# **Chapter 1. Introduction**

---

This arborist report includes information concerning the location and condition of City trees along an abandoned railway corridor west of Freeport Boulevard within the City of Sacramento (City). This report also includes an analysis of impacts to these trees as a result of the Del Rio Trail Project. This chapter provides background information on the project description, the City’s tree ordinance, and the survey methods that were used to determine the number and condition of City trees within the rail corridor.

## **1.1. Project Description**

The City proposes to construct 4.8 miles of Class 1 multi-use trail along the abandoned railway corridor west of Freeport Boulevard from south of Meadowview Road/Pocket Road to the Sacramento River Parkway north of Sutterville Road. The proposed Project consists of a Class I multi-use trail (12 feet wide with 2 unpaved shoulders). The trail will include at-grade crossings and intersection modifications at each major arterial location.

The project begins approximately 0.4 mile south of Pocket Road near the Freeport Water Tower adjacent to the I-5 bridge over Freeport Boulevard. At the southern entry, the bike trail will connect directly to the newly constructed Freeport Shores Trail and the South Sacramento Parkway West. The route will then extend approximately 4.8 miles north along the inactive railway corridor within the City of Sacramento and continue north through the South Land Park neighborhood towards William Land Park and the Sacramento River Parkway. North of Sutterville Road, the trail will connect to the Sacramento River Parkway via an alignment that parallels the existing railway corridor.

The purpose of the proposed project is to improve pedestrian and bicycle access throughout the South Land Park and Pocket Communities and provide multi-modal connectivity to adjacent communities throughout the Sacramento area. The project is needed because the inactive railway corridor is currently located within neighborhoods with no protected bikeways, minimal sidewalks, and limited connectivity for pedestrians to access schools, retail stores, jobs, and recreational facilities.

Easements will be needed where the trail passes through state-owned parcels. This project is federally funded through the Active Transportation Program grant and therefore required compliance with both the National Environmental Policy Act (NEPA) and the California Environmental Quality Act (CEQA). The lead agency for CEQA compliance was the City and the federal lead agency for NEPA compliance was Caltrans. The City prepared an Environmental Impact Report under CEQA that was approved in March 2019. Caltrans prepared a Categorical Exclusion under NEPA that was approved in October 2019. The Project is currently in the final design phase with construction anticipated to start in 2022.

## **1.2. City of Sacramento Tree Ordinance**

Chapter 12.56 of the Sacramento City Code specifies tree planting, maintenance, and conservation requirements of City Trees as part of Public Projects. This section states that whenever feasible, the City shall modify the design of public projects to avoid the removal or damage of City trees. It further states that if the City proposes to remove “City trees” written justification for why the removal is necessary must be provided and the City shall mitigate for removed trees and secure a tree permit from the City arborist.

This arborist report has been prepared to document tree resources within the rail corridor and assess which trees will be impacted by the proposed project.

### **1.2.1. Relevant definitions**

The following definitions have been taken directly from Chapter 12.56 of the Sacramento City Code and are included here for reference:

“City tree” means any tree the trunk of which, when measured 4.5 feet above ground, is partially or completely located in a City park, on real property the City owns in fee, or on a public right-of-way, including any street, road, sidewalk, park strip, mow strip, or alley.

“Diameter at standard height” or “DSH,” means the diameter of a tree measured at 4.5 feet above natural grade, except as specified below. The diameter shall be calculated by using the following formula: diameter = circumference/3.14.

1. For a tree that branches at or below 4.5 feet, DSH means the diameter at the narrowest point between the grade and the branching point.
2. For a tree with a common root system that branches at the ground, DSH means the sum of the diameter of the largest trunk and one-half the cumulative diameter of the remaining trunks at 4.5 feet above natural grade.

In addition to the definitions from the Sacramento City Code, the following definition was taken from International Society of Arboriculture:

“Critical Root Zone” is an area equal to a 1-foot radius from the base of the tree’s trunk for each 1 inch of DSH. For example, the Critical Root Zone of a 12-inch DSH tree would be a circle extending out from the tree with a radius of 12 feet.

