I. STUDY PURPOSE AND OBJECTIVES

The Stone Beetland property (“Project”) is located directly east of the Delta Shores master-planned community. The Project is approximately 140 acres and is bound by Cosumnes River Boulevard to the south, Delta Shores and the future 24th Street extension to the west, City of Sacramento property and the Detroit Boulevard Neighborhood to the north and the Sacramento Regional Transit Blue Line light rail line and station, and Morrison Creek to the east. See Figure 1 depicting the Project Location.

The proposed Project includes the development of a mixed-use community with a range of residential densities that transition from similar housing types as the surrounding communities to higher densities surrounding the Light Rail station, promoting transit-oriented development. The current land uses within the Project include approximately 1,163 residential units, 6 acres of commercial uses and 28 acres of trails, open space and integrated drainage facilities. See Figure 2 depicting the proposed Project Land Use Plan.

The proposed Project was considered as a future development site within the Delta Shores Water Master Plan, dated June 2013. Accordingly, the infrastructure surrounding the Project has been planned to provide capacity for the Project. This includes an existing 24-inch transmission pipeline and a 12-inch diameter pipeline that were installed in Cosumnes River Boulevard along the Project’s southern boundary and with existing 12-inch stubs into the Project. This study is to confirm the design conditions and criteria of the proposed distribution lines within the Project meet the City of Sacramento criteria and Project demands.

II. STUDY AREA

The Study Area of this Plan includes the Project Site and surrounding infrastructure included in Cosumnes River Boulevard and future 24th Street. The proposed water distribution system includes the backbone framework within the Project Site reflected on Figure 2. The proposed pipelines will range from 8 to 12 inches in diameter.

A water model for the proposed distribution system has been assembled specific to the Stone Beetland project. The model points of connection have been coordinated with the City of Sacramento Department of Utilities and flow tests have been conducted at the following locations:

- POC 1: 8" Main at Southern Terminus of Detroit Boulevard
- POC 2: 12" Main at Cosumnes River Boulevard and Proposed "B" Street

Detailed information for the model boundary conditions provided by the City of Sacramento is enclosed in Appendix C.

III. DEMAND AND PEAKING FACTOR PROJECTIONS

This study utilizes the water demand values, system losses and peaking factors from the 2018 City of Sacramento Water Study Design Manual. Average Day Demand (ADD) unit water use factors for each land use per the Design Manual have been utilized to calculate the estimated water demand associated with the proposed Project. These water use factors include a 10% unaccounted water loss factor. A peaking factor of 2.0 was used to generate the Maximum Day Demand (MDD) and a 2.6 peaking factor was used to generate the Peak Hour Demand (PHD). The Project demands are summarized in Table 1.

Table 1 – Project Demands

Land Use	Total Units / Area	Base Unit Water Demand Factors (gpd)	Avg. Day Demand (gpd)	Peaking Factors	Max. Day Demand (gpd)	Peaking Factors	Peak Hour Demand (gpd)
Low Density Residential	190 DU	544.54	103,462	2.0	206,924	2.6	269,000
Medium Density Residential	262 DU	348.15	91,214	2.0	182,428	2.6	237,157
High Density Residential	711 DU	107.12	76,164	2.0	152,327	2.6	198,025
Commercial	6.1 AC	1,339	8,168	2.0	16,336	2.6	21,237
Open Space / Park Site	20.5 AC	2,678	54,900	2.0	109,800	2.6	142,740
Transit Station	17.6 AC	0	0	2.0	0	2.6	0
Roadways	18 AC	0	0	2.0	0	2.6	0
TOTALS:			333,908		667,815		868,159

IV. PROPOSED WATER SYSTEM

The following system criteria for minimum operating conditions were established to ensure that the system criteria distribution systems are adequately sized to serve the Project.

