and is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Calvey Inc. / Thrifty Supply / IM Distributing Corp (8541 23rd Ave.)	359 feet west, southwest / cross-gradient	SWEEPS UST, CA FID UST, LUST, Sacramento Co. CS, Historic UST, Historic CORTESE, CERS	This facility is documented as having a gasoline LUST that released to soil in 1986. The SWRCB GeoTracker case was completed and closed in 1986. This release qualifies as an **off-Subject Property CREC.** The facility is also documented as having a 2,000-gallon diesel UST. BSK did not see documentation of a diesel release from this UST in the records reviewed.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Sacramento Technologies / Valair / Web Specialties / Hardwoods Specialty / Foundation Building / FBM Sacramento / Kik No-Cal Inc. (8600 23rd Ave.)	360 feet south, southwest / cross-to-down-gradient	Sacramento Co. ML, RCRA-SQG	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Pac Machine Company Inc. (8570 23rd Ave.)	363 feet southwest / cross-gradient	RCRA-SQG, MANIFEST, CERS Hazardous Waste, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Zanze's Baking Company (8560 23rd Ave.)	364 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Bike Lockers Co. (6182 Warehouse Wy.)	368 feet southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Grocery Outlet / Swift Transportation / Safeway/Transco Distribution / Grocery Outlet Inc. / Crystal Creamery (4400 Florin Perkins Rd.)	382 feet northwest / up-gradient	Sacramento Co. ML, AST, CERS Hazardous Waste, Historic UST, HAZNET, CERS, SWEEPS UST, CA FID UST, LUST, CORTESE, Sacramento Co. CS, Historic CORTESE	This facility is documented on the Sacramento Co. ML and as having a 36,000-gallon AST. BSK did not see documentation of the contents of the AST in the records reviewed. The facility is also documented as a hazardous waste generator and as having a 9 USTs removed containing diesel, gasoline, and waste oil. The facility is documented as having a diesel release to soil in 1986. The SWRCB GeoTracker case was completed and closed in 1995 following remediation. This release qualifies as an **off-Subject Property CREC.**

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Scotsco / US Geological Survey (8550 23rd Ave.)	384 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
CTEC, Inc. (6172 Warehouse Wy.)	386 feet southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Aramark Refreshments / Central Pacific Sprinkler Co. (6152 Warehouse Wy.)	422 feet southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Excel Garden Product / Central Pet (4601 Florin Perkins Rd.)	429 feet west / cross-to-up-gradient	Sacramento Co. ML, CERS Hazardous Waste, CERS, MANIFEST	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Riddio Construction / Heath Specialties / Widings Windshields (8525 23rd Ave.)	384 feet southwest / cross-gradient	Sacramento Co. ML, EDR Historic Auto	This facility is documented on the Sacramento Co. ML and as an automotive transmission repair shop in 1991. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Central Valley Screen and Supply / Elcom Specialty Products (6199 Warehouse Wy.)	498 feet southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
B&B Power Equipment / Drywall Works Inc. (8521 23rd Ave.)	510 feet west, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Pump House – 4592 Florin Perkins (4592 Florin Perkins Rd.)	516 feet west / cross-to-up-gradient	Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML and as a chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Amadir Systems / The Chopper Shoppe / Raban Janitorial/Paper Supply / Ethan Conrad / Counter Coat USA / Fresh Cars / Managed Mobile – Sacramento / The Community College Foundation / Dan's Custom Cabinets / Arties Automotive (4900 Warehouse Wy.)	529 feet west, southwest / cross-gradient	Sacramento Co. ML, CERS Hazardous Waste, HAZNET, CERS, MANIFEST	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
HP Hood Warehouse (4600 Warehouse Wy.)	534 feet west / cross-to-up-gradient	CHMIRS, HAZNET, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML and as a chemical storage facility. Approximately 5-gallons of diesel was released to cementin 2020 and was cleaned by placing absorbents. This release is considered di minimis.
Diamond Peak, Inc. (4150 Florin Perkins Rd.)	589 feet northwest / up-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
ESIRG Manufacturing / Sonny S NW / Car Wash Technology (4901 Warehouse Way.)	616 feet southwest / cross-gradient	Sacramento Co. ML, MANIFEST	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7 Listed Facilities			
Facility Name and Location	**Estimated Distance/Direction/ Hydrogeological Gradient**	**Database Listings**	**Additional Information Regarding Property and Interpretation of Impact on Subject Property**
PW FUND, B LLP (4660 Florin Perkins Rd.)	677 feet west / cross-to-up-gradient	MANIFEST	This facility is documented as having hazardous materials transferred off the property. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Hopper Manufacturing / American Building Materials (6150/6102 Warehouse Way.)	688 feet southeast / down-gradient	Sacramento Co. ML,	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
KA Fleetone Inc. DBA Amerit Fleet Solutions / Camelia City Iron Works (6121 Warehouse Way.)	742 feet south, southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Blue Ribbon Enterprise / Pioneer Fleet Service Inc. (6111 Warehouse Way.)	749 feet south, southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
ATI Transport Inc. / Toro Body Shop / Chocolate Candy Land (6101 Warehouse Way.)	756 feet south, southeast / down-gradient	Sacramento Co. ML, Manifest	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
S&D Automotive / Custom Fabrication / Factory UTV LLC (4949 Florin Perkins Rd.)	772 feet west, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Clarklift West Inc. / Circo System Balance (4100 Florin Perkins Rd.)	837 feet northwest / up-gradient	RCRA-VSQG, Sacramento Co. ML, CERS Hazardous Waste, CERS, SWEEPS UST, Historic UST, CA FID UST, LUST, Sacramento Co. CS, CORTESE, Historic CORTESE	This facility is documented on the Sacramento Co. ML and is a very small quantity generator of hazardous waste. The facility is also documented as having two, 1,000-gallon gasoline USTs and a 500-gallon waste oil UST that were removed. Lastly, the facility is documented as having a waste oil LUST that released to soil in 1991. The SWRCB GeoTracker case was completed and closed in 1996. This release qualifies as an **off-Subject Property CREC.**
HP Hood – Dry Storage (4570 Florin Perkins Rd.)	851 feet west / cross-to-up-gradient	CHMIRS, Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. Additionally, the facility is reported as having approximately 54-gallons of diesel fuel syphoned from a trailer into a trash can by a transient. During the transfer, approximately 5-gallons of diesel fuel was released into a storm drain. This release is considered di minimis.
Lawnman Inc. / Blue Collar Supply (4871 Florin Perkins Rd.)	854 feet west, southwest / cross-gradient	Sacramento Co. ML, MANIFEST	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Unique Motorsports / Alpine Automotive Service / Press Kleen Chemicals / B M Lynn Painting (5401 Warehouse Wy.)	877 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
HP Hood – Kitting Warehouse (4630 Florin Perkins Rd.)	884 feet west / cross-to-up-gradient	HAZNET, CERS, Sacramento Co. ML	This facility is documented on the Sacramento Co. ML and as a chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Tesla, Inc. – Sacramento / UNARCO / Iron Mountain (8470 Belvedere Ave.)	884 feet west, northwest / up-gradient	RCRA-SQG, MANIFEST, Sacramento Co. ML, CERS Hazardous Waste, CERS	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. The facility is also documented as a chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Liqui-Box Corporation (5000 Warehouse Way.)	934 feet southwest / cross-gradient	E. MANIFEST , CERS Hazardous Waste, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
California Cabinet & Storage Fixture / Presidential Garden Group / Elite Workshop / Magnum Products / Clean Slate Consulting / Skypack / Continental hardwood / Panoramic Management / Elite Bodyshop / Stright-Line / Capital Wall Product (5801 Warehouse Wy.)	946 feet south / cross-to-down-gradient	Sacramento Co. ML, CERS Hazardous Waste, CERS	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Dish Network, LLC (5601 Warehouse Wy.)	947 feet south, southwest / cross-gradient	Sacramento Co. ML, HAZNET	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
The LetterExpress Connection (5451 Warehouse Wy.)	954 feet south, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
PESCO / Stringfellow Family / New Horizon / Excelmar MFG Inc. / Fredrick Singh (5601 Warehouse Wy.)	954 feet south, southwest / cross-gradient	PFAS ECHO, Sacramento Co. ML, RCRA-SQG, MWMP, E. MANIFEST	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
HEIECK Supply (6100 Warehouse Wy.)	954 feet south, southeast / down-gradient	Sacramento Co. ML, HAZNET	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Echosphere West (5671 Warehouse Wy.)	963 feet south / cross-to-down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
American Brenner Wholesale (5200 Warehouse Wy.)	1,016 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Calsierra Pipelines, Inc. (5250 Warehouse Wy.)	1,032 feet south, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
California Sprout, LLC (5640 Warehouse Wy.)	1,062 feet south / cross-to-down-gradient	Sacramento Co. ML, ENF, CERS	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
West Fork Construction (6050 Warehouse Wy.)	1,063 feet south, southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Bridon Mechanical / Drywall Works, Inc. / C&R Wall Systems / Auto Works Service / Foam Works, LLC (5900 Warehouse Wy.)	1,077 feet south, southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Warehouse Way Association / Windustrial Company, Golden West Distribution (5800 Warehouse Wy.)	1,077 feet south / cross-to-down-gradient	Sacramento Co. ML, LUST, Sacramento CO. CS, CORTESE, Historic CORTESE, CERS	This facility is documented on the Sacramento Co. ML. This facility is documented as having a gasoline LUST that released to soil in 1990. The SWRCB GeoTracker case was completed and closed. Due to the distance and direction away from the Subject Property, this release does not qualify as a REC.
Jeff White Equipment / M&S Racing (5600 Warehouse Wy.)	1,077 feet south, southeast / down-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Mark III Construction (5101 Florin Perkins Rd.)	1,078 feet southwest / cross-gradient	Sacramento Co. ML, CERS, CERS Hazardous Waste, E. MANIFEST	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Dalton Enterprises / Safeway Warehouse (6002 Warehouse Wy.)	1,079 feet south, southeast / down-gradient	Sacramento Co. ML, AST, CERS Tanks, CERS	This facility is documented on the Sacramento Co. ML and as a chemical storage facility. The facility is documented as a petroleum AST. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Schatz & Krum / Gentle Ben's Towing, Asion Auto Recycling (8460 Belvedere Ave.)	1,132 feet northwest / up-gradient	CERS Hazardous Waste, Sacramento Co. ML, CERS, E. Manifest	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Facility Name and Location	**Estimated Distance/Direction/ Hydrogeological Gradient**	**Database Listings**	**Additional Information Regarding Property and Interpretation of Impact on Subject Property**
American Stripping Co of Sacramento, Inc. (5420 Warehouse Wy.)	1,183 feet south, southwest / cross-gradient	Sacramento Co. ML, CERS Hazardous Waste, HAZNET, CERS, E. MANIFEST, PFAS ECHO	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Sac Auction Company (5400 Warehouse Wy.)	1,183 feet south, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Alpha Architectural (5410 Warehouse Wy.)	1,183 feet south, southwest / cross-gradient	Sacramento Co. ML, E. MANIFEST	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Blue Ribbon Enterprises / California Grills / Webtex Fiber Product / Martinelli & Sons / M&S Fabrications / Denco Sales Company / Automotive Supply Company (5440 Warehouse Wy.)	1,184 feet south, southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
German Auto Parts (5001 Florin Perkins Rd.)	1,213 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Old Libbey Cannery / Libby McNeill & Libby Inc. / Belvedere Avenue Property / Florin Perkins #2 (3900 Florin Perkins Rd.)	1,216 feet northwest / up-gradient	LUST, Sacramento CO. CS, CORTESE, Historic CORTESE, CERS, RCRA-SQG, Sacramento Co. ML	This facility is documented on the Sacramento Co. ML and as a small quantity generator of hazardous waste. The facility is documented as having three, 10,000-gallon diesel USTs. The facility is documented as having a diesel LUST to soil in 1990. The SWRCB GeoTracker case was completed and closed in 1991. This release qualifies as an **off-Subject Property CREC.**