## **1.3. Survey Methodology**

Tree surveys were completed over 10 days during the spring and summer of 2020. Surveys were completed by a two-person team consisting of an ISA certified arborist and an assistant. To the greatest extent practical, the tree survey included all trees over 4 inches DSH within the rail corridor. In areas where access was limited, only trees within 10-feet of the construction footprint were included.

### **1.3.1. Types of Data Collected**

The following data was collected for each tree within the survey boundary: GPS location, tree tag number, species, diameter at standard height, general health, and structural stability.

#### *1.3.1.1. GPS Location*

GPS data for each tree was collected using the program Collector for ArcGIS on an Apple iPad mini. GPS accuracy was enhanced by using a Trimble R1 Bluetooth GPS receiver. Average GPS accuracy during the tree survey was between 70 cm and 1.5 m. GPS data was automatically uploaded to an ArcGIS Online cloud database from which the data was accessed for further analysis.

#### *1.3.1.2. Tree Tags*

Round numbered aluminum tree tags were attached to each tree included in the survey. Tree tags were attached using aluminum nails hammered approximately halfway into the tree. Tree tags were not hammered all the way in to allow the tree to grow for several seasons before growing around the tag.

### 1.3.1.3. *Species Identification*

Species were identified from general knowledge of the surveyors. In some instances, individual trees had to be identified via dichotomous key or plant identification applications.

### 1.3.1.4. *Diameter at Standard Height*

DSH was recorded using a loggers tape which automatically converts circumference to diameter. The tape was wrapped tightly around the trunk of the tree at a height of approximately 4.5 feet above the ground and the diameter recorded.

### 1.3.1.5. *General Health*

The general health of each tree was assessed based on readily visible indicators, including but are not limited to: canopy thickness, signs of die back, average leaf size and condition, twig extension, water sprouts or other disfigured growth habits, and trunk condition. Based on these visible indicators the health of each tree was given a rank as shown on the following table:

**Table 1. Tree Health Rating System**

Tree Health Ratings	
<b>Good</b>	Average or below-average deadwood/dieback. Leaf size, color, and density typical for the species. Buds are normal size, viable, abundant, and uniform. Current and past growth increments are generally average or better. Wounds are well closed with little to no sign of decay. Very little evidence of stress, disease, nutrient deficiency, and/or insect infestation.
<b>Fair</b>	Above-average deadwood/dieback. Leaf size and density below what is typically expected for the species. Leaves may be discolored or deformed. Buds are normal size and viable but may be sparse. Current and past growth increments may be below average. Some wounds not closed. Some decay may be present. Fair to moderate level of stress, nutrient deficiency, disease, and/or infestation.
<b>Poor</b>	Abundant deadwood/dieback. Leaf size and density are well below what is typically expected for the species. Leaves may be discolored or deformed from nutrient deficiency or infection. Few viable buds are present throughout the canopy. Current and past growth increments indicate minimal growth. Wounds show minimal closure. Decay may be present. The tree is strongly exhibiting signs of stress, nutrient deficiency, disease, and/or infestation. Tree is in decline.

### 1.3.1.6. *Structural Stability*

The general structural stability of each tree was also assessed based on visual observation of structural deficiencies from the ground. If a structural deficiency was observed, that tree was recorded as having a potential structural hazard. Presence of a structural deficiency alone does not indicate that the tree is hazardous and further observation of these potentially hazardous trees is recommended. Examples of structural deficiencies that were found during the survey include: cavities/decay in the trunk or major limbs, severe damage to the trunk, co-dominant stems, included bark, cracks, exposed roots, or excessive lean.

## 1.3.2. **Survey Personnel And Survey Dates**

Tree surveys were completed over 10 days in the spring and summer of 2020. All surveys were completed by a two-person crew consisting of an arborist and an assistant. The arborist for all tree

survey work was Dokken Engineering’s ISA certified arborist Scott Salembier (WE-12418A). The table below summarizes survey personnel and survey dates.