Table 2 – System Criteria for Minimum Operating Conditions

Condition	Goal
Average Day Demand Condition	
Minimum Pressure	30 psi
Maximum Pressure	80 psi
Maximum Head Loss	7 ft/kft
Maximum Velocity	5 fps
Minimum Velocity	0.10 fps
Maximum Day Plus Fire Flow Demand Condition	
Minimum Pressure	20 psi
Maximum Head Loss	10 ft/kft
Maximum Velocity	10 fps
Peak Hour Demand Condition	
Minimum Pressure	30 psi
Maximum Head Loss	7 ft/kft
Maximum Velocity	7 fps

V. HYDRAULIC ANALYSIS SUMMARY

A. Model Description

H2O NET Water Version 17.0 was used for the water modeling. The model was updated to include the street framework and specific parcel layouts and demands within the Project area. The hydraulic modeling assumptions, criteria, and results are described below. The proposed water system that was included in the model is depicted on Figure 3.

B. Assumptions

The following are the assumptions of the hydraulic modeling:

- A Hazen Williams “C” value of 130 was used to represent all pipe material, including Ductile Iron Pipe (DIP), Welded Steel, Concrete Cylinder and Polyvinyl Chloride (PVC) mains.
- Extended Period Simulations (EPS) are not warranted for this Study.
- Water demands and boundary pressure conditions were provided by the City of Sacramento Department of Utilities at two separate points of connection. These boundary conditions and flow test results are enclosed in Appendix C.

C. Hydraulic Demand Scenarios

Three hydraulic demand scenarios were modeled to observe the operating behavior and to determine water supply facility sizing for the Project. This was done to size distribution lines and to check fire flow pressures and velocities through the mains. Fire flow demands are analyzed at appropriate nodes in the system and the results are used to determine the maximum available flow while maintaining the minimum required 20 psi pressure. The locations within the system that are most sensitive to fire flow demand are analyzed to determine the overall system response to the fire flow.

D. Hydraulic Modeling Results

The hydraulic modeling criteria were used to determine the ability of the designed system to convey adequate flows and sustain sufficient pressures. In review of the various demand scenarios, the transmission and distribution mains are sized to meet current City of Sacramento Department of Utilities design standards with respect to pressure and velocity.

The table below summarize the normal operating hydraulic results from the various demand scenarios utilizing the criteria outlined above. Detailed results from each demand scenario can be found in Appendix A.

Table 3 – Modeling Results

Demand Scenario	POC 1 Operating Pressure Node J169 (psi)	POC 2 Operating Pressure Node J299 (psi)	Minimum Pressure in Development (psi)	Minimum Pressure Location (Node)	Maximum Velocity in Development (fps)	Maximum Velocity Location (Pipe)
Average Day	34.66	34.64	34.64	J299	0.42	P789

APPENDIX B

SB610 Water Supply Assessment Form

City of Sacramento
SB 610/SB 221 Water Supply Assessment and Certification Form

This form may be used to complete water supply assessments for projects located in an area covered by the City's most recent Urban Water Management Plan.

Note: Please do not use this form if the projected water demand for your project area was not included in the City's latest Urban Water Management Plan. To review the City's Urban Water Management Plan, please visit:
<https://www.cityofsacramento.org/Utilities/Reports>

Project:

Date:

Project Applicant (Name of Company):

Applicant Contact (Name of Individual):

Phone Number:

E-mail:

Address:

Project Applicant to fill in the following:

1. Does the project include:

Type of Development	Yes	No
A proposed residential development of 500 or more dwelling units		
A shopping Center employing more than 1,000 persons or having more than 500,000 square feet?		
A Commercial Office building employing more than 1,000 persons or having more than 250,000 square feet?		
A proposed hotel or motel, or both, having more than 500 rooms		
A proposed industrial, manufacturing, or processing plant or industrial park planned to house more than 1,000 persons, occupying more than 40 acres of land, or having more than 650,000 square feet of floor area		
A mixed use project that includes one or more of the projects specified above		
A project that would demand an amount of water equivalent to, or greater than, the water required by a 500 dwelling unit project		

If the answer is no to all of the above, a water supply assessment is not required for the project.

2. Is the projected water demand for the project location included in the City's 2020 Urban Water Management Plan, adopted June 29, 2021?

Yes: _____

No: _____

If the answer is no, you cannot use this form. Please refer to the requirements of SB 610 for preparing a water supply assessment.