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Kelloggs Towing Equipment & Repair (5003 Florin Perkins Rd.)	1,226 feet southwest / cross-gradient	Sacramento Co. ML, HAZNET	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
BMW's Only Too (5005 Florin Perkins Rd.)	1,229 feet southwest / cross-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Barnett Brass & Copper / Whitmire Distribution Corp. / Iron Mountain Record (8450 Belvedere Ave.)	1,238 feet west, northwest / up-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Independent Paper Stock Company / Green Evolution Recycling / Rock Tenn CP, LLC / Smurfit-Stone Container Enterprises Inc. (4800 Florin Perkins Rd.)	1,287 feet west, southwest / cross-gradient	Historic UST, AST, CERS Hazardous Waste, HAZNET, Sacramento Co. ML, E. Manifest, CERS	This facility is documented on the Sacramento Co. ML and as a hazardous waste generator/chemical storage facility. This facility is documented as having a 10,000-gallon gasoline UST, a 5,000-gallon gasoline UST, a gasoline UST with an unreported quantity in the records reviewed, and a 5,000-gallon diesel UST removed. The facility is also documented as having a 2,510-gallon AST. BSK did not see documentation of the contents of the AST in the records reviewed. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.
Hunt-Wesso, Inc. / DBA River City RV Auto Repair and MPH Mobile Fleet / Sawbridge Engineered / Continental Hardwood (5400 Warehouse Wy.)	1,292 feet northwest / up-gradient	Sacramento Co. ML	This facility is documented on the Sacramento Co. ML. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as a REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Markel Bros. Plumbing / Universal Service Recycling Inc. (5400 Warehouse Wy.)	1,703 feet west, southwest / cross-gradient	LUST, Historic UST, CORTESE, HAZNET, CERS, Sacramento Co. CS, CERS Hazardous Waste, Historic UST, CERS Tanks, Historic CORTESE, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML. This facility is documented as having a gasoline LUST that released to groundwater and soil in 1990. The SWRCB GeoTracker case was completed and closed in 2004. This release qualifies as an **off-Subject Property CREC.**
Quality Mattress Company (8441 24th Ave.)	1,779 feet west, southwest / cross-gradient	LUST, Sacramento Co. CS, CORTESE, Historic CORTESE, Sacramento Co. ML, CERS	This facility is documented on the Sacramento Co. ML. This facility is documented as having a gasoline LUST that released to soil in 1994. The SWRCB GeoTracker case was completed and closed in 2000. Due to the distance and direction from the Subject Property and that the release was reportedly to soil only, this release does not qualify as a REC.
L&D Landfill Company (8635 Fruitridge Rd.)	1,912 feet south/ down-to-cross-gradient	SEMS-ARCHIVE, SWF/LF, AST, CERS Hazardous Waste, LDS, CORTESE, Historic CORTESE, HAZNET, Sacramento Co. ML, CERS	This facility is documented as a solid waste landfill. This facility qualifies as an **off-Subject Property REC.** This facility is documented as having oil spilling from a vehicle onto the shop floor in 2017. This release is considered di minimis.
Dolan's Lumber Company (5150 Florin-Perkins Rd.)	2,066 feet west, southwest / cross-gradient	LUST, Sacramento Co. CS, Historic UST, CORTESE, Historic CORTES	This facility is documented as having a gasoline LUST that released to groundwater and soil in 1990. The SWRCB GeoTracker case was completed and closed in 2002. This release qualifies as an **off-Subject Property CREC.**
Valley Slurry Seal (8510 Jackson Rd.)	2,316 feet north, northwest / up-gradient	LUST, Sacramento Co. CS, SWEEPS UST, CORTESE, Historic CORTESE, CERS, Sacramento Co. ML	This facility is documented as having a waste oil LUST that released to soil in 1988. The SWRCB GeoTracker case was completed and closed in 1989. The facility is documented as having a 5,000-gallon gasoline UST and a 12,000-gallon diesel UST removed. Due to the distance away from the Subject Property, this release does not qualify as an off-Subject Property REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
PG&E Sacramento Service Facility (5555 Florin Perkins Rd.)	2,544 feet south, southwest / cross-gradient	LUST, Sacramento Co. CS, SWEEPS UST, CORTESE, Historic CORTESE, CERS	This facility is documented as having a waste oil LUST that released to soil in 1988. The SWRCB GeoTracker case was completed and closed in 1988. This facility is also documented as having a gasoline LUST that released to groundwater. Due to the distance away from the Subject Property, this release does not qualify as an off-Subject Property REC.
Williamette Industries / Capital Corrugated (8333 24th Ave.)	2,630 feet west, southwest / cross-gradient	LUST, Sacramento Co. CS, CERS Hazardous Waste, CORTESE, Historic CORTESE, CERS	This facility is documented as having a gasoline LUST that released to groundwater and soil in 1989. The SWRCB GeoTracker case was completed and closed in 1999. Due to the distance away from the Subject Property, this release does not qualify as an off-Subject Property REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Sacramento Army Depot (8350 Fruitridge Rd.)	2,831 feet south, southwest / cross-gradient	NPL, SEMS, CORRACTS, RCRA-SDF, RCRA-SQG, Historic UST, CA FID UST, ROD, PADS, FTTS, Historic FTTS, Docket HWC, PFAS NPL, HAZNET, AQUEOUS FOAM	This property is a documented as former Army installation that was an electronics maintenance facility and prisoner of war camp for German prisoners. The facility was closed in 1995. According to the Final PFAS PA/SI Executive Summary Package dated December 2023 (https://documents.geotracker.waterboards.ca.gov/regulators/deliverable_documents/3887723624/2023-12%20Exec%20Sum%20PASI%20Rpt%20for%20PFAS%20at%20SAAD.pdf), PFAS concentrations exceeded screening levels in soil in one area on the property and in groundwater in four areas of the property. Additionally, the property is documented to have soil and groundwater contamination that includes metals, carbon tetrachloride, trichloroethene (TCE), tetrachloroethene, 1,2-dichlorethane, and cis-1,2-dichloroethene (cis-DCE) as a result of metal plating and painting operations that disposed residues in oxidation lagoons and burn pit sites. This documented soil and groundwater contamination qualifies as an **off-Subject Property REC.**
Reed & Graham Inc. (8280 14th Ave.)	3,219 feet west, northwest / up-gradient	SWEEPS UST, Historic UST, CA FID UST, HWP, CERS	This property is documented as having a 12,000-gallon diesel UST and a 630-gallon waste oil UST removed. BSK did not see documentation of a release from this facility in the documents reviewed, and therefore, this facility does not qualify as an off-Subject Property REC.

