RE: **NOTICE OF PREPARATION OF A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT AND SCOPING MEETING FOR THE RAILYARDS SPECIFIC PLAN UPDATE, KAISER PERMANENTE MEDICAL CENTER, AND MLS STADIUM**

COMMENT PERIOD

June 26, 2015 to July 30, 2015

SCOPING MEETING

Wednesday, July 22, 2015, Sacramento City Hall (see below)

INTRODUCTION

On December 11, 2007, the City of Sacramento (City) certified the Environmental Impact Report (EIR) and adopted a Mitigation Monitoring Program (MMP) for the Railyards Specific Plan (RSP).

Pursuant to section 21166 of the California Public Resources Code and section 15162 of the California Environmental Quality Act (CEQA) Guidelines, the City is the Lead Agency for preparation of a Subsequent Environmental Impact Report (SEIR) for the proposed Railyards Specific Plan Update (RSPU) project. The SEIR will also address the environmental effects of a proposed Kaiser Permanente Medical Center (Medical Center) and a proposed Major League

Soccer (MLS) Stadium (Stadium), both of which will be constructed within the Railyards.

The SEIR will evaluate potential significant environmental effects of the RSPU as a whole, as well as the individual Medical Center and Stadium projects, and other actions and transactions associated with the RSPU and the projects. Written comments regarding the issues that should be covered in the SEIR, including potential alternatives to the RSPU, Medical Center, and Stadium projects and the scope of the analysis, are invited.

The SEIR for the RSPU, Medical Center, and Stadium projects is being prepared in compliance with the CEQA. The City, as Lead Agency, is issuing this Notice of Preparation (NOP) to inform trustee and responsible agencies, as well as the public, of its decision to prepare an SEIR, which will augment and supplement the 2007 RSP EIR. The purpose of the NOP is to provide information describing the projects and their potential environmental effects to those who may wish to comment regarding the scope and content of the information to be included in the SEIR. Agencies should comment on such information as it relates to their statutory responsibilities in connection with the project.

The SEIR will provide an evaluation of potential environmental impacts associated with implementation of the proposed RSPU, as well as development of the Medical Center and Stadium projects. The location of, and the environmental issue areas that may be affected by, development of the proposed projects are set forth below. The SEIR will update relevant parts of the 2007 RSP EIR, and will evaluate the potentially significant environmental impacts of the proposed projects, on both a direct and cumulative basis, identify mitigation measures that may be feasible to lessen or avoid such impacts, and identify alternatives to the proposed projects.

SUBMITTING COMMENTS

Comments and suggestions as to the appropriate scope of analysis in the SEIR are invited from all interested parties. Written comments or questions concerning the SEIR for the proposed project should be directed to the environmental project manager at the following address by 5:00 p.m. on July 30, 2015. Please include the contact person's full name and address in order for staff to respond appropriately:

Tom Buford, Senior Planner
City of Sacramento Community Development Department
300 Richards Blvd., Third Floor
Sacramento, CA 95811
Telephone: (916) 808-7931
E-mail: tbuford@cityofsacramento.org

SCOPING MEETING

A public scoping meeting will be held on Wednesday, July 22, 2015, from 6:00 p.m. to 8:00 p.m. at the following location:

City of Sacramento City Hall Foyer
915 I Street
Sacramento, CA 95814

Responsible agencies and members of the public are invited to attend and provide input on the scope of the SEIR. The scoping meeting will be conducted in an open house format. Written comments regarding relevant issues may be submitted at the meeting.

PROJECT LOCATION/SETTING

The RSP area is located in Sacramento County within the existing downtown area of the City of Sacramento, near the confluence of the American and Sacramento rivers, as depicted in Figure 1, Regional Location Map. The approximately 244-acre RSP area is immediately north of the Sacramento Central Business District, east of the Sacramento River and Interstate 5 (I-5), south of North B Street and the River District area, and west of the Alkali Flat Neighborhood, as depicted in Figure 2, Local Vicinity Map. The RSP area is generally bounded by the Sacramento River Water Treatment Plant and industrial and commercial uses along Richards Boulevard to the north; the Alkali Flat neighborhood to the southeast; the Central Business District to the south; Old Sacramento to the southwest; and I-5 and the Sacramento River to the west.

As depicted on Figure 2, the proposed Medical Center would be located on approximately 18 acres north of Railyards Boulevard and west of 5th Street. The Stadium is proposed on an approximately 12 to 14.5-acre site north of Railyards Boulevard, between 8th and 10th Streets.

PROJECT DESCRIPTION

The key project elements to be considered in the SEIR are described further below.

- The proposed RSPU would make refinements to: the density and intensity of land uses within the Office/Residential Mixed Use (ORMU), Residential/Commercial Mixed Use (RCMU) and Residential Mixed Use (RMU) zones; the configuration of the Central Shops Historic District; the configuration of roads within the RSP area; the arrangement of parks and open space within the RSP area; and the drainage system and potential outfall that would be built to serve the RSP area.
- The Medical Center would be a new, state-of-the-art, approximately 1.2 million square foot flagship medical center campus located on the western end of the RSP area, generally north of Railyards Boulevard and west of 5th Street. The Medical Center would provide health care services to residents of the City of Sacramento and surrounding communities. It would include a comprehensive range of inpatient and outpatient primary and specialty care services, including diagnostic and treatment services, surgical services and emergency care, urgent care, radiation/oncology services, diagnostic services including radiology and telemedicine, women's services, and supporting ancillary health care services such as optical, pharmacy, laboratory, education and training. The Medical Center would also include a helipad to provide for emergency patient transfers to nearby trauma centers, an Energy Center (central utility plant), surface and structured parking, as well as internal circulation and open space. The Medical Center would be designed LEED

Gold or equivalent and incorporate sustainable building standards and innovative green initiatives.

- The Stadium would be the home to a new Major League Soccer (MLS) team that would be an outgrowth of the United Soccer League (USL) Sacramento Republic FC. The Stadium could be designed to accommodate a range of attendees estimated at up to 25,000 for MLS soccer games, other sporting events, concerts, and other civic events. The Stadium would be constructed on approximately 12-14.5 acres of land, generally north of Railyards Boulevard, between 8th and 10th Streets.

ENVIRONMENTAL EFFECTS AND SCOPE OF THE SEIR

The SEIR will analyze potentially significant impacts that result from implementation of the proposed RSPU, as well as development and operation of the proposed Medical Center and Stadium projects.

Pursuant to section 15063 (a), of the CEQA Guidelines, an Initial Study has not been prepared for the proposed project. However, the SEIR will update, augment, and evaluate, as appropriate, the environmental issues addressed in the 2007 RSP EIR, as well as additional environmental issues that may be relevant to the proposed RSPU, Medical Center and/or Stadium projects, including, but not limited to:

- Air Quality
- Biological Resources
- Cultural Resources
- Energy and Energy Conservation
- Geology and Soils
- Greenhouse Gas Emissions And Climate Change
- Hazards and Hazardous Materials
- Hydrology and Water Quality
- Land Use and Planning
- Light and Glare
- Noise
- Parking: On-street and parking structures
- Population and Housing
- Public Services
- Recreation
- Transportation/Traffic and Parking
- Utilities, including Stormwater, Wastewater, and Water Supply

The SEIR will consider the alternatives addressed in the 2007 RSP EIR, and, as appropriate, will identify and evaluate a reasonable range of potentially feasible alternatives to the proposed projects.

To: Reviewing Agencies

Re: Railyards Specific Plan Update, Kaiser Medical Center and MLS Stadium
SCH# 2006032058

Attached for your review and comment is the Notice of Preparation (NOP) for the Railyards Specific Plan Update, Kaiser Medical Center and MLS Stadium draft Environmental Impact Report (EIR).

Responsible agencies must transmit their comments on the scope and content of the NOP, focusing on specific information related to their own statutory responsibility, within 30 days of receipt of the NOP from the Lead Agency. This is a courtesy notice provided by the State Clearinghouse with a reminder for you to comment in a timely manner. We encourage other agencies to also respond to this notice and express their concerns early in the environmental review process.

Please direct your comments to:

Tom Buford
City of Sacramento
300 Richards Boulevard, 3rd Floor
Sacramento, CA 95816

with a copy to the State Clearinghouse in the Office of Planning and Research. Please refer to the SCH number noted above in all correspondence concerning this project.

If you have any questions about the environmental document review process, please call the State Clearinghouse at (916) 445-0613.

Sincerely,

Scott Morgan
Director, State Clearinghouse

Subject: Notice of Preparation of a Subsequent Environmental Impact Report and Scoping Meeting for the Railyards Specific Plan Update, Kaiser Permanente Medical Center and Major League Soccer Stadium

Dear Mr. Buford:

Sacramento Regional County Sanitation District (Regional San) has the following comments regarding the Environmental Impact Report for the Railyards Specific Plan Update, Kaiser Permanente Medical Center and Major League Soccer Stadium project.

Regional San is not a land-use authority. Projects identified within Regional San planning documents are based on growth projections provided by land-use authorities. Sewer studies will need to be completed to assess the impacts of any project that has the potential to increase flow demands. Onsite and offsite impacts associated with constructing sanitary sewer facilities to provide service to the subject project should be included in this environmental impact report.

Customers receiving service from Regional San are responsible for rates and fees outlined within the latest Regional San ordinances. Fees for connecting to the sewer system are set up to recover the capital investment of sewer and treatment facilities that serves new customers. The Regional San ordinance is located on the Regional San website at http://www.srcsd.com/ordinances.php.

Local sanitary sewer service for the proposed project site will be provided by the City of Sacramento's local sewer collection system. Ultimate conveyance to the Sacramento Regional Wastewater Treatment Plant (SRWTP) for treatment and disposal will be provided via Sump 2/2A and the Regional San City Interceptor system. Cumulative impacts of the proposed project will need to be quantified by the project proponents via a sewer master plan to ensure wet and dry weather capacity limitations within Sump 2/2A and the City Interceptor system are not exceeded.

On March 13, 2013, Regional San approved the Wastewater Operating Agreement between Regional San and the City of Sacramento. The following flow limitations are outlined in this agreement:

Service Area	*Flow Rate (MGD)*
Combined Flows from Sump 2 and Sump 2A	*60*
Combined flows from Sumps 2, 2A, 21, 55, and 119	*98*
Total to City Interceptor of combined flows from Sumps 2, 2A, 21, 55, 119, and five trunk connections	*108.5*

The SRWTP provides secondary treatment using an activated sludge process. Incoming wastewater flows through mechanical bar screens through a primary sedimentation process. This allows most of the heavy organic solids to settle to the bottom of the tanks. These solids are later delivered to the digesters. Next, oxygen is added to the wastewater to grow naturally occurring microscopic organisms, which consume the organic particles in the wastewater. These organisms eventually settle on the bottom of the secondary clarifiers. Clean water pours off the top of these clarifiers and is chlorinated, removing any pathogens or other harmful organisms that may still exist. Chlorine disinfection occurs while the wastewater travels through a two mile "outfall" pipeline to the Sacramento River, near the town of Freeport, California. Before entering the river, sulfur dioxide is added to neutralize the chlorine. The design of the SRWTP and collection system was balanced to have SRWTP facilities accommodate some of the wet weather flows while minimizing idle SRWTP facilities during dry weather. The SRWTP was designed to accommodate some wet weather flows while the storage basins and interceptors were designed to accommodate the remaining wet weather flows.

A NPDES Discharge Permit was issued to Regional San by the Central Valley Regional Water Quality Control Board (Water Board) in December 2010. In adopting the new Discharge Permit, the Water Board required Regional San to meet significantly more restrictive treatment levels over its current levels. Regional San believed that many of these new conditions go beyond what is reasonable and necessary to protect the environment, and appealed the permit decision to the State Water Resources Control Board (State Board). In December 2012, the State Board issued an Order that effectively upheld the Permit. As a result, Regional San filed litigation in California Superior Court. Regional San and the Water Board agreed to a partial settlement in October 2013 to address several issues and a final settlement on the remaining issues were heard by the Water Board in August 2014. Regional San began the necessary activities, studies and projects to meet the permit conditions. The new treatment facilities to achieve the permit and settlement requirements must be completed by May 2021 for ammonia and nitrate and May 2023 for the pathogen requirements

Regional San currently owns and operates a 5-mgd Water Reclamation (WRF) that has been producing Title 22 tertiary recycled since 2003. The WRF is located within the SRWTP property in Elk Grove. A portion of the recycled water is used by Regional San at the SRWTP and the rest is wholesaled to the Sacramento County Water Agency (SCWA). SCWA retails the recycled water, primarily for landscape irrigation use, to select customers in the City of Elk Grove. It should be noted that Regional San currently does not have any planned facilities that could provide recycled water to the proposed project or its vicinity. Additionally, Regional San is not a water purveyor and any potential use of recycled water in the project area must be coordinated between the key stakeholders, e.g. land use jurisdictions, water purveyors, users, and the recycled water producers.

If you have any questions regarding these comments, please contact me at 916-876-6104.

Sincerely,

Robb Armstrong

Re: Railyards Specific Plan Update Subsequent EIR Notice of Preparation

Dear Mr. Buford:

The City of West Sacramento is encouraged to see interest in the Railyards. The project will certainly have benefits of regional significance. To assist the City of Sacramento in preparing the SEIR for the Railyards Specific Plan update, the City of West Sacramento has the following comments and recommendations:

1. The SEIR should evaluate the proposed Downtown/Riverfront Streetcar network and its future operation. The starter line (Route A) for this regional circulator will provide connections between West Sacramento's Civic Center, the Sacramento Intermodal Transportation Facility, the State Capitol, the convention center, and Midtown. Future streetcar lines include Route E that will connect across the new C Street/Railyards Bridge with West Sacramento's Washington District and Bridge District neighborhoods. The streetcar project could both mitigate traffic and air quality impacts and could extend the economic benefit of the Railyards far beyond its localized impact by providing riders an easier method to connect destinations.
2. The cumulative analysis should account for planned development as described in the Washington Specific Plan and the Bridge District Specific Plan.
3. The EIR should consider the plans for new bridges over the Sacramento River including the Broadway Bridge and the C Street/Railyards Bridge.
4. The following intersections should be studied employing West Sacramento level of service thresholds and include any air quality impacts that may result:
   a) 3rd & Tower Bridge Gateway
   b) 5th & Tower Bridge Gateway
   c) Garden St & Tower Bridge Gateway
   d) 3rd & C Streets
   e) 3rd & E Streets
   f) 3rd & F Streets
   g) 3rd & G Streets
   h) Bridge St & South River Rd
   i) Jefferson Blvd & US 50
   j) 5th & C Streets

Recycled, 100% post-consumer content

5. The proposed projects in the Railyards may have an impact on the following bridges, freeways and regional facilities. Potential impacts to these facilities should be examined in the traffic analysis and the risk of upset and air quality sections of the EIR:
   a) Tower Bridge Operations
   b) I Street Bridge Operations
   c) Interstate 5 Operations and Bus/Carpool Lanes Project.
   d) US 50 Operations
   e) RT & YCTD Transit Services
   f) Raley Field Operations

6. The recreation chapter of the EIR should address potential impacts to the West Sacramento Riverwalk Park resulting from additional demand from increased employment in the Railyards.

The City of West Sacramento believes there are a number of projects and programmatic solutions that could improve traffic, risk of upset air quality and other transportation impacts in the Railyards, the downtown core, and West Sacramento. We recommend that the EIR analyze the following potential solutions to impacts that may be created by the project:

1. Joint Comprehensive Parking Program-The two cities have started talks regarding shared services for parking in the downtown core. Implementation of this shared service would provide better coordination for parking which would lessen impacts arising from Railyards development on traffic and parking operations.
2. Regional Bike Share – the regional bike share project, of which both West Sacramento and Sacramento are members could reduce vehicle trips to and from the Railyards if bike share facilities are included as part of the projects.
3. I Street Bridge Replacement Project – Both cities have jointly obtained funding for the replacement of the I Street Bridge. This project could improve access between the project area and West Sacramento.
4. Bi-City Traffic Signal Synchronization/Connection- both cities employ automated traffic management systems. Coordination of these traffic signals could lessen traffic impacts created by Railyards development.
5. Emergency Evacuation Plan Coordination- emergency evacuation plans for both cities have traditionally not been coordinated. Given the location of large public facilities (Raley Field, the ESC, MLS stadium), emergency evacuation plans should be coordinated to prevent problems in the event of a disaster in the downtown core area including West Sacramento.

Thank you for sending the NOP to the City of West Sacramento. We appreciate the opportunity to provide early input on the project. If you have any questions, please contact me or David Tilley at (916) 617-4645 or via email at charlineh@cityofwestsacramento.org or davidt@cityofwestsacramento.org.

Sincerely,

Charline R. Hamilton

Subject: Notice of Preparation (NOP) of a Subsequent Environmental Impact Report (SEIR) for the Railyards Specific Plan (RSP) Update, Kaiser Permanente Medical Center, and MLS Stadium (P14-012)

Dear Mr. Buford:

Thank you for the opportunity to comment on the subject NOP. We are excited to see progress on developing the Railyards project area and look forward to it being a state of the art neighborhood for comfortable and friendly bicycle access for all ages and abilities. Both Kaiser Permanente and the Sacramento Republic Football Club, the intended occupant of the MLS Stadium, have already demonstrated their interest and commitment to fostering bicycling as a healthy and sustainable form of modern transportation.

The proposed project will cause a significant adverse effect on the environment if it will not adequately provide access by bicycle. Adequacy of bicycle access happens in three ways:

Adequate bicycle parking. The project must comply with Sacramento's requirements for short-term and long-term bicycle parking. The Medical Center is proposed to have 1.2 million square feet which will require 180 long-term bicycle parking spaces for employees or long-term patients and 60 short-term spaces for short-term visitors. We encourage the project to go beyond the basic requirements by providing bicycle parking that is noteworthy as an amenity of the project and therefore a selling point to potential employees and customers that is consistent with Kaiser's health care mission. For example, the Medical Center should include a state-of-the-art "bike station" to serve employees and customers with a secure, indoor, 24-hr accessible bike-parking facility; such a facility might also provide tools and supplies for minor bike repairs and servicing (e.g. flat repairs, tire inflation). The Sacramento Republic has provided valet parking for bicycles at its games since its first game in 2014. As many as 400 attendees have ridden bikes to games at its remote Cal Expo location. A much higher proportion of attendees at the proposed MLS Stadium will be expected to ride bicycles given its more accessible location to large residential areas. Therefore, the MLS Stadium should include a design for a bike parking operation that will hold at least 1,000 bikes, possible distributed among two or more locations.

Adequate bicycle access within the project. Because the proposed Medical Center and MLS Stadium each will occupy multiple city blocks, internal access by bicycle from the roadway network to bicycle parking locations will be critical. We request that bikeways be provided as part of the internal promenades through the sites. These bikeways should be delineated by pavement-surface treatments to show cyclists where they should ride to avoid conflicts with pedestrians. Signage can be used to guide cyclists to long-term bike parking and to exits from the project to the surrounding roadway network.

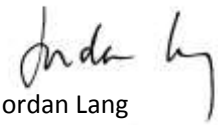
Adequate bicycle access to the project sites. The project sites will be located on roadways to be developed through the Railyards. It will be critical for the proposed project to ensure it provides access for all ages and abilities of cyclists to and along these roadways from key rider sources like the Sacramento River Parkway, midtown Sacramento, and East Sacramento. Because of the high number of cyclists expected to ride to MLS soccer games, either Class 1 (bike trails) or Class 4 (protected bike lanes) should be provided to the stadium site to prevent conflicts between high vehicle volumes and high bicycling volumes.

The subject EIR must address these 3 dimensions of adequate bicycle access.

SABA works to ensure that bicycling is safe, convenient, and desirable for everyday transportation. Bicycling is the healthiest, cleanest, cheapest, quietest, most energy efficient, and least congesting form of transportation.

Thank you for considering our comments.

Sincerely,



Jordan Lang

COMMENTS ON CITY OF SACRAMENTO'S JUNE 26, 2015 NOTICE OF PREPARATION FOR A SUBSEQUENT ENVIRONMENTAL IMPACT REPORT FOR THE RAILYARDS SPECIFIC PLAN UPDATE

Dear Mr. Buford:

Department of Toxic Substances Control (DTSC) has received and reviewed the June 26, 2015 Notice of Preparation (NOP) for the Railyards Specific Plan Update (RSPU) Subsequent Environmental Impact Report (SEIR). The RSPU SEIR would update the December 11, 2007 Railyards Specific Plan (RSP) Environmental Impact Report (EIR). The RSPU SEIR will also address the environmental effects of a proposed Kaiser Permanente Medical Center and Major League Soccer Stadium which would be constructed within the Railyards.

DTSC appreciates the opportunity to review and comment on the NOP and is eager to participate and provide information to facilitate the implementation of the California Environmental Quality Act process. Close communication between all responsible agencies during preparation of the RSPU SEIR will be essential to assure the document is complete and up to date. Below are points that should be discussed in the RSPU SEIR.

Scope of RSPU SEIR

As you are probably aware, DTSC is providing lead regulatory oversight for the cleanup of contaminated soil, soil gas, and groundwater at the Railyards. DTSC's review on the scope of the RSPU SEIR focused on the aspects related to the historical and ongoing remedial measures at the Railyards. The sections in the RSPU SEIR titled "Hazards and Hazardous Materials" and "Hydrology and Water Quality" should consider and discuss Railyards remediation issues.

Printed on Recycled Paper

The RSP EIR included a Mitigation Monitoring Program that became ordinance. The RSPU SEIR should continue this program for construction of new development and infrastructure. DTSC will focus on mitigations regarding hazardous materials.

Additionally, the RSP EIR and associated documents mention a Tri-Party Memorandum of Understanding (MOU) that was developed between DTSC, City of Sacramento, and S. Thomas Enterprises of Sacramento, LLC (STES). Since STES' loss of the Railyards by way of foreclosure resulted in the MOU being ineffective, discussion of the MOU needs to be updated in the RSPU SEIR.

Cleanup at the Railyards

The soil cleanup for the following Study Areas have been completed, with the exception of inaccessible areas: Sacramento Station, Northern Shops, Central Corridor, Car Shop Nine, and Lagoon. Inaccessible areas include soil beneath the former platforms in Sacramento Station and beneath Track 150 east of 7th Street in Car Shop Nine that will be remediated when they become accessible; soil near the Central Shops border in Northern Shops that will be remediated this year; and soil beneath a water line in Northern Shops that will remain inaccessible. Soil remediation will be certified complete when the required land use covenants (LUCs) are recorded.

The soil remedies for the Central Shops and Lagoon Northwest Corner Study Areas are ongoing. The soil remedy for the Manufactured Gas Plant Study Area has not yet been selected.

The final groundwater remedies for South Plume and Lagoon Groundwater Study Areas have not been completed, but interim remedial measures have been in place. The South Plume remedy is currently being designed and implemented, and the Lagoon Groundwater remedy is being evaluated.

The Railyards was not remediated to levels protective for unrestricted land use, so recordation of a LUC is required to limit land use and require exposure controls and mitigation measures to protect human health and the environment. DTSC is working with the current Railyards owner to record a LUC.

Examples of exposure controls include having a compliant layer/barrier and signage to prevent access to native soil. Also, a soil and groundwater management plan would be required prior to disturbance of either media to identify procedures for safe and appropriate handling. Lastly, vapor intrusion mitigation measures would be required as part of new construction of enclosed structures unless data is provided to show they aren't needed.

Medical Center and Stadium

The Medical Center is approximately 18 acres in an area bounded by Bercut Street, South Park Street, 5th Street, and Railyards Boulevard. This area is in the Northern Shops and Lagoon Study Areas, located above the Lagoon Groundwater Study Area. The soil there has been cleaned up, and groundwater remediation is ongoing.

The Stadium is approximately 12-14.5 acres in an area bounded by 8th Street, North B Street, 10th Street, and Railyards Boulevard. This area is in the Lagoon and Car Shop Nine Study Areas, and located above the Lagoon Groundwater and South Plume Study Areas. The soil there has been remediated, except for under Track 150, and groundwater remediation is ongoing.

DTSC looks forward to receiving the RSPU SEIR for a complete review of the specific points related to remediation of contamination at the site. As the RSPU SEIR project proceeds, and if you have any questions regarding site investigation and remediation, please contact me at (916) 255-3601 or Ruth.Cayabyab@dtsc.ca.gov.

Sincerely,

Ruth Cayabyab

Re: Comments on Notice of Preparation of Subsequent Environmental Impact Report and Scoping Meeting for the Railyards Specific Plan Update

Please accept this response to the referenced Notice of Preparation of a Subsequent Environmental Impact Report (SEIR). Please **include the following contact as an interested party** to the distribution list to receive all updates and notifications for this Project:

Ivan Hou
Unite Here Local 5
1516 South King Street
Honolulu, HI 96826
Email: ihou@unitehere5.org

The City's SEIR should take a critical look at Kaiser Permanente's Medical Center proposal and ask if it will significantly advance Sacramento's healthcare industry. The Railyard site, based on the 2007 Railyards Specific Plan (RSP), may be better suited for other developments that diversify the city's economic activities. The 2007 RSP provided a cohesive plan for the site with commercial, retail and residential mixed uses. A medical and sports complex is an incongruent departure from the RSP. Alternative uses for the Railyard site should be a point of focus of the SEIR.

The Kaiser medical center is a zero-sum development. The medical center was reported to provide about the same number of jobs as the Morse Avenue facility it will replace[1]. Kaiser wants to build this new facility a mere six and a half miles away from the old facility. The new location moves the medical facility further away from densely populated neighborhoods to the west. Sacramento will have one Kaiser hospital whether or not this development is approved. In fact, the City would probably benefit from more choice and competition if a *different* healthcare company built at the Railyard. Granting Kaiser the Railyard site is a lateral move for the City. In contrast, the Major League Soccer facility is at least a unique addition to the city's development mix.

[1] http://www.sacbee.com/news/business/article25986196.html

The SEIR should evaluate whether the assignment of Railyard acreage to build a Kaiser facility and sports stadium is the best use of the site and whether it will impact the City's ability to enhance the downtown and waterfront neighborhoods with the mixed uses described in the 2007 RSP, i.e. will the proposed facilities limit the viability of commercial, retail and residential mixed-use developments in the remainder of the site?

Kaiser's financial reserves should be incorporated into the SEIR's evaluation of alternative uses and mitigation actions. Kaiser is a tax-exempt organization but is immensely profitable. Much of Kaiser's profitability comes from taxpayers since many of Kaiser's members are public sector employees. CalPERS alone provide Kaiser with 500,000 members. Kaiser:

- held $32.8 *billion* in unrestricted cash and investment reserves at the end of 2014;
- made $3.1 billion in net income in 2014;
- averaged nearly $2.5 billion in net income each year over the past five years;
- the CEO and Chairman earned $10 million in 2012 while the board of directors received an average salary of $220,000.

The money Kaiser spends each year for marketing, executive pay, capital projects and retained as net income is money not used for direct patient care. Indeed, Kaiser is in the midst of a ten year plan to spend $30 billion on capital expenditure projects. Kaiser has the financial resources to implement a range of development plans including refurbishment of existing facilities. Negative impacts to Kaiser from City policy decisions that do not meet its organizational goals are minimized by its financial flexibility. The City should not be too focused on making Kaiser happy. The City should only commit to a Railyard Kaiser facility if it is the best use for the site that benefits the region for the long term, regardless of what Kaiser wants. The SEIR should take Kaiser's financial resources into account when evaluating alternative uses for the site and mitigation actions for environmental impacts.

Regards,

Ivan Hou

RE: Railyards Specific Plan Notice of Preparation Response

The Board of Directors of Preservation Sacramento request that the City of Sacramento include the following items as areas within the scope of analysis of the SEIR proposed for the Railyards Specific Plan Update.

First, the Central Shops Historic District should be maintained and protected, with adjustments only as necessary to provide better circulation via relocation of Camille Avenue farther north, and inclusion of potential new construction in the former Transfer Table location west of the Paint Shop, in order to facilitate use of that large open space in the absence of the already removed eastern Transfer Table. We strongly encourage the city to require nomination of the Central Shops for listing in the National Register of Historic Places, as a potential mitigation method and to facilitate adaptive reuse of the historic Shops buildings.

Second, the proposed reduction of housing units in the Railyards from 12,000 to approximately 6,000 must be scrutinized for ways to minimize loss of proposed housing, including utilization of the ORMX zoned properties for new construction that combine office and employment center uses with residential floors. Sacramento's central city currently employs approximately 90,000 people, with a workforce population of only approximately 12,000. In order to avoid significant impacts to transportation networks via a loss of proposed housing, as much housing as possible should be retained in the revised plan. Significant reductions in proposed population density, coupled with increases in commercial space, could result in greatly increased traffic as people must commute to this new job center instead of living in close proximity to work. This means potential dramatic increases in vehicle miles traveled compared to the numbers provided in the original Railyards EIR.