3. Please fill in the project demands below:

Type of Development	Land Use Category	Demand Factor		Proposed Development			Current Zoning		
		Residential Water Use Factor, afy/dwelling unit	Non-Residential Water Use Factor, afy/employee	Number Dwelling Units	Number Employees	Total Demand	Number Dwelling Units	Number Employees	Total Demand
Residential - Low	Rural Residential (RR)								
	Suburban Neighborhood Low Density (SNLD)								
	Traditional Neighborhood Low Density (TLDR)								
Residential - Medium	Suburban Neighborhood Medium Density (SMDR)								
	Urban Neighborhood Low Density (ULDR)								
Residential - High	Suburban Neighborhood High Density (SHDR)								
	Traditional Neighborhood Medium Density (TMDR)								
	Urban Neighborhood Medium Density (UMDR)								
	Traditional Neighborhood High Density (THDR)								
Mixed Use	Employment Center Mid Rise (ECMR)								
	Suburban Center (SCnt)								
	Suburban Corridor (Scor)								
	Traditional Center (TCnt)								

Mixed Use - Higher Density	Urban Center High (UCntHigh)								
	Urban Center Low (UcntLow)								
	Urban Corridor High (UCorHigh)								
	Urban Corridor Low (UCorLow)								
Central Business District	Central Business District (CBD)								
	Urban Neighborhood High Density (UHDR)								
Commercial	Regional Commercial (RC)								
	Employment Center Low Rise (ECLR)								
Industrial	Industrial (IND)								
Public	Public/Quasi-Public (PUB)								
Park	Parks and Recreation (PRK)								
Open Space	Open Space (OS)								
Other									
Other									
Other									
Total Demand (AFY)									

4. Required Elements of Water Supply Assessment (Water Code § 10910)

A. Water supply entitlements, water rights or water service contracts (Water Code § 10910(d)):

The City's water supply entitlements, water rights and water service contract are identified and discussed in the Urban Water Management Plan, Chapters 3, 6, and 7.

All infrastructure necessary to deliver a water supply to the project is in place, excepting any distribution facilities required to be constructed and financed by the project applicant: Yes: _____ No: _____

- B. Identification of other sources of water supply if no water has been received under City's existing entitlements, water rights or water service contracts (Water Code § 10910(e)):

Not applicable.

- C. Information and analysis pertaining to groundwater supply (Water Code § 10910(f)):

Addressed by Urban Water Management Plan, Chapters 3, 6, and 7.

Verification of Water Supply
(for residential development of more than 500 dwelling units)

Based on the City's most recent Urban Water Management Plan, are there sufficient water supplies for the project during normal, single dry and multiple dry years over a 20 year period?

Yes: _____

No: _____

By: _____ 

Title: _____

Date: _____

The undersigned agrees to the following items and conditions:

- (1) *The street address and/or parcel number shown above is correct*
- (2) *Water supply data is developed from several sources of information which may include water supply test data, computer models, and pressure recording stations. The water supply data given is to be used for design purposes.*
- (3) *Based on hydrant locations, test results may not provide accurate flow information at the point of connection, for a fee the City can provide the hydraulic analysis necessary to transfer the results to a single point of connection.*
- (4) *Although the water supply data reported herein is believed to be accurate, the City makes no warranty, guaranty, certification or other representation of any kind that such data is accurate or correct, or that the pressures and/or flow rates reported herein can or will be maintained. The undersigned agrees that the City, its officers and employees shall not be liable for any damages of any kind resulting from the use of or reliance upon the water supply data reported herein by the undersigned or by any third party.*
- (5) *When more than one water supply test has been performed, the decision is left to the Fire Plan Checker as to which water supply test is to be used.*
- (6) *If the undersigned desires to witness the water supply test performed by the City, please check the box below:*
 I want to witness this water supply test, which will be scheduled at the convenience of the Department of Utilities.
- (7) *If the undersigned elects to hire a licensed engineer, at the undersigned's sole expense, to witness and certify the water supply test performed by the City, please check the box below:*
 At my expense, I will arrange for a licensed engineer to witness and certify this water supply test, which will be scheduled at the convenience of the Department of Utilities.