Table 7
Listed Facilities

Facility Name and Location	Estimated Distance/Direction/ Hydrogeological Gradient	Database Listings	Additional Information Regarding Property and Interpretation of Impact on Subject Property
Proctor & Gamble (8201 Fruitridge Rd.)	4,748 feet west, southwest / cross-gradient	LUST, CPS-SLIC, Sacramento Co. CS, CERS Hazardous Waste, SWEEPS UST, CHMIRS, CORTESE, Historic CORTESE, HAZNET, Sacramento Co. ML, CERS	This property is documented as having a gasoline LUST that released to soil in 1989. The SWRCB GeoTracker case was completed and closed in 1996. Additionally, a toluene release to soil was documented in 1996. Due to the distance away from the Subject Property, this release does not qualify as an off-Subject Property REC.
Metalloy Steel Foundry (8588 Thys Ct.)	5,040 feet south / down-gradient	ENVIROSTOR, Sacramento Co. CS, VCP, CERS	This property is documented as having contaminated soil removed from the property in 1993. DTSC issued a "No Further Action" determination in 1996. Due to the distance and direction from the Subject Property, this release does not qualify as a REC.

The remaining facilities listed in Appendix A were reviewed and did not reveal evidence of potential RECs in association with the Subject Property, due to distance and hydrogeologic gradient.

4.2 Previous Assessments

BSK was not provided a previous assessment for the Subject Property. However, as previously mentioned there was a lengthy history regarding this property related to the Florin Perkins Landfill on GeoTracker.

4.3 Subject Property Reconnaissance

In accordance with the ASTM 1527-21, a Subject Property reconnaissance, which included an observation of the Subject Property and adjacent properties, was conducted by Messrs. Kevin Grove, Christopher Semilla, and Victor Trujillo of BSK on August 6, 2025 and October 2, 2025. Subject Property photographs taken during this reconnaissance are included in Appendix C. The objective of the Subject Property reconnaissance was to observe Subject Property conditions and obtain information indicating the likelihood of identifying RECs, including hazardous substances and petroleum products, in connection with the Subject Property and/or adjacent properties (including soils, surface waters, and groundwater).

The Subject Property reconnaissance included observations of the Subject Property, the Subject Property's exterior periphery, and immediately adjacent properties. Table 8 provides a brief description of Subject Property observations encountered during the Subject Property reconnaissance. Please note, Table 8 does not include observations from the surrounding parcel, which includes the remainder of the facility (and consequently the same address, since the Subject Property was a small sliver of land that was intended for use as a rail spur.

Table 8
Subject Property Observations

Observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products	Observed	Not Observed	Description
Aboveground storage tank (AST)	X		Above-ground storage tanks were observed as part of the landfill gas blower system (Photos 4 and 5).

Table 8
Subject Property Observations

Observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products	Observed	Not Observed	Description
Air Emissions	X		A landfill gas blower system and landfill gas venting was observed on the Subject Property. (Photo 4 and 5) Vapor probes and soil gas vents were observed on the South Fill Area. (Photo 17, 18, 19, 20, 21, 22, 23, 24, 25, 26)
Below grade vaults		X	
Burned or buried debris	X		A portion of the property was burned. (Photos 6, 7, 11, 12, 16, 17, 28)
Chemical storage		X	
Chemical mixing areas		X	
Discolored soil or water	X		Stained pavement and soil was observed in the blower system area. This qualifies as an **on-Subject Property REC.** (Photo 5)
Ditches, streams	X		There were ditches related to the drainage of the South Fill Area.
Drains and piping (e.g., floor drains, floor trenches, bay drains, sand traps, grease traps)	X		Piping was observed leading from the capped South Area Fill to the landfill gas blower system and landfill gas vents on the Subject Property. (Photos 5, 16, 17, 19, 20, 21, 24, 25, 26)

Table 8 Subject Property Observations			
Observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products	**Observed**	**Not Observed**	**Description**
Drums	X		Drums were observed next to well MW-H(D), MW-G(D) and MW-G(S). BSK could not ascertain the contents of the drum, however, given the location, it is likely purgewater related to the monitoring well. These drums qualify as **on-Subject Property RECs** due to the documented contamination of groundwater on the Subject Property. (Photos 2, 11, 12)
Electrical or hydraulic equipment (Polychlorinated biphenyls [PCBs])		X	Overhead power was observed with pole-mounted transformers in the southeast corner of the Subject Property, however, BSK did not see evidence of a release and the transformers appeared to be relatively new. (Photo 15)
Fill dirt from unknown source	X		Two soil piles were observed in the northwest portion of the Subject Property. These piles qualify as separate **on-Subject Property RECs.** (Photo 30, Photo 33, and Photo 34)
Fill dirt from known source		X	
Hazardous chemical and petroleum products in connection with unknown use		X	
Non-hazardous containers with contents		X	
Hazardous Waste Storage		X	
Heating and cooling system and fuel source		X	

Table 8
Subject Property Observations

Observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products	Observed	Not Observed	Description
Industrial waste treatment equipment	X		A landfill gas blower system and landfill gas venting was observed on the Subject Property. (Photo 4 and 5)
Loading and unloading areas		X	
Odors		X	
Pits, Ponds, or Lagoons	X		A pit was visible on the northern boundary of the Subject Property in the location of the former pond. As stated previously, this pond qualifies as an **on-Subject Property REC.**
Pools of Liquid		X	
Process wastewater		X	
Sanitary Sewer System		X	
Septic system (e.g., tank and leach fields)		X	
Soil piles	X		Two soil piles were observed in the northwest portion of the Subject Property. These piles qualify as separate **on-Subject Property RECs.** (Photo 30, Photo 33, and Photo 34)
Solid Waste/Evidence of Unauthorized Dumping		X	Di minimis unauthorized dumping. However, the Subject Property includes portion of the South Fiil Area.
Stained pavement, soil or concrete	X		Stained pavement and soil was observed in the blower system area. This qualifies as an **on-Subject Property REC.** (Photo 5)
Stains or corrosion (interior, non-water)		X	

Table 8 Subject Property Observations			
Observations or environmental conditions that may involve the use, storage, disposal or generation of hazardous substances or petroleum products	**Observed**	**Not Observed**	**Description**
Storm drains/catch basins	X		Three (3) stormwater culverts and shotcrete drainages were observed along the northern boundary of the Subject Property to convey water from the South Fill Area. (Photos 37 and 38)
Stressed vegetation	X		A portion of the Subject Property was burned. (Photos 6, 7, 11, 12, 16, 17, 28)
Sumps and clarifiers		X	
Surface Water		X	
Underground storage tank(s) including heating oil tanks and oil/water separators		X	
Unidentified substance containers		X	
Utilities	X		Overhead power was observed. (Photo 15)
Wastewater Discharge		X	
Water supplies (potable and process)		X	A production well (Well-SE) was noted (Figure 2 and Photo 3).
Wells (irrigation, monitoring, or domestic)	X		Both monitoring wells and a production well was observed on the Subject Property (Figure 2). (Photos 2, 3, 11, 12. 27, 28)
Wells (dry)		X	
Wells (Oil and Gas)		X	

The Subject Property reconnaissance identified the following RECs:

1. Monitoring well MW-H(S) and MW-H(D) drum – potential hazardous materials
2. Monitoring well MW-G(S) drum – potential hazardous materials
3. Monitoring well MW-G(D) drum – potential hazardous materials
4. Stained pavement and soil in the landfill gas blower system area – hazardous material release
5. Soil Pile (South – Photo 30) – Potential Hazardous Material and/or Petroleum Product Release

6. Soil Pile (North – Photo 33/34) – Potential Hazardous Material and/or Petroleum Product Release
7. Landfill Gas Vapor Probes, Vents, and Landfill Gas Recovery System – Hazardous Material Release
8. Landfill Groundwater Monitoring Wells – Hazardous Material Release

No other RECs were identified during the Subject Property reconnaissance.

4.4 Interviews

The Owner/Occupant Questionnaire was prepared by Mr. Mark Caso of EPD & BBD Family Properties LP, the Subject Property owner, on July 30, 2025. According to Mr. Caso's responses, he is not aware of any USTs, ASTs, septic tanks, wash rack areas, storm drains, stationary hydraulic lifts, or pipelines on the Subject Property. He is aware of water or disposal wells, fill material or imported soil, and freon 11 on the Subject Property. He stated that the Subject Property was originally farmland and was mined for gravel in 1950/1960. After mining operations ceased, a landfill operated from 1993 to 2011. In 2006 the Subject Property was leased by Zanker who started operations as a transfer facility in 2011 until present. As stated previously, the documented landfill operation, landfill gas contamination, and groundwater contamination qualify as an **on-Subject Property REC.** The completed questionnaire is included in Appendix D.