**Table 2. Survey Dates & Personnel**

Date	Survey Personnel
April 30	Scott Salembier, ISA certified arborist Anthony Dang, Environmental Planner
May 1	Scott Salembier, ISA certified arborist Anthony Dang, Environmental Planner
May 13	Scott Salembier, ISA certified arborist Patricia Basaldua-Sanchez, Environmental Intern
May 19	Scott Salembier, ISA certified arborist Mikayla Hartford, Assistant Engineer
August 3	Scott Salembier, ISA certified arborist Karsen O’Rourke, Environmental Intern
August 4	Scott Salembier, ISA certified arborist Karsen O’Rourke, Environmental Intern
August 5	Scott Salembier, ISA certified arborist Jessica Cheung, Engineering Intern
August 6	Scott Salembier, ISA certified arborist Mikayla Hartford, Assistant Engineer
August 20	Scott Salembier, ISA certified arborist Paola Montoya, Assistant Engineer
December 20	Scott Salembier, ISA certified arborist

## Chapter 2. Tree Survey Results

This chapter includes a summary of trees observed and mapped within the survey area. A complete table of tree results has been attached to this Arborist Report for reference.

### 2.1. Total Number of Trees

A total of 1,795 trees were recorded within the rail corridor. Of these recorded trees, 71% of mapped trees are species native to the Sacramento Region. The table below summarizes all species observed.

**Table 3. Tree Survey Summary Table**

Species	Number Recorded	Native (N) / Non-Native (X)
Aleppo Pine ( <i>Pinus halepensis</i> )	5	X
Almond ( <i>Prunus dulcis</i> )	41	X
American Elm ( <i>Ulmus americana</i> )	26	X
Apricot ( <i>Prunus armeniaca</i> )	1	X
Bay Laurel ( <i>Umbellularia californica</i> )	2	X
Bitter Cherry ( <i>Prunus emarginata</i> )	6	X
Black Locust ( <i>Robinia pseudoacacia</i> )	2	X
Black Walnut ( <i>Juglans hindsii</i> )	26	N
Blue gum ( <i>Eucalyptus globulus</i> )	15	X
Blue Oak ( <i>Quercus douglasii</i> )	1	N
Callery Pear ( <i>Pyrus calleryana</i> )	4	X
Chinese Elm ( <i>Ulmus parvifolia</i> )	14	X
Chinese Pistache ( <i>Pistacia chinensis</i> )	44	X
Chokecherry ( <i>Prunus virginiana</i> )	1	X
Coast Redwood ( <i>Sequoia sempervirens</i> )	24	X
Common Fig ( <i>Ficus carica</i> )	2	X
Cork Oak ( <i>Quercus suber</i> )	100	X
Crepe myrtle ( <i>Lagerstroemia</i> sp.)	3	X
Cypress ( <i>Hesperocyparis</i> sp.)	3	X
Deodar Cedar ( <i>Cedrus deodara</i> )	1	X
English Walnut ( <i>Juglans regia</i> )	3	X
Flowering plum ( <i>Prunus triloba</i> )	1	X
Fremont Cottonwood ( <i>Populus fremontii</i> )	32	N
Fruit Tree (unknown species)	1	X
Glossy Privet ( <i>Ligustrum lucidum</i> )	45	X
Golden Wattle ( <i>Acacia pycnantha</i> )	1	X
Goldenraintree ( <i>Koelreuteria paniculata</i> )	1	X
Gooding's Black Willow ( <i>Salix goodingii</i> )	4	N
Hackberry ( <i>Celtis</i> sp.)	3	X
Honeylocust ( <i>Gleditsia triacanthos</i> )	3	X