Third, because this new neighborhood will require neighborhood-serving retail in order to avoid additional traffic impacts from residents leaving the neighborhood to perform regular shopping activities, commercial programming within the district should focus on neighborhood-serving retail, such as grocery stores, hardware, clothing, and other retail uses, rather than focusing on entertainment, dining and other commercial uses that do not satisfy basic needs for neighborhood residents. Another pressing neighborhood need is a site for educational facilities, as Sacramento's central city has only two elementary schools, no junior high or high schools or full-sized college campuses. Educational facilities provide employment while also filling a growing need for future downtown residents who wish to raise their families in the heart of the city. Failing to provide these facilities may also result in increased vehicle miles and resultant pollution impacts, as lack of these services means they must travel elsewhere to satisfy household needs and transport children to school.

Railyards Specific Plan Update (RSPU), Kaiser Medical Center (KMC) and Major League Soccer Stadium (MLSS) Project – Notice of Preparation (NOP) of a Subsequent Environmental Impact Report (SEIR)

Dear Mr. Buford:

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the project referenced above. The proposed RSPU includes construction of a 1.2 million square foot KMC, and a MLSS to house a new professional soccer team and up to 25,000 attendees at soccer games and other events. The proposed RSPU will also include refinements to the density and intensity of land uses within the Office/Residential Mixed Use, Residential/Commercial Mixed Use, and Residential Mixed Use zones. The project is located immediately north of downtown Sacramento on both sides of Interstate 5 (I-5), with I-5 providing direct freeway access to the project site via the Richards Blvd., I Street, and J Street interchanges. Due to the project's location, scale of development and potentially significant impacts to mainline I-5 and its interchanges (IC), Caltrans views the project as being of regional and interregional significance. Caltrans' new mission, vision, and goals signal a modernization of our approach to California's transportation system. We review this local development for impacts to the State Highway System in keeping with our mission, vision and goals for sustainability/livability/economy, and safety/health. We provide these comments consistent with the State's smart mobility goals that support a vibrant economy, and build communities, not sprawl. The following comments are based on the NOP.

Transportation, Traffic, and Parking

The second paragraph on page 4 of the NOP states that the ensuing SEIR will evaluate potential environmental issues regarding Transportation, Traffic, and Parking. Caltrans requests that evaluation include an analysis of local and State facilities within the project area to determine

potential operational impacts that may occur as a result of the implementation of the proposed project. The analysis must also include proposed improvements or suggestions to mitigate those potential impacts to the facilities. The study is to include, I-5, the I-5/Richards Blvd. IC, 7th St., State Route (SR) 160, 12th St., 16th St., and 10th St. The study should also include an existing-plus-project scenario, and future-plus-project scenario analyses.

Caltrans' concerns about potential mitigation for significant impacts that may be identified in the SEIR, to the State Highway System, could be addressed by payment to the I-5 Subregional Corridor Mitigation Program (SCMP). The SCMP would be a voluntary impact fee for new developments within the I-5 corridor between Elk Grove, downtown Sacramento and West Sacramento that would be used to construct a set of transportation improvements including very relevant projects like the American River Bridge Crossing, the Green Line extension, the Sacramento Streetcar, and the Richards Blvd. IC projects.

The SCMP would not encompass when a development would create significant impacts to intersections where freeway ramps meet local roadway, including Intersection level of service impacts; determining if traffic added by a development would cause off-ramp traffic to back-up onto the freeway mainline; and determining if the development would cause existing or future conditions to deteriorate to the point where there is potential for increased collisions.

Transportation Management Plan (TMP)

If it is determined that traffic restrictions and detours are needed on or affecting State highways, a TMP or construction Traffic Impact Study may be required of the developer for approval by Caltrans prior to construction. TMPs must be prepared in accordance with Caltrans' *Manual on Uniform Traffic Control Devices.* Further information is available for download at the following web address: http://www.dot.ca.gov/hq/traffops/engineering/mutcd/pdf/camutcd2014/Part6.pdf.

Encroachment Permit

Please be advised that any work or traffic control that would encroach onto the State Right of Way (ROW) requires an encroachment permit that is issued by Caltrans. To apply, a completed encroachment permit application, environmental documentation, and five sets of plans clearly indicating State ROW must be submitted to the address below.

Charles Laughlin
California Department of Transportation
District 3 Office of Permits
703 B Street
Marysville, CA 95901

Traffic-related mitigation measures should be incorporated into the construction plans prior to the encroachment permit process. See the website link below for more information.
http://www.dot.ca.gov/hq/traffops/developserv/permits/.

Please provide our office with copies of any further actions regarding this project. We would appreciate the opportunity to review and comment on any changes related to this development.

If you have any questions regarding these comments or require additional information, please contact Arthur Murray, Intergovernmental Review Coordinator at (916) 274-0616 or by email at: arthur.murray@dot.ca.gov.

Sincerely,

Eric Fredericks

Subject: Notice of Preparation of a Subsequent Environmental Impact Report for the Railyards Specific Plan Update, Kaiser Permanente Medical Center, and MLS Stadium

Dear Mr. Buford,

The Sacramento Municipal Utility District (SMUD) appreciates the opportunity to provide comments on the Notice of Preparation (NOP) of a Subsequent Environmental Impact Report (SEIR) for the Railyards Specific Plan Update, Kaiser Permanente Medical Center, and MLS Stadium. SMUD is the primary energy provider for Sacramento County and the proposed project area. SMUD's vision is to empower our customers with solutions and options that increase energy efficiency, protect the environment, reduce global warming, and lower the cost to serve our region. As a Responsible Agency, SMUD aims to ensure that the proposed project limits the potential for significant environmental effects on SMUD facilities, employees, and customers.

It is our desire that the SEIR, the Railyards Specific Plan Update, Kaiser Permanente Medical Center, and MLS Stadium will acknowledge any project impacts related to the following:

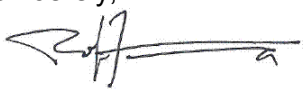
- Overhead and or underground transmission and distribution line easements. Please view the following links on smud.org for more information regarding transmission encroachment:
  - https://www.smud.org/en/do-business-with-smud/documents/Guide-for-Transimssion-Encroachment.pdf. Some of these requirements include the following
  - https://www.smud.org/en/business/customer-service/support-and-services/documents/Underground-Structure-T007.pdf
- Utility line routing
- Electrical load needs/requirements
  1. Energy Center (central utility plant)
- Energy Efficiency
- Climate Change

Printed on Recycled Paper

SMUD would like to be involved with discussing the above areas of interest as well as discussing any other potential issues. We aim to be partners in the efficient and sustainable delivery of the proposed project. Please ensure that the information included in this response is conveyed to the project planners and the appropriate project proponents.

Environmental leadership is a core value of SMUD and we look forward to collaborating with you on this project. Again, we appreciate the opportunity to provide input on this NOP. If you have any questions regarding this letter, please contact Rob Ferrera, SMUD Environmental Specialist at rob.ferrera@smud.org.

Sincerely,



Rob Ferrera

tbuford@cityofsacramento.org

RE: Railyards Specific Plan Update (SAC200500788)

Mr. Buford,

The Sacramento Metropolitan Air Quality Management District (The District) thanks the City of Sacramento for the opportunity to comment on the proposed project to modify the Railyards Specific Plan to include a hospital campus and soccer facility. The District is required by law to "represent the citizens of the Sacramento district in influencing the decisions of other public and private agencies whose actions may have an adverse impact on air quality within the Sacramento district."[1] We offer our comments in that spirit.

Construction Emissions

Construction of the current specific plan is currently being done consistent with the Railyards Construction Mitigation Plan. Altering the land uses, tentative map, and zoning may result in more or less anticipated construction emissions. These emissions should be discussed, quantified, and disclosed in the manner described in Chapter 3 of the District's "CEQA Guide to Air Quality Assessment."[2] If the anticipated emissions would vary significantly from the prior environmental document, the construction mitigation plan should be amended to account for the change.

With respect to greenhouse gas emissions generated from the construction of the project, these emissions should be discussed, quantified, and disclosed in the manner described in Chapter 6 of the District's "CEQA Guide to Air Quality Assessment." Per the guidance, the District recommends that GHG emissions be minimized during the

[1] California Health and Safety Code §40961
[2] http://www.airquality.org/ceqa/ceqaguideupdate.shtml

construction phase utilizing the District's "Guidance for Construction GHG Emissions Reductions."[3]

Operational Criteria Emissions

The Railyards Specific Plan's Mitigation Monitoring and Reporting Plan (MMRP) required the adoption of an Air Quality Mitigation Plan (AQMP). The current AQMP incorporates 20 measures, and effectiveness of each measure was scaled based on the land uses and circulation plan anticipated in the original environmental documents. Changing the tentative map, zoning, land uses, and intensities may alter the effectiveness of the 20 measures incorporated in the current AQMP. The emissions from altering the project should be discussed, quantified, and disclosed in the manner described in Chapter 4 of the District's "CEQA Guide to Air Quality Assessment."[4] If the effectiveness of the AQMP is degraded with the proposed changes, the City and proponents should work with the District to amend the AQMP to maintain current levels of effectiveness.

Greenhouse Gas Emissions

Operation of the project may result in an increase in Greenhouse Gas emissions. These emissions should be discussed, quantified, and disclosed in the manner described in Chapter 6 of the District's "CEQA Guide to Air Quality Assessment." The proponents should also discuss the project's consistency with existing Greenhouse Gas reduction plans, such as the Metropolitan Transportation Plan/Sustainable Communities Strategy, the California Air Resources Board Scoping Plan and the City of Sacramento Climate Action Plan.

Permitted and Unpermitted sources of Toxic Air Contaminants

The City should make a concerted effort to disclose potential TAC-related health impacts from locating sources of TAC emissions in close proximity to existing or future planned receptors, and utilizes best practices when locating receptors in close proximity to an existing or future planned source of TAC emissions. For example, proponents should be mindful of planning outdoor space at the hospital campus near Interstate 5, utilizing best practices in its design.

Permitted sources can be identified using ARB's Community Health Air Pollution Information System (CHAPIS) and supplemented using the EPA's Toxics Release Inventory Explorer search tools. For more information, refer to Chapter 5 of our CEQA Guide.

Additionally, the proposed project may require permits from the SMAMQD (Authority to Construct and Permit to Operate) due to equipment needed for the uses (such as back-

[3] http://www.airquality.org/ceqa/cequguideupdate/Ch6ConstructionMitMeasures.pdf
[4] http://www.airquality.org/ceqa/ceqaguideupdate.shtml

up generators and boilers at the Hospital Campus). The Environmental Document should discuss the impacts of these sources, and the District recommends proponents contact a permitting engineer in the Stationary Sources Division at (916) 874-4800.

Sustainable Modes Service to Soccer Facility

Sports and entertainment venues deserve special attention to ensure sustainable modes can handle peak loads from patrons. Bicycle valet, bus layover facilities, and expanded waiting areas at the light rail station should be considered in the transportation management plan to minimize vehicle miles traveled.

General comments

To summarize, the District requests that the City consider construction and operational emissions, as well as toxic air contaminants. All projects are subject to SMAQMD rules in effect at the time of construction. A complete listing of current rules is available at www.airquality.org or by calling (916) 874-4800.

The SMAQMD thanks the City of Sacramento for the opportunity to comment on this project. If you have additional questions or require further assistance, please contact me at pphilley@airquality.org or (916) 874-4882.

Sincerely,

Paul Philley, AICP
Associate Air Quality Planner/Analyst
Sacramento Metropolitan Air Quality Management District
777 12th Street, 3rd Floor
Sacramento, CA 95814

Attachment: Construction Mitigation (Basic and Enhanced)
Attachment: SMAQMD Rules & Regulations Statement

BASIC CONSTRUCTION EMISSION CONTROL PRACTICES

The following practices are considered feasible for controlling fugitive dust from a construction site. Control of fugitive dust is required by District Rule 403 and enforced by District staff.

- Water all exposed surfaces two times daily. Exposed surfaces include, but are not limited to soil piles, graded areas, unpaved parking areas, staging areas, and access roads.
- Cover or maintain at least two feet of free board space on haul trucks transporting soil, sand, or other loose material on the site. Any haul trucks that would be traveling along freeways or major roadways should be covered.
- Use wet power vacuum street sweepers to remove any visible trackout mud or dirt onto adjacent public roads at least once a day. Use of dry power sweeping is prohibited.
- Limit vehicle speeds on unpaved roads to 15 miles per hour (mph).
- All roadways, driveways, sidewalks, parking lots to be paved should be completed as soon as possible. In addition, building pads should be laid as soon as possible after grading unless seeding or soil binders are used.

The following practices describe exhaust emission control from diesel powered fleets working at a construction site. California regulations limit idling from both on-road and off-road diesel powered equipment. The California Air Resources Board enforces the idling limitations.

- Minimize idling time either by shutting equipment off when not in use or reducing the time of idling to 5 minutes [required by California Code of Regulations, Title 13, sections 2449(d)(3) and 2485]. Provide clear signage that posts this requirement for workers at the entrances to the site.

Although not required by local or state regulation, many construction companies have equipment inspection and maintenance programs to ensure work and fuel efficiencies.

- Maintain all construction equipment in proper working condition according to manufacturer's specifications. The equipment must be checked by a certified mechanic and determine to be running in proper condition before it is operated.

Lead agencies may add these emission control practices as Conditions of Approval (COA) or include in a Mitigation Monitoring and Reporting Program (MMRP).

ENHANCED EXHAUST CONTROL PRACTICES

1. The project representative shall submit to the lead agency and District a comprehensive inventory of all off-road construction equipment, equal to or greater than 50 horsepower, that will be used an aggregate of 40 or more hours during any portion of the construction project.

    - The inventory shall include the horsepower rating, engine model year, and projected hours of use for each piece of equipment.
    - The project representative shall provide the anticipated construction timeline including start date, and name and phone number of the project manager and on-site foreman.
    - This information shall be submitted at least 4 business days prior to the use of subject heavy-duty off-road equipment.
    - The District's Equipment List Form can be used to submit this information.
    - The inventory shall be updated and submitted monthly throughout the duration of the project, except that an inventory shall not be required for any 30-day period in which no construction activity occurs.

2. The project representative shall provide a plan for approval by the lead agency and District demonstrating that the heavy-duty off-road vehicles (50 horsepower or more) to be used in the construction project, including owned, leased, and subcontractor vehicles, will achieve a project wide fleet-average 20% NO_X reduction and 45% particulate reduction compared to the most recent California Air Resources Board (ARB) fleet average.

    - This plan shall be submitted in conjunction with the equipment inventory.
    - Acceptable options for reducing emissions may include use of late model engines, low-emission diesel products, alternative fuels, engine retrofit technology, after-treatment products, and/or other options as they become available.
    - The District's Construction Mitigation Calculator can be used to identify an equipment fleet that achieves this reduction.

3. The project representative shall ensure that emissions from all off-road diesel powered equipment used on the project site do not exceed 40% opacity for more than three minutes in any one hour.

    - Any equipment found to exceed 40 percent opacity (or Ringelmann 2.0) shall be repaired immediately.

Enhanced Exhaust Control Practices

- Non-compliant equipment will be documented and a summary provided to the lead agency and District monthly.
- A visual survey of all in-operation equipment shall be made at least weekly.
- A monthly summary of the visual survey results shall be submitted throughout the duration of the project, except that the monthly summary shall not be required for any 30-day period in which no construction activity occurs. The monthly summary shall include the quantity and type of vehicles surveyed as well as the dates of each survey.

4. The District and/or other officials may conduct periodic site inspections to determine compliance. Nothing in this mitigation shall supercede other District, state or federal rules or regulations.

SMAQMD Rules & Regulations Statement (revised 3/12)

*The following statement is recommended as standard condition of approval or construction document language for **all** development projects within the Sacramento Metropolitan Air Quality Management District (SMAQMD):*

All projects are subject to SMAQMD rules in effect at the time of construction. A complete listing of current rules is available at www.airquality.org or by calling 916.874.4800. Specific rules that may relate to construction activities or building design may include, but are not limited to:

Rule 201: General Permit Requirements. Any project that includes the use of equipment capable of releasing emissions to the atmosphere may require permit(s) from SMAQMD prior to equipment operation. The applicant, developer, or operator of a project that includes an emergency generator, boiler, or heater should contact the SMAQMD early to determine if a permit is required, and to begin the permit application process. Portable construction equipment (e.g. generators, compressors, pile drivers, lighting equipment, etc.) with an internal combustion engine over 50 horsepower are required to have a SMAQMD permit or a California Air Resources Board portable equipment registration. Other general types of uses that require a permit include, but are not limited to dry cleaners, gasoline stations, spray booths, and operations that generate airborne particulate emissions.

Rule 403: Fugitive Dust. The developer or contractor is required to control dust emissions from earth moving activities, storage or any other construction activity to prevent airborne dust from leaving the project site.

Rule 414: Water Heaters, Boilers and Process Heaters Rated Less Than 1,000,000 BTU PER Hour. The developer or contractor is required to install water heaters (including residence water heaters), boilers or process heaters that comply with the emission limits specified in the rule.

Rule 417: Wood Burning Appliances. This rule prohibits the installation of any new, permanently installed, indoor or outdoor, uncontrolled fireplaces in new or existing developments.

Rule 442: Architectural Coatings. The developer or contractor is required to use coatings that comply with the volatile organic compound content limits specified in the rule.

Rule 460: Adhesives and Sealants. The developer or contractor is required to use adhesives and sealants that comply with the volatile organic compound content limits specified in the rule.

Rule 902: Asbestos. The developer or contractor is required to notify SMAQMD of any regulated renovation or demolition activity. Rule 902 contains specific requirements for surveying, notification, removal, and disposal of asbestos containing material.

Naturally Occurring Asbestos: The developer or contractor is required to notify SMAQMD of earth moving projects, greater than 1 acre in size in areas "Moderately Likely to Contain Asbestos" within eastern Sacramento County. Asbestos Airborne Toxic Control Measures, Section 93105 & 93106 contain specific requirements for surveying, notification, and handling soil that contains naturally occurring asbestos.

300 Richards Blvd., Third Floor
Sacramento, CA 95811

Re: Comment Letter, Railyards Specific Plan Update, Subsequent Environmental Impact Report

Dear Mr. Buford:

Thank you for the opportunity to provide comments on the California Environmental Quality Act (CEQA) scoping documents for the Subsequent Environmental Impact Report for the Railyards Specific Plan Update, Kaiser Permanente Medical Center and MLS Stadium ("SEIR").

The SEIR will consider the impacts of a Kaiser Permanente Medical Center and Major League Soccer ("MLS") Stadium, both of which are proposed to be constructed within the Railyards Specific Plan area ("RSP"). The River District Business Association ("Association") is a private, non-profit business association charged with managing and promoting programs to strengthen the economic and cultural well being of the River District Property and Business Improvement District area and the River District Special Planning District. The RSP area is located immediately south of the River District; therefore, the Association's members may be affected by impacts related to the proposed Medical Center and MLS Stadium.

The Association supports the Medical Center or the MLS Stadium. These facilities may, however, create greater and/or different impacts than were evaluated under the 2007 RSP EIR. The Association provides the following comments in the spirit of assuring that these impacts are considered in the SEIR.

1. <u>Transportation and Traffic</u>

The MLS Stadium is likely to create more traffic congestion, and have a greater impact on circulation, than the land uses that were anticipated in the 2007 EIR, especially during peak periods for Stadium events. The SEIR should address impacts related to:

a) Greater vehicle traffic on North 10th Street and North B Street;
b) Greater pedestrian and bicycle traffic on North 10th Street and North B Street;
c) Additional bicycle traffic and pedestrian traffic to/from transit stations and bus stops;
d) Large vehicles (trucks, vans, etc.) delivering equipment and supplies for special events taking place at the Stadium;

e) Larger numbers of vehicles on local streets at game times, and at times of special events at the Stadium.

The SEIR should also consider circulation options for most efficiently bringing the increased number of vehicles to and from the adjacent major freeways, in particular Interstate 5 and State Highway 160.

2. Public Services

The SEIR should consider the appropriate level of public services necessary to address large crowds of people arriving at, and leaving, the Stadium during events.

3. Parking / Urban Design

The SEIR should analyze the design and scale of any proposed parking facilities, including appropriate circulation for vehicles moving to and from the entry and exit points of the parking facilities.

4. Light and Glare

The SEIR should consider impacts related to stadium signage and lighting.

5. Noise

The Stadium may create situations when excessive noise emanates from the site, especially during games and other events that were not studied under the 2007 RSP EIR. There should be appropriate analysis to assure that noise does not negatively impact businesses and residents in the area.

6. Other Comments: The Secondary Levee

The Association believes that removal of the secondary levee that forms the northern boundary between the RSP area and the River District will create greater connectivity within the area, thus allowing for more efficient movement of pedestrians and vehicles. The Association supports removal of the secondary levee.

The Association appreciates the opportunity to submit these comments on the SEIR. I would be happy to meet with City staff to discuss any of these comments. Please do not hesitate to contact me with any questions or concerns.

Very truly yours,

Patty Kleinknecht

Patty Kleinknecht
Executive Director, The River District

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
Hospital	1,228.00	1000sqft	28.19	1,228,000.00	0
Unenclosed Parking Structure	2,160.00	Space	19.44	864,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Permanente, 2015. Kaiser Dublin Construction Assumptions

Off-road Equipment - Used CalEEMod construction equipment defaults

Off-road Equipment -

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod construction equipment defaults

Off-road Equipment - Used CalEEMod construction equipment defaults

Off-road Equipment - Used CalEEMod construction equipment defaults

Off-road Equipment -

Off-road Equipment - Used CalEEMod construction equipment defaults

Off-road Equipment - Used CalEEMod construction equipment defaults

Trips and VMT -

Grading -

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates and VMT were provided by F&P

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule.

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for buiding construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT -

Grading - Assume 18 acres disturbed

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates and trip lengths were adjusted to reflect the VMT provided by F&P.

Road Dust -

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule.

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for buiding construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT -

Grading - Assume 18 acres disturbed

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates and trip lengths were adjusted to reflect the VMT provided by F&P.

Road Dust -

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for buiding construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT -

Grading -

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P

Road Dust -

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Light Industry	5.40	1000sqft	0.12	5,400.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2016
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for buiding construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT -

Grading -

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P

Road Dust -

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates and trip lengths were adjusted to reflect the VMT provided by F&P.

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P. Trip lengths were adjusted to match the VMT provided by F&P.

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates and trip lengths were adjusted to reflect the VMT provided by F&P.

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P. Trip lengths were adjusted to match the VMT provided by F&P.

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Trips and VMT - Assumed 750,000 cy are soil would be imported to the project site during grading.

Grading -

Vehicle Trips - Adusted the trip rates and trip length to match the VMT that was provided by F&P

Energy Use - Adjusted the energy intensity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Trips and VMT - Assumed 750,000 cy are soil would be imported to the project site during grading.

Grading -

Vehicle Trips - Adusted the trip rates and trip length to match the VMT that was provided by F&P

Energy Use - Adjusted the energy intensity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P. Adjusted trips lengths for the Arena to reflect what would be expected at an MLS Stadium; not an arena.

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Off-road Equipment - Used CalEEMod default equipment type for the architectural coating phase.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for architectural coating.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for building construction.

Off-road Equipment - Used CalEEMod default equipment type for grading.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Off-road Equipment - Used CalEEMod default equipment type for paving.

Trips and VMT - Assumed 750,000 cy of soil would be imported to the project site during grading.

Grading - Assumes 750,000 cubic yards of soil imported

Architectural Coating - Updated the interior and exterior square footage for the MLS Stadium, KPMC, and RSPU.

Vehicle Trips - Trip generation rates were provided by F&P

Area Coating -

Energy Use - Adjusted energy intsity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	3.5	**Precipitation Freq (Days)**	58
Climate Zone	6			**Operational Year**	2035
Utility Company	Sacramento Municipal Utility District				
CO2 Intensity (lb/MWhr)	590.31	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics -

Land Use - Source: RSPU SEIR Project Description 3-10-16

Construction Phase - Assumed construction schedule

Trips and VMT - Assumed 750,000 cy are soil would be imported to the project site during grading.

Grading -

Vehicle Trips - Adusted the trip rates to match what was provided by F&P

Energy Use - Adjusted the energy intensity rates to reflect the lastest 2013 Title 24 Standards

Construction Off-road Equipment Mitigation -

Introduction

The Sacramento Metropolitan Air Quality Management District (SMAQMD) has developed guidance to mitigate operational emissions for projects subject to the California Environmental Quality Act.[1] SMAQMD's guidance recommends that project applicants prepare an Air Quality Mitigation Plan (AQMP) for all projects that exceed SMAQMD's operational significance thresholds of 65 pounds per day for reactive organic gases (ROG) and/or 65 pounds per day for nitrogen oxides (NO_x).

If a project exceeds these thresholds, design features and/or mitigation measures must be identified to reduce on-road mobile source emissions by 15 percent if the project is within the current State Implementation Plan (SIP), or by 35 percent if not within the SIP. Since the Railyards is included within the SIP, the 15 percent reduction applies to this project. The emissions reduction measures used to demonstrate a 15 percent reducing, as described below, reflects the proposed design features found in the Railyards Specific Plan Update (RSPU). As demonstrated below, the RSPU would achieve the SMAQMD's 15 percent emission reduction requirement for mobile source emissions and would not need to implement any additional mitigation reduction measures.

SMAQMD Guidance

The following steps are used to determine if a project meets the 15 percent reduction goal. The first step involves estimating total unmitigated ROG and NOx emissions using CalEEMod default values. Since this project includes a traffic analysis, the second step involves estimating mitigated ROG and NOx emissions using CalEEMod but adjusted for the vehicle miles traveled (VMT) estimates included in the project traffic report. Then, the decrease in ROG and NO_x mobile source emissions between unmitigated and mitigated is calculated, and the difference is converted to NOx equivalents or NO_xe. NO_xe is the sum of NOx reductions plus one-third of ROG reductions. If the project meets the 15 percent NO_xe reduction goal, it is considered consistent with the SIP.

RSPU Emission Reductions

RSPU Unmitigated Emissions

Unmitigated RSPU ROG and NO_x emissions from mobile sources were estimated using the CalEEMod model (2013.2.2 version). Table C2-1 shows these emissions with and without a major league soccer match. With one exception, the unmitigated emissions have been estimated using CalEEMod default values. The only exception is that the daily trip generation rates are based on the trip rates included in the traffic study.

[1] Sacramento Metropolitan Air Quality Management District. Recommended Guidance for Land Use Emission Reductions, Version 3.2 (for Operational Emissions). Accessed April 14, 2015.

RSPU Mitigated Emissions

Table C2-1 also shows mitigated emissions with and without a major league soccer match. The mitigated emission estimates were also estimated using CalEEMod, except that trip lengths were adjusted so that the RSPU's VMT estimates match those in the project traffic analysis. This approach matches SMAQMD's Off-Model Measure (TS: Traffic Study (meta-measure)) included in SMAQMD's AQMP guidance.

TABLE C2-1
RSPU PERCENT REDUCTION OF MOBILE EMISSIONS OF NOXe
WITH AND WITHOUT MITIGATION[1]

Alternative	Unmitigated Emissions (ppd)			Mitigated Emissions (ppd)			Percent Reduction	Exceed 15%?
	ROG	NOx	NOxe[2]	ROG	NOx	NOxe[2]		
RSPU (without MLS Match)	346	531	646.3	322	426	533.3	17%	Yes
RSPU (with MLS Match)	394	629	760.3	371	526	650.7	15%	Yes

1. Operational emissions estimates for summertime conditions were made using CalEEMod 2013.2.2. See Appendix C1 for details.

2. NOxe as defined by the SMAQMD is the reduction in ROG divided by 3 plus the reduction in NOx.

Source: ESA, 2016

The traffic study (meta-measure) recognizes that site-specific information is better than information generated from a statewide model. Consequently, it recommends that if a project has a traffic study, then that study should be used in lieu of the CalEEMod model defaults to estimate unmitigated emissions.[2] SMAQMD's guidance states that traffic studies typically include calculations of internal trip capture, the mix of land uses, distances to job centers, and transit, walking, and cycling information. In lieu of using CalEEMod's built in mitigation measures, SMAQMD recommends that the project traffic study should be used instead. To do this, CalEEMod's default values (typically trip generation rates and trip lengths) are adjusted so that its VMT estimates are consistent with the traffic study, and adding any mitigation not accounted for in the traffic study. The VMT estimates for the RSPU were modeled using the Sacramento Area Council of Government's (SACOG) SACMET travel demand model.[3] SACMET accounts for several factors that reduce project VMT. These include:

[2] Sacramento Metropolitan Air Quality Management District. *Operational Emissions Mitigation.* http://www.airquality.org/ceqa/mitigation.shtml. Accessed April 14, 2016.
[3] Fehr & Peers, 2016. Railyards Specific Plan SEIR Traffic Study. March, 2016.

- job accessibility (within a 30 minute drive or transit travel time),
- proximity to transit (distance to nearest light rail or bus station, in miles),
- availability of Class 1 and 2 bike lanes within and adjacent to the project,
- parameters that effect walking, including sidewalks and pedestrian paths and distances to transit, commercial, and related destinations,
- job and housing density (dwelling units and jobs per acre), and
- jobs and housing mix.

The CalEEMod default estimate of total vehicle miles traveled (VMT) was revised to be consistent with the project-specific VMT estimates. Within CalEEMod, VMT estimates for each land use type are the product of trip generation rates times trip lengths. CalEEMod's default trip lengths were adjusted so that its VMT matched the project specific estimates.