4.5 Migration and VES

Migration refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface. A Vapor Encroachment Screen (VES) was conducted to comply with the requirements of ASTM E2600-10, "Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions." A VES is a high-level screening of available records to evaluate the likelihood of migration of volatile contaminants (generally excluding petroleum hydrocarbons from on-Subject Property sources) which may impact the Subject Property. The screening evaluates groundwater gradient, distance, migration pathways, barriers, and chemical specific characteristics to determine the likelihood of migration. A search of the available records was conducted by EDR as part of the screening evaluation. The VES identified four (4) properties with Vapor Encroachment Concern (VEC)s in relation to the Subject Property:

1. Florin-Perkins Landfill / Florin-Perkins Chip/Grind / Florin Perkins Public Disposal Site – Green Waste / Brownies Auto Sales - (4201 Florin Perkins Rd.)
2. Calvey Inc. / Thrifty Supply / IM Distributing Corp - (8541 23rd Ave.)
3. Grocery Outlet / Swift Transportation / Safeway/Transco Distribution / Grocery Outlet Inc. / Crystal Creamery - (4400 Florin Perkins Rd.)
4. Clarklift West Inc. / Circo System Balance - (4100 Florin Perkins Rd.)

The VEC Screening Report is included in Appendix A

5. FINDINGS AND CONCLUSIONS

We have performed a Phase I ESA in general conformance with the scope and limitations of ASTM practice E 1527-21 for Sacramento County APNs: 061-0150-049-0000, 061-0150-045-0000, & a Portion of 061-0150-042-0000 & 061-0150-054-000 in Sacramento, California. Any exceptions to, or deletions from, this practice are described in Section 2.6 of this Report.

This assessment identified nine (9) RECs in connection with the Subject Property. The RECs are as follows:

1. Two Historic Structures (Approximately 1940s) – Potential Termiticide and/or Lead-based Paint Application
2. Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation of Hazardous Materials
3. Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of Hazardous Materials
4. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
5. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill gases)
6. Groundwater Monitoring Well Drums – Potential Hazardous Material Release
7. Soil Pile (South – Photo 30) – Potential Hazardous Material and/or Petroleum Product Release
8. Soil Pile (North – Photo 33/34) – Potential Hazardous Material and/or Petroleum Product Release
9. Stained Concrete and Soil in Blower System Area – Hazardous Material Release

This assessment did not identify a CREC or HREC in connection with the Subject Property.

This assessment identified seven (7) RECs in the vicinity of the Subject Property. The RECs are as follows:

1. Railroad spur visible in 1949/1950 Topographic Map – Potential Hazardous Material and/or Petroleum Product Release
2. Gravel Pit visible in 1967 topographic map and 1972 aerial photograph – Potential Accumulation of Hazardous Materials
3. Pond visible in 1967 topographic map and 1964 aerial photograph – Potential Accumulation of Hazardous Materials
4. Agricultural Use visible in 1937 aerial photograph – Hazardous Materials Release
5. Florin-Perkins Landfill property – Hazardous Materials Release (to soil, groundwater and landfill gases)
6. L&D Landfill Company (8635 Fruitridge Rd.) – Hazardous Material and/or Petroleum Product Release
7. Sacramento Army Depot (8350 Fruitridge Rd.) – Soil and Groundwater Contamination.

This assessment identified three (3) CRECs in the vicinity of the Subject Property. The CRECs are as follows:

This assessment identified six (6) CRECs in the vicinity of the Subject Property. The CRECs are as follows:

1. Calvey Inc. / Thrifty Supply / IM Distributing Corp (8541 23rd Ave.) – Gasoline LUST
2. Grocery Outlet / Swift Transportation / Safeway/Transco Distribution / Grocery Outlet Inc. / Crystal Creamery (4400 Florin Perkins Rd.) – Diesel LUST
3. Clarklift West Inc. / Circo System Balance (4100 Florin Perkins Rd.) – Waste Oil LUST
4. Old Libbey Cannery / Libby McNeill & Libby Inc. / Belvedere Avenue Property / Florin Perkins #2 (3900 Florin Perkins Rd.) – Diesel LUST
5. Markel Bros. Plumbing / Universal Service Recycling Inc. (5400 Warehouse Wy.) – Gasoline LUST
6. Dolan's Lumber Company (5150 Florin-Perkins Rd.) – Gasoline LUST

This assessment did not identify a HREC in the vicinity of the Subject Property.

This assessment identified four (4) VEC in connection with the Subject Property and three (3) VECs in the vicinity of the Subject Property.

1. Florin-Perkins Landfill / Florin-Perkins Chip/Grind / Florin Perkins Public Disposal Site – Green Waste / Brownies Auto Sales - (4201 Florin Perkins Rd.)
2. Calvey Inc. / Thrifty Supply / IM Distributing Corp - (8541 23rd Ave.)
3. Grocery Outlet / Swift Transportation / Safeway/Transco Distribution / Grocery Outlet Inc. / Crystal Creamery - (4400 Florin Perkins Rd.)
4. Clarklift West Inc. / Circo System Balance - (4100 Florin Perkins Rd.)

The Central Valley Regional Water Quality Control Board's Waste Discharge Order # R5-2013-0042 was issued for the Florin Perkins Landfill. The Waste Discharge Requirements (WDRs) details many requirements for the Subject Property related to the landfill. Amongst the many requirements, Item 62 states "Provision I.12 requires that the Discharger submit a revised Final Closure and Post-Closure Maintenance Plan that reflects the requirements under these WDRs (including MRP No. R5-2013-0042) and any other planned changes in the closure plan for the landfill not requiring revision of this Order." Therefore, EPD & BBD Family Properties LP should consult the CVRWQCB to see if a Revised Final Closure and Post-Closure Maintenance Plan or any other requirements are needed prior to development. A copy of the WDR is included as Appendix E.

According to the Updated Final Closure and Post-Closure Maintenance Plan dated June 2018 and prepared by NV5, the South Fill Area on a portion of the Subject Property states that "land development will not occur within 1,000 feet of the waste footprint without Regional Water Quality Control Board approval of a revision of the post-closure monitoring and maintenance plan identifying the proposed development. The revision will also be submitted to the LEA, SMAQMD, and the local planning department as required by Section 21190(c) of Title 27. In additional, as required by Section 21990(c) of Title 27, the LEA shall review and approve proposed post-closure land uses if the project involves structures within 1,000 feet of the disposal area, structures on top of the waste, modification of the low permeability, or irrigation over waste." A copy of this report is included in Appendix F.

In a March 8, 2024, Inspection Report, Mr. Mark Caso of Florin-Perkins Landfill, Inc. stated that the site owners are continuing to explore the possibility of adding multiple warehouses along the south perimeter of the property within 1,000 feet of the South Fill Area. The inspection report documents the notification requirements needed for this to occur.

Therefore, it is also required to receive Regional Water Quality Control Board approval, LEA approval, SMAQMD approval, and local planning department approval of the proposed project.

7. ENVIRONMENTAL PROFESSIONAL STATEMENT AND SIGNATURES

The signatories of this Report declare that to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. We have developed and performed all appropriate inquiries in general conformance with the standards and practices set forth in 40 CFR Part 312. For copies of the resumes of said Environmental Professionals, please refer to Appendix L.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 06/26/2025 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SACRAMENTO ARMY DEPO Cerclis ID:: 902715 EPA Id: CA0210020780	***8350 FRUITRIDGE RD***	***SSW 1/2 - 1 (0.536 mi.)***	***0***	***12***

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 06/26/2025 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

Lists of Federal RCRA facilities undergoing Corrective Action

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Lists of Federal RCRA generators

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/02/2025 has revealed that there are 8 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-VSQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-VSQG list, as provided by EDR, and dated 06/02/2025 has revealed that there is 1 RCRA-VSQG site within approximately 0.25 miles of the target property.

Lists of state- and tribal hazardous waste facilities

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/21/2025 has revealed that there are 4 ENVIROSTOR sites within approximately 1 mile of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 4 SWEEPS UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/02/2025 has revealed that there are 45 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

PFAS ECHO: Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

A review of the PFAS ECHO list, as provided by EDR, and dated 03/24/2025 has revealed that there are 2 PFAS ECHO sites within approximately 0.25 miles of the target property.

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there are 12 UST FINDER RELEASE sites within approximately 0.5 miles of the target property.

E MANIFEST: EPA established a national system for tracking hazardous waste shipments electronically. This system, known as ?e-Manifest,? will modernize the nation?s cradle-to-grave hazardous waste tracking process while saving valuable time, resources, and dollars for industry and states.

A review of the E MANIFEST list, as provided by EDR, and dated 02/17/2025 has revealed that there are 29 E MANIFEST sites within approximately 0.25 miles of the target property.