Species	Number Recorded	Native (N) / Non-Native (X)
Interior Live Oak ( <i>Quercus wislizeni</i> )	208	N
Italian Cypress ( <i>Cupressus sempervirens</i> )	10	X
Jujube ( <i>Ziziphus jujuba</i> )	18	X
Mayten Tree ( <i>Maytenus boaria</i> )	1	X
Mexican Fan Palm ( <i>Washingtonia robusta</i> )	1	X
Mulberry ( <i>Morus alba</i> )	4	X
Non-Native Pine ( <i>Pinus</i> sp.)	30	X
Oregon Ash ( <i>Fraxinus latifolia</i> )	8	N
Persian Silk Tree ( <i>Albizia julibrissin</i> )	2	X
Persimmon ( <i>Diospyros</i> sp.)	1	X
Peruvian Pepper ( <i>Schinus molle</i> )	5	X
Red Box ( <i>Eucalyptus polyanthemos</i> )	4	X
Red Maple ( <i>Acer rubrum</i> )	1	X
Rubber Tree ( <i>Ficus</i> sp.)	1	X
Silver Maple ( <i>Acer saccharinum</i> )	4	X
Silver Wattle ( <i>Acacia dealbata</i> )	11	X
Southern Catalpa ( <i>Catalpa bignonioides</i> )	5	X
Tanoak ( <i>Notholithocarpus densiflorus</i> )	1	X
Tree of Heaven ( <i>Ailanthus altissima</i> )	53	X
Trident Maple ( <i>Acer buergerianum</i> )	1	X
Unidentified Non-Native	11	X
Valley Oak ( <i>Quercus lobata</i> )	1000	N

## 2.2. Trees Protected by City Ordinance

Under Chapter 12.56 of the Sacramento City Code, all trees over 4-inches DSH within City right-of-way are City Trees and are protected by City ordinance, regardless of species.

## Chapter 3. Project Impacts to Trees

Following completion of the tree survey, project impacts to City Trees were determined using an ArcGIS map of tree data and project features. A map of all directly impacted trees and additional trees recommended for removal is included as Attachment C of this report.

### 3.1. All Impacted Trees

The direct impact area was established by creating a 3-foot buffer around all permanent project features including edge of pavement, shoulders, curb & gutter, and cut/fill slopes. A 3-foot buffer was selected because additional clearance beyond project features may be required for construction and trees located that close to construction would likely have their root system or crown adversely impacted by construction.

A total of 384 City Trees are located within the direct impact area and will need to be removed as part of the project. In addition, one Honeylocust tree will have two limbs removed to the base, to accommodate clearance for the proposed falsework along a segment of the railroad bridge. This trim, however, will not remove the tree and therefore is not listed as a directly impacted tree. A complete table of all trees located within the direct impact area is included in Attachment C. The summary table below lists the number of each species located within the direct impact area.

**Table 4. Directly Impacted Trees Summary Table**

Species	Number Impacted	Native (N) / Non-Native (X)
Aleppo Pine ( <i>Pinus halepensis</i> )	1	X
Almond ( <i>Prunus dulcis</i> )	10	X
American Elm ( <i>Ulmus americana</i> )	1	X
Bitter Cherry ( <i>Prunus emarginata</i> )	1	X
Black Walnut ( <i>Juglans hindsii</i> )	17	N
Blue Oak ( <i>Quercus douglasii</i> )	1	N
Callery Pear ( <i>Pyrus calleryana</i> )	2	X
Chinese Elm ( <i>Ulmus parvifolia</i> )	2	X
Chinese Pistache ( <i>Pistacia chinensis</i> )	3	X
Coast Redwood ( <i>Sequoia sempervirens</i> )	6	X
Cork Oak ( <i>Quercus suber</i> )	29	X
Crepe myrtle ( <i>Lagerstroemia</i> sp.)	1	X
English Walnut ( <i>Juglans regia</i> )	1	X
Fremont Cottonwood ( <i>Populus fremontii</i> )	2	N
Fruit Tree (unknown species)	1	X
Glossy Privet ( <i>Ligustrum lucidum</i> )	6	X
Goldenraintree ( <i>Koelreuteria paniculata</i> )	1	X
Gooding's Black Willow ( <i>Salix gooddingii</i> )	2	N
Hackberry ( <i>Celtis</i> sp.)	2	X
Honeylocust ( <i>Gleditsia triacanthos</i> )	2	X
Interior Live Oak ( <i>Quercus wislizeni</i> )	25	N
Italian Cypress ( <i>Cupressus sempervirens</i> )	10	X
Jujube ( <i>Ziziphus jujuba</i> )	17	X