AQMP Effectiveness

After modeling the unmitigated project emissions, SMAQMD recommends applying all feasible project mitigation and recalculating the daily summer emissions as NO_xe. The effectiveness of the mitigation plan is then calculated as a percentage reduction from the unmitigated project, defined as follows:

$$\text{AQMP Effectiveness} = ((\text{Unmitigated Project } NO_x\text{e} - \text{Mitigated Project } NO_x\text{e})/ \text{Unmitigated Project } NO_x\text{e}) \times 100$$

Using the SMAQMD Recommended Guidance for Land Use Emission Reduction,[4] the percent reduction of mobile emissions of NO_xe after mitigation for the RSPU (with and without a major league soccer match) is presented in Table C2-1. The average daily trip lengths for each prosed land use were adjusted in the each mitigated CalEEMod run until the annual VMT matched those provided by Fehr & Peers for the RSPU (with and without a major league soccer match).[5]

As shown in Table C2-1, the RSPU (with and without a major league soccer match) would result in a 17 and 15 percent reduction in NO_xe emissions after mitigation, respectively. The RSPU would achieve a 15 percent emission reduction/mitigation guideline established by the SMAQMD and would be consistent with the SIP.

RSPU Land Use Variant Emission Reductions

RSPU Land Use Variant Unmitigated Emissions

ROG and NO_x operational mobile source unmitigated emissions were estimated using the CalEEMod model (2013.2.2 version). Table C2-2 shows these emissions for the RSPU Land Use Variant. With one exception, unmitigated emissions have been estimated using CalEEMod

[4] SMAQMD, 2015. Recommended Guidance for Land Use Emission Reductions Version 3.2 (for Operations Emissions). April 1, 2015.
[5] Fehr & Peers, 2016. Railyards Traffic Impact Study. March 2016.

default values. The only exception is that the daily trip generation rates are based on the trip rates included in the traffic study.

RSPU Land Use Variant Mitigated Emissions

Table C2-2 also shows mitigated mobile source emissions for the RSPU Land Use Variant. The mitigated emission estimates were also estimated using CalEEMod, except that trip lengths were adjusted so that the RSPU Land Use Variant's VMT estimates match those in the project traffic analysis. This approach matches SMAQMD's Off-Model Measure (TS: Traffic Study (meta-measure)) included in SMAQMD's AQMP guidance.

TABLE C2-2
RSPU LAND USE VARIANT PERCENT REDUCTION OF MOBILE EMISSIONS OF NOXe AFTER MITIGATION[1]

Alternative	Unmitigated Emissions (ppd)			Mitigated Emissions (ppd)			Percent Reduction	Exceed 15%?
	ROG	NOx	NOxe[2]	ROG	NOx	NOxe[2]		
RSPU Land Use Variant	358	535	654.3	336	439	551.0	16%	Yes

1. Operational emissions estimates for summertime conditions were made using CalEEMod 2013.2.2. See Appendix C1 for details.

2. NOxe as defined by the SMAQMD is the reduction in ROG divided by 3 plus the reduction in NOx.

Source: ESA, 2016

Just like the RSPU, the VMT estimates for the RSPU Land Use Variant were modeled using the Sacramento Area Council of Government's (SACOG) SACMET travel demand model.[6] SACMET accounts for several factors that reduce project VMT. These include:

- job accessibility (within a 30 minute drive or transit travel time),
- proximity to transit (distance to nearest light rail or bus station, in miles),
- availability of Class 1 and 2 bike lanes within and adjacent to the project,
- parameters that effect walking, including sidewalks and pedestrian paths and distances to transit, commercial, and related destinations,
- job and housing density (dwelling units and jobs per acre), and
- jobs and housing mix.

The CalEEMod default estimate of total vehicle miles traveled (VMT) was revised to be consistent with the project-specific VMT estimates. Within CalEEMod, VMT estimates for each land use type are the product of trip generation rates times trip lengths. CalEEMod's default trip lengths were adjusted so that its VMT matched the project specific estimates.

[6] Fehr & Peers, 2016. Railyards Specific Plan SEIR Traffic Study. March, 2016.

AQMP Effectiveness

Using the SMAQMD Recommended Guidance for Land Use Emission Reduction,[7] the percent reduction of mobile emissions of NO_xe after mitigation for the RSPU Land Use Variant is presented in Table C2-2. The average daily trip lengths for each prosed land use were adjusted in the each mitigated CalEEMod run until the annual VMT matched those provided by Fehr & Peers for the RSPU Land Use Variant.[8]

As shown in Table C2-2, the RSPU Land Use Variant would result in a 16 percent reduction in NO_xe emissions after mitigation, respectively. The RSPU Land Use Variant would achieve 15 percent emission reduction/mitigation guideline established by the SMAQMD and would be consistent with the SIP.

SUMMARY

The Proposed Project includes the Railyards Specific Plan Update (RSP), the Railyards Specific Plan Update Land Use Variant (Variant), the Kaiser Permanente Medical Center (KPMC), the Major League Soccer Stadium (Stadium), and the Stormwater Outfall. The SEIR project description includes a listing of the objectives and land uses for each of these options. The project site is located in the area of downtown Sacramento north of I Street, east of the Sacramento River, south on North B Street, and west of N. 7th Street.

The purpose of this health risk assessment (HRA) is to determine the potential cancer risks, and chronic and acute health hazards, faced by the future residents of the proposed project and by residents and other sensitive receptors that live in the project area. This HRA focuses on diesel particulate matter (DPM) emissions resulting from diesel vehicle traffic on I-5 as it passes through downtown Sacramento. The HRA also evaluates DPM emissions from backup diesel generators to be located at the KPMC, the Stadium, and the Outfall. Finally, the HRA evaluates the health risks from natural gas fired boilers to be used by the KPMC. The analysis considers a 30-year exposure scenario consistent with guidance from the California Office of Environmental Health Hazard Assessment (OEHHA, 2015a). A 30-year exposure period is conservative (i.e., health protective) and assumes residents would be exposed continuously to diesel particulate matter (DPM) emissions for 30 years, which is the maximum amount of time that individuals typically reside in the same place.

This HRA finds that the project's residents, residents living near the Project, and other sensitive receptors in the area would not be exposed to a cancer risk exceeding SMAQMD's significance threshold of 10 in 1 million cancer risk threshold under a 30-year exposure scenario. Also, sensitive receptors would not be exposed to concentrations of toxic air contaminants that would exceed SMAQMD's noncancer chronic and acute health hazard index of 1.0. It is important to note that emissions will improve over time due to more stringent state and federal standards for air pollutants and from turnover in the fleet as older, higher emitting vehicles are replaced by lower-emitting vehicles.

INTRODUCTION

Purpose

This HRA estimates the toxic air contaminant (TAC) emissions associated with stationary sources (diesel generators and natural gas fired boilers) and diesel traffic traveling on Interstate 5 (I-5) through the RSPU site and the health effects of those emissions on existing and future residents and other sensitive receptors.

Project Description

The proposed project and alternatives are located within the RSPU area of the City of Sacramento, California. The detailed project description is included as part of the Supplemental Environmental Impact Report (SEIR).

Toxic Air Contaminants

A substance is considered toxic if it has the potential to cause adverse health effects in humans, including increasing the risk of cancer upon exposure, or acute and/or chronic noncancer health effects. A toxic substance released into the air is considered a toxic air contaminant (TAC). Examples include certain aromatic and chlorinated hydrocarbons, diesel particulate matter (DPM), certain metals, and asbestos. TACs are generated by a number of sources, including stationary sources such as dry cleaners, gas stations, combustion sources, and laboratories; mobile sources such as trucks and automobiles; and area sources such as landfills. Adverse health effects associated with exposure to TACs may include carcinogenic (i.e., cancer-causing) and noncarcinogenic effects. Noncarcinogenic effects typically affect one or more target organ systems and may be experienced either on short-term (acute) or long-term (chronic) exposure to a given TAC.

California's air toxics control program began in 1983 with the passage of the Toxic Air Contaminant Identification and Control Act, Assembly Bill (AB) 1807, better known as the Tanner Bill. The Tanner Bill established a regulatory process for the scientific and public review of individual toxic compounds. When a compound becomes listed as a TAC under the Tanner process, the California Air Resources Board (CARB) normally establishes minimum statewide emission-control measures to be adopted by air quality management districts and air pollution control districts. By 1992, 18 of the 189 federal hazardous air pollutants had been listed by the CARB as state TACs. In April 1993, the CARB added 171 substances to the state program to make the state TAC list equivalent to the federal list of hazardous air pollutants. In 1998, CARB designated diesel engine exhaust particulate matter (DPM) as a TAC (CARB 1998). The exhaust from diesel engines is a complex mixture of gases, vapors, and particles, many of which are known human carcinogens.

The second major component of California's air toxics program, supplementing the Tanner process, was provided by the passage of AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. AB 2588 currently regulates over 600 compounds, including all of the Tanner-designated TACs.

Additionally, Proposition 65, passed by California voters in 1986, required that a list of carcinogenic and reproductive toxicants found in the environment be compiled, the discharge of these toxicants into drinking water be prohibited, and warnings of public exposure by air, land, or water be posted if a significant adverse public health risk is posed. The emission of any of the listed substances by a facility would require a public warning unless health risks could be demonstrated to be less than significant. For carcinogens, Proposition 65 defines the "no significant risk level" as the level of exposure that would result in an increased cancer risk of greater than 10 in 1 million over a 70-year lifetime. The "no significant risk level" is 1/1000 of the No Observable Effect Level for reproductive toxicants.

This HRA focuses on health impacts associated with DPM from diesel trucks traveling along the portion of I-5 through the project site, from DPM emitted by several backup generators, and from TACs released during natural gas combustion in boilers. DPM is the risk-driving substance emitted from vehicles and diesel-powered stationary sources, and it has been identified by the state of California as a carcinogenic compound as indicated earlier.

Cancer Risk

Cancer risk is defined as the increase in lifetime probability (chance) of an individual developing cancer due to exposure to a carcinogenic compound, typically expressed as the increased probability in 1 million. The cancer risk from inhalation of a TAC is estimated by calculating the inhalation (and if applicable, ingestion) dose in units of milligrams/kilogram body weight per day based on a ambient concentration in units of micrograms per cubic meter ($\mu g/m^3$), breathing rate, and exposure period, and multiplying the dose by the inhalation cancer potency factor, expressed as $(milligrams/kilogram\ body\ weight\ per\ day)^{-1}$. Cancer risks for residential receptors and similar sensitive receptors are typically estimated based on a lifetime (30 years) of continuous exposure, although other time periods (e.g., 9 years, 30 years) may be evaluated in accordance with OEHHA or air district guidance.

Cancer risks are typically calculated for all carcinogenic TACs and summed to calculate the overall increase in cancer risk to an individual. The calculation procedure assumes that cancer risk is proportional to concentrations at any level of exposure and that risks due to different carcinogens are additive. This approach is generally considered a conservative assumption at low doses and is consistent with the current OEHHA regulatory approach. Exposure to carcinogenic TACs does not imply that the exposed individual would contract cancer; rather, the cancer risk is a probability of developing cancer if other factors (e.g., heredity, exposure to environmental or workplace exposures that comprise the immune system, overall health) would result in an increased susceptibility to developing cancer. The California Almanac of Emissions and Air

Quality lists the Sacramento Valley Air Basin regional background average cancer risk for diesel particulate matter as 360 in 1 million (CARB, 2009).

Noncancer Health Effects

In addition to their carcinogenic effects, exposure to some TACs also includes noncancer health effects. Other TACs may not be carcinogenic, but exposure to them results in noncancer health effects. Noncancer health effects are classified as acute (short-term) and chronic (long-term). Acute health effects occur over brief periods and can include eye irritation, respiratory irritation, throat pain, and headaches, among others. Typically, in health risk assessments, acute health effects are evaluated over exposure periods of 1 or 8 hours, depending on the specific TACs. Chronic health effects resulting from an exposure to a TAC can occur over exposure periods from several months to several years and can include birth defects, neurological damage, or genetic damage, among others. Typically, in health risk assessments, chronic health effects are evaluated over an exposure period of one year. Noncancer health effects are evaluated by the target organ or organ system they affect. The target organ or organ systems can include the respiratory system, hematopoietic system, alimentary system, endocrine system, reproductive system, kidney, nervous system, cardiovascular system, and skin.

Acute and chronic noncancer health effects are assessed relative to a Reference Exposure Level (REL). The REL is the concentration (inhalation) or daily dosage (noninhalation) at or below which no adverse health effects are anticipated. The most recent RELs, established by OEHHA and/or CARB, are found in the Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values (OEHHA, 2015b).

Land Use and Air Quality

CARB Guidance

CARB's Air Quality and Land Use Handbook: A Community Health Perspective ([CARB Handbook] CARB 2005) addresses the importance of considering health risk issues when siting sensitive land uses, including residential development, near air emission sources including freeways or high-traffic roads, distribution centers, ports, petroleum refineries, chrome plating operations, dry cleaners, and gasoline dispensing facilities. The CARB Handbook draws upon studies evaluating the health effects of traffic traveling on major interstate highways in metropolitan California centers within the Los Angeles (Interstate (I) 405 and I-710), San Francisco Bay, and San Diego areas. The recommendations identified by CARB, including siting residential uses no closer than 500 feet from freeways or other high-traffic roadways, are consistent with those adopted by the State of California for location of new schools. Specifically, the CARB Handbook recommends, "[a]void siting new sensitive land uses within 500 feet of a freeway, urban roads with 100,000 vehicles/day, or rural roads with 50,000 vehicles/day" (CARB 2005).

Importantly, the CARB Handbook Introduction clarifies that these guidelines as strictly advisory

recognizing that: "[l]and use decisions are a local government responsibility. The Air Resources Board is advisory and these recommendations do not establish regulatory standards of any kind." Also, CARB recognizes that there may be land use objectives that need to be considered by a governmental jurisdiction relative to the general recommended setbacks, specifically stating, "[t]hese recommendations are advisory. Land use agencies have to balance other considerations, including housing and transportation needs, economic development priorities, and other quality of life issues" (CARB 2005).

The CARB Handbook provides evidence that truck traffic generating diesel particulates poses a health risk to sensitive receptors, particularly children. Studies cited in the CARB Handbook identify a health risk within 500 feet of a freeway. As stated above, these studies are based on emissions generated by traffic on major interstate commerce freeways. The study states, "[o]n a typical urban freeway (truck traffic of 10,000–20,000/day), diesel particulate matter (PM) represents 70% of the potential cancer risk from the vehicle traffic" (CARB 2005). Health impacts, however, may vary depending on vehicle traffic on a local roadway, target year for the analysis, meteorological conditions, and other factors for a specific project.

SMAQMD Guidance

The SMAQMD has developed risk assessment guidance that is summarized in Chapter 5 of their CEQA Handbook (SMAQMD, 2014). That assessment requires the use of a health risk assessment for projects that may expose sensitive receptors to significant amounts of toxic air contaminants (TACs). The SMAQMD guidance has established guidance showing that significant health risks occur if emissions would result in risks exceeding 10 per million cancer risk or 1.0 hazard index for stationary sources.

SMAQMD has also developed guidance for evaluating the health risks from locating residences near high volume freeways (SMAQMD, 2011). That guidance includes both a screening methodology and, if the project fails the screening, a more detailed modeling analysis of health risks. The Project fails the SMAQMD screening analysis because of the high volume of traffic on I-5 and because the Project would locate sensitive receptors in close proximity to I-5.

CALCULATION OF TAC EMISSIONS

The calculation of TAC emissions used three sources: diesel backup generator emissions, gas-fired boiler emissions, and diesel traffic on I-5. Based on recommendations from SMAQMD, DPM from trains was not included in the analysis.

Diesel Backup Generator Emissions

Table HRA-1 shows diesel backup generator emissions. The number and size of the generators is based on information provided by KPMC for their hospital (Miller, M.F, 2016). A similarly sized generator was assumed for the MLS Stadium. A smaller 500 kW generator was assumed for the Outfall. The emission rates are based on Tier 4 emission rates for emergency generators as included in the California Air Resources Board's OFFROAD2011 model (CARB, 2011). The

PM10 grams per second values shown in the rightmost column were used as the inputs to the AERMOD model.

Table HRA-1. Diesel Backup Generator Emissions

Structure	Emergency Power, kW	Generator Output, kW	Number of Generators	HP	PM10 [g/bhp-hr]	Load Factor	PM g/hr	hours/ year	PM10 [grams/ year]	PM10 [grams/ second]
KMPC										
Hospital	6600	2,000	4	5,966	0.008	0.75	8.95	200	7,158.72	2.27E-04

					Total		**8.95**			

Hospital Boiler Emissions

Table HRA-2 shows emissions for the KPMC's natural gas-fired boilers. The number and size of the boilers is based on information provided by KPMC (Miller, M.F, 2016). The emission rates are based on U.S. EPA emission factors for natural gas boilers (U.S. EPA, 1998). The PM10 grams per second values shown in the right column were used as the inputs to the AERMOD model.

Table HRA-2. Natural Gas-Powered Boiler Emissions

Structure	Type of Boiler	Generator Output, MBH	Number of Boilers	MMBTU per Hour	BTUs/SCF	SCFs/hour	PM (lbs/MM SCF)	Load Factor	PM10 grams / second
Kaiser Permanente Medical Center									
Hospital	Space Heating	9,000	3	27	1,020.0	8,823.53	7.6	0.75	6.34E-03

MOB 2	Space Heating								
									2.53E-02

Table HRA-3 shows the TAC emissions associated with natural gas combustion in boilers (U.S. EPA, 1998). The resulting annual and hourly concentrations were then used to estimate acute, chronic, and carcinogenic health risks.

Table HRA-3. Natural Gas Powered Boiler TAC Emissions and Concentrations

CAS Number	TAC	Emission Factor (lbs/MM scf)	Emission Rate (grams/second)	Annual Concentration (ug/m^3)	Hourly Concentration (ug/m^3)
71-43-2	Benzene	2.10E-03	1.0E-07	8.8E-07	1.81E-05
50-00-0	Formaldehyde	7.50E-02	3.6E-06	1.4E-06	6.46E-04
108-88-3	Toluene	3.40E-03	1.6E-07	1.4E-06	2.93E-05
7440-43-9	Cadmium	1.10E-03	5.2E-08	4.6E-07	9.48E-06
18540-29-9	Chromium	1.40E-03	6.7E-08	5.9E-07	1.21E-05
7440-50-8	Copper	8.50E-04	4.0E-08	3.6E-07	7.32E-06
7439-96-5	Manganese	3.80E-04	1.8E-08	1.6E-07	3.27E-06
7439-97-6	Mercury	2.60E-04	1.2E-08	1.1E-07	2.24E-06
7440-02-0	Nickel	2.10E-03	1.0E-07	8.8E-07	1.81E-05
7440-62-2	Vanadium	2.30E-03	1.1E-07	9.7E-07	1.98E-05

Notes: Emission factors based on U.S. Environmental Protection Agency Emission Factors (1998). The TACs with emission ratings of D or better were used in this analysis. TACs without acute, chronic, or cancer listings in the California Air Resources Board's Consolidated Table of OEHHA/ARB Approved Risk Assessment Health Values were not included in this analysis.

Emission rates assume 35 MMBtu per hour for all boilers combined, 1,020 Btus per standard cubic foot of natural gas, and 75 percent boiler load factor. These assumptions result in 9.53 standard cubic feet of natural gas consumed per second.

Dispersion modeling assumed that all boilers would be co-located using an emission rate of 1 gram per second. The resulting highest hourly and annual concentrations using 1 grams per second equaled 181.05 ug/m^3 and 8.85 ug/m^3, respectively. Those concentrations were then converted to the hourly and annual concentrations shown in the above table using the actual emission rates of each TAC.

I-5 Vehicle Diesel Emissions

In addition to the stationary sources described above, SMAQMD's roadway protocol was used to evaluate the potential health risks from diesel vehicles traveling on I-5 (SMAQMD, 2011). Due to the high traffic volumes on I-5 and locations of future residences to be located near I-5, a detailed site-specific analysis was conducted using AERMOD.

I-5 traffic data for project buildout was used to analyze truck emissions. I-5 traffic volumes in 2014 were obtained from Caltrans (Caltrans, 2015). Total peak hour traffic on I-5 in 2014 between Richards Blvd. and I Street equals 15,500 vehicles. These volumes were increased by 0.5 percent per year through 2035, the year of project buildout. Using a 0.5 percent increase per year, total peak hour traffic would equal 17,040 vehicles on this same segment of I-5 in 2035. The 17,040 peak hour vehicles traveling on I-5 in 2035 were multiplied by the percentage of diesel vehicle travel in Sacramento in 2035 (4.5%). This percentage was estimated by dividing the daily diesel vehicle VMT in Sacramento County for 2035 by the total daily VMT of all vehicles in Sacramento County for 2035. This resulted in 765.5 diesel vehicles traveling on I-5 in 2035 during the peak hour.

The next step involved using EMFAC2014 to estimate the diesel particulate matter emission rates for diesel powered vehicles in Sacramento in 2035. This value, 0.00562 grams per mile, was estimated by weighting the 2035 PM10 exhaust emissions for each diesel vehicle class by the percentage VMT traveled for that class compared to VMT traveled for all Sacramento County diesel vehicles. The resulting average of 0.00562 grams DPM per mile was converted to DPM grams per second for the 0.92 mile segment of I-5 included in the traffic analysis. The resulting emission rate was 1.08E-3 grams DPM/second within the 0.92 segment of I-5. This value was entered into the AERMOD model for the I-5 linear volume sources.

MODELING METHODOLOGY

Dispersion Model

The U.S. Environmental Protection Agency (EPA) AERMOD model was used to model the air quality impacts of emissions from trucks traveling along I-5, from diesel generators, and from KPMC's natural gas boilers. AERMOD was used to estimate the TAC concentrations using the locations of each source, the stack parameters of each source, and five years of meteorological conditions provided by the SMAQMD.

The model was configured with the following control parameters:

- Modeling switches: Regulatory Defaults
- Urban Setting
- Averaging periods: 1-hour and Annual
- 7.5 minute topographical data for downtown Sacramento
- AERMOD-ready meteorological data for Sacramento Executive Airport for 2010-2014 (SMAQMD, 2016).

Source Characteristics

Diesel Backup Generator

The KPMC would have five 2,000 KW emergency generators with a combined emission rate of 2.8E-4 grams per second as shown previously in Table HRA-1. The MLS Stadium is assumed to have one 2,000 KW emergency generator, with an emission rate of 1.42E-5 grams DPM per second. The Outfall is assumed to have a 500kW generator with an emission rate of 5.68E-05 grams per second. The five KPMC generators were assumed to be collocated and were modeled using a gas exit temperature of 987 degrees Fahrenheit, a stack height of 20 feet, a stack inside diameter of 6 inches, and an exit velocity of 164 feet per second. These same stack parameters were used to model emissions for the MLS Stadium generator and for the Outfall generator.

Hospital Boilers

The KPMC would have four boilers with a combined emission rate of 2.53E-2 grams per second as shown previously in Table HRA-2. Boiler emissions were modeled at 1 gram per second. The resulting maximum concentration was adjusted to reflect emission rates of the individual TACs shown in Table HRA-3. The four KPMC boilers were assumed to be collocated and were modeled using a gas exit temperature of 300 degrees Fahrenheit, a stack height of 30 feet, a stack inside diameter of 6 inches, and an exit velocity of 45 feet per second.

I-5 Vehicle Diesel Emissions

Vehicle DPM emissions from vehicles traveling on I-5were modeled as a line volume source consisting of separated volume sources along a 0.92-mile long segment of I-5 from Richards Boulevard on the north end to I Street on the south end. A plume height of 2 meters and a plume width of 30 feet was used for the modeling analysis. A two-width volume source spacing option was based on U.S. Environmental Protection Agency modeling recommendations (U.S EPA, 1992). Since this portion of I-5 is elevated, emissions were modeled at an elevation of 30 feet. Emission rates for freeway diesel vehicles were modeled within AERMOD using a DPM emission rate of 0.00108 grams per second.

Receptor Grid

The extent of the receptor grid used in the AERMOD modeling analysis differed based on the project being modeled. For the evaluation of the Outfall and MLS Stadium as individual projects, the receptor grid was limited to existing residential locations outside of the Railyards but near these project locations. For the KPMC, the receptor grid included existing residential locations outside of the Railyards plus sensitive receptors associated with the KPMC hospital. For the RSPU, the receptor grid included offsite residences near the site boundary plus onsite locations of future residences, including residences located near I-5, mixed use locations that could include residences, and the KPMC hospital. For the RSPU Variant, the receptor grid included the offsite residences near the site boundary plus onsite locations of future residences, including residences located near I-5 and mixed use locations that could include residences.

EVALUATION OF HEALTH IMPACTS

Cancer Risk

Exposure and risk equations used to calculate the cancer risk at residential receptors were based on the OEHHA manual for health risk assessments prepared under the Air Toxics "Hot Spots" program (OEHHA 2015a).

Table HRA-4 shows the cancer risk inputs by age category. These are the cancer risk inputs as recommended by OEHHA (2015a).

Table HRA-4. Cancer Risk Inputs by Age Category

Age Category	Daily Breathing Rate	Inhalation Absorption Rate	Days/year	Years	Days in 30 Years	Child Risk Factor	Fraction of Time at Home
3rd Trimester to Birth	361	1	365	0.3	10,950	10	0.85
0 to 2	1090	1	365	2	10,950	10	0.85
2 to 16	745	1	365	14	10,950	3	0.72
16 to 30	290	1	365	54	10,950	1	0.73

The following equations use the values in Table HRA-4 to calculate cancer risks (OEHHA, 2015a):

$$Risk = Inhalation\ potency\ factor * Dose\ Inhalation \quad (1)$$

where:

Inhalation potency factor = 1.1 (mg/kg-day) for diesel particulate matter,

and:

$$Dose\ Inhalation = C_{air} * DBR * A * EF * ED * ASF * 10^{-6} / AT * FAH \quad (2)$$

where:

C_{air} = concentration of DPM in microgram per cubic meter ($\mu g/m^3$)
DBR = breathing rate in liter per kilogram of body weight per day; 361 for the third trimester; 1090 for ages 0 to 2, 745 for ages 2 to 16, and 290 for ages 16 to 30.
A = inhalation absorption factor (1 for DPM)
EF = exposure frequency in days per year
ED = exposure duration in years
ASF = age sensitivity factor for a specific age group (unitless); 10 for ages from 3rd trimester to age 2, 3 for ages 2 to 16, and 1 for ages 16 to 30.
*AT = averaging time period over which exposure is averaged in days (*10,950 *days over 30 years)*
FAH = fraction of time at home (unitless); 85% or 0.85 for ages from 3rd trimester to age 2, 72% or 0.72 for ages 2 through 16 and 73% or 0.73 for ages 16 through 30.

The risks associated with TACs use the equations listed above but inhalation potency factors differ by TAC. Emissions estimated in this health risk assessment represent 30-year cancer risks. Table HRA-5 lists the cancer risks from TACs emitted by natural gas combustion by the KPMC boilers. Five of the ten TACs listed have been shown to increase cancer risks from various routes of exposure. Cancer risks are based on the maximum residential concentration, which is a location approximately 100 meters southwest of the KPMC boilers. The maximum cancer risk attributable to the boilers is 0.25 per million.

Table HRA-5. Maximum Cancer Risk from Natural Gas Boilers

CAS Number	TAC	Annual Concentration (ug/m^3)	Cancer Risk
71-43-2	Benzene	8.8E-07	5.45E-11
50-00-0	Formaldehyde	1.4E-06	1.80E-11
108-88-3	Toluene	1.4E-06	N/A
7440-43-9	Cadmium	4.6E-07	4.30E-09
18540-29-9	Chromium	5.9E-07	2.10E-07
7440-50-8	Copper	3.6E-07	N/A
7439-96-5	Manganese	1.6E-07	N/A
7439-97-6	Mercury	1.1E-07	N/A
7440-02-0	Nickel	8.8E-07	5.00E-10
7440-62-2	Vanadium	9.7E-07	N/A
	Totals		2.15E-07
		Risk per million	0.25
		Threshold (per million)	10

RSPU

Table HRA-6 shows the worst case cancer health risks for the RSPU. At 5.0 per million, the total health risk is less than the threshold of 10 per million. Of this total, 96 percent of the risk is from exposure to DPM from diesel exhaust (generators and I-5), with the remaining five percent of the risk from natural gas fired boiler operation.

Table HRA-6. Maximum Cancer Risks for the Project Alternatives

	Annual DPM Concentration (ug/m3)	DPM Cancer Risk per Million	Natural Gas TAC Cancer Risk per Million	Total Cancer Risk per Million
RSPU	7.1E-3	4.8	0.22	5.0
RSPU Variant	6.5E-3	4.4	N/A	4.4
KPMC	4.4E-3	3.0	0.22	3.2
Stadium	7.5E-4	0.51	N/A	0.5
Outfall	7.7E-4	0.53	N/A	0.5

RSPU Variant

Table HRA-6 shows the worst-case cancer health risks for the RSPU Variant. At 4.4 per million, the total health risk is less than the threshold of 10 per million. This cancer risk is entirely from exposure to DPM from diesel generator operation and from I-5 DPM vehicle exhaust.