MWMP: The Medical Waste Management Program (MWMP) ensures the proper handling and disposal of medical waste by permitting and inspecting medical waste Offsite Treatment Facilities (PDF) and Transfer Stations (PDF) throughout the state. MWMP also oversees all Medical Waste Transporters.

A review of the MWMP list, as provided by EDR, and dated 01/02/2025 has revealed that there is 1 MWMP site within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Summary Details:

Conditions at proposal October 15, 1984): The Sacramento Army Depot SAAD) occupies 485 acres within the city limits of Sacramento, Sacramento County, California, approximately 7 miles to the southeast of the Sacramento business district. Morrison Creek enters the SAAD eastern boundary. The creek parallels the depot perimeter to the south and discharges on the western boundary. SAAD is a supply depot primarily responsible for the receipt, storage, issue, maintenance, and disposal of various electronic materials. The primary sources of contamination at SAAD derive from metal-plating operations and their associated waste waters and solid wastes. Generally, these wastes were discharged to unlined sewage lagoons or burned and/or buried on the facility. Ground water on and off the site is contaminated with trichloroethylene. Heavy metals above background levels have been detected in on-site ground water and in sediment of Morrison Creek immediately downstream of SAAD. The California Regional Water Quality Control Board CRWQCB) and SAAD have been discussing additional monitoring of ground water and further investigations to define contaminated areas. SAAD is participating in theInstallation Restoration Program, established in l978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. The Army has completed Phase I records search) and Phase II preliminary survey). Status July 22, 1987): SAAD is conducting a remedial investigation/feasibility study to determine the type and extent of contamination at the base and to identify alternatives for remedial action. EPA, CRWQCB,and the California Department of Health Services will review the remedial investigation, as well as a feasibility study for a water treatment plant on the base. Within the boundaries of this Federal facility, there are areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act RCRA). However, no such areas were included in scoring this specific site. Therefore, this Federal facility site is being placed on the Federal sectionof the NPL under the NPL/RCRA policy announced on September 8, 1983 48

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violations:
Site ID: 359937
Site Name: PRODUCE EXPRESS INC
Violation Date: 01-12-2017
Citation: 19 CCR 4.5 2755.5(c) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.5(c)
Violation Description: Failure to ensure that each contractor can document that their employees are trained to perform the maintenance and appropriate operation procedures developed under section 2755.5(a).
Violation Notes: Returned to compliance on 09/28/2018. OBSERVATION: The owner/operator failed to prepare written procedures to maintain the on-going mechanical integrity of the process equipment as noted in violations Q170. As a result contract maintenance employees are not trained to perform the maintenance procedures. CORRECTIVE ACTION: Develop maintenance procedures as stated in violation Q170. Upon completion of the maintenance procedures, submit documentation to this department demonstrating that each contract maintenance employee is trained to perform applicable maintenance procedures.

Citation:	19 CCR 4.5 2735.6(c) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2735.6(c)
Violation Description:	Failure to document the following when responsibility for implementing individual requirements of this chapter is assigned to persons other than the person identified under section (b): 1. Names or positions. 2. Lines of authority defined through an organization chart or similar document.
Violation Notes:	Returned to compliance on 09/28/2018. OBSERVATION: Based on the number and type of violations observed at the time of inspection the current management system is not being implemented. CORRECTIVE ACTION: Submit documentation to this office demonstrating that the organization chart or similar document defining the names or positions and lines of authority of the persons responsible for implementing individual requirements of the risk program elements has been revised to ensure all CalARP responsibilities are being implemented.

Violation Date: 01-12-2017
Citation: 19 CCR 4.5 2765.1(b) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2765.1(b)
Violation Description: Failure of a stationary source whose employees will not respond to accidental releases of regulated substances to meet the following: 1. With only regulated toxic substances held in a process above the threshold quantity, is included in the community emergency response plan developed under Section 11003 of Title 42 of the United States Code (USC), is included in the city or county Hazardous Materials Area plans, and/or is included in the business plan program, pursuant to

PRODUCE EXPRESS INC (Continued) **S118417663**

Section 25507 of the Health & Safety Code. The owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies; 2. With only regulated flammable substances held in a process above the threshold quantity, the owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies; and, 3. Appropriate mechanisms and written procedures are in place to notify emergency responders when there is a need for a response.

Violation Notes: Returned to compliance on 09/28/2018. OBSERVATION: Response actions have not been coordinated with the local fire department and hazardous materials response agencies and documented. CORRECTIVE ACTION: Submit documentation to this department demonstrating that response actions have been coordinated with the Sacramento City Fire Department and Hazardous Materials Response Team.
Violation Division: Sacramento County Env Management Department
Violation Program: CalARP
Violation Source: CERS,

Site ID: 359937
Site Name: PRODUCE EXPRESS INC
Violation Date: 01-12-2017
Citation: 19 CCR 4.5 2755.2(e) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.2(e)
Violation Description: Failure to address the following in the hazard review: 1. Document the results of the hazard review and ensure problems identitifed are resolved; 2. Complete these actions on a timetable agreed upon with the AA, or within two and one-half (2.5) years of performing the hazard review, or the next planned turnaround, for those items that require a turnaround; 3. Document the final resolution taken to address each recommendation and actual completion date.
Violation Notes: Returned to compliance on 09/28/2018. OBSERVATION: Documentation demonstrating that hazard review recommendations were resolved was not available at the time of inspection. CORRECTIVE ACTION: Submit documentation to this department demonstrating that problems identified in the hazard review have been resolved and actual completion dates documented.
Violation Division: Sacramento County Env Management Department
Violation Program: CalARP
Violation Source: CERS,

Site ID: 359937
Site Name: PRODUCE EXPRESS INC
Violation Date: 01-12-2017
Citation: 19 CCR 4.5 2755.2(a) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.2(a)
Violation Description: Failure to conduct a review of the hazards associated with the regulated substances, process, and procedures that identifies the following: 1. The hazards associated with the process and regulated substances; 2. Opportunities for equipment malfunctions or human errors that could cause an accidental release; 3. The safeguards used or needed to control the hazards or prevent equipment malfunction or human error; 4. Any steps used or needed to detect or monitor releases.
Violation Notes: Returned to compliance on 09/28/2018. OBSERVATION: During a walk down of the ammonia refrigerator system engine room a large number of pipes were observed cut and capped with most of the piping left in place. A

PRODUCE EXPRESS INC (Continued) **S118417663**

number of valves were observed with pink flags with no identifiers while some valves were observed with tags while others were not. When questioned about what pipes and vessels were still in service and what the pink flags were for, the facility representative and refrigeration contractor were not sure. This represents a significant hazard that was not identified in the hazard review. CORRECTIVE ACTION: Submit documentation to this department demonstrating that all piping, valves, and equipment have been identified and labeled, tagged. In addition submit documentation demonstrating that out of service equipment has been labeled and properly tagged out or removed.

Violation Division: Sacramento County Env Management Department
Violation Program: CalARP
Violation Source: CERS,

Site ID: 359937

Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)
Violation Description: Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.
Violation Notes: Returned to compliance on 06/21/2016. OBSERVATION: Employees are not thoroughly familiar with proper waste handling and emergency procedures as demonstrated by the number and type of hazardous waste violations observed at the time of inspection. CORRECTIVE ACTION: Submit documentation to this department demonstrating that employees have been properly trained.
Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 359937
Site Name: PRODUCE EXPRESS INC
Violation Date: 01-12-2017
Citation: 19 CCR 4.5 2755.5(d) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.5(d)
Violation Description: Failure to perform or cause to be performed inspections and tests on process equipment that: 1. Follow recognized and generally accepted good engineering practices; 2. The frequency of inspections & tests must be consistent with applicable manufacturer s recommendations, industry standards or codes, good engineering practices and prior operating experience).
Violation Notes: Returned to compliance on 09/28/2018. OBSERVATION: The manufacturer's information for the process equipment was not available at the time of inspection. As a result, the recommended frequency of inspections and tests on the process equipment could not be ascertained. CORRECTIVE ACTION: Submit documentation to this department demonstrating that you have obtained all process safety information for the equipment in the process. In addition submit documentation demonstrating that a maintenance program has been developed and implemented to ensure that all equipment is being inspected and tested consistent with applicable manufacturer recommendations and good engineering practices.

Violation Date:	06-02-2016
Citation:	22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description:	Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes:	Returned to compliance on 07/06/2016. OBSERVATION: One 55 gallon drum of oily absorbent waste in the engine room area had an accumulation start date of 10-1-2011 and a manifest/receipt demonstrating disposal within the past 180 days was not available. CORRECTIVE ACTION: Dispose of oily absorbent and submit a copy of the manifest/receipt to this department.

