Ms. Shevchuk:

In accordance with the *Sub-Consultant Agreement* between Raney Planning and Management, Inc, (Raney, the Client) and Geocon Consultants, Inc. (Geocon) executed January 25, 2022, Geocon has performed a Phase I Environmental Site Assessment (ESA) of the property at 4790 Norwood Avenue (the Site) in Sacramento, California. We understand that Raney is preparing an Initial Study/Mitigated Negative Declaration (IS/MND) report for the Site. We performed the Phase I ESA for Raney to be able to summarize the findings in the IS/MND.

The enclosed report describes the methodology and presents the findings of the Phase I ESA including the potential presence of recognized environmental conditions as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*.

We appreciate the opportunity to have assisted Raney with this project. Please contact us if you have any questions concerning this report or if we may be of further service.

Sincerely,

PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT

1.0 INTRODUCTION

Geocon Consultants, Inc. (Geocon) performed a Phase I Environmental Site Assessment (ESA) of the property at 4790 Norwood Avenue (the Site) in Sacramento, California. We performed the Phase I ESA for Raney Planning and Management, Inc. (Raney, the Client) to assess the potential presence of hazardous substance and/or petroleum product impacts at the Site and for Raney to provide the findings of the Phase I ESA in an Initial Study/Mitigated Negative Declaration (IS/MND) for the Site. This report describes the methodology and presents the findings of the Phase I ESA.

1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of ‘recognized environmental conditions’ (REC) as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Section 1.1.1 of ASTM *Designation E 1527-13* defines an REC as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.” De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of the enforcement action if brought to the attention of appropriate governmental agencies.

ASTM *Designation E1527-13* also defines ‘Historical’ and ‘Controlled’ RECs (HREC and CREC, respectively). An ‘Historical REC’ is defined as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” A ‘Controlled REC’ is defined as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by the regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when a property does not meet the unrestricted residential use requirement unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35) (B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

- **“Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.”
- **“Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.”
- **“Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.”

1.2 Scope of Services

Our Proposal No. LS-21-440, dated December 21, 2021, describes our services for the Phase I ESA. We performed the services outlined in the proposal with the exception that we did not review Sanborn Fire Insurance Maps (Sanborn maps) as Environmental Data Resources, Inc. (EDR) indicated that Sanborn map coverage does not exist for the Site and vicinity.

The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting:** We reviewed physical setting references to obtain information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of the direction and/or extent that a contaminant could migrate in the event of a spill or release.
- **Records Review:** We reviewed publicly available Federal, State, and local regulatory agency records to obtain information that could potentially help identify RECs at or potentially affecting the Site.

- **Site History:** We reviewed historical references to assess the history of previous uses of the Site and surrounding area to identify those that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current conditions at and uses of the Site.
- **Site Reconnaissance:** We performed a site reconnaissance to observe site conditions and activities for indications of evidence of RECs. The site reconnaissance was for the Site only. Offsite properties and features were viewed solely from the vantage of the Site and public thoroughfares.

1.3 Report Limitations

We prepared this Phase I ESA report exclusively for Raney. The information obtained is only relevant for the dates of the records reviewed and the latest site visit. Therefore, the information contained herein for the Phase I ESA is only valid as of the date of the report and will require an update after 180 days to reflect updated records and another site reconnaissance to assess current site conditions.

Raney should recognize that this report is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. Raney should also understand that wetlands, asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining activities, methane, mold or potential naturally occurring hazards such as asbestos and arsenic as part of this Phase I ESA.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the report is implied within the intent of this report or any subsequent reports, correspondence or consultation, either express or implied. We strove to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as “a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.” Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or the lack of access to all parts of a site during the site reconnaissance.

As described in Section 1.2, we did not review Sanborn maps for the Site, as EDR indicated that Sanborn map coverage does not exist for the Site and vicinity. We also did not receive a completed user questionnaire from Raney summarizing their knowledge of the Site. However, we were able to review other sufficient historical information and therefore do not consider the lack of Sanborn map coverage or a user questionnaire as data gaps.

2.0 SITE DESCRIPTION

This section provides information regarding the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

2.1 Location and Legal Description

The Site is located at 4790 Norwood Avenue in Sacramento, California (Figure 1). The Site is situated in the Robla Neighborhood of Sacramento approximately one mile north of Interstate 80.

Within the Public Land Survey System of California the Site is in the northeastern quarter of Section 8, Township 9 North, Range 5 East, Mount Diablo Base and Meridian.

The Site is identified by Sacramento County assessor's parcel number 237-0040-001-0000. A parcel map depicting the Site is in Appendix A.