KPMC

Table HRA-6 shows the worst-case cancer risks health risks for the KPMC operation. At 3.2 per million, the total health risk is less than the threshold of 10 per million. Of this total, 94 percent of the risk is from exposure to DPM from diesel generators and traffic on I-5 and eight percent of the risk is from exposure to exhaust from the KPMC's natural gas fired boilers.

Soccer Stadium

Table HRA-6 shows the worst-case cancer risks health risks for the Stadium. At 0.5 per million, the total health risk is less than the threshold of 10 per million. This cancer risk results from DPM emitted by the Stadium diesel generator and from traffic on I-5.

Outfall

Table 6 shows the worst-case cancer risks health risks for the Outfall. At 0.5 per million, the total health risk is less than the threshold of 10 per million. This cancer risk results from DPM emitted by the Outfall diesel generator and diesel traffic on I-5.

Noncancer Health Effects

Table HRA-7 shows the non-cancer health risks from natural gas fired boilers that would operate at the KPMC. The project's chronic and acute health risks would result from several TACs associated with natural gas combustion. However, the emission rates of these TACs, and the resulting health risks, are extremely low. Both the chronic and acute hazard quotients would be substantially below the hazard index threshold of 1.0.

Table HRA-7. Maximum Non-Cancer Risks from Natural Gas Boilers

CAS Number	TAC	Annual Concentration (ug/m^3)	Chronic Hazard Quotient	Hourly Concentration (ug/m^3)	Acute Hazard Quotient
71-43-2	**Benzene**	8.8E-07	2.90E-07	1.81E-05	2.01E-06
50-00-0	**Formaldehyde**	1.4E-06	1.50E-07	6.46E-04	1.20E-05
108-88-3	**Toluene**	1.4E-06	1.41E-08	2.93E-05	2.34E-09
7440-43-9	**Cadmium**	4.6E-07	6.70E-05	9.48E-06	0.00E+00
18540-29-9	**Chromium**	5.9E-07	3.69E-06	1.21E-05	0.00E+00
7440-50-8	**Copper**	3.6E-07	N/A	7.32E-06	7.30E-08
7439-96-5	**Manganese**	1.6E-07	1.80E-06	3.27E-06	0.00E+00
7439-97-6	**Mercury**	1.1E-07	4.00E-05	2.24E-06	7.40E-06
7440-02-0	**Nickel**	8.8E-07	1.28E-04	1.81E-05	9.00E-05
7440-62-2	**Vanadium**	9.7E-07	N/A	1.98E-05	1.34E-06
	Totals		2.41E-04		1.13E-04
			Threshold (per million) 1.0		1.0

Table HRA-8 shows the maximum non-cancer risks for each land use scenario. This includes the PM chronic risks (DPM does not pose acute health risks) plus the chronic risks from natural gas. As shown, none of the land use scenarios would result in total chronic hazards that exceed 1.0.

–

Table HRA-8. Maximum Non-Cancer Risks

	Annual DPM Concentration (ug/m3)	DPM Chronic Hazard Quotient	Natural Gas Chronic HI	Total Chronic Hazard Quotient
RSPU	7.1E-3	1.4E-3	2.41E-4	1.6E-3
RSPU Variant	6.5E-3	1.3E-3	N/A	1.3E-3
KPMC	4.4E-3	8.8E-4	2.41E-4	1.1E-3
Stadium	7.5E-4	1.5E-4	N/A	1.5E-4
Outfall	7.7E-4	1.5E-4	N/A	1.5E-4

CONCLUSIONS

Based on this analysis, residents and other sensitive land uses would not be exposed to a cancer risk exceeding 10 in a million, or a chronic or acute health risk exceeding 1.0. These results reflect reasonable estimates of source emissions and exhaust characteristics, and available meteorological data near the project site. Given the limits associated with health risk assessments (e.g., assumptions regarding emission sources, air quality dispersion model options, health effects calculations), the actual impacts may vary from the estimates in this assessment. However, the combined use of the AERMOD dispersion model and the health impact calculations required by the OEHHA produce conservative (i.e., health-protective) results. Accordingly, the health impacts are not expected to be higher than those estimated in this assessment.

 **Model Set To Continue RUNning After the Setup Testing.

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     1.83 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.7 MB of RAM.

                                            ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    82 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   1500000.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay for URBAN/Non-SO2.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Model Assumes No FLAGPOLE Receptor Heights.
```

```
 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages

 **This Run Includes:     82 Source(s);       5 Source Group(s); and
126 Receptor(s)

 **The Model Assumes A Pollutant Type of:  PM_10

 **Model Set To Continue RUNning After the Setup Testing.

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     1.83 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Detailed Error/Message File:   Variant.err
 **File for Summary of Results:   Variant.sum

                                            ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    83 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   1500000.0 ;  Urban Roughness Length =  1.000 m

 **Model Allows User-Specified Options:
         1. Stack-tip Downwash.
         2. Allow FLAT/ELEV Terrain Option by Source,
            with      0 FLAT and     83 ELEV Source(s).
         3. Use Calms Processing Routine.
         4. Use Missing Data Processing Routine.
         5. No Exponential Decay.
         6. Urban Roughness Length of 1.0 Meter Used.
```

```
 **Model Assumes No FLAGPOLE Receptor Heights.

 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages

 **This Run Includes:     83 Source(s);       8 Source Group(s); and
41 Receptor(s)

 **The Model Assumes A Pollutant Type of:  PM_10

 **Model Set To Continue RUNning After the Setup Testing.

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     1.83 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Detailed Error/Message File:   Hospital.err
 **File for Summary of Results:   Hospital.sum

                                            ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    82 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   1500000.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay for URBAN/Non-SO2.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Model Assumes No FLAGPOLE Receptor Heights.
```

```
 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages

 **This Run Includes:     82 Source(s);       5 Source Group(s); and
28 Receptor(s)

 **The Model Assumes A Pollutant Type of:  PM_10

 **Model Set To Continue RUNning After the Setup Testing.

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     1.83 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Detailed Error/Message File:   Stadium.err
 **File for Summary of Results:   Stadium.sum

                                            ***     MODEL SETUP OPTIONS
SUMMARY       ***
 - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - - -
- - - - - - - - - - - - - - - - - - - - - - - - - - - - - -

 **Model Is Setup For Calculation of Average CONCentration Values.

   --  DEPOSITION LOGIC  --
 **NO GAS DEPOSITION Data Provided.
 **NO PARTICLE DEPOSITION Data Provided.
 **Model Uses NO DRY DEPLETION.  DRYDPLT  =  F
 **Model Uses NO WET DEPLETION.  WETDPLT  =  F

 **Model Uses URBAN Dispersion Algorithm for the SBL for    82 Source(s),
   for Total of    1 Urban Area(s):
   Urban Population =   1500000.0 ;  Urban Roughness Length =  1.000 m

 **Model Uses Regulatory DEFAULT Options:
        1. Stack-tip Downwash.
        2. Model Accounts for ELEVated Terrain Effects.
        3. Use Calms Processing Routine.
        4. Use Missing Data Processing Routine.
        5. No Exponential Decay for URBAN/Non-SO2.
        6. Urban Roughness Length of 1.0 Meter Assumed.

 **Model Assumes No FLAGPOLE Receptor Heights.
```

```
 **Model Calculates  1 Short Term Average(s) of:   1-HR
    and Calculates PERIOD Averages

 **This Run Includes:     82 Source(s);       5 Source Group(s); and
28 Receptor(s)

 **The Model Assumes A Pollutant Type of:  PM_10

 **Model Set To Continue RUNning After the Setup Testing.

 **Output Options Selected:
         Model Outputs Tables of PERIOD Averages by Receptor
         Model Outputs Tables of Highest Short Term Values by Receptor
(RECTABLE Keyword)
         Model Outputs External File(s) of High Values for Plotting
(PLOTFILE Keyword)
         Model Outputs Separate Summary File of High Ranked Values
(SUMMFILE Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for
Calm Hours
                                                                 m for
Missing Hours
                                                                 b for
Both Calm and Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =     1.83 ;
Decay Coef. =    0.000     ;  Rot. Angle =     0.0
                 Emission Units = GRAMS/SEC
;  Emission Rate Unit Factor =   0.10000E+07
                 Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      3.6 MB of RAM.

 **Detailed Error/Message File:   Outfall.err
 **File for Summary of Results:   Outfall.sum

Biological Resources Data

Species Observed within the RSP Area 2015

ESA

SPECIES OBSERVED WITHIN THE RSP AREA 2015

Scientific Name	Common Name
Acacia melanoxylon	black acacia
Acer negundo	box elder
Ailanthus altissima	tree of heaven
Avena fatua	oat
Baccharis pilularis	coyote brush
Brassica sp.	mustard
Bromus diandrus	rip-gut brome
Bromus hordeaceus	soft chess
Buteo jamaicensis	red-tailed hawk
Cardiis pynocephalus	italian thistle
Centauries solstitialis	yellow star thistle
Cephalanthus occidentalis	California buttonbrush
Charadrius vociferus	killdeer
Concolvulus arvensis	field bindweed
Cynodon dactylon	Bermuda grass
Dittrichia graveolens	stinkwort
Erigeron sp.	fleabane
Eucalyptus globulus	blue gum
Ficus carica	common fig
Fraximus latifolia	Oregon ash
Geranium dissectum	cutleaf geranium
Heterotheca sessilidlora	golden aster
Holocarpha sp.	tarweed
Juglans hinsii	northern California black walnut
Juglans regia	English walnut
Lactuca serriola	prickley lettuce
Lepus californicus	black-tailed jack rabbit
Malva sp.	malva
Mimus polyglottos	northern mocking bird
Nerium sp.	oleander
Nicotiana glauca	tobacco bush
Pistacia chinensis	Chinese pistache
Platanus racemosa	California sycamore
Polypogon monsepeliensis	rabbit's foot grass
Populus fremontii	Fremont cottonwood
Prunus sp.	cherry

SPECIES OBSERVED WITHIN THE RSP AREA 2015

Scientific Name	Common Name
Quercus lobata	valley oak
Quercus wislizeni	interior live oak
Quercys suber	cork oak
Rubus	Himalayan blackberry
Salix exigua	narrow leaf willow
Salix interior	sandbar willow
Salix lasiolepis	arroyo willow
Salix nigra	black willow
Sambucus caerulea	elderberry
Silibum marianum	milkthistle
Ulmus parvifolia	Chinese elm
Vitis californica	California wild grape
Zenaida macroura	mourning dove
Columba livia	rock dove

Special-Status Species with the Potential to Occur within the RSP Area

ESA

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Invertebrates				
Andrena subapasta	an andrenid bee	--/--/--	Collects pollen primarily from *Arenaria californica* but also *Orthocarpus erianthus* & *Lasthenia* sp.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Branchinecta conservatio	Conservancy fairy shrimp	FE/--/--	Endemic to the grasslands of the northern two-thirds of the Central Valley; found in large, turbid pools. Inhabit astatic pools located in swales formed by old, braided alluvium; filled by winter/spring rains, last until June.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within two miles of the RSP Area. This species was not observed during reconnaissance surveys.
Branchinecta lynchi	Vernal pool fairy shrimp	FT/--/--	Vernal pools and other seasonal wetlands in open grassland habitat.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Branchinecta mesovallensis	Midvalley fairy shrimp	--/--/--	Vernal pools in the Central Valley.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within two miles of the RSP Area. This species was not observed during reconnaissance surveys.
Cicindela hirticollis abrupta	Sacramento Valley tiger beetle	--/--/--	Sandy floodplain habitat in the Sacramento valley. Requires fine to medium sand, terraced floodplains or low sandy water edge flats.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Desmocerus californicus dimorphus	valley elderberry longhorn beetle	FT/--/--	Occurs only in the Central Valley of California, in association with blue elderberry (*Sambucus nigra* ssp. *caerulea*). Prefers to lay eggs in elderberries 2-8 inches in diameter; some preference shown for "stressed" elderberries.	**High**. Several elderberry shrubs and shrub clusters are known to occur within or directly adjacent to the RSP Area. A few elderberry shrub clusters occur along 12th Street, just south of N. B Street; one shrub occurs on the southern portion of the RSP Area, near 6th and F Streets, and one shrub occurs just outside of the project footprint on the northwest corner of the RSP Area between Bercut Drive and the I-5 right of way. CNDDB records show several occurrences of valley elderberry longhorn beetle along the Sacramento and American River within one mile of the RSP Area. No elderberry shrubs were observed within Valley Foothill Riparian habitat along the Sacramento River on the western side of the RSP Area.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Dumontia oregonensis	Hairy water flea	--/--/--	Vernal pools. In California, known only from Mather Field.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Hydrochara rickseckeri	Ricksecker's water scavenger beetle	--/--/--	Natural history of this aquatic species is not well known. Regionally, it is known to occur in Mather Field Regional Park.	**Unlikely.** Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Lepidurus packardi	Vernal pool tadpole shrimp	FE/--/--	Vernal pools and other seasonal wetlands in open grassland habitat.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Linderiella occidentalis	California linderiella	--/--/--	Seasonal pools in unplowed grasslands with old alluvial soils underlain by hardpan or in sandstone depressions. Water in the pools has very low alkalinity, conductivity, and total dissolved solids.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Myrmosula pacifica	Antioch multilid wasp	--/--/--	Natural history of this species is not well known.	**Unlikely.** Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Reptiles				
Emys marmorata	Western pond turtle	FSC/CSC/None	Streams, rivers, ponds, marshes and other aquatic habitats. Requires secure basking area where they can easily escape to water. Upland nesting sites can be as much as 300 feet from aquatic habitat, but are usually closer.	**Medium.** The Sacramento River provides suitable aquatic habitat. While the constructed basin onsite provides suitable aquatic and upland habitat, western pond turtle is unlikely to occur. Potential for occurrence in the constructed basin is low due to its recent construction in 2013, its isolation from the Sacramento River, or other suitable aquatic sites.
Thamnophis gigas	giant garter snake	FT/ST/--	Prefers freshwater marsh and low gradient streams. Has adapted to drainage canals & and irrigation ditches. This is the most aquatic of the garter snakes in California.	**Unlikely**. No suitable habitat present within the RSP. Giant garter snake is not known to occur south of the American River and east of the Sacramento River in the vicinity of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Amphibians				
Ambystoma californiense	California tiger salamander	FT/CT/--	Grassland, oak savanna, and edges of mixed woodland and lower elevation coniferous forest. Requires temporary breeding ponds to breed. Spends most time underground in animal burrows, especially those of California ground squirrels, valley pocket gophers, and moles. Requires both suitable upland terrestrial habitat with mammal burrows for refuge and temporary breeding ponds in order to survive and reproduce.	**Unlikely**. No suitable habitat present within the RSP. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Rana draytonii	California red-legged frog	FT/CSC/--	Found mainly near ponds in humid forests, woodlands, grasslands, coastal scrub, and streamsides with plant cover. Most common in lowlands or foothills. Frequently found in woods adjacent to streams. Breeding habitat is in permanent or ephemeral water sources; lakes, ponds, reservoirs, slow streams, marshes, bogs, and swamps. Ephemeral wetland habitats require animal burrows or other moist refuges for estivation when the wetlands are dry.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Spea hammondii	Western spadefoot	--/CSC/--	Occurs primarily in grassland habitats, but can be found in valley-foothill hardwood woodlands. Vernal pools are essential for breeding and egg-laying.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Fish				
Archoplites interruptus	Sacramento perch	--/CSC/--	Historically found in the sloughs, slow-moving rivers, and lakes of the central valley. Prefers warm water. Aquatic vegetation is essential for young. Tolerates wide range of Physio-chemical water conditions.	**Unlikely.** Extirpated from the Sacramento River. Populations may exist in farm ponds and reservoirs, but no instream populations remain.
Hypomesus transpacificus	Delta smelt	FT/CT/-	Occurs in Sacramento-San Joaquin Delta most of the year. Spawns in tidally influenced freshwater wetlands and seasonally submerged uplands along the Sacramento River, downstream from its confluence with the American River.	**Medium.** No suitable habitat exists within the project boundaries. However, adult delta smelt are known to occur in the Sacramento River as far upstream as its confluence with the American River. As of 1993, delta smelt were known to spawn in the Sacramento River as far upstream as the City of Sacramento.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Spirinchus thaleichthys	Longfin smelt	FT/CSC/--	Euryhaline, nektonic & anadromous. Found in open waters of estuaries, mostly in middle or bottom of water column. Prefer salinities of 15-30 parts per thousand, but can be found in completely freshwater to almost pure seawater.	**Unlikely.** Potential suitable habitat within the Sacramento River. However, this species is known to spawn as far upstream as Isleton in the Sacramento River, approximately 35 miles south of the RSP Area.
Oncorhynchus mykiss	Central Valley steelhead	FT/--/--	Requires cold, freshwater streams with suitable gravel for spawning; rears seasonally inundated floodplains, rivers, tributaries, and Delta.	**High.** No suitable habitat exists within the project boundaries. However, suitable migration habitat exists within the Sacramento River adjacent to the RSP Area.
Oncorhynchus tshawytscha	Central Valley spring-run Chinook salmon	FT/CT/--	Requires cold, freshwater streams with suitable gravel for spawning; rears seasonally inundated floodplains, rivers, tributaries, and Delta.	**High.** No suitable habitat exists within the project boundaries. However, suitable migration habitat exists within the Sacramento River adjacent to the RSP Area.
Oncorhynchus tshawytscha	Sacramento River winter-run Chinook salmon	FE/CE/--	Requires cold, freshwater streams with suitable gravel for spawning; rears seasonally inundated floodplains, rivers, tributaries, and Delta.	**High.** No suitable habitat exists within the project boundaries. However, suitable migration habitat exists within the Sacramento River adjacent to the RSP Area.
Oncorhynchus tshawytscha	Central Valley fall-/late fall-run Chinook salmon	--/CSC/--	Requires cold, freshwater streams with suitable gravel for spawning; rears seasonally inundated floodplains, rivers, tributaries, and Delta.	**High.** No suitable habitat exists within the project boundaries. However, suitable migration habitat exists within the Sacramento River adjacent to the RSP Area.
Pogonichthys macroleipidotus	Sacramento spittail	--/CSC/--	Spawning and juvenile rearing from winter to early summer in shallow weedy areas inundated during seasonal flooding in the lower reaches and flood bypasses of the Sacramento River including the Yolo Bypass.	**High.** No suitable habitat exists within the project boundaries. However, suitable habitat exists within the Sacramento River adjacent to the RSP Area.
Acipenser medirostris	Southern distinct population segment North American green sturgeon	FT/--/--	Requires cool, freshwater streams with suitable substrate for spawning; rears in rivers, tributaries, and Delta.	**High.** No suitable habitat exists within the project boundaries. However, suitable migration habitat exists within the Sacramento River adjacent to the RSP Area.
Birds				
Accipiter cooperi	Cooper's hawk	--/WL/--	Woodland, chiefly of open, interrupted or marginal type. Nest sites mainly in riparian growths of deciduous trees, as in canyon bottoms on river flood-plains; also, live oaks.	**Low.** The site does not support relatively dense stands of mature trees typically used for nesting.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Agelaius tricolor	Tricolored blackbird	--/CSC/--	Highly colonial species, most numerous in central valley & vicinity. Largely endemic to California. Requires open water, protected nesting substrate, & foraging area with insect prey within a few km of the colony.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Ammodramus savannarum	Grasshopper sparrow	--/CSC/--	Dense grasslands on rolling hills, lowland plains, in valleys & on hillsides on lower Mountain slopes. Favors native grasslands with a mix of grasses, forbs & scattered shrubs. Loosely colonial when nesting.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Aquila chrysaetos	Golden eagle	--/FP/--	Rolling foothills, mountain areas, sage-juniper flats, & desert. Cliff-walled canyons provide nesting habitat in most parts of range; also, large trees in open areas.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Ardea alba	Great egret	--/--/--	Colonial nester in large trees. Rookery sites located near marshes, tide-flats, irrigated pastures, and margins of rivers And lakes.	**Low.** No suitable nesting or foraging habitat for this species within the RSP Area; however, potential nesting habitat occurs along the Sacramento River. Species recorded in the CNDDB within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Ardea herodias	Great blue heron	--/--/--	Colonial nester in tall trees, cliffsides, and sequestered spots on marshes. Rookery sites in close proximity to foraging areas: marshes, lake margins, tide-flats, rivers and streams, wet meadows.	**Low.** No suitable nesting or foraging habitat for this species within the RSP Area; however, potential nesting habitat occurs along the Sacramento River. Species recorded in the CNDDB within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Athene cunicularia	burrowing owl	--/CSC/--	Forages in open plains, grasslands, and prairies; typically nests in abandoned small mammal burrows.	**Low.** The site provides potential foraging habitat for this species; however, no ground squirrel burrows or other suitable nesting habitat was observed during the 2015 reconnaissance. This species was not observed during the reconnaissance.
Buteo regalis	Ferruginous hawk	--/WL/--	Open grasslands, sagebrush flats, desert scrub, low foothills and fringes of pinyon and Juniper habitats. Eats mostly lagomorphs, ground squirrels, and mice. Population trends may follow lagomorph population cycles.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Buteo swainsoni	Swainson's hawk	--/ST/--	Breeds in grasslands with scattered trees, juniper-sage flats, riparian areas, savannahs, and agricultural or ranch lands with groves or lines of trees. Requires adjacent suitable foraging areas such as grasslands, or alfalfa or grain fields supporting rodent populations.	**Medium.** Suitable nest trees are present along the Sacramento River. Open areas of the project site and patchy ruderal vegetation provides limited foraging opportunities for this species.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Charadrius alexandrines nivosus	Western snowy plover	FT/CSC/--	Sandy beaches, salt pond levees & shores of large alkali lakes. Needs sandy, gravelly or friable soils for nesting.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Charadrius montanus	Mountain plover	--/CSC/--	Short grasslands, freshly plowed fields, newly sprouting grain fields, & sometimes sod Farms. Short vegetation, bare ground & flat topography. Prefers grazed areas & areas with burrowing rodents.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Coccyzus americanus occidentalis	Western yellow-billed cuckoo	FT/CE/--	Riparian forest nester, along the broad, lower flood-bottoms of larger river systems. Nests in riparian jungles of willow, often mixed with cottonwoods, w/ lower story of blackberry, nettles, or wild grape.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Egretta thula	Snowy egret	--/--/--	Colonial nester, with nest sites situated in protected beds of dense tules. Rookery sites situated close to foraging areas: marshes, tidal-flats, streams, wet meadows, and borders of lakes.	**Low.** No suitable nesting or foraging habitat for this species within the RSP Area; however, potential nesting habitat occurs along the Sacramento River. Species not recorded in the CNDDB within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Elanus leucurus	white-tailed kite	--/FP/--	Rolling foothills and valley margins with scattered oaks and river bottomlands or marshes next to deciduous woodland. Open grasslands, meadows, or marshes for foraging close to isolated, dense-topped trees for nesting and perching.	**Medium**. Suitable nest trees are present along the Sacramento River. Open areas of the project site and patchy ruderal vegetation provides marginal foraging habitat for this species.
Falco columbarius	Merlin	--/WL/--	Nest in forested openings, edges, and along rivers. May also nest in towns and cities (using crow nests in conifers planted in residential areas, schoolyards, parks, and cemeteries). During migration and winter, this species can be seen using open forest, grassland, and coastal areas.	**Low**. Species does not breed in California; breeds in Alaska and Canada. Uncommon winter migrant from September to May. Open areas of the project site and patchy ruderal vegetation provides marginal foraging habitat for this species.
Melospiza melodia	Song sparrow ("Modesto" population)	--/CSC/--	Prefers open habitat, including marsh edges, overgrown fields, backyards, desert washes, and forest edges. Commonly visit bird feeders and build nests in residential areas.	**Unlikely.** No suitable habitat for this species within the RSP Area. No recent occurrences recorded within five miles of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Nycticorax nycticorax	Black-crowned night heron	--/--/--	Colonial nester, usually in trees, occasionally in tule patches. Rookery sites located adjacent to foraging areas: lake margins, mud-bordered bays, marshy spots.	**Unlikely.** No suitable nesting or foraging habitat for this species within the RSP Area. No recent occurrences recorded within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Phalacrocorax auritus	Double-crested cormorant	--/WL/--	Colonial nester on coastal cliffs, offshore islands, & along lake margins in the interior of The state. Nests along coast on sequestered islets, usually on ground with sloping surface, or in tall trees along lake margins.	**Low.** No suitable habitat for this species within the RSP Area; however, species may use the Sacramento River. No recent occurrences recorded within five miles of the RSP Area. This species was observed in the Sacramento River during reconnaissance surveys.
Plegadis chihi	White-faced ibis	--/WL/--	Shallow fresh-water marsh. Dense tule thickets for nesting interspersed with areas of shallow water for foraging.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Progne subis	purple martin	--/ CSC /--	Inhabits woodlands, low elevation coniferous forest of Douglas-fir (*Pseudotsuga menziesii*), ponderosa pine (*Pinus ponderosa*), and Monterey pine (*Pinus radiata*). Nests primarily in old woodpecker cavities, also in human-made structures. Nest often located in tall, isolated tree/snag.	**High**. Known occurrence identified in the CNDDB at the I-Street Bridge and elevated structure of I-5 in the vicinity of the Railroad Museum.
Riparia riparia	Bank swallow	--/CT/--	Colonial nester; nests primarily in riparian and other lowland habitats west of the desert. Requires vertical banks/cliffs with fine-textured/sandy soils near streams, rivers, lakes, ocean to dig nesting hole.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Vireo bellii pusillus	Least Bell's vireo	FE/CE/--	Inhabits dense, low, scrub habitat, generally early successional stages in riparian areas, brushy fields, young second-growth forest or woodland, scrub oak, coastal chaparral, and mesquite brushlands, often near water in arid regions. Species is a summer resident of southern California in low riparian in vicinity of water or in dry river bottoms.	**Low.** Species is known to occur along South Fork Putah Creek, Putah Creek, Putah Creek sinks, in the vicinity of the Yolo Bypass Wildlife Area and was last observed in 2011.[1] There is one presumably extant record from 1877 in West Sacramento; however, no recent populations or observations were recorded within five miles of the RSP Area.

1 California Department of Fish and Wildlife (CDFW). 2015a. California Natural Diversity Database (CNDDB) RareFind 5 personal computer program. http://www.dfg.ca.gov/biogeodata/cnddb/mapsanddata.asp. Accessed on: September 8, 2015.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Xanthocephalus xanthocephalus	Yellow-headed blackbird	--/CSC/--	Nests in freshwater emergent wetlands with dense vegetation & deep water. Often along Borders of lakes or ponds. Nests only where large insects such as *Odonata* are abundant, nesting timed with maximum emergence of aquatic insects.	**Unlikely.** No suitable nesting or foraging habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Mammals				
Antrozous pallidus	Pallid bat	--/CSC/--	Deserts, grasslands, shrublands, woodlands & forests. Most common in open, dry habitats with rocky areas for roosting. Roosts must protect bats from high temperatures. Very sensitive to disturbance of roosting sites.	**Medium.** No suitable roosting habitat for this species within the RSP Area; specifically under the I Street Bridge, the elevated structure of I-5, and within the historic train depot buildings associated with the Central Shops Historic District and the Sacramento Valley Station.[2] No CNDDB record of species within five miles of the RSP Area.[3] This species was not observed during reconnaissance surveys.
Lasionycteris noctivagans	Silver-haired bat	--/--/--	Primarily a coastal & montane forest dweller feeding over streams, ponds & open brushy areas. Roosts in hollow trees, beneath exfoliating bark, abandoned woodpecker holes & rarely under rocks. Needs drinking water.	**Low.** Species range typically includes coastal and montane forests from the Oregon border south along the coast to San Francisco Bay and along the Sierra Nevada and Great Basin region to Inyo County. It is unlikely to occur in the RSP Area. Species not known to occur within five miles of the RSP Area. Species may be present during migration in the Sacramento Area. This species was not observed during reconnaissance surveys.