Citation:	19 CCR 4.5 2755.2(c) - California Code of Regulations, Title 19, Chapter 4.5, Section(s) 2755.2(c)
Violation Description:	Failure to determine whether the process is designed, fabricated, and operated in accordance with applicable standards or rules.
Violation Notes:	Returned to compliance on 09/28/2018. OBSERVATION: The process is not designed, fabricated, and operated in accordance with applicable standards as evidenced by the following: The Mid Temp Recirculator, Mid Temp Receiver Oil Pot, and the Low Pressure Receiver vessels were observed without nameplates. Vessel nameplates are required per ASME Boiler Pressure Vessel Code VIII Division 1, UG 119; Compressed Gas Association G-2.1-2014, Section 7.3.1; International Institute of Ammonia Refrigeration Standard 2 2014, Chapter 12.5; and IIAR Bulletin 109, Section 4.3.1. CORRECTIVE ACTION: Submit documentation/photos to this department that the name plates have been found affixed to the vessels. Contact this department for instructions if no nameplates are found. The Emergency Stop Switch and Emergency Ventilations Control Switch were observed without proper labeling. Per IIAR 2 2014, Chapter 6.12, Emergency Stop Switches and Emergency Ventilations Control Switches are required to be labeled. CORRECTIVE ACTION: [Truncated]

Violation Date:	05-11-2021
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 05/25/2021. OBSERVATION: A 55 gallon container of contaminated rags was observed in the refrigeration engine room with an inadequately completed hazardous waste label. Safety administrator Steve Palos stated that he did not know how long the rags have been accumulating for and what Produce Express' plan is for disposal. A waste determination has not been made for this waste stream. CORRECTIVE ACTION: Submit documentation to this department demonstrating that the contaminated rags have been properly characterized to determine if it is a hazardous waste. If determined to be hazardous, submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future.

Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: NOTE: The facility will be added to the stormwater program because it performs auto repair activities. Stormwater program brochures summarizing the requirements of the program were emailed to Steve Palos. RECOMMENDATION: Truck washing activities were observed at the time of inspection in paved area south of the engine room. Safety administrator Steve Palos stated that truck washing activities also occurred in the parking lot adjacent to the truck maintenance shop. The wastewater from washing activities discharges into gravel area west of the refrigeration engine room and parking lot storm drain. Discontinue discharging wastewater into the storm drain and ensure that wastewater is discharged to the sanitary sewer system. A linear trench drain was observed in the truck loading area south of the main warehouse and my inclination is that it is plumbed to an underground oil/water separator that discharges to sewer. Verify the underground sump discharges to the sewer system [Truncated]

Name: PACIFIC POWDER COATING, INC
Address: 8637 23RD AVE
City,State,Zip: SACRAMENTO, CA 95826
Site ID: 398939
CERS ID: 10217611
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 398939
Site Name: PACIFIC POWDER COATING, INC
Violation Date: 01-05-2018
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 01/09/2018. OBSERVATION: Annual training documentation for all applicable employees was not available.

PACIFIC POWDER COATING, INC (Continued) **S102955816**

CORRECTIVE ACTION: Submit documentation to this department demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.

Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398939
Site Name: PACIFIC POWDER COATING, INC
Violation Date: 01-07-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/09/2015. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for Propane 499 gal tank, 25 gallons x 9 tanks, Argon75/CO2 342 cuft x 6, Argon 301 cuft x 7, Argon 90/10C O2 x 1, oxygen 278 cu ft x 3, acetylene 145, 130, 131 cu ft, B-R 5512 Alkaline cleaner. Please verify if water mixed products, Kleen 842 (2x 250 gallons), Kote 63ls (2x 250 gallons), Eclps 2100 2x 55 gallons) are reportable hazardous materials. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in this department's e-Reporting Portal or in the California Environmental Reporting System.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398939
Site Name: PACIFIC POWDER COATING, INC
Violation Date: 01-07-2015
Citation: 22 CCR 12 66262.34(b)(1) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(b)(1)
Violation Description: Failure to dispose of hazardous waste after the first 100-kilogram threshold amount was accumulated within a 90 day period.
Violation Notes: Returned to compliance on 03/30/2015. OBSERVATION: Dried waste sludge in 55 gallon drum located outside on west end of shop in the was described as being on site longer than 180 days. CORRECTIVE ACTION: Dispose of dried waste sludge and submit a copy of the manifest/receipt to this department.

Site ID: 398939
Site Name: PACIFIC POWDER COATING, INC
Violation Date: 01-05-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/09/2018. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for KM 500 to this department. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398939
Site Name: PACIFIC POWDER COATING, INC
Violation Date: 09-27-2021
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 10/06/2021. OBSERVATION: The waste sand blast media is currently being managed and disposed of as non-hazardous. A waste determination for the sand blast media was not available for review at the time of inspection. Facility representatives Sara Rochester and Gabriel Ayala believe laboratory analysis was completed in the past demonstrating it as non-hazardous, however this documentation was not available to review at the time of inspection. CORRECTIVE ACTION: Submit documentation to this department demonstrating that the waste sand blast media has been properly characterized as non-hazardous waste. If a waste determination cannot be located, complete a hazardous waste determination and submit documentation to this department.

Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Date: 04-21-2017
Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes: Returned to compliance on 04/25/2017. OBSERVATION: 1 garbage can located in the manufacturing room was observed accumulating regular garbage and filled with an unknown liquid that is possibly finished product or raw material and a proper waste determination has not been made. 2 x 275 gallon totes of expired product were observed outside next to the dumpster-waste determination was made by generator knowledge. CORRECTIVE ACTION: Submit documentation to this department demonstrating that the unknown liquid has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous submit a manifest/receipt documenting proper disposal and a statement demonstrating how you will manage it in the future. Keep the test results, waste analyses, or other determinations at least three years from the date that the waste was last sent to on-site or off-site treatment, storage, or disposal. Provide appropriate documentation to substantiate the generator knowledge of determining the expired [Truncated]

Environmental Interest/Information System:

The Integrated Compliance Information System (ICIS) provides a database that, when complete, will contain integrated enforcement and compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions and a subset of the Permit Compliance System (PCS), which supports the National Pollutant Discharge Elimination System (NPDES). This information is maintained in ICIS by EPA in the Regional offices and it at Headquarters. A future release of ICIS will completely replace PCS and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities that support compliance and enforcement programs, including incident tracking, compliance assistance, and compliance monitoring.
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS),EnviroStor, GeoTracker,

D A LUBRICANT CO INC (Continued) **1000819763**

California Integrated Water Quality System (CIWQS), andToxic Release Inventory (TRI).
California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Date: 10-06-2015
Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to comply with all of the following requirements: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. 2. Failure to sign written procedures and/or a record of inspections and/or customary business records by the appropriate supervisor or inspector. 3. Failure to keep written procedures and/or a record of inspections and/or customary business records with the plan. AND 4. Failure to maintain written procedures and/or a record of inspections and/or customary business records for three years.
Violation Notes: Returned to compliance on 11/12/2015. OBSERVATION: Failure to comply with the following requirement: 1. Failure to conduct inspections and tests in accordance with written procedures that you or a certifying engineer have developed for the facility. The facility SPCC contains an inspection checklist in the appendices. One of the items on the checklist is to check for leaks in the secondary containment. At the time of inspection a crack was observed in the containment wall on the east side of the tank farm. A review of facility inspections does not indicate documentation of containment cracks presence and/or maintenance/repair for the secondary containment item on the checklist. CORRECTIVE ACTION: Repair existing containment crack. Conduct tests/inspections in accordance with written procedures and maintain records for 3 years. Submit documentation to this department demonstrating the tests/inspections are being conducted in accordance with written procedures. Include a statement regarding how containment [Truncated]

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/25/2019. OBSERVATION: (1) 55-gallon metal container of waste flammable liquid located outside of the laboratory

D A LUBRICANT CO INC (Continued) **1000819763**

was observed labeled with an accumulation start date of 2/28/18 and a manifest/receipt demonstrating disposal within the past 180 days was not available. A pick up was scheduled with Fremouw Environmental. CORRECTIVE ACTION: Dispose of the contents of the (1) 55-gallon metal container of waste flammable liquid and submit a copy of the manifest/receipt to this department.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)
Violation Description: Failure to have technical amendment(s) certified by a professional engineer for a qualified facility.
Violation Notes: Returned to compliance on 11/12/2015. OBSERVATION: Failure to have technical amendment(s) certified by a professional engineer for a qualified facility. The STI SP001 Inspection Reports that were conducted for the ASTs at the facilty for In-Service or External Inpsection inspections conducted in May 2012 identified three action items that needed to be taken for complaince with the SP001 Standard. Per discussion with DA Lubricants Facility Manger Clay Mattison, all three of the action items regarding tank category and external/internal inspection interval, repair of secondary containment, and emergency venting were implemented at the facility. There is not any documentation avaialble to demonstrate that the action items were implemented, and the SPCC has not had any technical amendments. With regard to the emergency vent action item, per Facility Manager Clay Mattision, the facility opted to install long bolts along the roof manway cover due to the lack of emergency vents

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 03-01-2022
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: No violations were noted at the time of the inspection. Notes: The five year SPCC plan review is due by 4/18/2023. According to the last formal external inspection report from 5/9/12, Tanks 1-7 need to have another formal external inspection completed by 2022 and formal internal inspection by 2023. Ensure that the inspections are scheduled in a timely manner. Ensure that SPCC training is conducted annually and annual tank inspections are completed. Tanks 8-11 continue to be permanently closed. A phone call was made to the contractor to schedule the formal external inspections while on site.

Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	76508
Site Name:	Glacier Supply Group
Violation Date:	02-18-2020
Citation:	HSC 6.95 25507 - California Health and Safety Code, Chapter 6.95, Section(s) 25507
Violation Description:	Failure to adequately establish and implement a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes:	Returned to compliance on 02/21/2020. OBSERVATION: The hazardous materials business plan has not been adequately implemented as demonstrated by the oxygen and nitrogen cylinders observed being stored freestanding and not in a secure manner. CORRECTIVE ACTION: Submit photos/documentation to this department demonstrating that the hazardous materials listed above are being properly stored and that

CALVEY, INCORPORATED (Continued) **S123289816**

employees have received training on proper cylinder storage.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 02-18-2020
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Update your 2020 hazardous materials business plan with the following information: 1. Update the business activities page by deleting "Alameda" as the county and replacing it with "Sacramento". 2. Consider changing the business owner operator page secondary emergency contact from John Bristow to Dave Dunbar since John no longer is employed by the facility full time.

Environmental Interest/Information System:
The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violations:

Site ID:	398839
Site Name:	PAC MACHINE CO, INC
Violation Date:	01-17-2018
Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 01/19/2018. OBSERVATION: Annual training documentation for all applicable employees was not available. The most recent training documentation available was from March 2015. CORRECTIVE ACTION: Submit documentation to this department demonstrating that employees have received training on safe handling of hazardous materials and the Emergency Response Plan.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,

Site ID:	398839
Site Name:	PAC MACHINE CO, INC
Violation Date:	01-17-2018
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 01/19/2018. OBSERVATION: Observed one 55 gallon steel drum of used oil filters located in the outside storage area without a start accumulation date. Observed one 55 gallon steel

PAC MACHINE CO, INC (Continued) **S108215766**

drum of waste sand blast media and one 55 gallon steel drum of oily sludge located in the outside storage area and the hazardous waste label was missing generator name and address, start accumulation date, physical hazards and contents. CORRECTIVE ACTION: Submit a photo to this department demonstrating that the containers listed above have been properly labeled.

Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 03-09-2015
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a site map with all required content.
Violation Notes: Returned to compliance on 03/10/2015. OBSERVATION: The annotated site map submitted to this department does not include the location of the diesel storage. CORRECTIVE ACTION: Revise the annotated Site Map to include all required content and submit electronically in this department's e-Reporting Portal or in the California Environmental Reporting System.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 03-09-2015
Citation: 22 CCR 12 66262.40(c) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(c)
Violation Description: Failure to determine if the waste generated is a hazardous waste and to maintain analysis results for three years.
Violation Notes: Returned to compliance on 03/25/2015. OBSERVATION: According to Phil Albee, facility engineer, a waste determination has not been made on the waste bead blast media and this waste stream was most likely disposed of in the regular trash. CORRECTIVE ACTION: Immediately cease disposal of the waste bead blast media into the trash until a proper hazardous waste determination has been made. Submit documentation to this department demonstrating that this waste has been properly characterized to determine if it is a hazardous waste. If determined to be hazardous, submit a statement demonstrating how you will manage it in the future.

Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to maintain uniform hazardous waste manifest, consolidated manifest, or bills of lading copies for three years.
Violation Notes: Returned to compliance on 03/13/2015. OBSERVATION: Designated Facility copies of the Uniform Hazardous Waste Manifests for oily sludge were

PAC MACHINE CO, INC (Continued) **S108215766**

not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all Designated Facility copies of the Uniform Hazardous Waste Manifests for oily sludge and submit copies to this department.

Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 03-09-2015
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 03/25/2015. OBSERVATION: Annual training documentation for all applicable employees was not available. CORRECTIVE ACTION: Submit documentation to this department demonstrating that the employees have received training on safe handling of hazardous materials and the Emergency Response Plan.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 01-17-2018
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 01/23/2018. OBSERVATION: The facility has not submitted the Hazardous Materials Inventory Chemical Description page for oxygen, waste oily sludge, and argon/ carbon dioxide mix to this department. CORRECTIVE ACTION: Complete and submit the Hazardous Materials Inventory Chemical Description page for all materials listed above electronically in the California Environmental Reporting System.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 09-24-2021
Citation: 22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description: Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes: Returned to compliance on 10/07/2021. OBSERVATION: The signed designated facility copy for manifest number 022830623JJK dated April 6, 2021 could not be located at the time of inspection. CORRECTIVE ACTION: Locate a copy of the signed designated facility copy for the

PAC MACHINE CO, INC (Continued) **S108215766**

manifest referenced above and submit a copy to this department. Ensure that you receive a copy of the signed designated facility of all future uniform hazardous waste manifests within 35 days of the waste being picked up by the registered transporter.

Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 398839
Site Name: PAC MACHINE CO, INC
Violation Date: 01-17-2018
Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)
Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.
Violation Notes: Returned to compliance on 01/19/2018. OBSERVATION: Observed one 55 gallon plastic drum of used coolant located in the shop with a start accumulation date of May 5, 2017 and a manifest within the last 180 days was not available.. Observed one 55 gallon steel drum of used sand blast media located outside in the hazardous waste storage area without a start accumulation date and the most recent manifest was April 7, 2017. Observed one 55 gallon steel drum of used oily sludge located in the outside hazardous waste storage area without a start accumulation date and the most recent manifest was from April 7, 2017. CORRECTIVE ACTION: Dispose of used coolant, waste sand blast media, and waste oily sludge and submit a copy of the manifest/receipt to this department.

Violations:
Site ID: 394202
Site Name: GROCERY OUTLET
Violation Date: 01-25-2019
Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to annually review and electronically certify that the business plan is complete and accurate on or before the annual due date.
Violation Notes: Returned to compliance on 01/25/2019. OBSERVATION: The Hazardous Materials Business Plan (HMBP) was not reviewed and electronically certified by the annual due date of 6/8/18 that it is complete, accurate, and in compliance with EPCRA. The CERS submittal was made today while on site. CORRECTIVE ACTION: Review, revise, and submit and certify the HMBP electronically in the California Environmental Reporting System. On an ongoing basis, electronically submit and certify the HMBP annually on or before the annual due date. Corrected on site

Violation Program: HW
Violation Source: CERS,

Site ID: 394202
Site Name: GROCERY OUTLET
Violation Date: 01-08-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/01/2016. OBSERVATION: One approximately 1/2 pallet of acetone, one approximately 1/2 pallet of astringent, and one two part rubber masking mold (55-gallon drum with 5g container) located in the hazardous waste storage area inside the main warehouse were observed without a hazardous waste label. Per facility personnel, the above mentioned items had undergone a waste determination and were awaiting pickup from the waste hauler. CORRECTIVE ACTION: Submit a photo to this department demonstrating that the container listed above has been properly labeled.

CERS ID: 10227685
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 389649
Site Name: CENTRAL PET
Violation Date: 02-21-2020
Citation: 22 CCR 12 66262.12 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.12
Violation Description: Failure to obtain an Identification Number prior to treating, storing, disposing of, transporting or offering for transportation any hazardous waste.
Violation Notes: Returned to compliance on 03/17/2020. OBSERVATION: The generator's EPA ID number (CAL000340806) is inactive. A hazardous waste generator shall not treat, store, dispose of, transport or offer for transportation, hazardous waste without an active EPA ID number. CORRECTIVE ACTION: Submit documentation to this department demonstrating that you have reactivated the facility's EPA ID number.
Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 389649
Site Name: CENTRAL PET
Violation Date: 12-23-2013
Citation: HSC 6.95 25504(a) - California Health and Safety Code, Chapter 6.95, Section(s) 25504(a)
Violation Description: Failure to complete and/or submit hazardous material inventory forms for all reportable hazardous materials on site.
Violation Notes: Returned to compliance on 01/14/2014.
Violation Division: Sacramento County Env Management Department
Violation Program: HMRRP
Violation Source: CERS,

Site ID: 389649
Site Name: CENTRAL PET
Violation Date: 02-21-2020
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 02/24/2020. OBSERVATION: A cubic yard cardboard bin of non-RCRA hazardous wastes located in the returns area was observed without a hazardous waste label. CORRECTIVE ACTION: Submit photos to this department demonstrating that the container listed above has been properly labeled.
Violation Division: Sacramento County Env Management Department
Violation Program: HW
Violation Source: CERS,

Site ID: 389649
Site Name: CENTRAL PET
Violation Date: 12-23-2013
Citation: 19 CCR 4 2729.2(a)(3) - California Code of Regulations, Title 19, Chapter 4, Section(s) 2729.2(a)(3)

CENTRAL PET (Continued) **S110041261**

Violation Description:	Failure to complete and/or submit an annotated site map if required by CUPA.
Violation Notes:	Returned to compliance on 01/14/2014.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HMRRP
Violation Source:	CERS,
Site ID:	389649
Site Name:	CENTRAL PET
Violation Date:	07-18-2024
Citation:	22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11
Violation Description:	Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.
Violation Notes:	Returned to compliance on 07/24/2024. OBSERVATION: A proper waste determination was not made for the following containers: 1. One black 55-gallon metal drum with no lid and no label located outside at the northeast corner of the facility. The contents were described as floor cleaning solution. 2. Two 5-gallon containers located outside at the northeast corner of the facility. It could not be determined if the floor stripper is still a product that can be used for its intended purpose or a waste. CORRECTIVE ACTION: Submit documentation to EMD Specialist Daniel Abellon demonstrating that the one black 55-gallon metal container and the two plastic 5-gallon containers have been properly characterized to determine if they are hazardous wastes. If determined to be hazardous submit a manifest/receipt documenting proper disposal.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HW
Violation Source:	CERS,
Site ID:	389649
Site Name:	CENTRAL PET
Violation Date:	07-18-2024
Citation:	22 CCR 12 66262.40(a) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.40(a)
Violation Description:	Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.
Violation Notes:	Returned to compliance on 07/18/2024. OBSERVATION: Signed designated facility copies of three uniform hazardous wastes from shipments in 2021 and 2024 were not available at the time of inspection. CORRECTED ON SITE: Signed designated facility copies of the hazardous waste manifests for 2021 and 2024 were obtained via the Hazardous Waste Tracking System at the time of inspection. No further action is required.