2.2 Site and Vicinity General Characteristics

The 3.15-acre Site is a vacant, undeveloped property with seasonal grasses and a few trees in its northern portion. The Site is situated in an area of predominantly single-family residential land use with Norwood Junior High located across Norwood Avenue to the southwest of the Site (Figure 2).

2.2.1 Topography

The United States Geological Survey (USGS) *Rio Linda, California* topographic maps shows the topography of the Site as relatively flat-lying at an approximate elevation of 39 feet above mean sea level (USGS, 2018).

2.2.2 Geologic Conditions

We obtained geologic information regarding the Sites from a variety of sources including:

- *California Geology* (Harden, 2003),
- *Note 36, California Geomorphic Provinces* (California Geological Survey [CGS], 2002), and
- *Preliminary Geologic Map of the Sacramento 30'x60' Quadrangle* (CGS, 2011).

Following are summaries of pertinent information obtained.

2.2.2.1 Geomorphic Region

The Site is situated in the southern Sacramento Valley, which is the northern portion of the Great Valley geomorphic province of California. The Sacramento Valley is bounded by the northern Sierra Nevada and southern Cascade Range to the east, the northern Coast Ranges to the west, and drains via the Sacramento River and its tributaries south to the Sacramento-San Joaquin river delta. The Sacramento Valley is filled with a thick sequence of Jurassic to Recent-age sedimentary deposits both continental and marine in origin (CGS, 2002; Harden, 2003).

2.2.2.2 Geologic Formations/Stratigraphy

Surficial geology at the Site is mapped as Pleistocene Riverbank Formation (middle unit), which generally consists of interbedded silt, sand, and clay deposits (CGS, 2011).

2.2.3 Soil Conditions

The United States Department of Agriculture – Natural Resources Conservation Web Soil Survey (<http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx>) indicates that surficial soil on the Site is classified as San Joaquin fine sandy loam. San Joaquin fine sandy loam is described as a moderately well-drained soil that is moderately deep and derived from material weathered from granitic rock sources.

2.2.4 Hydrologic and Hydrogeologic Conditions

There are no surface water bodies on the Site or nearby properties. The nearest natural surface water body is Magpie Creek approximately 1,850 feet east of the Site. The Dry Creek flood channel is approximately ½ mile northwest of the Site

There is no site-specific groundwater information for the Site. Conestoga-Rovers and Associates' (CRA) *First 2013 Semi-Annual Groundwater Monitoring and Sampling Report* dated April 26, 2013, for the former Nolan's Self-Serve fuel station (approximately 2,300 feet east-northeast of the Site), which is available on the California State Water Resources Control Board's (SWRCB) GeoTracker online data management system (<http://geotracker.waterboards.ca.gov>), indicates that depth to groundwater in seven groundwater monitoring wells there ranged from 54.65 to 59.90 feet in March 2013 and that groundwater flow was to the southeast. Groundwater conditions beneath the Site may be somewhat similar to those beneath and around the former Nolan's Self-Serve fuel station.

The California Department of Water Resources Sustainable Groundwater Management Act (SGMA) Data Viewer (<https://sgma.water.ca.gov/webgis/?appid=SGMADataViewer#gwlevels>) also depicts groundwater flow in the site region during spring 2021 to the southeast toward a groundwater depression at the southern end of McClellan Park.

2.3 Current and Planned Uses of the Site

The Site is vacant and not used for any purpose. Norwood North, LLC (site owner) plans to develop the Site with townhomes for multi-family use.

2.4 Descriptions of Structures, Roads, Other Improvements on the Site

No structures, roads, or other improvements are present at the Site. Further descriptions of site conditions are in Section 6.0.

2.5 Current Uses of Adjoining Properties

Beyond Main Avenue to the north and Norwood Avenue to the west are single-family residences. Large acreage single-family residential properties adjoin the Site to the east and south.

3.0 USER-PROVIDED INFORMATION

Raney did not provide a completed user questionnaire pertaining to their knowledge of the Site. Raney did provide an IS/MND for the Site that the City of Sacramento Development Services Department prepared in 2005. That IS/MND does not identify the use, storage or disposal of hazardous substances and/or petroleum products on the Site or adjoining or nearby properties.

4.0 RECORDS REVIEW

This section summarizes information we obtained from readily available agency records pertaining to the Site and properties and facilities in the vicinity of the Site.