2 City of Sacramento. 2007. Railyards Specific Plan Environmental Impact Report. Certified December 11, 2007.

3 California Department of Fish and Wildlife (CDFW). 2015a. California Natural Diversity Database (CNDDB) RareFind 5 personal computer program. http://www.dfg.ca.gov/biogeodata/cnddb/mapsanddata.asp. Accessed on: September 8, 2015.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Lasiurus blossevillii	Western red bat	--/CSC/--	Preferred roosting habitat includes forests and woodlands. Feeds over grassland, shrubland, open woodland, forests, and cropland	**High.** Species was documented in the vicinity of RSP Area.[4]
Lasiurus cinereus	hoary bat	--/--/--	Prefers open habitats or habitat mosaics, with access to trees for cover and open areas or habitat edges for feeding. Roosts in dense foliage of medium to large trees. Feeds primarily on moths.	**Medium.** Species may roost within riparian habitat along the Sacramento River and forage within the RSP Area. Recorded occurrence in West Sacramento, west of the RSP Area and the Sacramento River.
Myotis yumanensis	Yuma myotis	--/--/--	Prefers open forests and woodlands with sources of water over which to feed. Roosts in buildings, mines, caves, and crevices.	**High.** Species was documented in the vicinity of the RSP Area.[5]
Taxidea taxus	American badger	--/CSC/--	Most abundant in drier open stages of most shrub, forest, and herbaceous habitats, with Friable soils. Needs sufficient food, friable soils & open, uncultivated ground. Preys on burrowing rodents. Digs burrows.	**Low.** No significant burrowing rodents observed in the RSP Area sufficient to support species. Evidence of species presence (burrows, prints, and scat) not observed during reconnaissance. Nearest recorded occurrence is located approximately four miles southeast of the RSP Area.
Plants				
Astragalus pauperculus	Depauperate milk-vetch	--/--/4.3	Alkali playa, valley and foothill grassland, vernal pools. low ground, alkali flats, and flooded lands; in annual grassland or in playas or vernal pools. 1-170m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Astragalus tener var. *ferrisiae*	Ferris' milk-vetch	--/--/1B.1	Meadows, valley and foothill grassland. subalkaline flats on overflow land in the central valley; usually seen in dry, adobe soil. 5-75m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species known to occur in the Yolo Bypass area, within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Astragalus tener var. *tener*	Alkali milk-vetch	--/--/1B.2	Alkali playa, valley and foothill grassland, vernal pools. low ground, alkali flats, and flooded lands; in annual grassland or in playas or vernal pools. 1-170m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Atriplex cordulata var. *cordulata*	Heartscale	--/--/1B.2	Chenopod scrub, valley and foothill grassland, meadows. alkaline flats and scalds in the central valley, sandy soils. 0-560 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Atriplex depressa	Brittlescale	--/--/1B.2	Chenopod scrub, meadows, playas, valley and foothill grassland, vernal pools. usually in alkali scalds or alkaline clay in meadows or annual grassland; rarely associated with riparian, marshes, or vernal pools. 1-320 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Carex comosa	Bristly sedge	--/--/2B.1	Marshes and swamps. Lake margins, wet places; site below sea level is on a Delta island. -5-1005m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Centromadia parryi subsp. *rudis*	Parry's rough tarplant	--/--/4.2	Alkaline, vernally mesic, seeps, sometimes roadsides. Valley and foothill grassland, vernal pools. 0-100 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Chloropyron palmatum	Palmate-bracted bird's beak	FE/CE/1B.1	Chenopod scrub, valley and foothill grassland. Usually on Pescadero silty clay which is alkaline, with *Distichlis, Frankenia*, etc. 5-155 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Cuscuta obtusiflora var. *glandulosa*	Peruvian dodder	--/--/2B.2	Marshes and swamps (freshwater). Freshwater marsh. 15-280 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Downingia pusilla	Dwarf downingia	--/--/2B.2	Valley and foothill grassland (mesic sites), vernal pools. Vernal lake and pool margins with a variety of associates. in several types of vernal pools. 1-445 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Extriplex joaquinana	San Joaquin spearscale	--/--/1B.2	Chenopod scrub, alkali meadow, playas, valley and foothill grassland.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Fritillaria agrestis	Stinkbells	--/--/4.2	Cismontane woodland, chaparral, valley and foothill grassland. sometimes on serpentine; mostly found in nonnative grassland or in grassy openings in clay soil. 10-1555 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Gratiola heterosepala	Boggs Lake hedge-hyssop	FE/--/1B.2	Marshes and swamps (freshwater), vernal pools. Clay soils; usually in vernal pools, sometimes on lake margins. 10-2375 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Hesperevax caulescens	Hogwallow starfish	--/--/4.2	Valley and foothill grassland (mesic, clay), vernal pools (shallow). 0-505 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Hibiscus lasiocarpos var. *occidentalis*	Wooly rose-mallow	--/--/1B.2	Marshes and swamps (freshwater). Moist, freshwater-soaked river banks & low peat islands in sloughs; can also occur on riprap and levees. In California, known from the Delta watershed. 0-120 m.	**Low.** No suitable habitat for this species within the RSP Area. Suitable habitat may occur along the Sacramento River. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Juglans hindsii	Northern California black walnut	--/--/1B.1	Riparian forest, riparian woodland. Few extant native stands remain; widely naturalized. Deep alluvial soil associated with a creek or stream. 0-440 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was observed during reconnaissance surveys; however, no native stands were observed.
Juncus leiospermus var. *ahartii*	Ahart's dwarf rush	--/--/1B.2	Vernal pools, valley and foothill grassland. Restricted to the edges of vernal pools. 30-229 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Legenere limosa	Legenere	--/--/1B.1	Vernal pools. In beds of vernal pools. 1-880 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Lepidium latipes var. *heckardii*	Heckard's pepper-grass	--/--/1B.2	Valley and foothill grassland. Grassland, and sometimes vernal pool edges. Alkaline soils. 2-200 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Lilaeopsis masonii	Mason's lilaeopsis	--/--/1B.1	Freshwater and brackish marshes, riparian scrub. Tidal zones, in muddy or silty soil formed through river deposition or river bank erosion. 0-10 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Myosurus minimus subsp. *apus*	Little mousetail	--/--/3.1	Valley and foothill grassland, vernal pools (alkaline). 20-640 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Navarretia eriocephala	Hoary navarretia	--/--/1B.1	Vernally mesic. Cismontane woodland, valley and foothill grassland. 105-400 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Navarretia leucocephala subsp *bakeri*	Baker's navarretia	--/--/1B.1	Cismontane woodland, meadows and seeps, vernal pools, valley and foothill grassland, lower montane coniferous forest. Vernal pools and swales; adobe or alkaline soils. 5-1740 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Neostapfia colusana	Colusa grass	FT/CE/1B.1	Vernal pools. Usually in large, or deep vernal pool bottoms; adobe soils. 5-200 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Orcuttia tenuis	Slender Orcutt grass	FT/CE/1B.1	Vernal pools. Often in gravelly pools. 35-1760 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Orcuttia viscida	Sacramento Orcutt grass	FE/CE/1B.1	Vernal pools. 30-100 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Plagiobothrys hystriculus	Bearded popcornflower	--/--/1B.1	Vernal pools, valley and foothill grassland. Wet sites. 0-275 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Sagittaria sandfordii	Sandford's arrowhead	--/--/1B.2	Marshes and swamps. In standing or slow-moving freshwater ponds, marshes, and ditches. 0-650 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Symphyotrichum lentum	Suisun Marsh aster	--/--/1B.2	Marshes and swamps (brackish and freshwater). most often seen along sloughs with *Phragmites*, *Scirpus*, blackberry, *Typha*, etc. 0-3 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Trifolium hydrophilum	Saline clover	--/--/1B.2	Marshes and swamps, valley and foothill grassland, vernal pools. Mesic, alkaline sites. 0-300 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.
Tuctoria mucronata	Crampton's tuctoria (Solano grass)	FE/CE/1B.1	Vernal pools, valley and foothill grassland. Clay bottoms of drying vernal pools and lakes in valley grassland. 5-10 m.	**Unlikely.** No suitable habitat for this species within the RSP Area. Species not known to occur within five miles of the RSP Area. This species was not observed during reconnaissance surveys.

SPECIAL-STATUS SPECIES WITH THE POTENTIAL TO OCCUR WITHIN THE RSP AREA

Scientific Name	Common Name	Listing Status: Federal/State/Other	Habitat Description	Potential for Occurrence within the RSP Area
Sensitive Vegetation Communities				
Elderberry savanna	--	--	Open to moderately closed stands characterized by *Sambucus Mexicana*. Understory typically dominated by grasses. Occurs in association with remnant riparian forest vegetation.	**Unlikely.** Habitat not present within or directly adjacent to the RSP Area.
Great Valley Cottonwood Riparian Forest	--	--	A dense, broadleafed, winter deciduous riparian forest dominated by Fremont cottonwood (*Populus fremontii*) and Goodding's black willow (*Salix gooddingii*). The understory is usually dense, with abundant vegetative reproduction of canopy dominants and California wild grape is the most conspicuous vine. Habitat experiences frequent flooding.	**Unlikely.** Habitat not present within or directly adjacent to the RSP Area.
Great Valley Valley Oak Riparian Forest	--	--	Medium to tall (rarely to 100 feet) broadleaved, winter deciduous, closed-canopy riparian forest dominated by Valley oak (*Quercus lobata*). Understories include scattered Oregon ash, Northern California black walnut, and western sycamore as well as young valley oaks. Vines are relatively scattered throughout the shady understory but quickly become conspicuous occupying gaps where light is available.	**High.** Habitat occurs adjacent to the RSP Area along the Sacramento River.
Northern Claypan Vernal Pool	--	--	Similar to Northern Hardpan Vernal Pools, but with less topographical relief, and usually lower overall cover. Pools range in size from the small (a few square meters) to quite large (covering several hectares).	**Unlikely.** Habitat not present within or directly adjacent to the RSP Area.
Northern Hardpan Vernal Pool	--	--	Community is dominated by annual grasses and herbs that grow in and out of the water. Germination and growth begin with winter rains, often continuing even when inundated. These pools gradually evaporate during spring, leaving concentric bands of vegetation that colorfully encircle the drying pools.	**Unlikely.** Habitat not present within or directly adjacent to the RSP Area.
Northern Volcanic Mudflow Vernal Pool	--	--	Pools occur on Tertiary volcanic mudflows called lahars. Pools form after winter rains in settings of impeded water over rock-bound depressions. The pools are small, forming in irregular depressions in gently sloping surfaces. Habitat is seasonally flooded and seasonally saturated.	**Unlikely.** Habitat not present within or directly adjacent to the RSP Area.

CLIMATE ACTION PLAN – CONSISTENCY REVIEW CHECKLIST

The purpose of the Climate Action Plan Consistency Review Checklist (CAP Consistency Review Checklist) is to provide a streamlined review process for proposed new development projects which are subject to discretionary review and trigger environmental review pursuant to the California Environmental Quality Act (CEQA)..

CEQA Guidelines require the analysis of greenhouse gas (GHG) emissions and potential climate change impacts from new development. The Sacramento Climate Action Plan qualifies under section 15183.5 of the CEQA Guidelines as a plan for the reduction of GHG emissions for use in cumulative impact analysis pertaining to development projects. This allows projects that demonstrate consistency with the CAP to be eligible for this streamlining procedure. Projects that demonstrate consistency with the CAP and the Sacramento 2030 General Plan may be able to answer "No additional significant environmental effect" in the City's initial study checklist. Projects that do not demonstrate consistency may, at the City's discretion, prepare a more comprehensive project-specific analysis of GHG emissions consistent with CEQA requirements. (See FAQ about the CAP Consistency Review Checklist for more details.)

The diagram below shows the context for the CAP Consistency Review Checklist within the planning review process framework.

Streamlined Review of GHG Emissions in Development Projects

CLIMATE ACTION PLAN – CONSISTENCY REVIEW CHECKLIST

Application Submittal Requirements

1. The CAP Consistency Review Checklist is required only for proposed new development projects which are subject to CEQA review (non-exempt projects)
2. If required, the CAP Consistency Review Checklist must be submitted in addition to the basic set of requirements set forth in the Universal Application and the Planning Application Submittal Matrix.
3. The applicant shall work with staff to meet the requirements of this checklist. These requirements will be reflected in the conditions of approval and/or mitigation measures.
4. All conditions of approval and mitigation measures from this checklist shall be shown on full-size sheets for building plan check submittals.

Application Information

Project Number: _____

Address of Property: _____

Was a special consultant retained to complete this checklist? ☐ Yes ☐ No. If yes, complete following

CAP Consistency Checklist Form for Projects that are Not Exempt from CEQA

Checklist Item (Check the appropriate box, and provide explanation for your answer).	Yes	No*
1. Is the proposed project substantially consistent with the City's over-all goals for land use and urban form, allowable floor area ratio (FAR) and/or density standards in the City's 2035 General Plan, as it currently exists?		
Please explain how proposed project compares to 2035 General Plan with respect to density standards, FAR, land use and urban form. (See directions for filling out CAP Checklist)		

2. Would the project incorporate traffic calming measures? *(Examples of traffic calming measures include, but are not limited to: curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers.)*	Yes	NA
Please explain how the proposed project meets this requirement (list traffic calming measures). If "not applicable" (NA), explain why traffic calming measures were not required.		

*****If "No", equivalent or better GHG reduction must be demonstrated as part of the project and incorporated into the conditions of approval.

Note: Requirements from this checklist should be incorporated into the conditions of approval, and shown on the full-size plans submitted for building plan check.

City of SACRAMENTO

	Checklist Item (Check the appropriate box, and provide explanation for your answer).	Yes	NA
3.	Would the project incorporate pedestrian facilities and connections to public transportation consistent with the City's Pedestrian Master Plan?		
	Please explain how the proposed project meets this requirement. If "not applicable" (NA), explain why this was not required.		

		Yes	NA
4.	Would the project incorporate bicycle facilities consistent with the City's Bikeway Master Plan, and meet or exceed minimum standards for bicycle facilities in the Zoning Code and CALGreen?		
	Please explain how the proposed project meets this requirement. If "not applicable" (NA), explain why this was not required.		

*If "No", equivalent or better GHG reduction must be demonstrated as part of the project and incorporated into the conditions of approval.

Note: Requirements from this checklist should be incorporated into the conditions of approval, and shown on the full-size plans submitted for building plan check.

	Checklist Item (Check the appropriate box, and provide explanation for your answer).	Yes	No*	NA
5.	For residential projects of 10 or more units, commercial projects greater than 25,000 square feet, or industrial projects greater than 100,000 square feet, would the project include on-site renewable energy systems (e.g., photovoltaic systems) that would generate at least a minimum of 15% of the project's total energy demand on-site? (CAP Actions: 3.4.1 and 3.4.2)			

Please explain how the proposed project meets this requirement. If "not applicable" (NA), explain why this was not required. If project does not meet requirements, see DIRECTIONS FOR FILLING OUT CAP CONSISTENCY REVIEW CHECKLIST re: alternatives to meeting checklist requirements.

Attach a copy of the CalEEMod input and output. Record the model and version here _____.
Do NOT select the "use historical" box in CalEEMod for energy demand analysis related to this requirement.

		Yes	NA
6.	Would the project (if constructed on or after January 1, 2014) comply with minimum CALGreen Tier I water efficiency standards?		

Please explain how the proposed project meets this requirement. If "not applicable" (NA), explain why this was not required.

*If "No", equivalent or better GHG reduction must be demonstrated as part and incorporated into the conditions of approval.

Note: Requirements from this checklist should be incorporated into the conditions of approval, and shown on the full-size plans submitted for building plan check.

DIRECTIONS FOR FILLING OUT CAP CONSISTENCY REVIEW CHECKLIST

General Plan Consistency & Sustainable Land Use

1. **Is the proposed project substantially consistent with the land use and urban form designation, allowable floor area ratio (FAR) and/or density standards in the City's 2035 General Plan?**

   Consistency with the General Plan land use and urban form designation, FAR and/or density standards is a key determining factor in whether or not the CAP Consistency Review procedure can be used. This is because future growth and development consistent with the General Plan was used to estimate business as usual emission forecasts, as well as emission reductions from actions that would be applicable to new development.

   Refer to the 2035 General Plan, Land Use and Urban Form Designations and Development Standards starting on page 2-29. If a project is not fully consistent with the General Plan, the project still may qualify for consistency with the CAP, but this determination will need to be closely coordinated with the City. The City will determine whether the proposed land uses under consideration could be found consistent with the growth projections and assumptions used to develop the GHG emissions inventory and projections in the CAP.

Mobility

2. **Would the project incorporate traffic calming measures? (Applicable CAP Action: 2.1.1)**

   List the traffic calming measures that have been incorporated into the project. These may include, but are not limited to: curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers.

   The project proponent and City staff should consult with staff in the Department of Public Works-Transportation Division to verify that traffic calming measures are adequate and in compliance with the City's Street Design Standards.

   If the proposed project does not include any roadway or facility improvements, traffic calming measures may not apply. For example, certain infill projects may not result in on-street or transportation facility improvements because sufficient infrastructure already exists.

3. **Would the project incorporate pedestrian facilities and connections to public transportation consistent with the City's Pedestrian Master Plan? (Applicable CAP Action: 2.2.1)**

   List the pedestrian facilities and connections to public transportation that have been included in the proposed project on the Checklist. These may include, but are not limited to: sidewalks on both sides of streets, marked crosswalks, count-down signal timers, curb extensions, median islands, transit shelters, street lighting.

   The project proponent and City staff should consult with Department of Public Works-Transportation Division staff to verify that pedestrian facilities are consistent with the Pedestrian Master Plan. As in the previous example, if "not applicable", an explanation shall be documented in the Checklist. For example, certain infill projects may not require on-street or transportation facility improvements because sufficient infrastructure already exists.

300 Richards Blvd., 3rd Floor
Sacramento, CA 95811
Help Line: 916-264-5011
CityofSacramento.org/dsd

The "Pedestrian Review Process Guide" (Appendix A to the Master Plan) will be used to determine consistency, as follows:

- For typical infill development projects where existing streets will serve the site (no new streets are proposed): the level of pedestrian improvements necessary to determine Pedestrian Master Plan consistency will be measured according to the "Basic, Upgrade or Premium" categories defined in Appendix A to the Pedestrian Master Plan, which are based on project location, surrounding land uses, proximity to transit, etc. If the proposed project does not include the minimum level of improvements per the assigned category for the project's location, the project will be required as a condition of approval to include appropriate features, per the approval of the Department of Public Works-Transportation Division.

- For new "greenfield" projects and/or larger infill development projects where new streets are proposed as part of the project, the following will apply:
    - "Basic, Upgrade or Premium" levels of improvement will be required based on the proposed project's location and context, where applicable, consistent with the criteria defined in the Master Plan. If the proposed project does not include the minimum level of improvements per the assigned category, the

      project will be required as a condition of approval to include appropriate features, per the approval of the Department of Public Works-Transportation Division.
    - The "Pedestrian Smart Growth Scorecard" (Appendix A to the Master Plan) will be required to be completed for the project, and a minimum score of 3 or better will need to be achieved. If the proposed project cannot achieve the minimum score, changes to the proposed project may be required, and/or the project may be required as a condition of approval to include certain improvements such that the average score will meet 3 or better. (Note: an Excel version of the Pedestrian Smart Growth Scorecard is available, to assist in automating the rating & scoring process)

4. Would the project incorporate bicycle facilities consistent with the City's Bikeway Master Plan, and meet or exceed minimum standards for bicycle facilities in the Zoning Code and CALGreen? (Applicable CAP Action: 2.3.1)

List the bicycle facilities that are incorporated into the proposed project on the Checklist. These include, but are not limited to: Class I bike trails and Class II bike lanes connecting the project site to an existing bike network and transit stations, bike parking [bike racks, indoor secure bike parking, bike lockers], end-of-trip facilities at non-residential land uses [showers, lockers]).

The project proponent and City staff should consult with staff in the Transportation Division of the Department of Public Works to verify that such facilities are consistent with the Bikeway Master Plan and meet or exceed Zoning Code and CALGreen standards. Generally, the following guidelines will be used:

- If existing on-street and off-street bikeways are already present and determined to be consistent with the Bikeway Master Plan, no additional on-street bikeways will be required. Check the "not applicable" box if appropriate. However, on-site facilities shall still be required to meet or exceed minimum Zoning and CALGreen requirements.
- If not applicable, fully document the reasons why using the Checklist.

300 Richards Blvd., 3rd Floor
Sacramento, CA 95811

Help Line: 916-264-5011
CityofSacramento.org/dsd

- If on-street bicycle facilities are not present or are only partially consistent with the Master Plan, the project will be required as a condition of approval to construct or pay for its fair-share of on-street and/or off-street bikeways described in the Master Plan, in addition to meeting or exceeding minimum on-site facilities.
- In some cases, a combination of new or upgraded on-street and off-street bikeways may be used to determine consistency with the Master Plan, at the discretion of the Department of Public Works-Transportation Division staff.

Energy Efficiency and Renewable Energy

5. For residential projects of 10 or more units, commercial projects greater than 25,000 square feet, or industrial projects greater than 100,000 square feet, would the project include on-site renewable energy systems (e.g., solar photovoltaic, solar water heating etc.) that would generate at least 15% of the project's total energy demand? (CAP Actions: 3.4.1 and 3.4.2)

For projects of the minimum size specified in this measure, a commitment in the project description or in a mitigation measure that the project shall generate a minimum of 15% of the project's energy demand on-site is sufficient to demonstrate consistency with this measure. However, the project conditions of approval or mitigation measures should specify the intended renewable energy technology to be used (e.g. solar photovoltaic, solar water heating, wind, etc.) and estimated size of the systems to meet project demand based on the project description.

"Total energy demand" refers to the energy (electricity and natural gas) consumed by the built environment (including HVAC systems, water heating systems, and lighting systems) as well as uses that are independent of the construction of buildings, such as office equipment and other plug-ins.

Applicants may estimate the total energy demand of their projects using California Emissions Estimator Model (CalEEMod 2013.2), the same software used to estimate greenhouse gas emissions. ***For CalEEMod estimates of energy demand to meet this specific requirement, the user should NOT select the "use historical" box, otherwise they will be "double-counting" emissions reductions that have already been counted***. CalEEMod outputs for electricity demand are provided in annual kWh, and natural gas demand is provided in annual kBTU.

The energy demand estimate by CalEEMod is based on two datasets:

- The California Commercial End Use Survey (CEUS);
- The Residential Appliance Saturation Survey (RASS

CalEEMod takes energy use intensity data (above) and forecasts energy demand based on climate zone, land use subtype (such as "hospital", "arena", or "apartments, mid rise"), building area, and the number of buildings or units. This is an appropriate level of analysis for use at the planning submittal stage, but it may not provide an accurate picture of actual project energy demand because it does not factor project specifics such as building design.

Therefore, the applicant is advised (but not required) to run a more comprehensive energy simulation once project-specific details are known: basic building design, square-footage, building envelope, lighting design (at least rudimentary), and the mechanical system (at least minimally zoned). Some of the energy simulation programs that are appropriate for this level of analysis include: DOE 2.2, Trace 700, and Energy Pro.

300 Richards Blvd., 3rd Floor
Sacramento, CA 95811

Help Line: 916-264-5011
CityofSacramento.org/dsd

The U.S. DOE maintains a list of energy simulation programs that are available.
http://apps1.eere.energy.gov/buildings/tools_directory/subjects.cfm/pagename=subjects/pagename_menu=whole_building_analysis/pagename_submenu=energy_simulation

The applicant may then revise the estimate and make a final determination regarding the size of the PV system that is required.

Substitutions: Projects may substitute a quantity of energy efficiency for renewable energy, as long as the substituted GHG reduction does not "double count" GHG reductions already taken by the CAP. In other words, substitutions must reduce GHG emissions from the project beyond what is already accounted for in the CAP (to avoid double-counting).

- Additional mitigation may include equivalent or better GHG reduction from individual measures or a combination of:
- In lieu of installing PV systems that would generate 15% of the projects total energy, the project may exceed energy efficiency standards of Title 24, part 6 of the California Building Code, such as building to CALGreen Tier 1 energy standards. (Residential projects shall exceed the 2013 Title 24 energy efficiency by a minimum of 10% and commercial projects shall exceed 2013 Title 24 energy efficiency by a minimum of 5%).

6. Would the project comply with minimum CALGreen Tier I water efficiency standards? (CAP Action: 5.1.1)

The California Green Building Standards Code (CALGreen) includes mandatory green building measures, as well as voluntary measures that local jurisdictions may choose to adopt to achieve higher performance tiers, at either Tier 1 or Tier 2 compliance levels. Sacramento has adopted Tier 1 Water Efficiency Standards to be required on or after January 1, 2014 Currently, in order to meet the Tier 1 Water Efficiency Standards, buildings are required to implement all mandatory water efficiency and conservation measures as well as certain Tier 1 specific measures that exceed minimum mandatory measures (e.g. 30% increase in indoor water efficiency). Specific Tier 1 provisions can be found in the CALGreen Code at http://www.bsc.ca.gov/Home/CALGreen.aspx.

The City recognizes that project construction details are often not known at the environmental review stage, and it may be premature for a project proponent to identify compliance with precise requirements of CALGreen. A condition of approval requiring the project to comply with minimum CALGreen Tier 1 water efficiency and conservation standards is sufficient to demonstrate consistency with this criterion.

Planning approval of your project will include the following condition:
Project must meet CALGreen Tier 1 water efficiency and conservation standards. Copies of the appropriate CalGreen checklist (see FAQ) shall be included on the full-size sheets for building plan check submittals.

Note: Requirements from this checklist should be incorporated into the conditions of approval, and shown on the full-size plans submitted for building plan check.

LAND USE COVENANT AND AGREEMENT

ENVIRONMENTAL RESTRICTIONS

COUNTY OF SACRAMENTO, PORTIONS OF APNs 002-0010-049, 002-0010-052, 002-0010-056 and 002-0010-058
SPECIFIED STUDY AREAS WITHIN THE SACRAMENTO RAILYARDS
SACRAMENTO, SACRAMENTO COUNTY

This Covenant and Agreement ("Covenant") is made by and between Downtown Railyard Venture, LLC (the "Covenantor"), the current owner of property situated in City of Sacramento, County of Sacramento, State of California (the "Property"), and the Department of Toxic Substances Control (the "Department").

Pursuant to Civil Code section 1471, the Department has determined that this Covenant is reasonably necessary to protect present or future human health or safety or the environment as a result of the presence on the land of hazardous materials as defined in Health and Safety Code section 25260. The Covenantor and Department, collectively

referred to as the "Parties," hereby agree that, pursuant to Civil Code section 1471 and Health and Safety Code section 25355.5, the use of the Property be restricted as set forth in this Covenant; and the Parties further agree that the Covenant shall conform with the requirements of California Code of Regulations, title 22, section 67391.1.

To the extent that the Property is encumbered by and governed by the (i) Covenant and Agreement to Restrict Use of Property, dated June 22, 1990, and recorded in the Official Records of the County of Sacramento on June 28, 1990, in Book 900628, at Page 1056; (ii) Covenant and Agreement to Restrict Use of Property, dated May 6, 1994, and recorded in the Official Records of the County of Sacramento on May 19, 1994, in Book 940519, at Page 1437; and (iii) Covenant and Agreement to Restrict Use of Property, dated May 6, 1994, and recorded in the Official Records of the County of Sacramento on May 19, 1994, in Book 940519, at Page 1438 (collectively, including any amendments thereto, the "Prior Covenants"), the Department agrees that the Prior Covenants are terminated, extinguished and replaced in their entirety by this Covenant.

ARTICLE I
STATEMENT OF FACTS

1.01. Property Location. The Property that is subject to this Covenant totals approximately 158 acres, is more particularly described and depicted in the attached Exhibits "A" and "B". The Property is located within a portion of the former Southern Pacific Transportation Company ("SPTCo") Locomotive Works (known as the "Sacramento Railyards") and in the area now generally bounded by Jibboom Street to the west, the Water Treatment Plant and North B Street to the north, 12th Street to the east, and the Central Shops study area to the south, and in the area bounded by 5th Street to the west, the mainline track to the north, 7th Street to the east, and I Street to the south. The Property is also generally described as portions of Sacramento County Assessor's Parcel Numbers (APN) 002-0010-049, 002-0010-052, 002-0010-056 and 002-0010-058.

1.02. Property History. Historically, the past uses of the Property included operations of a sheet metal shop, warehouse, battery shop, forge and foundry activities, maintenance right of way, company equipment facilities and other industrial uses. In 1988, SPTCo and the Department entered into the Enforceable Agreement (such document, as amended is referred to as the "1988 Enforceable Agreement"). Union Pacific Railroad Company ("UPRR") entered into a merger with SPTCo in 1996 and acquired the Sacramento Railyards in 1998. Pursuant to the 1988 Enforceable Agreement, UPRR has investigated and remediated soil and groundwater contamination at the Sacramento Railyards. In addition, UPRR has certain continuing obligations under the 1988 Enforceable Agreement, including remediation of groundwater, soil vapor, and ongoing operation and maintenance responsibilities.

For the purposes of soil and groundwater remediation, the Sacramento Railyards was divided into study areas: the Lagoon, Northern Shops, Central Corridor, Car Shop Nine, Central Shops, Lagoon Northwest Corner, and Sacramento Station soil study areas, the Lagoon Groundwater study area, South Plume groundwater study area, and the Manufactured Gas Plant soil and groundwater study area. The Property is composed of the Lagoon, Northern Shops, Central Corridor, Car Shop Nine and a portion of Sacramento Station soil study areas, excluding the Manufactured Gas Plant study area, the 7th Street right-of-way, the 6th Street right-of-way, the Lagoon Northwest Corner study area and the Central Shops soil study area (see Exhibits A and B).

1.03. Soil Remediation of Property. The Property has been investigated and contaminated soil has been remediated under the Department's oversight. Soils contained volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), metals and total petroleum hydrocarbons (TPH). The Department approved remedial action plans (individually a "RAP" and collectively "RAPs") for the Lagoon, Northern Shops, Central Corridor, and Car Shop Nine soil study areas in accordance with Health and Safety Code, division 20, chapter 6.8.

