

OIL RECYCLING FACILITIES

The California Integrated Waste Management Board encourages the recycling of used motor oil by certifying used oil recycling collection centers throughout the state. Certified Used Oil Collection Centers will take used motor oil from the public and will pay you 40¢ a gallon. Most centers will take up to 5 gallons at a time.

Residents of Sacramento can also recycle their oil at home. Simply call (916) 264-5011 or 311 24 hours before your scheduled recycling day to schedule an appointment. Help keep Sacramento clean by putting waste in its place!

CERTIFIED USED OIL COLLECTION CENTERS • See map on reverse side for locations

KEEP OUR WATERS CLEAN!

KNOW WHERE TO GO!

It's very important to know where public restrooms and pumpout facilities are located along the Sacramento and American Rivers and at Folsom Lake. It's also important to use them! Human waste contains microorganisms, like bacteria and viruses, that can make you sick and also harm fish and aquatic life. Our lakes and rivers are also a source of drinking water for millions of Californians. By using the restrooms and pumpout facilities while enjoying our lakes and rivers, you'll be doing your part to protect our most precious natural resource...water!

The map shows where restrooms, pumpout stations and dog waste stations are located along our local waterways. Using them will help to keep the water clean for our use and enjoyment.

WHY RECYCLE USED OIL?

1. Did you know that used motor oil never wears out? It just gets dirty and can be recycled, cleaned and used again. Recycling used motor oil conserves a natural resource (oil) and is good for the environment too!
2. Motor oil poured onto the ground or into storm drains, or tossed into trash cans (even in a sealed container) can contaminate and pollute the soil, groundwater, streams and rivers.
3. When you take your used oil to a certified used oil collection center for recycling, you are protecting the environment, conserving a valuable resource, and getting paid for it. That's a winning combination!
4. Report oil, fuel and chemical spills to all numbers below:
1-800-424-8802 National Response Center
1-800-852-7550 California Office of Emergency Services

WHAT IS A PUMPOUT?

A pumpout is a facility at local marinas to remove wastewater from your boat's holding tank. Always use a pumpout to empty your holding tank, even if you have a Type I or Type II Marine Sanitation Device (MSD). To help prevent clogging, use fast dissolving marine toilet tissue made for MSD use. When in "no discharge" waters, lock or secure the toilet closed so it cannot empty overboard. Please use the map inside of this brochure to find public restrooms and pumpouts at Folsom Lake, the Lower American River, and the portion of the Sacramento River from the Feather River confluence to Freeport.

BILGE CARE & PREVENTING OIL SPILLS TIPS

1. Never use soaps or detergents to clean oil or fuel - it is illegal and increases the pollution problem.
2. Install an on-board bilge filtration system that filters gas, oil or diesel from bilge water before the automatic pump discharges the water.
3. Use oil-only absorbents in the bilge, securely fastened to prevent clogging the bilge pump or its sensor, to capture unexpected leaks.
4. If you have a large quantity of oil in the bilge, use a bilge pumpout system. Never use the sewage pumpout for the bilge.
5. If the bilge and/or engine compartment still needs significant cleaning after bilge pumpout, use a steam cleaning service.

FREE BILGE OIL KITS

Waste oil can build up inside the engine bilge in small quantities. Help prevent pollutants from entering the waters by using a bilge oil kit. A bilge kit contains an absorbent pad or sheet to be placed in the bilge and soak up oil before the bilge pump discharges it into the water. Folsom Lake Marina has free absorbent pads or sheets and has a free collection site for used pads or sheets. Pick up your free absorbent today!

HAZARDOUS WASTE

1. Never use soaps or detergents to clean oil or fuel. Soaps emulsify oil, breaking it into invisible droplets that disperse through the water. Adding soap is ILLEGAL and bad for the environment.
2. Many cleaning and maintenance products are considered hazardous waste such as antifreeze, lead-acid batteries, used oil and oil filters, oil/fuel saturated absorbents, solvents, paints, zincs, varnishes and cleaning products.
3. Review storage of products every six months and properly dispose of old or unnecessary products. Be sure to bring all hazardous waste to your local Household Hazardous Waste Facilities. HHW facilities and used oil recycling centers are listed on the map.
4. Practice good preventive engine maintenance. Inspect fuel lines, hoses, hydraulic lines, valves, oil seals, gaskets and connections for leaks and deterioration.