4.1 Standard Environmental Record Sources

EDR searched federal, state, and local environmental databases for the Site and properties/facilities within one mile of the Site. The following table lists the databases that were searched which have listings and the number of properties/facilities listed. Other databases searched that do not list any properties/facilities are not included in the table. A copy of the report: *The EDR Radius Map Report with GeoCheck*, dated January 28, 2022, is in Appendix B.

Database Name	Search Radius (Miles)	Number of Listings
STATE, LOCAL, AND TRIBAL DATABASES		
Department of Toxic Substances Control [DTSC] Site Mitigation and Brownfields Reuse Program (EnviroStor)	1.0	8
Leaking Underground Storage Tanks (LUST)	0.5	1
Sacramento County Contaminated Sites (Sacramento Co. CS)	0.5	1
ADDITIONAL ENVIRONMENTAL RECORDS		
School Property Evaluation Program (SCH)	0.25	1
Hazardous Waste & Substance Site List (CORTESE)	0.5	1
Historical Hazardous Waste & Substance Site List (HIST CORTESE)	0.5	1
Sacramento County Master List (Sacramento Co. ML)	0.25	3
California Environmental Reporting System (CERS)	0.001	1

4.1.1 Site

The Site is not listed on any of the databases searched by EDR.

4.1.2 Offsite Properties

Three properties within 1/8 mile of the Site are listed on various non-release-related¹ databases and therefore are unlikely to have caused an REC at the Site. One property within 1/4 mile of the Site is listed on a release-related database¹. Norwood Junior High School at 4601 Norwood Avenue, approximately 60 feet west of the southern end of the Site (with school buildings approximately 270 feet west at their nearest) is listed on the ENVIROSTOR, SCH, and CERS databases. The ENVIROSTOR and SCH databases list a targeted site investigation for the school site. ENSR Corporation performed a Phase I ESA in September 2000 and did not identify any RECs associated with this property. The CERS database provides no pertinent information. The findings of the Phase I ESA suggest that the school property would not have caused an REC at the Site.

4.2 Orphan Summary

EDR's Orphan Summary identifies properties and facilities that have incomplete address information and therefore could not be accurately plotted. The Orphan Summary lists two facilities that are both greater than one mile from the Site. The distances of these facilities from the Site are too far for conditions involving the use, storage, or release of hazardous substances or petroleum products (if any) there to have caused an REC at the Site.

4.2.1 GeoTracker and EnviroStor

No information regarding documented environmental assessment and cleanup at the Site and/or properties/facilities within 1/4 mile of the Site is available on GeoTracker. Information available on the California Department of Toxic Substances Control (DTSC) EnviroStor (<http://www.envirostor.dtsc.ca.gov/public/>) online data management system for the Norwood Junior High School property indicates the same info as described for the ENVIROSTOR database in Section 4.1.2 - ENSR performed a Phase I ESA for the school property in September 2000 and did not identify any RECs associated with this property. The findings of the Phase I ESA suggest that the school property would not have caused an REC at the Site.

¹ "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

4.2.2 Sacramento County Environmental Management Department

We contacted the SCEMD for records pertaining to the use, storage, disposal, or any releases of or violations related to hazardous substances and/or petroleum at the Site. The SCEMD indicated that they have no records pertaining to the Site.

4.2.3 California Geologic Energy Management Division

The California Geologic Energy Management Division's (CalGEM) online mapping system (Well Finder) does not show any oil or gas wells within ½ mile of the Site.

4.2.4 National Pipeline Mapping System

The National Pipeline Mapping System (NPMS) online mapping system does not show any natural gas or liquid petroleum pipelines on or in the vicinity of the Site.

5.0 HISTORICAL USE

We evaluated the historical use of the Site and adjoining and adjacent properties through review of historical aerial photographs, topographic maps, and city directories provided by EDR. This section summarizes information obtained from these sources.

5.1 Aerial Photographs

We reviewed historical aerial photographs for the years 1937, 1947, 1957, 1964, 1966, 1972, 1984, 1993, 1998, 2006, 2009, 2012, 2016 (Appendix C) for indications of past land uses that had the potential to have impacted the Site through the use, storage, or disposal/release of hazardous substances and/or petroleum. The following table summarizes our observations/interpretations of the Site and adjoining and adjacent property uses as shown by the historical aerial photographs.

Year	Observations	
	Site	Adjoining and Adjacent Properties

2018-2020 (Google Earth)	Conditions appear to have been similar to those observed in the 2016 photograph.	Conditions appear to have been similar to those observed in the 2016 photograph.

The historical aerial photographs do not show land uses or development that would suggest the use, storage or disposal/release of hazardous substances and/or petroleum products on the Site or adjoining or nearby properties with the possible exception of a heating oil underground storage tank (UST) at the former residence on the northern portion of the Site.