Soils in the Lagoon study area were remediated under a RAP approved on December 28, 1998 and an amended RAP approved by the Department on February 14, 2000. The selected remedial alternative includes excavation, chemical stabilization, and

off-site disposal. During implementation of the remedy, asbestos containing material was discovered and remediated.

Soils in the Northern Shops, Central Corridor, and Car Shop Nine study areas were remediated under a RAP approved by the Department on February 14, 2000. The selected remedial alternative includes excavation, chemical stabilization, landfarming, and off-site disposal. During implementation of the remedy, asbestos containing material was discovered and remediated. Due to inaccessibility, small areas within the Car Shop Nine study area, generally described on Exhibit "C", require further remediation in accordance with the RAP prior to excavation or initiation of any redevelopment activities in those areas.

Soils in the Sacramento Station study area were remediated under a RAP approved on December 7, 1989. The selected remedial alternative includes excavation, chemical stabilization, off-site disposal, cleaning of debris/ballast, and clean fill for backfill.

Soils in the Property were remediated to cleanup levels that, along with adherence to the restrictions in this Covenant, are protective of all populations for planned land uses, including, but not limited to, commercial, retail, industrial, hospital, school, daycare, mixed use, residential and park use. However, soils on the Property were not remediated to levels protective for unrestricted land use so the RAPs require a land use covenant, which is satisfied by this Covenant.

1.04. Groundwater Remediation of Property. Groundwater and soil vapor impacts from VOCs beneath the Property are in the process of being remediated by and are the continuing obligations of UPRR, and contamination in these media will be addressed by the final remedies of the Central Shops soil and South Plume groundwater RAP and the future Lagoon Groundwater study area RAP and the future Manufactured Gas Plant soil and groundwater study area RAP.

The Central Shops and South Plume RAP was approved by the Department on July 3, 2013. The selected remedial alternative for groundwater includes air injection, groundwater extraction and treatment, plume containment, soil vapor extraction remediation systems, and monitored natural attenuation. The Lagoon Groundwater RAP

will be drafted after the Health Risk Assessment and Feasibility Study are complete. Groundwater monitoring wells, groundwater and soil vapor extraction wells, and related groundwater and soil vapor extraction remediation systems (collectively, "Remediation Systems") have been and may continue to be installed within the Property by UPRR as part of remediation in the South Plume and Lagoon Groundwater study areas and the Manufactured Gas Plant soil and groundwater study area. As a result of the long -term remediation, UPRR will have ongoing operations and maintenance obligations within the Property with regard to those Remediation Systems.

The South Plume and Lagoon Groundwater contain similar contaminants of concern but are a result of different sources. Groundwater contamination associated with the South Plume and Lagoon Groundwater has been identified as containing, but not limited to, 1,1-dichloroethane (DCA), 1,2-dichloroethene (DCE), tetrachloroethene (PCE), trichloroethylene (TCE), and vinyl chloride.

The South Plume and Lagoon Groundwater Health Risk Assessments conclude that VOCs in groundwater and soil vapor beneath certain areas of the Property may pose an unacceptable human health risk to future users based on potential migration into indoor air and groundwater contact absent compliance with this Covenant. This Covenant requires that vapor mitigation measures approved by the Department be implemented pursuant to Section 4.05 for activities or land uses at the Property to maintain an acceptable risk to human health, safety and the environment. Initially, the boundaries of the requirement for vapor mitigation measures shall apply to the entire Property, also referred to as the "Vapor Mitigation Areas", subject to adjustment to these boundaries approved by the Department, as evidenced in writing from the Department, confirming that areas removed from the Vapor Mitigation Areas do not pose an unacceptable risk to human health and safety and the environment (the map(s) of and information relating to the existing Vapor Mitigations Areas shall be maintained by the Department).

1.05. Basis for Environmental Restrictions. As a result of the presence of hazardous substances, which are also hazardous materials as defined in Health and Safety Code section 25260, at the Property, the Department has concluded that it is

reasonably necessary to restrict the use of the Property in order to protect present or future human health or safety or the environment, and that this Covenant is required as part of the Department-approved remedy for the Property. The Department has also concluded that the Property, as remediated and when used in compliance with the Environmental Restrictions of this Covenant, does not present an unacceptable risk to present and future human health or safety or the environment.

1.06. Sacramento Railyards. Transfer and Notice of Other Restrictive Covenant. On September 15, 2015, Covenantor acquired fee simple title to a portion of the Sacramento Railyards. The Property is located within and is a portion of the Sacramento Railyards. Concurrent with such transfer, Covenantor and UPRR entered into the Amended and Restated Covenant and Agreement Regarding Restriction on Use of Property and Grant of Easement and Environmental Restriction ("Revised Covenant Regarding Restriction on Use") and recorded, as an encumbrance on the Sacramento Railyards, such document in the Official Records of Sacramento County, California. This Covenant is referenced in the Revised Covenant Regarding Restriction on Use, but is entirely independent from such document.

1.07. MOA. Covenantor and the Department shall enter into a Memorandum of Agreement ("MOA") within ninety (90) days following the execution of this Covenant. The provisions of the MOA shall, among other provisions, include (i) establishing a process for Owners (or an owners' association formed by Covenantor representing Owners and Occupants) paying the Department's costs, and monitoring, inspecting and reporting in compliance with this Covenant on behalf of Owners and Occupants, (ii) the Covenantor's preparation of Soil Management Plan ("SMP") approved in writing by the Department for use in accordance with Article IV, and (iii) upon Covenantor's request, the providing of available information by the Department relating to (a) soil vapor impacts (including applicable information subsequently required by the Department from UPRR under the 1988 Enforceable Agreement) and resulting adjustments to the Vapor Mitigation Areas based upon such information, as applicable, (b) any required handling, transportation and/or offsite disposal of soil disturbed (or adjacent to such disturbance) in

accordance with Section 4.02, and/or (c) any required Remediation Systems to supplement Vapor Mitigation required in accordance with Section 4.05.

ARTICLE II
DEFINITIONS

2.01. Department. "Department" means the California Department of Toxic Substances Control and includes its successor agencies, if any.

2.02. Environmental Restrictions. "Environmental Restrictions" means all protective provisions, covenants, restrictions, prohibitions, and terms and conditions as set forth in this Covenant.

2.03. Improvements. "Improvements" includes, but is not limited to: buildings, structures, roads, driveways, re-grading, landscaping, bodies of water, parks and playgrounds, parking areas, wells, pipelines, or other utilities, constructed or placed upon any portion of the Property.

2.04. Lease. "Lease" means lease, rental agreement, or any other document that creates a right to use or occupy any portion of the Property.

2.05. Native Soil. "Native Soil" means soil present at the Property at the time Covenantor acquired fee title to the Property. Such soil has been remediated as described in Section 1.03 and requires restrictions as described in Section 4.01 and 4.02.

2.06. Occupant. "Occupant" means Owners and any person or entity entitled by ownership, leasehold, or other legal relationship to the right to occupy any portion of the Property.

2.07. Owner. "Owner" means the Covenantor, and its successors in interest including heirs and assigns, who at any time hold title to all or any portion of the Property.

2.08. Property. "Property" is defined in the introductory paragraph of this Covenant. The Property is composed of the Lagoon, Northern Shops, Central Corridor, Car Shop Nine and a portion of the Sacramento Station study areas, excluding the Manufactured Gas Plant study area, the 7th Street right-of-way, the 6th Street right-of-way, the Central Shops study area, and the Lagoon Northwest Corner study area. The Property does not include all study areas of the Sacramento Railyards.

ARTICLE III
GENERAL PROVISIONS

3.01. Runs with the Land. This Covenant sets forth Environmental Restrictions that apply to and encumber the Property and every portion thereof no matter how it is improved, held, used, occupied, leased, sold, hypothecated, encumbered, or conveyed. This Covenant: (a) runs with the land pursuant to Health and Safety Code section 25355.5 and Civil Code section 1471; (b) inures to the benefit of and passes with each and every portion of the Property, (c) is for the benefit of, and is enforceable by the Department, and (d) is imposed upon the entire Property unless expressly stated as applicable only to a specific portion thereof.

3.02. Binding upon Owners/Occupants. It is intended that this Covenant: (a) binds all Owners and Occupants of the Property, and their heirs, successors, and assignees; and (b) the agents, employees, and lessees of the Owners and Occupants and their heirs, successors, and assignees. Pursuant to Civil Code section 1471, all successive Owners and Occupants of the Property are expressly bound hereby for the benefit of the Department; this Covenant, however, is binding on all Owners and Occupants, and their respective successors and assigns, only during their respective periods of ownership or occupancy except that such Owners or Occupants shall continue to be liable after their ownership or occupancy for any violations of, or non-compliance with, the Environmental Restrictions of this Covenant or any acts committed or omissions made during their ownership or occupancy.

3.03. Incorporation into Deeds and Leases. This Covenant shall be incorporated by reference into each and every deed and Lease for any portion of the Property.

3.04. Conveyance of Property. The Owner shall provide written notice to the Department not later than thirty (30) days after any conveyance or receipt of any ownership interest in the Property (excluding Leases, and mortgages, liens, and other non-possessory encumbrances). The written notice shall include the name and mailing address of the new Owner of the applicable portion of the Property and shall reference the site name and site code as listed on page one of this Covenant. The notice shall also include the Assessor's Parcel Number(s) [APNs] as noted on page one. If the new Owner's portion of the Property has been assigned a different APN, each such APN that covers the new Owner's portion of the Property must be provided. The Department shall not, by reason of this Covenant, have authority to approve, disapprove, or otherwise affect a proposed conveyance, except as otherwise provided by law or by administrative order.

3.05. Costs of Administering the Covenant to be paid by Owner. The Department will incur administrative costs associated with this Covenant. Therefore, the Covenantor hereby covenants for the Covenantor and for all subsequent Owners that, pursuant to California Code of Regulations, title 22, section 67391.1(h), the Owner agrees to pay the Department's costs in administering, implementing, and enforcing this Covenant. One purpose of the MOA is to provide a consolidated mechanism for Owner to pay the administrative costs the Department will incur. If, however, payments are not made pursuant to the MOA, the Owner will be responsible for the Department's costs.

ARTICLE IV
RESTRICTIONS AND REQUIREMENTS

4.01. Prohibited Use.

If Improvements to be constructed on a discrete parcel(s) within the Property ("Improved Parcel") for any use, which allowed uses include, but are not limited to, commercial, retail, industrial, hospital, school, daycare, mixed use, residential or park use, include areas in which direct human exposure to Native Soil remains possible at the Improved Parcel following the completion of such construction (e.g. yards, open space or landscaped areas), the Owner or Occupant of the Improved Parcel shall install, keep and maintain a top layer of environmentally compliant soil of a thickness and composition to prevent exposure to such Native Soil which is reasonably satisfactory to the Department as being protective of human health, and the environment ("Compliant Soil Layer") (such criteria may be included in a SMP) approved in writing by the Department or determined by the Department on an individual Improved Parcel basis). Excepting routine maintenance upon the Compliant Soil Layer (e.g. replacement of irrigation, vegetation planting and replacement, or utilities maintenance), the Compliant Soil Layer shall not be disturbed unless the Owner or Occupant of the subject Improved Parcel demonstrates to the reasonable satisfaction of the Department that the disturbance of the Compliant Soil Layer is (1) necessary to the present or modified use of the Improved Parcel and can be accomplished in a manner that will not materially increase exposure to the Native Soil as compared to the existing Compliant Soil Layer or (2) is otherwise performed and completed in a manner the Department approves as being protective of human health and the environment. The Department may waive the requirement of a Compliant Soil Layer on a particular Improved Parcel if it is demonstrated to the Department's satisfaction, as evidenced in writing from the Department, that the Native Soil will not pose an unacceptable risk to human health and safety and the environment.

4.02. Soil Management.

(a) No activities that will disturb the soil (e.g., excavation, grading, removal, trenching, earth movement, mining, or drilling) shall be allowed on the Property without a SMP approved in writing by the Department.

(b) Any soils brought to the surface (including but not limited to by grading, excavation, trenching or backfilling) shall be managed in compliance with all applicable provisions of state and federal law and a SMP approved in writing by the Department.

4.03. Prohibited Activities. The following activities shall not be conducted at the Property:

(a) Drilling for water, oil, or gas without prior written approval by the Department.

(b) Extraction of groundwater except as approved in advance in writing by the Department in a groundwater management plan.

4.04. Non-Interference with Remediation Systems. No disruption of any Remediation Systems, including all-associated equipment shall be permitted without prior written approval by the Department. The Department shall reasonably consider the location and placement of new Remediation Systems to avoid unreasonable interference with Improvements.

4.05. Vapor Intrusion Mitigation Management. Any enclosed building or enclosed structure (including tunnels) or utility corridors to be constructed within the Vapor Mitigation Areas must be designed and constructed to include Vapor Mitigation

(as hereinafter defined) unless such area is exempted from such requirement by the Department. If Vapor Mitigation is required by the Department, the Covenantor or subsequent Owner shall certify in writing to the Department within thirty (30) days following completion of such construction that the required Vapor Mitigation was incorporated into such construction in accordance with the requirements of the Department.

"Vapor Mitigation" means design features within an enclosed building or enclosed structure (including tunnels) or utility corridors to be constructed, separate from the Remediation Systems, that prevent vapor intrusion within such building or structure at a level that poses an unacceptable risk to human health and the environment as determined by the Department. Vapor Mitigation may function independently or may be installed to work in coordination with existing or new Remediation Systems within or adjacent to the Vapor Mitigation Areas). Vapor Mitigation is not required if it is demonstrated to the Department's satisfaction before construction begins, as evidenced in writing from the Department, that vapor intrusion will not pose an unacceptable risk to human health and safety and the environment.

4.06. Access for Department. The Department shall have a reasonable right of entry and access to the Property for inspection, monitoring, and other activities as deemed necessary by the Department in order to protect the public health or safety, or the environment.

4.07 Access for Implementing Operation and Maintenance. The entity or person responsible for implementing operation and maintenance activities, if any, shall have a reasonable right of entry and access to the Property for the purpose of implementing such operation and maintenance activities until the Department determines that no further operation and maintenance activity is required.

4.08. Inspection and Reporting Requirements. One purpose of the MOA is to address all monitoring, inspection and reporting requirements required by this Section. 4.08. Therefore, it is understood that the reporting requirements of this Section 4.08 will

be met, as long as the MOA is complied with. If reporting requirements are not met through the MOA, then each Owner shall conduct an annual inspection of its portion of the Property verifying compliance with this Covenant, and shall submit an annual written inspection report to the Department for its approval by March 15th of each year. The annual inspection report must include the date(s), time(s), and names of those who conducted the inspection and reviewed the annual inspection report. It also shall describe how the observations were performed that were the basis for the statements and conclusions in the annual inspection report (e.g., drive by, fly over, walk in, etc.). If violations are noted, the annual inspection report must detail the steps taken to return to compliance. If an Owner identifies any violations of this Covenant during the annual inspections or at any other time, the Owner must within ten (10) calendar days of identifying the violation: determine the identity of the party in violation, send a letter advising the party of the violation of the Covenant, and demand that the violation cease immediately. Additionally, copies of any correspondence related to a violation of this Covenant shall be sent to the Department within ten (10) calendar days of its original transmission.

4.09. Signage Requirement. For those areas of the Property that remain unimproved (Improvements have not been constructed) and at which disturbance of Native Soil remains possible, the Owner(s) of such unimproved portions of the Property shall post and maintain signage which is reasonably adequate to provide notice of (i) no trespassing, and (ii) the prohibition of disturbing such soil (e.g., excavation, grading, removal, trenching, earth movement, mining, or drilling) in such areas, except as permitted under Section 4.02.

ARTICLE V
ENFORCEMENT

5.01. Enforcement. Failure of the Owner or Occupant to comply with this Covenant shall be grounds for the Department to require modification or removal of any Improvements constructed or placed upon any portion of the Property in violation of this

Covenant. Violation of this Covenant, including such as failure to submit (including submission of any false statement) a record or report to the Department, shall be grounds for the Department to pursue administrative, civil, or criminal actions, as provided by law.

ARTICLE VI
VARIANCE, REMOVAL AND TERM

6.01. Variance from Environmental Restrictions. Any person may apply to the Department for a written variance from any of the Environmental Restrictions imposed by this Covenant. Such application shall be made in accordance with Health and Safety Code section 25223.

6.02 Removal of Environmental Restrictions. Any person may apply to the Department to remove any of the Environmental Restrictions imposed by this Covenant or terminate the Covenant in its entirety. Such application shall be made in accordance with Health and Safety Code section 25224.

6.03 Term. Unless ended in accordance with paragraph 6.02, by law, or by the Department in the exercise of its discretion, this Covenant shall continue in effect in perpetuity.

ARTICLE VII
MISCELLANEOUS

7.01. No Dedication Intended. Nothing set forth in this Covenant shall be construed to be a gift or dedication, or offer of a gift or dedication, of the Property, or any portion thereof, to the general public or anyone else for any purpose whatsoever.

7.02. Recordation. The Covenantor shall record this Covenant, with all referenced Exhibits, in the County of Sacramento within ten (10) calendar days of the

Covenantor's receipt of a fully executed original.

7.03. Notices. Whenever any person gives or serves any notice ("Notice" as used herein includes any demand or other communication with respect to this Covenant), each such Notice shall be in writing and shall be deemed effective: (a) when delivered, if personally delivered to the person being served or to an officer of a corporate party being served, or (b) five (5) business days after deposit in the mail, if mailed by United States mail, postage paid, certified, return receipt requested:

To Covenantor:

Downtown Railyard Venture, LLC
3140 Peacekeeper Way
McClellan, California 95652
Attention: General Counsel

and

To Department:

Department of Toxic Substances Control
8800 Cal Center Drive
Sacramento, CA 95826
Attention: Sacramento Railyards
Program Manager
Cal Center Cleanup Program

Any party may change its address or the individual to whose attention a Notice is to be sent by giving written Notice in compliance with this paragraph.

7.04. Partial Invalidity. If this Covenant or any of its terms are determined by a court of competent jurisdiction to be invalid for any reason, the surviving portions of this Covenant shall remain in full force and effect as if such portion found invalid had not been included herein.

7.05. Statutory References. All statutory references include successor provisions.

7.06 Incorporation of Exhibits. All attachments and exhibits to this Covenant are incorporated herein by reference.

[REMAINDER OF PAGE LEFT INTENTIONALLY BLANK]

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 04° 20' 18" EAST, 258.98 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTHWESTERLY ALONG THE ARC OF A TANGENT CURVE TO THE RIGHT HAVING A RADIUS OF 200.00 FEET, THE CHORD SUBTENDED BY SAID ARC BEARS SOUTH 21° 09' 08" WEST, 172.14 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 83° 57' 15" WEST, 225.06 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTHERLY ALONG THE ARC OF A NON-TANGENT CURVE TO THE LEFT HAVING A RADIUS OF 980.00 FEET, THE CHORD SUBTENDED BY SAID ARC BEARS SOUTH 17° 04' 57" EAST, 41.08 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 18° 17' 00" EAST, TANGENT TO SAID CURVE, 127.28 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTHERLY ALONG THE ARC OF A CURVE TO THE RIGHT HAVING A RADIUS OF 520.00 FEET, THE CHORD SUBTENDED BY SAID ARC BEARS SOUTH 08° 28' 21" EAST, 177.21 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, NORTH 88° 39' 43" WEST, RADIAL TO SAID CURVE, 34.33 FEET TO AN ANGLE POINT IN THE BOUNDARY OF THE LAND CONVEYED TO THE STATE OF CALIFORNIA BY DEED RECORDED IN BOOK 8003-26 AT PAGE 478 OFFICIAL RECORDS OF SAID COUNTY;

THENCE ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 01° 25' 08" WEST, 204.49 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 01° 20' 08" WEST, 567.62 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 22° 17' 45" WEST, 242.66 FEET;

THENCE CONTINUING ALONG THE BOUNDARY OF THE LAND SO CONVEYED, SOUTH 13° 05' 18" WEST, 58.10 FEET TO A LINE PARALLEL WITH AND DISTANT 25 FEET NORTHERLY, MEASURED AT RIGHT ANGLES, FROM THE CENTERLINE OF SOUTHERN PACIFIC TRANSPORTATION COMPANY'S WESTWARD MAIN TRACT (SACRAMENTO TO OAKLAND) ALSO BEING A POINT ON THE NORTHERLY BOUNDARY LINE OF SAID CERTIFICATE OF COMPLIANCE RECORDED DECEMBER 28, 2006;

THENCE ALONG SAID NORTHERLY BOUNDARY LINE OF SAID CERTIFICATE OF COMPLIANCE SOUTH 71° 34' 07" EAST, 71.56 FEET;

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE 439.27 FEET ALONG THE ARC OF A 750.00 FOOT RADIUS TANGENT CURVE TO THE LEFT THROUGH A CENTRAL ANGLE OF 33° 33' 28";

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE NORTH 74° 52' 25" EAST, 583.72 FEET;

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE 136.27 FEET ALONG THE ARC OF A 1500.00 FOOT RADIUS TANGENT CURVE TO THE RIGHT THROUGH A CENTRAL ANGLE OF 05° 12' 18";

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE NORTH 80° 04' 43" EAST, 1035.82 FEET;

THENCE CONTINUING ALONG THE NORTHERLY BOUNDARY LINE 337.93 FEET ALONG THE ARC OF AN 825.00 FOOT RADIUS TANGENT CURVE TO THE LEFT THROUGH A CENTRAL ANGLE OF 23° 28' 09";

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE NORTH 56° 36' 34" EAST, 416.15 FEET;

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE 192.85 FEET ALONG THE ARC OF A 500.00 FOOT RADIUS TANGENT CURVE TO THE RIGHT, THROUGH A CENTRAL ANGLE OF 22° 05' 55";

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE NORTH 78° 42' 29" EAST, 1371.35 FEET;

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE 711.37 FEET ALONG THE ARC OF A 1370.00 FOOT RADIUS TANGENT CURVE TO THE RIGHT, THROUGH A CENTRAL ANGLE OF 29° 45' 03"

THENCE CONTINUING ALONG SAID NORTHERLY BOUNDARY LINE SOUTH 71° 32' 29" EAST, 93.07 FEET TO THE POINT OF BEGINNING.

NOT A PART #4

EXCEPTING THEREFROM THAT PORTION THEREOF DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT ON THE NORTHERLY BOUNDARY LINE OF SAID CERTIFICATE OF COMPLIANCE RECORDED DECEMBER 28, 2006, SAID POINT BEING THE SOUTHWESTERLY TERMINUS OF THAT CERTAIN COURSE HEREINABOVE DESCRIBED AS "NORTH 80°04'43" EAST 1035.82 FEET";

THENCE ALONG SAID NORTHERLY BOUNDARY AND SAID COURSE NORTH 80°04'43" EAST 961.33 FEET;

THENCE LEAVING SAID NORTHERLY BOUNDARY NORTH 09°56'42" WEST 551.08 FEET;

THENCE NORTH 71°01'28" WEST 117.98 FEET TO THE BEGINNING OF A 1,500.00 FOOT RADIUS CURVE CONCAVE SOUTHERLY;

THENCE WESTERLY AND SOUTHWESTERLY ALONG SAID CURVE, 1,622.79 FEET THROUGH A CENTRAL ANGLE OF 61°59'09";

THENCE SOUTH 46°59'22" WEST 18.91 FEET TO THE BEGINNING OF A 500.00 FOOT RADIUS CURVE CONCAVE NORTHWESTERLY;

THENCE SOUTHWESTERLY ALONG SAID CURVE, 59.06 FEET THROUGH A CENTRAL ANGLE OF 06°46'04";

THENCE SOUTH 18°41'13" EAST 335.62 FEET TO THE BEGINNING OF A NON-TANGENT 1,216.25 FOOT RADIUS CURVE CONCAVE SOUTHERLY, A RADIAL TO WHICH BEARS NORTH 04°32'00" WEST;

THENCE EASTERLY ALONG SAID CURVE, 581.74 FEET THROUGH A CENTRAL ANGLE OF 27°24'17" TO THE LAST SAID NORTHERLY BOUNDARY;

THENCE ALONG LAST SAID NORTHERLY BOUNDARY NORTH 74°52'25" EAST 21.41 FEET TO THE BEGINNING OF A 1,500.00 FOOT RADIUS CURVE CONCAVE SOUTHERLY;

THENCE EASTERLY ALONG SAID CURVE, 136.27 FEET THROUGH A CENTRAL ANGLE OF 05°12'18" TO THE POINT OF COMMENCEMENT.

NOT A PART #5

ALSO EXCEPTING THEREFROM THAT PORTION THEREOF DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT ON THE BOUNDARY OF THE LAND CONVEYED TO THE STATE OF CALIFORNIA BY DEED RECORDED IN BOOK 8003-26 AT PAGE 478 OFFICIAL RECORDS OF SAID COUNTY, DISTANT THEREON NORTH 01°20'08" EAST 258.95 FEET FROM THE SOUTHERLY TERMINUS OF THAT COURSE HEREINABOVE DESCRIBED AS "SOUTH 01°20'08" WEST 567.62 FEET";

THENCE LEAVING SAID BOUNDARY SOUTH 88°39'52" EAST 124.84 FEET TO THE BEGINNING OF A 100.00 FOOT RADIUS CURVE CONCAVE NORTHWESTERLY;

THENCE NORTHEASTERLY ALONG SAID CURVE, 157.08 FEET THROUGH A CENTRAL ANGLE OF 90°00'00";

THENCE NORTH 01°20'08" EAST 114.06 FEET TO THE BEGINNING OF A 25.00 FOOT RADIUS CURVE CONCAVE EASTERLY;

THENCE NORTHERLY ALONG SAID CURVE, 10.46 FEET THROUGH A CENTRAL ANGLE OF 23°58'13";

THENCE NORTH 25°18'21" EAST 6.40 FEET TO THE BEGINNING OF A 15.00 FOOT RADIUS CURVE CONCAVE SOUTHWESTERLY;

THENCE NORTHWESTERLY ALONG SAID CURVE, 25.47 FEET THROUGH A CENTRAL ANGLE OF 97°16'56";

THENCE NORTH 71°58'35" WEST 64.11 FEET TO THE BEGINNING OF A 25.00 FOOT RADIUS CURVE CONCAVE SOUTHERLY;

THENCE WESTERLY ALONG SAID CURVE, 22.10 FEET THROUGH A CENTRAL ANGLE OF 50°38'34";

THENCE SOUTH 57°22'51" WEST 6.94 FEET TO THE BEGINNING OF A 25.00 FOOT RADIUS CURVE CONCAVE NORTHERLY;

THENCE WESTERLY ALONG SAID CURVE, 14.82 FEET THROUGH A CENTRAL ANGLE OF 33°57'17";

THENCE NORTH 88°39'52" WEST 117.93 FEET TO THE SAID BOUNDARY OF THE LAND SO CONVEYED;

THENCE ALONG SAID BOUNDARY SOUTH 01°20'08" WEST 257.59 FEET TO THE POINT OF COMMENCEMENT.

NOT A PART #6

ALSO EXCEPTING THEREFROM THAT PORTION THEREOF DESCRIBED AS FOLLOWS:

COMMENCING AT THE MOST EASTERLY CORNER OF SAID PARCEL NO. 2 PER DEED RECORDED IN BOOK 655 OF DEEDS AT PAGE 489, OFFICAL RECORDS;

THENCE ALONG THE BOUNDARY OF SAID PARCEL NO. 2, SOUTH 89°35'01" WEST 488.40 FEET;

THENCE CONTINUING ALONG SAID BOUNDARY SOUTH 00°24'59" EAST 347.74 FEET;

THENCE LEAVING SAID BOUNDARY SOUTH 72°22'30" WEST 122.92 FEET;

THENCE SOUTH 00°24'58" EAST 26.76 FEET TO THE BEGINNING OF A NON-TANGENT 585.00 FOOT RADIUS CURVE CONCAVE SOUTHERLY, A RADIAL TO WHICH BEARS NORTH 03°12'17" EAST;

THENCE EASTERLY ALONG SAID CURVE, 97.48 FEET THROUGH A CENTRAL ANGLE OF 09°32'50" TO THE BEGINNING OF A COMPOUND 50.00 FOOT RADIUS CURVE CONCAVE SOUTHERLY;

THENCE EASTERLY ALONG SAID CURVE, 9.74 FEET THROUGH A CENTRAL ANGLE OF 11°09'53";

THENCE SOUTH 66°05'00" EAST 63.16 FEET TO THE BEGINNING OF A 50.00 FOOT RADIUS CURVE CONCAVE NORTHERLY;

THENCE EASTERLY ALONG SAID CURVE, 18.57 FEET THROUGH A CENTRAL ANGLE OF 21°16'36";

THENCE SOUTH 87°21'36" EAST 161.22 FEET TO THE BEGINNING OF A 1,000.00 FOOT RADIUS CURVE CONCAVE NORTHERLY;

THENCE EASTERLY ALONG SAID CURVE, 181.98 FEET THROUGH A CENTRAL ANGLE OF 10°25'36";

THENCE NORTH 82°12'48" EAST 427.49 FEET TO THE BEGINNING OF A 50.00 FOOT RADIUS CURVE CONCAVE NORTHWESTERLY;

THENCE EASTERLY ALONG SAID CURVE, 24.73 FEET THROUGH A CENTRAL ANGLE OF 28°20'21";

THENCE NORTH 53°52'27" EAST 60.28 FEET;

THENCE NORTH 55°14'42" EAST 495.14 FEET;

THENCE NORTH 06°37'42" WEST 170.56 FEET TO BOUNDARY OF SAID PARCEL NO. 2 OF THOSE CERTAIN PARCELS OF LAND CONVEYED TO THE RANSOM COMPANY BY DEED RECORDED IN BOOK 991 AT PAGE 486 AND 487 OF OFFICIAL RECORDS OF SAID COUNTY;

THENCE ALONG LAST SAID BOUNDARY SOUTH 83°22'17" WEST 808.60 FEET TO THE POINT OF COMMENCEMENT.