Species	Number Impacted	Native (N) / Non-Native (X)
Mayten Tree ( <i>Maytenus boaria</i> )	1	X
Non-Native Pine ( <i>Pinus</i> sp.)	5	X
Red Box ( <i>Eucalyptus polyanthemos</i> )	1	X
Rubber Tree ( <i>Ficus</i> sp.)	1	X
Silver Wattle ( <i>Acacia dealbata</i> )	2	X
Southern Catalpa ( <i>Catalpa bignonioides</i> )	3	X
Tree of Heaven ( <i>Alianthus altissima</i> )	14	X
Unidentified Non-Native	1	X
Unknown	1	X
Valley Oak ( <i>Quercus lobata</i> )	213	N

### 3.2. Native Impacted Trees

Of the 384 trees that will be impacted by the project, 259 are species native to the Sacramento region. A summary table of native trees impacted by the project is included below. A complete table of all native species that will be impacted by the project is included in Attachment E of this report.

**Table 5. Directly Impacted Native Trees Summary Table**

Species	Number Impacted	Native (N) / Non-Native (X)
Black Walnut ( <i>Juglans hindsii</i> )	17	N
Blue Oak ( <i>Quercus douglasii</i> )	1	N
Fremont Cottonwood ( <i>Populus fremontii</i> )	1	N
Gooding's Black Willow ( <i>Salix gooddingii</i> )	2	N
Interior Live Oak ( <i>Quercus wislizeni</i> )	25	N
Valley Oak ( <i>Quercus lobata</i> )	213	N

## **Chapter 4. City Tree Mitigation**

---

Tree mitigation for public works projects must provide for the replacement of native trees at a ratio of one inch DSH of tree replaced for each inch DSH of tree removed (1:1 ratio). This chapter will discuss the mitigation requirements under City Code. The City's tree ordinance also requires the development of a tree replacement plan to specify how tree impacts will be mitigated. The tree replacement plan will be developed separately after the number of trees that can be planted on-site is determined.

### **4.1. Mitigation Requirements**

The proposed project will result in the removal of 384 City Trees. Of these, 259 are species native to the Sacramento region requiring mitigation. Impacted native trees have a combined DSH of 3,148 inches.

### **4.2. Replacement Options**

The City's tree ordinance allows for two different tree replacement methods for public works projects which can be used in any combination to reach the requisite amount of tree mitigation.

#### **4.2.1. On-Site Replacement**

The City may elect to mitigate for some or all tree impacts by installing native trees within or adjacent to the project footprint following construction. A tree replacement plan that includes on-site or off-site replacement shall specify where the trees will be planted and how the trees will be monitored and maintained for a time period as determined by the City Arborist.

On-site replacement trees shall be the same species as those removed or a species that is acceptable to the City Arborist, with consideration given to species diversity. The following equivalent sizes shall be used whenever new trees are planted (either on-site or off-site) pursuant to a tree replacement plan:

- a. A tree in a 15-gallon container or smaller = one-inch DSH.
- b. A tree in a 24-inch box = two-inch DSH.
- c. A tree in a 36-inch box or larger = three-inch DSH.

#### **4.2.2. Payment of an In-Lieu Fee**

The City may elect to mitigate some or all tree impacts through payment of an in-lieu fee as adopted by resolution of the City council. The City may pay an in-lieu fee for the loss of the trees in an amount established by resolution of the City council. Such monies shall be deposited in the tree planting and replacement fund described in section 12.56.060.F.

### **4.3. Tree Replacement Plan**

The City proposes to mitigate for the loss of native trees to the greatest extent practicable by installing native trees along the project alignment. Additionally, the Final Environmental Impact Report (2018), requires that the following mitigation for impacts to Aesthetics be implemented as a result of tree removal for the Project:

**AES-1:** The City shall comply with City Code section 12.56.040 by establishing a replacement plan for any City trees that must be removed. The City shall replace the trees removed during project

construction by replanting a minimum of 700 trees. If additional trees can be incorporated into the project design and planting plan above 700, the City shall plant additional trees where feasible. The exact number of trees and locations shall be determined during final design. The tree removal and replacement plan is subject to approval by the City Council.

The remaining balance of tree mitigation will be paid into the City's in-lieu-fee program.