5.2 Topographic Maps

We reviewed historical topographic maps for the years 1891, 1892, 1893, 1902, 1911, 1950, 1951, 1954, 1967, 1975, 1980, 1992, 2012, 2015, and 2018 (Appendix D). The following table summarizes our observations of the Site and adjacent and vicinity properties as depicted on the historical topographic maps.

The topographic maps do not depict land uses or development that would suggest the use, storage or disposal/release of hazardous substances and/or petroleum products on the Site or adjoining or nearby properties.

5.3 City Directories

EDR prepared an abstract of city directories including city, cross reference and telephone directory listings (Appendix E) with information provided for approximate 5-year intervals, if available, from 1965 to 2017. Individual homeowners are listed for the Site and adjoining and adjacent properties none of which suggest the potential for use, storage, or disposal/release of large quantities of hazardous substances or petroleum products sufficient to have caused an REC at the Site.

6.0 SITE RECONNAISSANCE

This section summarizes our observations of the Site and surrounding properties made during the site reconnaissance.

6.1 Methodology and Limiting Conditions

Cristian Virrueta, Senior Staff Geologist with Geocon, performed the site reconnaissance on February 11, 2022, by walking unaccompanied throughout the Site and along the site perimeter to observe site features and conditions. He observed adjoining and adjacent properties from the Site and public roads. Weather on the day of the site reconnaissance was clear with temperatures in the low 70s°F. Photographs of various site features and offsite properties are appended.

6.2 Site Setting

The Site is situated in an area of single-family residential and institutional (school) uses.

6.3 Onsite Survey

The Site is vacant, unimproved property vegetated with seasonal grasses and a few, scattered trees (Photo 1). We observed domestic trash (i.e., plastic bottles, food containers, plastic bags) throughout the Site.

We observed no evidence of RECs on the Site.

6.4 Offsite Survey

Adjoining and nearby properties consist of the following:

- North – Main Avenue, beyond which are single-family residences (Photo 2).
- West – Norwood Avenue, beyond which are single-family residences (Photo 3) and Norwood Junior High.
- South – Larger-acreage single-family residential property with multiple vehicles (Photos 4).
- East – Larger-acreage single-family residential property (Photo 5).

We observed no evidence of RECs on adjoining or adjacent properties.

7.0 INTERVIEW

We provided David Cobbs, a representative of Norwood North, LLC, with an owner/occupant questionnaire regarding past and present use of the Site and the potential for impacts related to the use, storage, or disposal/release of hazardous substances and/or petroleum products on the Site. A copy of the site owner/occupant questionnaire is in Appendix F.

Mr. Cobbs indicated that Norwood North, LLC acquired the Site in 2013 and that the Site has been vacant for over 20 years. Mr. Cobbs is not aware of any previous uses and/or environmental issues related to the Site or the adjoining or adjacent properties.

8.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in general conformance with the scope and limitations of ASTM *Designation E 1527-13* of the property at 4790 Norwood Avenue (the Site) in Sacramento, California. Exceptions to, or deletions from, this practice are described in Section 1.4 of this report.

The Phase I ESA has revealed no evidence of RECs in connection with the Site or adjoining or adjacent properties. However, the potential exists for the former residence in the northern portion of the Site to have had a heating oil UST. The formerly developed portion of the Site could be further assessed for the potential presence of a heating oil UST by performing a geophysical survey. Alternatively, a UST, if present, would likely be encountered during future site grading for development and could be removed at that time under permit from the SCEMD. No other environmental assessment of the Site appears to be warranted at this time.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state- and tribal hazardous waste facilities

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/25/2021 has revealed that there are 8 CA ENVIROSTOR sites within approximately 1 mile of the target property.

which were unknown prior to 1999. One of the five original and the two 1960 USTs, along with one dispenser island, were reportedly removed in 1999. In 2000, the four additional USTs were located and removed from the site. From March 2003-December 2005, quarterly gauging and sampling of monitoring wells MW-1 through MW-6 was conducted. From May 2007-August 2009, a new consultant conducted quarterly gauging and sampling of monitoring wells MW-1 through MW-6. Monitoring well MW-7 has been sampled and gauged since May 2009. Semi-annual gauging and sampling of monitoring wells MW-1 through MW-7 since August 2009. The primary constituent of concern in groundwater at the site is 1,2- dichloroethane (1,2-DCA). A municipal drinking water supply well is located with 500 feet of the site.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: SAN JOAQUIN

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.