EXHIBIT "A"
LEGAL DESCRIPTION

NOT A PART #7

ALSO EXCEPTING THEREFROM THAT PORTION THEREOF DESCRIBED AS FOLLOWS:

COMMENCING AT A POINT ON THE BOUNDARY OF SAID DEED RECORDED IN BOOK 955 AT PAGE 427 OF OFFICIAL RECORDS, DISTANT THEREON NORTH 71°38'25" WEST 595.22 FEET FROM THE SOUTHEAST CORNER THEREOF;

THENCE SOUTH 37°58'39" EAST 170.07 FEET;

THENCE SOUTH 44°54'53" EAST 96.56 FEET;

THENCE SOUTH 57°02'03" EAST 142.49 FEET;

THENCE SOUTH 61°25'45" EAST 205.14 FEET;

THENCE NORTH 33°04'57" EAST 46.20 FEET;

THENCE NORTH 21°04'40" EAST 38.66 FEET;

THENCE NORTH 24°22'27" EAST 89.83 FEET;

THENCE NORTH 25°28'14" EAST 37.65 FEET TO THE BOUNDARY OF LAST SAID DEED;

THENCE ALONG SAID BOUNDARY NORTH 71°38'25" WEST 595.22 FEET TO THE POINT OF COMMENCEMENT.

ALSO EXCEPTING THEREFROM PARCEL D OF CERTIFICATE OF COMPLIANCE RECORDED DECEMBER 28, 2006 IN BOOK 20061228, PAGE 1682 OF OFFICIAL RECORDS OF SACRAMENTO COUNTY DESCRIBED AS FOLLOWS:

COMMENCING AT THE MOST EASTERLY CORNER OF THAT CERTAIN TRIANGULAR STRIP OF LAND CONVEYED TO THE CENTRAL RAILWAY COMPANY AS PARCEL NO. 2 BY DEED RECORDED IN BOOK 655 OF DEEDS AT PAGE 489;

THENCE ALONG THE BOUNDARY OF SAID PARCEL NO. 2, SOUTH 89° 35' 01" WEST, 488.40 FEET;

THENCE CONTINUING ALONG SAID BOUNDARY SOUTH 00° 24' 59" EAST, 347.74 FEET;

THENCE LEAVING SAID BOUNDARY SOUTH 15° 38' 36" WEST, 165.98 FEET TO THE TRUE POINT OF BEGINNING;

THENCE SOUTH 09° 58' 14" EAST, 581.56 FEET;

THENCE NORTH 79' 55" 50" EAST, 288.50 FEET;

THENCE NORTH 82° 07' 51" EAST, 150.00 FEET;

THENCE NORTH 80° 01' 46" EAST, 286.61 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE EAST HAVING A RADIUS OF 1263.14 FEET TO WHICH A RADIAL BEARS SOUTH 84° 10' 24" WEST;

THENCE NORTHERLY 498.86 FEET ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 22° 37' 42" TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE SOUTHEAST HAVING A RADIUS OF 375.26 FEET TO WHICH A RADIAL BEARS NORTH 02° 21'08" EAST;

THENCE SOUTHWESTERLY 162.38 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 24° 47' 34" TO THE BEGINNING OF A REVERSE CURVE CONCAVE TO THE NORTHWEST HAVING A RADIUS OF 526.33 FEET TO WHICH A RADIAL BEARS SOUTH 22° 26' 26" EAST;

THENCE WESTERLY 153.99 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 16° 45' 48";

THENCE SOUTH 84° 19' 22" WEST, 232.96 FEET TO THE BEGINNING OF A CURVE CONCAVE TO THE NORTH HAVING A RADIUS OF 637.00 FEET;

THENCE WESTERLY 275.31 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 24° 45' 46" TO THE BEGINNING OF A REVERSE CURVE CONCAVE TO THE SOUTHWEST HAVING A RADIUS OF 565.52 FEET TO WHICH A RADIAL BEARS NORTH 19° 05' 08" EAST;

THENCE NORTHWESTERLY 54.63 FEET ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 05° 32' 05" TO THE TRUE POINT OF BEGINNING.

THIS PARCEL IS ALSO DESCRIBED AS PARCEL 2 IN THE CERTIFICATE OF COMPLIANCE RECORDED JANUARY 31, 2007 IN BOOK 20070131 PAGE 2410, OFFICIAL RECORDS.

NOT A PART #3

ALSO EXCEPTING THEREFROM ALL THAT CERTAIN PROPERTY DESCRIBED IN THAT CERTAIN "GRANT DEED" TO THE CITY OF SACRAMENTO, A MUNICIPAL CORPORATION RECORDED FEBRUARY 28, 2011, IN BOOK 20110228 PAGE 0955 OF OFFICIAL RECORDS.

NOT A PART #1

ALSO EXCEPTING THEREFROM ALL THAT CERTAIN PROPERTY DESCRIBED IN THAT CERTAIN "GRANT DEED" TO THE CITY OF SACRAMENTO, A MUNICIPAL CORPORATION RECORDED APRIL 26, 2012, IN BOOK 20120426 PAGE 1168 OF OFFICIAL RECORDS.

CONTAINING 134.31 ACRES, MORE OR LESS.

PARCEL THREE:

ALL THAT CERTAIN REAL PROPERTY IN THE CITY AND COUNTY OF SACRAMENTO, STATE OF CALIFORNIA AND BEING A PORTION OF THAT CERTAIN 203.161 ACRE TRACT OF LAND SHOWN AND DELINEATED ON RECORD OF SURVEY FILED IN BOOK 51 OF SURVEYS AT PAGE 10 OF THE OFFICIAL RECORDS OF SACRAMENTO COUNTY AND A PORTION OF PARCEL A AS SAID PARCEL IS SHOWN AND SO DESIGNATED ON PARCEL MAP FILED IN BOOK 120 OF PARCEL MAPS, AT PAGE 10 OF OFFICIAL RECORDS BEING DESCRIBED AS FOLLOWS:

COMMENCING AT THE MOST EASTERLY CORNER OF THAT CERTAIN TRIANGULAR STRIP OF LAND CONVEYED TO THE CENTRAL RAILWAY COMPANY AS PARCEL NO. 2 BY DEED RECORDED IN BOOK 655 OF DEEDS AT PAGE 489;

THENCE ALONG THE BOUNDARY OF SAID PARCEL NO. 2, SOUTH 89° 35' 01" WEST, 488.40 FEET;

THENCE CONTINUING ALONG SAID BOUNDARY SOUTH 00° 24' 59" EAST, 347.74 FEET;

THENCE LEAVING SAID BOUNDARY SOUTH 15° 38' 36" WEST, 165.98 FEET TO THE TRUE POINT OF BEGINNING;

THENCE SOUTH 09° 58' 14" EAST, 581.56 FEET;

THENCE NORTH 79' 55" 50" EAST, 288.50 FEET;

THENCE NORTH 82° 07' 51" EAST, 150.00 FEET;

THENCE NORTH 80° 01' 46" EAST, 286.61 FEET TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE EAST HAVING A RADIUS OF 1263.14 FEET TO WHICH A RADIAL BEARS SOUTH 84° 10' 24" WEST;

THENCE NORTHERLY 498.86 FEET ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 22° 37' 42" TO THE BEGINNING OF A NON-TANGENT CURVE CONCAVE TO THE SOUTHEAST HAVING A RADIUS OF 375.26 FEET TO WHICH A RADIAL BEARS NORTH 02° 21'08" EAST;

THENCE SOUTHWESTERLY 162.38 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 24° 47' 34" TO THE BEGINNING OF A REVERSE CURVE CONCAVE TO THE NORTHWEST HAVING A RADIUS OF 526.33 FEET TO WHICH A RADIAL BEARS SOUTH 22° 26' 26" EAST;

THENCE WESTERLY 153.99 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 16° 45' 48";

THENCE SOUTH 84° 19' 22" WEST, 232.96 FEET TO THE BEGINNING OF A CURVE CONCAVE TO THE NORTH HAVING A RADIUS OF 637.00 FEET;

THENCE WESTERLY 275.31 FEET ALONG SAID CURVE THROUGH A CENTRAL ANGLE OF 24° 45' 46" TO THE BEGINNING OF A REVERSE CURVE CONCAVE TO THE SOUTHWEST HAVING A RADIUS OF 565.52 FEET TO WHICH A RADIAL BEARS NORTH 19° 05' 08" EAST;

THENCE NORTHWESTERLY 54.63 FEET ALONG THE ARC OF SAID CURVE THROUGH A CENTRAL ANGLE OF 05° 32' 05" TO THE TRUE POINT OF BEGINNING.

THIS PARCEL IS ALSO DESCRIBED AS PARCEL D IN THE CERTIFICATE OF COMPLIANCE RECORDED DECEMBER 28, 2006 IN BOOK 20061228, PAGE 1682 OF OFFICIAL RECORDS.

CONTAINING 8.74 ACRES, MORE OR LESS.

1.0 Introduction

1.1 Plan Purpose

This "*Railyards Projects Soil & Ground Water Management Plan"* ("Plan") has been prepared for use with each development project ("Project") constructed within the Downtown Sacramento Railyards, referred to as the "Master Development", which involve the handling of Development Soil and Development Groundwater (as such terms are hereinafter defined) and certain other matters described herein to ensure compliance with regulatory requirements and other obligations set forth in this Plan. Specific provision of this Plan apply to (i) the portion of the Master Development described in the LAND USE COVENANT AND AGREEMENT, ENVIRONMENTAL RESTRICTIONS, COUNTY OF SACRAMENTO, PORTIONS OF APNS 002-0010-049, 002-0010-052, 002-0010-056 AND 002-0010-058, SPECIFIED STUDY AREAS WITHIN THE SACRAMENTO RAILYARDS, SACRAMENTO, SACRAMENTO COUNTY, recorded in the Official Records of Sacramento County in Book _____, at Page___ ("LUC" and the real property described therein is the "Certified Area"), and (ii) the remainder of the Master Development ("Non-Certified Area"). The Master Development is described in Exhibit A, the Certified Area is described in Exhibit B, and the Non-Certified Area is descried in Exhibit C, each of which is attached hereto. The Soil Study Areas within the Master Development are shown on Exhibit D

This Plan's purpose is to describe required management, handling, and procedures associated with encountered soil, groundwater, and general waste streams with the potential to require special handling.

This Plan is based on existing regulatory order(s), including the 1988 Enforceable Agreement with Southern Pacific Transportation Company (SPTCo), the predecessor of Union Pacific Railroad Company ("UPRR") (the responsible party); along with relevant approvals, practices, and procedures that have been established during the cumulative regulatory process and working experience at the Master Development, and as set forth and implemented in several project-specific soil and groundwater management plans that have thus far been approved by the Department of Toxic Substances Control ("DTSC") and implemented at the Master Development.

This Plan has been prepared by Downtown Railyard Venture, LLC, a Delaware limited liability company ("DRV"), the owner of the Master Development. DRV intends to assign its rights under this Plan to an association formed under a Master Declaration of Covenants, Conditions and Restrictions and Reservation of Easements for Sacramento Railyards and, upon such assignment, the association shall have all the rights of DRV hereunder.

1.2 Project Construction Area and Plan Applicability

This Plan is applicable to all Projects within the Master Development and relates to (i) soils moved, handled, disturbed and/or excavated by or on behalf of a Project Proponent (as hereinafter defined) in anticipation of or during the course of a Project ("Development Soils"), (ii) groundwater encountered by or on behalf of a Project Proponent during the course of a Project that requires pumping for excavation activities ("Development Groundwater"), and (iii) the imposition of and the required satisfaction of other obligations set forth in this Plan.

Projects may be constructed on any single parcel, a combination of parcels, or areas

designated for open space and roadways, irrespective of the ownership of the various land components of a given Project; and may be constructed on land that crosses different ownerships, roads, and open space within the Master Development.

Implementation of this Plan for Projects that cross multiple parcels with different Parcel Owners are subject to (i) the prior approval of DRV, and (ii) the entering into of all required and relevant ownership agreements by the affected Property Owners for such Project.

This Plan applies to all current and future Property Owners, their respective successors and assigns, and each of respective operators, tenants, contractors and sub-contractors preforming construction activities as part of a Project.

1.3 Regulatory Framework

DTSC has been formally designated as the lead regulatory agency for the Master Development. As the lead agency, DTSC coordinates on Projects involving the handling of Development Soil and/or Development Groundwater aspects that relate to protection of human health and the environment, in consultation with other regulatory agencies as needed. DTSC primarily oversees and regulates all remediation work conducted by UPRR, which is under separate approved plans in accordance with DTSC's approval process.

Projects may be within one or more defined soil and groundwater remediation study areas ("Study Areas") that are subject to DTSC's 1988 enforceable agreement with UPRR. Such Study Areas may be under partial or total cleanup requirements that are being performed by UPRR separate and distinct from Projects. Unless otherwise indicated, soils within the Certified Area have been certified by DTSC as having met their respective RGs (as hereinafter defined) requirements.

The Study Areas within the Master Development are shown on Exhibit D and are: the Sacramento Station; the Central Shops and South Plume; the Central Corridor; the Northern Shops; the Lagoon; the Lagoon Groundwater; Car Shop Nine; the Northwest Corner; and the Manufactured Gas Plant (the Certified Area does not include all such Study Areas).

Remedial Goals ("RGs") for the Master Development have been selected by DTSC for each of the Study Area. These RGs, shown on Exhibit E, were/are established by DTSC to be the more protective value of either construction workers or groundwater exposure, taking into account inhalation of volatile constituents of concern released from groundwater into ambient air, trench air, and indoor air. Additionally, a set of remedial goals for groundwater were also selected to restore the groundwater to beneficial use – the groundwater quality Remedial Goals. RGs for the first encountered groundwater (the upper Sand Zone) are the more stringent of the health based goals or groundwater quality goals for a given constituent

The underlying assumption for this Plan for Development Soil handling purposes is that soil within the Certified Area has been certified, unless indicated otherwise. It is also assumes that historic and previously-identified contaminations within the Certified Area (Historic Contamination, also referred to as contamination) above RG levels has been remediated or placed under engineering or institutional controls approved by DTSC to meet the established cleanup goals.

This Plan describes development management activities for Development Soil and Development Groundwater consistent with DTSC directives for on-site management and testing for certified areas before appropriate final disposition is determined. In addition, this Plan

describes testing, management, treatment, and disposition activities that will be implemented in the event that Development Soil and Development Groundwater is determined to be above applicable RGs.

Existing approvals and standard operating procedures developed for Non-Certified Areas or inaccessible areas within the Master Development are described in Section 5. DTSC will be informed and consulted when work in these areas occurs.

1.4 Parties Implementing this Plan

The following constitute the general parties that are anticipated to implement this Plan:

- Project Proponent: The Project Proponent is defined as the entity that is primarily responsible for the construction of a given project. The Project Proponent will be responsible for obtaining all approvals and permits, encroachment permits, enter into agreements with owners as needed, obtain project approvals, execute all hazardous and non-hazardous waste manifests; file the storm water Notice of Intent, and oversee the implementation of the Project's SWPPP. The Project Proponent will obtain Property Owner(s) approvals on all items related to agreements governed between the parties (Property Owners and Project Proponent).

- Construction Manager: Working under the direction of the Project Proponent, the Construction Manager ("CM") will oversee the implementation of the Plan and ensure the compliance of General Contractors and sub-contractors. The Project Proponent may act as the Construction Manager.

- General Contractor: A Project's General Contractor will implement this Plan under the oversight of the CM, and in accordance with applicable rules and regulations, including agreements with owner(s).

- Environmental Oversight Project Manager: The Environmental Oversight Project Manager ("EOPM") will oversee activities related to the implementation of this Plan, and will coordinate with owners and regulators, as necessary. The EOPM may be part of the Project Proponent of the CM teams.

- Regulatory Oversight: The DTSC is the lead regulatory agency overseeing all aspects of Plan's implementation. Regional Water Quality Control Board, Central Valley Region ("RWQCB") coordinates and assists with the oversight of the site in areas where DTSC seeks support or areas that are under the direct jurisdiction of RWQCB.

- Property Owner: Public or private entity(ies) that own of all or portions of the property (including roadways and open space) within the Master Development where a Project(s) is to be constructed.

1.5 Plan Implementation, Amendments and Approvals

This Plan has been prepared in accordance with regulatory approvals and relevant agreements in compliance with engineering and institutional requirements of the LUC for the Certified Area.

The Property Owner and its Project Proponent for a given Project is responsible for implementing this Plan in accordance with the LUCs (applicable to the Certified Area), all applicable approvals and relevant laws and regulations, this Plan and the Approved Project Addendum (as hereinafter defined).

Should the need for amendments to this Plan arise with regard to a specific Project(s), such amendments shall be made with the written approval of DRV, the Property Owner, and DTSC prior to implementation. Any other amendment to this Plan shall be effective only following the approval of DTSC and DRV.

The following are examples of when DTSC's written approval is required:

- If there is an amendment to the Plan.
- If soil will be exported outside the boundary of the Master Development for any purpose other than disposal at regulated facilities.
- If additional time is needed beyond 30 days to sample Suspect or Impacted Soil stockpiles.
- If a Project is in a Non-Certified Area.
- If monitoring and extraction wells conflict with a proposed Project; and if they need to be removed, modified, abandoned, and/or relocated.
- If groundwater needs to be extracted, treated or discharged.

The following are examples of when DTSC will be notified:

- If roads need closure for soil transportation.
- If well caps are disturbed.
- If significant impacts are discovered, such as discovery of underground storage tanks.

1.6 Project Specific Details

At the inception of any given Project, the Project Proponent will submit to DRV and the various Property Owners whose property will be accessed or impacted, an addendum to this Plan to provide sufficient project details and describe project specific implementation tasks. No work on the Project shall occur until such addendum is approved by such receiving parties (such approved addendum is referred to as the "Approved Project Addendum"). The addendum shall at least include the following (to the extent applicable) and any other information required by this Plan or otherwise requested by the approving parties:

1. Brief project description
2. Project area(s), owner(s), and proponent(s)
3. Project main stakeholders, including public funding agencies, if any
4. Identify the Environmental Oversight Project Manager, Construction Manager, and General Contractor
5. Impacted or restricted areas or properties
6. Construction plans, including earth work handling and Land Use Plans

7. Encroachments, transportation and access routes, laydown areas, project management and support areas, off-site soil and material/waste removal and disposal, soil and material import protocols, and any similar such construction-required plans to be implemented
8. Groundwater control and dewatering plans, if any
9. Plans for wells and above ground or subsurface remediation system relocation and replacement, if any
10. Plans for removal of existing hardscape, especially but not limited to areas where remediation has not occurred, if any
11. Hazardous waste on-site and off-site handling and disposal plans
12. Storm Water Pollution Prevention Plan
13. Health and Safety Plan(s)
14. Transportation and debris handling and removal plan(s)
15. Archaeology oversight and review plan

2.0 Plan Environmental Context

This is a general plan for development construction activities within the Certified Area, and is based on the existing cumulative regulatory approvals that have been developed and approved by the DTSC.

As previously indicated, this Plan identifies a wide range of activities to address various development construction tasks that may be encountered during the development of a Project. These tasks include, but are not limited to, soil excavation and stockpiles, soil transportation, health and safety, asbestos handling and mitigation, groundwater handling, debris handling, well abandonment or adjustment, and general site requirements, among others.

2.1 Project Remedial Goals

In the event RGs are changed by DTSC, all such modified RGs will be applicable and will replace any earlier RGs. The Plan is subject only to the final RGs approved by DTSC at the time of Project implementation.

As a general rule, DRV requires that all construction workers and support staff directly handling soil and groundwater shall be OSHA 40-Hour HAZWOPER trained, Level D criteria, which generally requires personal protective equipment: hard hat, gloves, boots, reflective vest, eye shield (glasses), ear protection, and disposable dust mask as needed (this is not a DTSC requirement). Additional protective measures, such as Level C, are not expected to be used and are not required, unless new unforeseen conditions are encountered that would require such additional protective measures.

The Project Proponent will also require that its Project(s) must proceed in accordance with the mitigation measures set forth in the relevant California Environmental Quality Act (CEQA) and the National Environmental Policy Act (NEPA) documents completed for the Master Development and/or specific additional project-related environmental approvals, if and where applicable. All Projects are required to implement applicable regulations regulating storm water control and project drainage under the City's National Pollutant Discharge Elimination System (NPDES) permit that applies to the subject site and is regulated by the RWQCB. This Plan does not address compliance with those additional regulatory requirements, and anticipates that proper implementation and adherence to such requirements will be observed. Discharge may be regulated by any or all of the following: the City of Sacramento, Sacramento Regional County Sanitation District, and RWQCB.

As a general rule, soils in certified areas may be utilized for further construction purposes within the same legal parcel. Above-RG soils, if encountered, would be handled in accordance with the measures set forth in this Plan for Impacted Soils.

Development Groundwater extracted during the course of for construction control will be tested. Development Groundwater that meets discharge requirements will be discharged into the sanitary sewer under the proper permitting requirements. Development Groundwater that exceeds discharge requirements will be treated in accordance with the applicable permits prior to discharge into the sanitary sewer.

In all events, were Impacted Soil and Development Groundwater that are above-RGs are encountered, the Property Owner and DRV will be notified immediately and work shall stop in the impacted area. All reasonable efforts will be made to relocate work to other areas, where possible, to allow for determination of responsibility of removal, before such removal occurs.

Contractors shall not remove or handle Impacted Soil or Development Groundwater that exceed RGs unless directed by the Project Proponent following consultation and direction from the Property Owner(s) and DRV. Other parties may have the responsibility to handle, remove and dispose of Impacted Soil and Development Groundwater that exceed RGs found to be impacted with historic contamination.

2.2 Site Constituents of Concern

Subject to the completed remediation processes performed by UPRR, past Constituents of Concern included heavy metals, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), and total petroleum hydrocarbons (TPH). Both friable and non-friable asbestos-containing materials (ACM) were also encountered in fill soils, transit pipes, and industrial waste buried on-site.

3.0 Development Soil Handling

3.1 Rationale for Development Soil Management

As a general rule, soils at the Certified Area have been certified by DTSC to have met relevant RGs, unless indicated otherwise. Nonetheless, the procedures in this Plan apply to any Development Soil and Development Groundwater encountered within the Certified Area, regardless of the certification status or remedy implementation.

All Development Soil that are below RGs may be either returned to the same excavation from which it was excavated or relocated to another area of the Master Development for which the same cleanup levels apply subject to the prior written approval of DRV. No soil above RGs should be returned to an excavation. Above RG soil should be properly characterized and handled, as described in later sections of this Plan.

In cases where Development Soil are relocated to areas owned by different Property Owners from the Project Proponent or area of property where material was originated, agreements with all affected Property Owners must be achieved, DRV shall have approved of such movement, and soil sampling protocol to establish soil conditions may be required as necessary as determined by DRV. The sampling protocol will be in accordance with the procedure set forth in this Plan, the intent of which is to ensure, where necessary, that soils transported meet owners agreements, the requirement of DRV, and the respective the RGs for the receiving Study Area as well as the originating Study Area.

Soils shall not be exported to any other sites outside the Master Development boundary for any purpose other than disposal at regulated facilities, unless prior approval from DTSC, DRV and the Property Owner is secured. Subject to the above movement limitations, for the purpose of transportation within the Master Development, properties owned by separate Property Owners are considered a single unit subject to the Master Development overall approvals.

3.2 Site Soils and Area Use Classification

Development Soil will be classified into 3 general categories:

1. Non-Impacted Soils: These soils represent the general rule. All soils at the Certified Area are considered Non-Impacted Soils unless proven otherwise. These soils are excavated from certified areas.

2. Suspect Soils: Soils excavated from certified areas with apparent indications (through the presence of discoloration, odors, PID, suspect material and debris, or similar indicators) that RGs may be exceeded as evident from site experience and observations of the EOPM or qualified designated personnel.

3. Impacted Soils: Suspect Soils which exceed RGs as determined by laboratory analytical results or which are expected to exceed those RGs as evidenced by excessive discoloration, presence of ACM, notable distinctive odors, sheen, or free product, as determined by the EOPM or qualified designated personnel.

The Development Soil handling methodology has been planned to follow a methodical execution that maintains adherence to the approved regulatory framework while simultaneously allowing General Contractors sufficient ability and clear process to implement its construction activities. In order to achieve this goal, a Project Proponent for a given Project must

establish areas for laydown, access, construction, and support purposes as necessary for the Project given the specific Project details and scope.

Prior to starting work, as part of the Approved Project Addendum, a Project Proponent must reach written agreement(s) with DRV on all necessary encroachments, access, staging, laydown, work, handling, management and support areas.

These areas can be modified from Project to the next as the need arise, with the approval of the relevant parties.

1 Construction and transportation access roads: These roads are to be within the Master Development to be used strictly for access and transportation purposes. Use of these roads does not require implementation of DOT regulations on public roads. This use includes crossing public roads within the Master Development, including 7th Street and other recently constructed roads, for the purpose of connecting between two or more parcels.

2 Standard wash and decontamination areas: Locations that are established to inspect and clean trucks, vehicles, and other heavy equipment prior to departing from impacted areas to non-impacted areas or from on-site to off-site areas. As a general rule, no vehicle is permitted to cause the generation of debris outside the Master Development or on-roads within the Master Development. Such responsibility is strictly the General Contractor's responsibility.

3 Access to public roads: Access points to public roads should be identified and used for general construction purposes. Should the need arise for the transport of regulated material or waste on public roads, the relevant regulations governing the transport of hazardous material, found at Title 49 of the Code of Federal Regulations, will be followed, except for cases where public roads are used for crossing from one development area to another. In situations where direct or diagonal crossing is needed, DOT regulations will not be required or implemented. Public roads may be temporarily closed for public use in the event transportation of impacted material is necessary along the entire length of the closed road. In this case, DOT regulations will not be required during the period of closure. DTSC, DRV and relevant property owners shall be informed of this use and closure prior to implementation and approval shall be granted prior to such implementation.

4 Concrete/asphalt processing: Areas designated for appropriate concrete and asphalt processing, to be reused by a given Project as needed.

5 Permanent soil staging: These are holding areas where Non-Impact Soils for reuse at the Master Development in excess of the Project's need will be held for subsequent use by other Projects.

6 Construction route requiring stabilization with crushed rock: These are construction areas that may be needed by a given project requiring some road stabilization to enable use.

7 General staging: This will be the overall staging areas for a given Project, where staging of construction material and equipment will occur.

8 Groundwater treatment access: This area is to be designated should the need arise for groundwater treatment, if needed.

9 Groundwater treatment facility: Where needed, a temporary treatment facility may be used for the treatment and discharge of Development Groundwater. A groundwater extraction and treatment plan for Development Groundwater must be approved by DRV, DTSC and RWQCB prior to implementation.

10 Groundwater treatment staging: This is an area that may be used for staging any needed vessels, filters, tanks and equipment/material required for groundwater treatment and control.

11 Soil treatment: This area is to be used for the staging of Impacted Soils; treatment, testing, and further characterization; and staging for Impacted Soils scheduled for off-site hauling by truck or rail.

12 Soil staging: This area is to be designated for storage of Non-Impacted Soils to be placed back into the respective Project.

13 Suspect Soil staging: This area is to be designated for the holding of Suspect Soil.

14 Trailer area: Areas to be used for housing all construction trailers, parking for construction crews and management staff, as well as staging of small support equipment, such as generators, portable bathrooms, and similar facilities.

3.3 Contractor's Excavation and Handling Approach

Prior to the commencement of work on any Project, as part of the Approved Project Addendum, the Contractor will submit to DRV and the various property owners whose property will be accessed or impacted, a plan that identifies all needed elements. These elements include all soil excavations, soil and material hauling and transportation, groundwater extraction and health and safety controls, among other Project requirements. This plan shall be prepared by the General Contractor in accordance with the conditions set forth in this Plan.

3.4 Project-Specific General Handling Conditions

Along with the Contractor's plan, Project-specific general handling procedures for handling various types of potential material that could be encountered should be prepared. These types of materials include vegetation, metal and wood scrap, asphalt deposits, and bricks.

As a general rule, the following will be implemented:

1 No material, soil, waste, water, debris, equipment of any kind will be transported or placed onto properties owned by others, without written approval by said other property owner and DRV.