ETHAN CONRAD (Continued) **S113460957**

Violation Date:	04-13-2023
Citation:	22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16
Violation Description:	Failure to provide employees with hazardous waste training program of class room instructions or on-the-job training within the first six months after the date of their employment or assignment to a facility, or to a new position at a facility and annually thereafter. Training records on current personnel shall be kept until closure of the facility and for former employees the record shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the type and amount of both introductory and continuing training that will be given to each person filling a position.
Violation Notes:	Returned to compliance on 04/24/2023. OBSERVATION: It is undetermined if the facility is a hazardous waste large quantity generator (LQG) based on the limited disposal documentation available for review at the time of inspection, however facility representative Joseph Wirth stated that the facility generates close to 1000 kilograms of hazardous waste per month. If the facility generates 1000 kilograms or greater per month of hazardous waste it is an LQG and documented hazardous waste training of personnel is required. CORRECTIVE ACTION: Determine the generator status of this facility. If determined to be a large quantity generator conduct training with applicable personnel and document it is in accordance with the requirements listed in 22 CCR 15 66265.16(d). Submit a copy of the training documentation to this department.

Citation:	HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description:	Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes:	Returned to compliance on 04/24/2023. OBSERVATION: Annual employee training in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan was not available for review. CORRECTIVE ACTION: Submit documentation to this department demonstrating appropriate personnel have received training and maintain ongoing annual training records for a minimum of three years.

Citation: HSC 6.5 25160.2 - California Health and Safety Code, Chapter 6.5, Section(s) 25160.2
Violation Description: Failure of a generator of hazardous waste that meets the conditions to be transported on a consolidated manifest to comply with one or more of the required consolidated manifesting procedures and retain copies of receipts for three years.
Violation Notes: Returned to compliance on 04/24/2023. OBSERVATION: Consolidated Manifests for used oil and waste antifreeze were not available at the time of inspection other than one dated April 10, 2023 for used oil. CORRECTIVE ACTION: Locate copies of the Consolidated Manifest receipts for used oil and waste antifreeze and submit copies to this department.

Violations:
Site ID: 705627
Site Name: CIRCO SYSTEM BALANCE, INC
Violation Date: 09-15-2016
Citation: 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description: Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes: Returned to compliance on 10/12/2016. OBSERVATION: One 55 gallon container of used oil and one 55 gallon container of used oil/gas filters located on the shop floor was observed without a hazardous waste label. CORRECTIVE ACTION: Submit a photo to this department demonstrating that the container listed above has been properly labeled. OBSERVATION: The pallet of assorted hazardous waste containers located in the outside storage area observed without labels. CORRECTIVE ACTION: Submit a photo to this department demonstrating that the container listed above has been properly labeled or provide documentation of disposal.
Violation Division: Sacramento County Env Management Department

Violation Source: CERS,

Site ID: 705627
Site Name: CIRCO SYSTEM BALANCE, INC
Violation Date: 08-21-2023
Citation: HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)
Violation Description: Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.
Violation Notes: Returned to compliance on 10/30/2023. OBSERVATION: Annual employee training in safety procedures in the event of a release or threatened release of a hazardous material including familiarity with the emergency response plan was not available for review at the time of inspection. CORRECTIVE ACTION: Submit documentation to this department demonstrating appropriate personnel have received training and maintain ongoing annual training records for a minimum of three years. A training template was provided via email to Ms. Compton to assist in complying with this requirement.

Site Name:	CIRCO SYSTEM BALANCE, INC
Violation Date:	11-27-2018
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/04/2018. OBSERVATION: Observed one 55 gallon steel drum of used oil located in the back of the facility with a hazardous waste label and the start accumulation date was March 14, 2017 the most recent manifest was from September 11, 2018. Observed one 55 gallon steel drum of used oil filters located in the back of the shop without a start accumulation date and the most recent manifest available was from February 12, 2018. CORRECTIVE ACTION: Submit photos to this department demonstrating that the containers listed above have been properly labeled.
Violation Division:	Sacramento County Env Management Department
Violation Program:	HW

Site ID:	705627
Site Name:	CIRCO SYSTEM BALANCE, INC
Violation Date:	08-21-2023
Citation:	22 CCR 16 66266.81(a)(1) - California Code of Regulations, Title 22, Chapter 16, Section(s) 66266.81(a)(1)
Violation Description:	Failure to meet the spent lead acid battery management requirements, when handling, storing, or transporting more than 10 lead acid batteries at any one time.
Violation Notes:	Returned to compliance on 08/30/2023. OBSERVATION: The generator did not meet the spent lead acid battery management requirements when handling or storing more than 10 lead acid batteries at any one time. Spent lead acid batteries were observed in a number of different locations in and out the shop and some have have been accumulating for longer than one year. CORRECTIVE ACTION: Submit documentation to this department demonstrating spent lead acid batteries that have been accumulating for longer than one year have been properly disposed of.
Violation Division:	Sacramento County Env Management Department

Citation: HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.
Violation Notes: OBSERVATION: A Hazardous Materials Business Plan (HMBP) has not been received by this department. The facility installed a 499 gallon propane dispensing tank approximately five years ago, however an HMBP was not submitted. CORRECTIVE ACTION: A notice will be mailed to your facility to you to complete, electronically submit, and implement an HMBP with a due date of 60 days from the date of the notice. Ensure the following submittal elements are submitted: Facility Information, Hazardous Materials Inventory, and Emergency Response Plan. Notify me when a submittal is made.

Violation Date:	10-06-2022
Citation:	22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)
Violation Description:	Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.
Violation Notes:	Returned to compliance on 12/29/2022. OBSERVATION: The following containers have incomplete labels located in the hazardous waste area: One 30 gallon plastic container of mixed oil and gasoline. One 55 gallon metal container of wasted oil. One 55 gallon metal container of waste antifreeze. One 55 gallon metal container of used oil filters. All hazardous waste labels must have the following: Name and address of facility Contents EPA ID number Accumulation start date State (Solid or Liquid) Toxicity (flammable, corrosive, toxic, reactive) CORRECTIVE ACTION: Provide photo-documentation that the containers have been properly labeled.
Violation Division:	Sacramento County Env Management Department

Site ID: 612614
Site Name: Lawnman
Violation Date: 10-06-2022
Citation: HSC 6.5 Multiple - California Health and Safety Code, Chapter 6.5, Section(s) Multiple
Violation Description: Hazardous Waste Generator Program - Operations/Maintenance - General
Violation Notes: Returned to compliance on 12/29/2022. OBSERVATION: The following containers were observed without accumulation start dates located in the hazardous waste area: One 30 gallon plastic container of mixed oil and gasoline. One 55 gallon metal container of wasted oil. One 55 gallon metal container of waste antifreeze. One 55 gallon metal container of used oil filters. Per latest Bill of Lading, the last pick up of hazardous material was 2/16/22. CORRECTIVE ACTION: Dispose of hazardous wastes and submit a copy of the manifest/receipt to this department.
Violation Division: Sacramento County Env Management Department
Violation Program: HW

Site ID: 612614
Site Name: Lawnman
Violation Date: 10-06-2022
Citation: HSC 6.95 25508(a)(3) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(3)
Violation Description: Failure to complete and electronically submit hazardous material inventory information for all reportable hazardous materials on site at or above reportable quantities.
Violation Notes: Returned to compliance on 10/19/2022. OBSERVATION: Chemical inventory information for all reportable hazardous materials on site at or above reportable quantities have not been completed and electronically submitted to this department. At the time of inspection, observed 3 pallets of fertilizers located in the cyclone fenced at the southern wall of shop. This material was not included in the chemical inventory of facility's CERS submittal. At time of inspection, facility was storing 205 gallons of motor oil. The facility's chemical inventory sheet showed only 55 gallons. CORRECTIVE ACTION: Complete the chemical inventory information for all reportable hazardous materials at or above reportable quantities and submit electronically in the California Environmental Reporting System. Once completed please notify me at nguyentuan@saccounty.gov.