2 All categories of Development Soils, waste and material generated by a given owner shall be retained on such owner's property only. If an owner is not DRV, such soils, waste and material may be transported onto DRV owned property in designated areas approved in writing by DRV and only following written encroachment and use agreements with DRV. No soil, waste or material shall be placed onto or passed through any DRV owned property by other owners, either in a temporary or permanent state, without a written approval and encroachment agreement with DRV.

3 All hazardous and non-hazardous waste manifests of soils generated will be signed by the Project Proponent.

4 Impacted Soils for the area from which they were excavated may be placed in a designated area within the Property Owner's property where they were generated. Subject to the prior approval of DRV, these soils may be relocated to other study areas with RGs that such soils do not exceed, provided there is sufficient analytical data to demonstrate that the soil is below all RGs of the receiving study area, or may be treated at designated areas to meet such goals, where possible. These soils may be transported off-site for disposal in accordance with applicable regulations should they fail to meet RGs for their source or destination areas.

5 Implementation of the Project's storm water pollution protection plans and preparation and submittal of the associated reporting requirements (e.g., Notice of Intent, Annual Reports, Notice of Termination) will be the responsibility of the Project Proponent.

6 The locations of the completed excavations, soils and material placed and generated stockpiles will be quantitatively determined using surveying appropriate methods, if and where required by Property Owners and Project contract documents.

7 In the area where Suspect Soil, Impacted Soil and any other impacted materials were held, the final clearance of the surveyed volume will include additional scraping of at least 3 inches of soils below originally surveyed grade. As such, surfaces in these areas will be prepared, graded and surveyed for original grade elevations prior to depositing any soils.

8 Where and if needed, a protective cover, such as plastic sheeting, will be used prior to stockpiling and handling soils. Plastic sheeting may be needed to protect original ground from newly deposited Impacted Soils or for purposes of complying with the requirement of the Project's storm water pollution prevention plan, as necessary. Specifically, 20 mil HDPE plastic sheeting and runoff berms will be used if soil moisture is such that free liquid is released from Impacted Soils. Refer to Section 4.1 for the handling and management of stockpiled soils to prevent migration of contaminants.

9 Fugitive dust emissions shall be controlled in accordance with applicable regulations, and shall be maintained at acceptable levels per the project-specific health and safety plan and existing regulations using water or other appropriate surface treatment.

10 Based on the history of industrial activity at the Master Development, workers may encounter significant debris, industrial deposits, and foundation remnants in fill soils. Debris may consist of scrap metal associated with the railroad industry, concrete fragments and foundation pieces, rock fragments such as granite of various sizes, and wood debris. Brick and asbestos containing material (ACM) may also be encountered. ACM-free debris does not pose an unacceptable risk to construction workers. Bricks on their own are not a cause of concern, unless coupled with other factors with known impacts. In some areas in the past, brick and ACM have been associated with foundry waste that generated Impacted Soils that have required remediation. In the event bricks or ACM are encountered, the EOPM must be notified. The EOPM will assess if the need for additional assessment is required, will determine the need for material handling procedures and, as appropriate, direct brick and/or ACM to be placed in a secure storage area, as described hereafter. All impacted brick material and asbestos waste will be isolated and disposed of at a regulated facility in accordance with applicable regulations. Such material will be properly secured, tested and handled at a designated area.

4.0 Development Soil Management Protocol

4.1 Holding Areas

During development construction activities at a Project, workers may encounter Development Soil that have significant and distinctive visual or odor indications of being Suspect Soils that may exceed RGs for the study area from which they were generated. Such Development Soil may fall under the categories of Suspect Soils and/or Impacted Soils. The EOPM must be immediately notified if such conditions are encountered.

Each Project, depending on specifics, will establish holding areas for known Impacted Soils and for Suspect Soils. The location, access, and maintenance of these areas are to be agreed upon among DRV, Property Owners and/or Projects Proponents. The area where Impacted Soils is to be held shall be designated as an exclusion zone and will be limited in access to authorized personnel only. In the event that Suspect Soils are encountered, upon direction from the EOPM, they must be transported to their respective holding areas pending final determination and disposition.

The specific size, location and construction details of these areas will be determined in coordination with the scheduled General Contractor, DRV and the relevant Property Owners based on the location and timing of active construction activities. Agreements with DRV and Property Owners are required for any use and placement of soils in these areas.

The holding areas will be designed to receive Suspect Soil from transport vehicles as determined by the General Contractor and agreed to by DRV, the landowners and Project Proponent(s). Soils held in the exclusion zone shall be stabilized if needed (e.g., covered with plastic sheeting or sprayed with a quick hardening foam, or equivalent) as soon as practical after being placed within the secure storage area, until it can be demonstrated that the soil meets applicable RGs. Appropriate SWPPP responsibilities will be allocated based on use between projects. The holding areas will be clearly marked and staked.

Suspect Soils held in their respective holding areas are intended to remain for a brief period of time, and shall be stabilized only if needed in compliance with dust control and SWPPP measures. This action is intended to limit release of wind-blown dust from the stockpiles during the holding period. All soils placed within the holding areas pending disposition shall be segregated in a manner that avoids commingling of different constituents.

Within the holding area, Suspect Soil will be sampled under the direction of the EOPM in accordance with soil profiling procedures established in this Plan. If Suspect Soils within their respective soil staging area are characterized as containing Constituents of Concern above RGs, these soils will be moved to the area where Impacted Soils are held, and will be placed on plastic sheeting as appropriate, as soon as possible.

The respective exclusion zones for a given Project will be restricted to authorized personnel only with 40-hour HAZWOPER training for workers and the needed training for managers. If ACM is present, ACM regulations pertaining to certification and training of workers shall be implemented. The EOPM shall be responsible for coordinating removal and/or treatment of soil stockpiled in the holding area that contains constituents in excess of RGs and that requires handling, disposal and/or treatment.

4.2 Development Soil Stockpile Types

This section includes the defining characteristics of generated stockpiles for Non-Impacted Soils, Suspect Soils and Impacted Soils and the respective handling and management procedures to be followed.

All generated dynamic stockpiles for the various categories of encountered soils (Non-Impacted, Suspect and Impacted) are temporary. Final stockpiles are only Non-Impacted Soils, and are held for long-term re-use on-site.

Suspect Soils stockpiles that have been generated will be evaluated or characterized as soon as practicable to facilitate construction expediency and appropriate management, but no later than thirty (30) days after stockpile formation unless the stockpile is moisture conditioned and fully wrapped in plastic sheeting, or an approval for a longer duration has been granted by the Project Proponent. After a Suspect Soils or Impacted Soils stockpile has been characterized, it will be handled according to its classification and applicable regulations.

The volume and placement of individual stockpiles will depend on its category.

- Non-Impacted Soils stockpiles: No sampling will be required for these Non-Impacted stockpiles if they remain on Project Proponent property and are returned to their initiating excavation. These may be up to approximately 5,000 cubic yards in volume, and may be initially placed in their appropriate areas as agreed upon by the General Contractor, Project Proponents and Property Owners. These stockpiles will be constructed to allow for visual inspection. Once a stockpile reaches a volume of 5,000 cubic yards, a second stockpile may be started adjoining to it to allow for any needed management on the first (if any) while the second is being constructed. As the second stockpile is constructed, the first will be reshaped and surveyed to allow the placement of another lift of up to 5,000 cubic yard on top of the existing soils. The process is continued until mass excavation is finalized for a given phase. If these Non-Impacted Soils stockpiles are relocated to be used for another purpose in different areas, owned by a different Property Owner or with more restrictive RGs, these Non-Impacted Soils stockpiles will be sampled for the relevant Constituents of Concern using 1 discrete sample per 500 cubic yards. In all cases, soil stockpiles will be surveyed and tracked to establish record of generation, handling, deposition and destination.

- Suspect Soils and Impacted Soil will be moved to the areas designated for Suspect Soils and Impacted Soil stockpiling, respectively.

- Suspect or Impacted Soils stockpiles will be located in their respective area in volumes not exceeding 500 cubic yard piles, as needed and as space allows, and will be identified by the excavation that the soil originated from. Soils that potentially have the same Constituents of Concern as determined by laboratory analytical results will be combined to form the same stockpiles. Suspect Soils stockpiles that are found to be Impacted Soil will be moved to areas designated for Impacted Soils upon characterization and profiling, and will remain pending their final disposition. These stockpiles will be sampled with 2 discrete samples to be analyzed for the subject Constituents of Concern for every 500 cubic yard, as needed. As previously indicated, these stockpiles will be sampled and characterized as soon as possible, but no later than thirty (30) days from formation unless the stockpiles are moisture conditioned and fully wrapped in plastic sheeting, or if additional time is approved by DTSC and Property Owner.

4.3 Stockpile Profiling

Suspect and Impacted Soils stockpiles will be profiled by collecting appropriate samples as previously discussed. These stockpiles will remain until the soil reaches its final disposition.

Non-Impacted Soils may be used as fill within the Master Development, so long as it meets the RGs for its respective area of use, and agreements between DRV and the relevant parties exist for such use.

Other than customary use of Non-Impacted Soils within the Certified Area, additional scenarios that may generate stockpiles of Non-Impacted Soils include the following:

- The characterization of a Suspect Soils stockpile indicates that no Constituents of Concern are present above the RGs for the area of intended reuse and such soil shall thereafter be deemed Non-Impacted Soil and handled in accordance with this Plan.

- The characterization of a treated stockpile of soil indicates that the Constituents of Concern in the soil have been remediated to below the RGs for the area of intended reuse and such soil shall thereafter be deemed Non-Impacted Soil and handled in accordance with this Plan.

- Construction-related excavation or grading in a Non-Impacted Soils will generate a stockpile of Non-Impacted Soils below RGs for the area of intended reuse. This could include removal of a Non-Impacted Soils overburden layer to access Impacted Soils and grading for drainage purposes.

All Non-Impacted Soils stockpiles will be labeled with a sign designating it as Non-Impacted Soils in accordance with this Plan. Based upon the criteria established herein, no Impacted Soils for the area of intended reuse or debris (including, but not limited to ACM) will be commingled with Non-Impacted Soils or Suspect Soils stockpiles.

Soils stockpiles may be an accumulation of smaller stockpiles that meet the same RGs. Project Proponents will retain information sufficient to allow it determine which soils (by quantity) originally exceeded the RGs for the area from which they were excavated and which soils (by quantity) met those goals when they were excavated.

4.4 Development Stockpile Management

Fugitive dust emission controls, volatile chemical emission controls, and storm water BMPs will be in place for each stockpile as follows:

- ***Fugitive Dust Emission Controls –*** During the wet winter months, fugitive dust emissions from stockpiles is not expected to be a concern. During the active construction (dry) season, the General Contractor will implement standard dust control procedures for earthwork construction. These dust control procedures are anticipated to follow all applicable Fugitive Dust regulations. The dust control procedure for stockpiles will at least entail applying water with a sprayer on a water truck, with or without a tackifier additive, to the stockpiles, or an equally protective measure that will meet applicable regulations.

- ***Volatile Chemical Emission Controls –*** The control of chemical emissions (if any is

encountered) will be dictated by the allowable limits established in the General Contractor-supplied Health and Safety Plan (for worker protection), the Air Monitoring Plan (for protection of the nearby public), or the SMAQMD. Specifically, the SMAQMD requires that the stockpiles be covered with plastic sheeting if the soil contains greater than a set threshold (50 mg/kg, to be updated using most current standard at the time of Project) for total VOCs, which includes total purgeable petroleum hydrocarbons. Pending analytical results, any stockpile that is judged to likely contain VOCs at a concentration above applicable threshold will be covered with plastic sheeting as soon as practicable. If a given soil stockpile is judged unlikely to contain Constituents of Concern above this threshold based on analytical data, field observations, and/or measurements, emission controls will not be required for that stockpile.

- ***Storm Water BMPs –*** During the wet winter months and any rainy periods of the construction (dry) season, typical construction storm water BMPs will be implemented in the stockpile holding areas and around any impacted or suspected impacted stockpiles, to minimize runoff and erosion of stockpiles as outlined in the Project's SWPPP.

  Some of the storm water BMPs may include: (1) placing silt fences and straw bales at the base and around the perimeter of the stockpile; (2) compacting the surface of the stockpile to reduce the amount of loose soil that creates sediment and erosion problems; and (3) covering stockpiles with plastic sheeting. Provisions of the SWPPP stipulate that sediment and COC runoff from the site will not be permitted.

  The storm water BMPs for the reuse soil stockpiles will be implemented like a typical Non-Impacted Soils grading project to prevent nuisance associated with storm water and sediment runoff. Given the chemical nature of reuse stockpiles, storm water BMPs to control contamination of storm water runoff due to their presence are unlikely to be necessary.

4.5 Development Stockpile Locations

Stockpile location and placement within the Project area will be specifically determined based on Project-specific needs, and will take into account the following:

- ***Proximity to the Property Line –*** Stockpiles will be constructed away from property lines to the extent possible, to reduce the potential nuisance to off-site persons and entities from dust, noise, and emissions without significantly restricting construction activities.

- ***Proximity to Track 150 –*** The remaining portion of Track 150, east of 7th Street, as relocated at the time of implementation, has been designated for railcar loading, if and when needed. Therefore, soil that is not eligible for reuse at the Master Development and has been characterized for off-site disposal to a Class I facility and/or soil that requires treatment may, subject to DRV prior approval, be staged along Track 150, east of 7th Street, provided appropriate access and use agreements with DRV, affected property owner(s) and UPRR (limited to the providing of rail service) are secured.

- ***Excavation Sequencing –*** The locations selected for stockpiles will depend on the planned excavation sequencing, so that stockpiled soil does not interfere with remedial excavations or associated activities.

- ***Proximity to Treatment Areas –*** Impacted Soil that is characterized as requiring treatment, if any, will be staged close to the applicable treatment area, likely located near Track 150 (pending approved property owner agreements), whenever possible. Excavation sequencing will also impact the locations of treatment areas.

- ***Original Grade Distinction –*** Before Suspect or Impacted Soils is stockpiled in any given area, the original grade elevations will be appropriately surveyed and will be distinguished with a sheet of plastic such that the original grade may be restored without leaving Impacted Soils or inadvertently over-excavating the area when removing the stockpile. These stockpile areas may also be excavated to a shallow depth of approximately 3 inches below the original grade to ensure that Impacted Soils, if any, has been removed and handled according to the provisions of this Plan.

4.6 Suspect or Impacted Stockpile Tracking & Recordkeeping

The EOPM, or other qualified designated personnel, will oversee the implementation of a reliable tracking and recordkeeping system to efficiently manage each Suspect and Impacted Soil stockpile generated. This is expected to include frequent global positioning system (GPS) surveying and mapping of stockpiles to produce stockpile maps. A stockpile needs to maintain a unique identity throughout the characterization process.

4.6.1 Stockpile Tracking

The types of information associated with each Suspect and Impacted Soil stockpile will include:

- An identification number that links stockpiles with the excavation source;

- The location of the stockpile within the Project utilizing a GPS such that one stockpile is not mistaken for another;

- The date(s) generated;

- Sampling information, if any, including the number of samples collected, the date of sampling, and the analyses requested (information contained in a typical chain-of-custody document); and

- Analytical data, if any, that characterizes the stockpile and facilitates its disposition.

A weatherproof sign will be posted in each stockpile that identifies:

- The stockpile by number;

- The Constituents of Concern expected in the soil, if any;

- The excavation number that was the source of the soil;

- The date the stockpile was sampled, if any; and

- The disposition of the soil once it is characterized.

4.6.2 Stockpile Disposition Decision Making

Before final disposition for a stockpile is determined, the following will be reviewed:

- The source and quantity of the soil (excavation identification), including the study area from which the soil originated;
- The expected Constituents of Concern, if any;
- Whether or not ACM was visually detected in the soil either visually or though appropriate testing;
- The sampling frequency from the stockpile;
- The analytical data from the stockpile; and
- Observations and field screening data from daily reports documenting the initial excavation of the soil.

Throughout work on Projects, a working database and related records of all Suspect and Impacted Soils stockpiles (as well as re-use stockpiles or as required by contract documents or owner agreements) will be maintained. In addition to the working database and records keeping, each stockpile will have a posted sign with the identification and characteristics of the stockpile.

4.7 Control of Storm Water, Erosion, Dust, and Volatile Chemical Emissions

The procedures for controlling storm water runoff, erosion, dust, and emissions must be protective of the environment and human health both on and off site, but must also be practical and implementable. In general, stockpiles will not be covered with plastic sheeting unless it is required to reduce emissions or fugitive dust in accordance with permit requirements and health and safety requirements or as required by this Plan. However, if encountered, stockpiles with high VOCs and/or volatile TPH emissions will be covered as soon as practicable in accordance with applicable requirements.

The control procedures during the dry construction season will be different from those of the wet winter months. The basic requirements for the control procedures at any time of the year will be to:

- Prevent off-site and on-site migration of contaminants through storm water, sediment, or dust;
- Control fugitive dust emissions in accordance with the SMAQMD Fugitive Dust Rule 403, the HSP requirements, local grading ordinance requirements, and other applicable regulations;
- Minimize cross-contamination on site; Control volatile chemical emissions in accordance with SMAQMD requirements and the Health and Safety Plan;
- Perform adequate storm water control and monitoring, as described in the SWPPP, to ensure that inappropriate storm water runoff and run-on does not occur;
- Perform adequate site and perimeter control of fugitive dust emissions and volatile

chemical emissions.

- No construction related activity will be conducted for this Project unless covered under an approved SWPPP for the area where such activity will occur.

5.0 Development Activities in Non-Certified Areas

This Section 5 applies to any Project within the Non-Certified Areas. The following constitutes the general process to address characterization, trenching, and backfilling activities for a Project within Non-Certified Areas, such as Central Shops Study Area and the Excluded Triangle east of Vista Park.

A Project(s) in the Non-Certified Area can only commence after the Project Proponent obtaining written approval from DRV, the Property Owner affected by the Project (s) and DTSC of an Approved Project Addendum, which also address the criteria set forth in this Section 5. In addition to its own internal approval process, DRV's approval may include the gaining of UPRR's approval of the Project due to UPRR's ongoing remediation obligations in such areas which may include adherence to additional processes required. Project Proponents must assume that all soils, including soils at depths deeper than previously remediated or characterized by UPRR, encountered during the course of a Project with in the Non-Certified Area are Suspect Soils, and will be subject to the characterization protocol described below (which shall be addressed in and supplemented by the Approved Project Addendum for such Project):

1 Following concrete removal, and prior to excavating soils in the designated areas, one discrete soil sample will be collected per 500 cubic yard of in-situ soils. The samples will be collected at various depths from pits excavated using traditional backhoe equipment. Areas and depths not previously remediated or characterized will be particularly targeted for characterization.

2 The samples will be analyzed for the Constituents of Concerns required by the DTSC.

3 All soils excavated for test pits will be returned to their respective excavations pending future removal during utility trenching, unless found to exceed RGs.

4 Soils exceeding RGs will be marked as impacted, and will be separated from all other soils.

5 Impacted Soils will be moved to a designated exclusion area for subsequent handling prior to their final disposition either through on-site treatment and/or off-site disposal, per the Approved Project Addendum.

6 Once all sampling results are available, Project Proponents will excavate soils to the lateral extent and depth needed.

7 During construction activities, Suspect Soil will be stockpiled separately from the rest of the excavated soils, to be removed subsequently to the holding areas.

8 Impacted Soils will be separated as previously noted, and temporarily held in the construction area pending transport to the area designated for impacted soils.

9 All remaining excavated soils will be stockpiled in the construction area for additional confirmatory stockpile sampling.

10 An adequate number of samples not to be less than 1 discrete per 500 cubic yards will be collected from the excavation spoils removed from a given operation and analyzed for the required Constituents of Concern. Spoils are soils that are being immediately handled and returned to the excavation areas. The actual number of samples shall be increased if warranted by soil conditions, as evaluated by the EOPM.

11 Non-Impacted Soil may be reused within the boundaries of the subject Project site as needed.

6.0 Concrete and Asphalt Processing

Concrete and asphalt debris generated during construction may be recycled through on-site or off-site crushing. Debris coated with oil or sludge will be segregated and disposed of at an appropriately regulated facility prior to crushing. Bricks will not be included in the concrete and asphalt crushing, unless agreed to specifically by the Project Proponent, General Contractor, and Property Owner.

On-site crushing will likely utilize a transportable concrete crusher and occur within the area designated as the asphalt and concrete stockpile area. The on-site recycling/processing plant will be operated and permitted by the General Contractor, and will be temporarily located in a designated area agreed upon by the Project Proponent, General Contractor, and Property Owner.

Project Proponent will verify that the General Contractor or the party responsible for operating the transportable concrete crusher is a General Contractor or facility licensed to perform this task. Dust control measures will be implemented for on-site crushing activities in accordance with applicable regulations, including those of SMAQMD. Any exceedance of fugitive dust emissions from crushing activities will result in implementing engineering controls such as water spraying during the crushing. In addition, crushing will be performed in accordance with City of Sacramento noise ordinances and during permitted work times.

The crushed concrete and asphalt will be a potential source of fill material for backfilling excavations, covering haul roads, and miscellaneous fill purposes on site. On-site use of the recycled concrete and asphalt is an environmentally responsible reuse of a valuable fill material. Additionally, by using the crushed material as fill at the site, the transportation of import fill material will be reduced.

In areas where significant discoloration or odors are noted, indicating the presence of hydrocarbon or similar organics at a level potentially exceeding acceptable thresholds, such material will be segregated and placed in the same area as Suspect Soils.

7.0 Wells and Associated Remediation Systems

The Master Development contains an extensive network of ground water monitoring and extraction wells due to the presence of historic contamination. These wells are a part of the ongoing remediation activities by UPRR pursuant to regulatory order(s) and approved plans.

The monitoring and extraction wells are required by DTSC to be protected and preserved and cannot be removed without DTSC concurrence. Further, well installation, protection, and removal are subject to ordinances established by Sacramento County.

However, replacement, adjustment, and relocation of monitoring and extraction wells, vapor probes, and all associated remediation systems that are in conflict with development, are expected to occur. Such work is permitted to occur only following written approval by the Project Proponent, DRV and Property Owner, coordination with UPRR, written approval by DTSC, and appropriate permitting in accordance with all applicable regulations.

DTSC, DRV, Property Owners, and Project Proponents should be notified of any apparent conflicts between intended activities and existing wells as soon as it is known. Any damage to wells or remediation systems is the responsibility of the General Contractor to repair, in accordance with applicable regulations.

7.1 Encounter of Previously Abandoned Monitoring Wells

Throughout the remediation of the Master Development by UPRR, a number of ground water monitoring wells, probes, and similar items have been abandoned. It is expected that, in accordance with County of Sacramento Environmental Management Department (County) requirements, the top five feet at these features was over excavated and a concrete cap was installed at 5 feet below ground surface. If the site activities disturb the well caps, then DTSC should be notified and a replacement cap must be installed a minimum of 2 feet below finish grade in accordance with County requirements.

7.2 Replacement/Relocation of Wells

Any wells intended for abandonment or relocation must have an approved work plan by the DTSC and DRV and all applicable permits, and must occur per all applicable regulations. **No wells or other remediation systems may be altered or affected in any way without the approval of DRV first, and the written approval of UPRR and DTSC**. **The protection of these systems is the sole responsibility of the relevant Project Proponent.** The location of the relocated wells must be agreed upon with DRV and to the satisfaction of the regulatory agencies and UPRR. Replaced or relocated wells will be located where their impact on future or ongoing construction projects will be minimized, to the greatest extent technically feasible, in coordination with DRV, the landowner, regulators and UPRR. New well locations will be determined and wells will be installed as soon as possible. All remediation systems, including conduits, pumps, power lines, discharge pipes, gauging instruments, and any associated elements used for the satisfaction of regulatory agencies will be maintained and protected. Any system, removed, modified or replaced in part or in full, will only be modified following DRV, DTSC, Project Proponent, Property Owner(s) and UPRR written approval.

8.0 Dewatering Management Plan

Given the proximity of the Master Development to the Sacramento River, it has been established that the groundwater table elevation beneath the Certified Area is determined primarily by Sacramento River stage elevations. Based on historic groundwater elevations and anticipated river stage, some form of groundwater control may be needed for deeper excavations.

Groundwater may not be extracted, treated or discharged in any way without an approved plan submitted to DTSC, RWQCB, Property Owner(s), and Project Proponent. Such written groundwater control plan shall be prepared by the General Contractor and submitted for approval prior to implementation. Contractor has the sole responsibility to estimate volumes, rate, location, and type of groundwater control, as well as securing all needed discharge permits, including City, Regional San, and State permits.

9.0 Health and Safety Guidance

This brief section describes the general health and safety guidance that are to be followed by General Contractor's performing Project construction activities. The General Contractor shall provide a Project- specific Health and Safety Plan to be approved by Project Proponent(s). In general, trained personnel shall assume work in apparently contaminated areas until potential hazards of such areas are appropriately evaluated.

10.0 Reporting

Upon completing all phases of work, Project Proponents will prepare a summary report that will include documentation of all completed activities. Routine reporting, at an agreed upon frequency between Property Owner and Project Proponents, including stockpile tracking, will be issued. Completed reports will be such that they include sufficient details, information, and activities required. At a minimum, the following will be included in the final report:

1. Summary of project scope
2. Summary of project schedule
3. Summary of project team
4. Log of soil and groundwater volumes
5. Relevant surveying and staking information
6. Relevant logs and observations
7. Qualitative and quantitative field observations
8. Laboratory analytical certificates
9. Waste disposal manifests and bills of lading
10. Relevant photographs
11. Regulatory correspondence and agreements
12. Project closeout punch list (specific to soil and groundwater management)
13. Copies of approved submittals
14. Copies of Monthly Reports

Routine reports at an agreed upon frequency will include:

1. Activities completed
2. Soils, material and/or groundwater handled
3. Interim and final disposition
4. Relevant photographs
5. Qualitative and quantitative observations, if any
6. Laboratory analytical results, if any
7. Regulatory correspondence, if any
8. Waste disposal manifests and bills of lading
9. Approved submittals
10. Relevant surveying and staking information

Each report will be issued no later than a specified date to be agreed upon by the parties.

Key:
mg/kg = Milligrams per kilogram
NE = Non established
a = As described in the Closure Report for Sacramento Station Hydrocarbon Area Soils (ERM 1994), the hydrocarbon area was characterized as an area of diesel fuel release. Compliance sampling was performed using analysis of TPH as diesel range hydrocarbons using SW-846 Method 8015 modified for diesel (< C-28) and approved by the DTSC.
DTSC = Department of Toxic Substances Control
mg/kg = Milligrams per kilogram
NA = Not applicable
NL = No limit
TEPH = Total extractable hydrocarbons
1 = *Final Remedial Action Plan, Sacramento Station Site* (Woodward-Clyde Consultants, December 1989) .
2 = *Final Central Corridor, Car Shop Nine, and Northern Shops Remedial Action Plan for Soil* (ERM, January 2000)
3 = *Final Amended Industrial Wastewater Lagoon Remedial Action Plan for Soil* (ERM, 2000b)
4 = *Final Amendments to the Lagoon Study Area Remedial Action Plan for Northwest Corner Soil* (ERM, 2003b)
5 = *Final Remedial Action Plan, Central Shops Study Area - Soil and South Plume Study Area – Groundwater* (ERM, July 2013)
6 = Remedial Goal applies in areas designated as Open Space in the Sacramento Railyards Specific Plan at a depth greater than 5 feet bgs
7 = More stringent of Health-Based Remedial Goals and Groundwater Protection Remedial Goals.

Appendix I
Noise Data

Project Name: Railyards Specific Plan Update
Model Description: FHWA Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVENO) Emission Levels.
Analysis Scenario: Baseline (2016) without RSPU
Source of Traffic Volumes: Fehr & Peers, 2016

Assumed 24-hour Traffic Distribution	Day	Evening	Night
Total ADT Traffic Volume Split	90.39%	0.00%	9.61%

Project Name: Railyards Specific Plan Update

Model Description: FHWA Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVENO) Emission Levels.

Analysis Scenario: Baseline (2016) without KP Medical Center

Source of Traffic Volumes: Fehr & Peers, 2016

Assumed 24-hour Traffic Distribution	Day	Evening	Night
Total ADT Traffic Volume Split	90.39%	0.00%	9.61%

Road Segment	ADT	Speed (mph)	Traffic Mix			Ldn from 50 ft.	Distance (ft) to Traffic Noise Contour (Ldn)				
			% Auto	% Medium Trucks	% Heavy Trucks		70	65	60	55	50

Project Name: Railyards Specific Plan Update
Model Description: FHWA Highway Noise Prediction Model (FHWA-RD-77-108) with California Vehicle Noise (CALVENO) Emission Levels.
Analysis Scenario: Cumulative (2035) with Proposed Project
Source of Traffic Volumes: Fehr & Peers, 2016

Assumed 24-hour Traffic Distribution	Day	Evening	Night
Total ADT Traffic Volume Split	90.39%	0.00%	9.61%

Road Segment	ADT	Speed (mph)	Traffic Mix			Ldn from 50 ft.	Distance (ft) to Traffic Noise Contour (Ldn)				
			% Auto	% Medium Trucks	% Heavy Trucks		70	65	60	55	50
